LIFE OF
Jane Welsh Carlyle.
By MRS. ALEXANDER IRELAND.
8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Postpaid on receipt of price.

A New Latin Dictionary

952 Pages. Square 8vo, Half Leather, $2 00.

The attention of students and teachers is invited to an **ELEMENTARY LATIN DICTIONARY,** by CHARLTON T. LEWIS, Ph.D., just published by Messrs. HARPER & BROTHERS. The work is substantially an abridgment of the author's 'Latin Dictionary for Schools,' but is sufficiently full to meet the needs of students in preparatory or fitting schools, and also of the first and second year's work in colleges. It answers in every respect to the demand for a good working dictionary at a reasonable price.

"Being an abridgment of a work that is already well known and that has been received in all quarters with admiration and approval, there is no need of extended remarks upon details of the present book. It is, without any doubt, the most scholarly and correct elementary Latin dictionary that has ever been published in English."—*New York Evening Post.*

LEWIS'S LATIN DICTIONARY.

A Latin Dictionary for Schools. By CHARLTON T. LEWIS, Ph.D. pp. 1192. Large 8vo, Cloth, $5 50; Sheep, $6 00.

"This dictionary is not an abridgment, but an entirely new and independent work, designed to explain every word or phrase in the Latin literature commonly read in schools, viz., the complete works of Cæsar, Terence, Cicero, Livy, Nepos, Vergil, Horace, Ovid, Juvenal, Phædrus, and Curtius, the Catiline and Jugurtha of Sallust, the Germania and Agricola of Tacitus, and a few words found in some extracts of Florus, Eutropius, and Justinus. The original meaning of every word is first given, and then the modifications which it underwent in usage."—*From Preface.*

HARPER'S LATIN DICTIONARY.

Founded on the translation of 'Freund's Latin-German Lexicon.' Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D. pp. xiv., 2020. Royal 8vo, Sheep, $6 50; Full Russia, $10 00.

LIDDELL & SCOTT'S GREEK LEXICON.

Revised and Enlarged. A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., and ROBERT SCOTT, D.D. With Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. pp. xiv., 1776. Seventh Edition, Revised and Augmented throughout. 4to, Sheep, $10 00.

LIDDELL & SCOTT'S INTERMEDIATE GREEK LEXICON.

An Intermediate Greek-English Lexicon, founded upon the Seventh Edition of Liddell and Scott's Greek-English Lexicon. pp. iv., 910. Small 4to, Cloth, $3 50; Linen, $3 75; Sheep, $4 00.

LIDDELL & SCOTT'S GREEK LEXICON.

Abridged. A Lexicon Abridged from Liddell & Scott's Greek-English Lexicon. The *Twentieth Edition*, carefully Revised throughout. With an Appendix of Proper and Geographical Names, prepared by the Rev JAMES M. WHITON, Ph.D. pp. 832. Small 4to, Half Leather, $2 00.

AUTENRIETH'S HOMERIC DICTIONARY.

A Homeric Dictionary: for Use in Schools and Colleges. From the German of Dr. GEORG AUTENRIETH, Rector of the Gymnasium at Zweibrucken. Translated, with Additions and Corrections, by ROBERT P. KEEP, Ph.D. 360 pages. Illustrated by many Woodcuts. Post 8vo, Cloth, $1 10.

"The attractive little book will do more, I am sure, to promote the study of Homer on this side of the water than half a dozen school editions."—*B. L. Gildersleeve, Ph.D.*

THAYER'S GREEK-ENGLISH LEXICON.

Greek-English Lexicon of the New Testament; being Grimm's Wilke's Clavis Novi Testamenti, Translated, Revised, and Enlarged by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. 746 pages. 4to, Cloth, $5 00; Half Roan, $6 00; Sheep, $6 50.

"Altogether the volume is one of great value, and the eminent scholars who have been concerned in its production should have the thanks of all who love the study of the New Testament in the Greek tongue."—*Presbyterian, Philadelphia.*

Complete Catalogue of School and College Text-Books and Works of Reference forwarded on application.

HARPER & BROTHERS, Franklin Square, N. Y.

MACMILLAN & CO.'S PUBLICATIONS

NEW DICTIONARIES.

Just Published. 4to, cloth, gilt, 706 pages and more than 450 Illustrations. $6.00 net.

A Dictionary of Classical Antiquities.

MYTHOLOGY, RELIGION, LITERATURE, AND ART.

From the German of Dr. OSCAR SEYFFERT. Revised and edited, with Additions, by HENRY NETTLESHIP, M.A., Professor of Latin Literature in the University of Oxford, and J. E. SANDYS, Litt.D. With more than 450 Illustrations. 4to, cloth, gilt. Price $6.00 net.

"This is truly a convenient book. The system on which it is arranged is readily understood and the proportionate interest or value of the various topics is a matter taken into strict account."—*N. Y. Tribune.*

"The Dictionary is the work, in the first place, of a philologist and distinguished Latin s holar, and has the added advantage of supervision and trans ation by the hands of professors of the two great English universities. It is a faithful picture of the wonderful civilization of the ancients. Its minute descriptions and important plates render this sumptuous Dictionary important to students and scholars."—*Philadelphia Public Ledger.*

An Etymological Dictionary of the German Language.

By FRIEDRICH KLUGE, Professor in the University of Jena. Translated from the Fourth German Edition by Dr. F. J. DAVIS. In one large 8vo volume. $3.00.

"Kluge's Dictionary is a fine summing up of all that modern learning has evolved."—*Chicago Tribune.*

"Kluge's Dictionary has at last been translated into English. . . . Not a few are bothered by the many abbreviations in the original, and the meanings of the rarer German words, which the translator has accurately rendered, will be welcome to a great many."—*Evening Post.*

An Etymological Dictionary of the English Language.

By the Rev. WALTER W. SKEAT, M.A., Ebington and Bosworth Professor of Anglo-Saxon in the University of Cambridge.

Special American Edition, pp, xxviii-800. In one volume, small 4to, cloth, $2.50; half calf, $3.50.

"Its merits are those of laborious and conscientiously accurate research, guided by profound learning and never failing sagacity."—*Prof Henry Sweet.*

A Middle-English Dictionary.

Containing words used by English writers from the twelfth to the fifteenth century. By FRANCIS HENRY STRATMANN. A New Edition, Rearranged, Revised, and Enlarged by HENRY BRADLEY. Small 4to, $8.00.

"We have in this volume a much better book than the original Stratmann—more exact, more complete, more useful."—*The Nation.*

The Oxford English Dictionary.

A New English Dictionary on Historical Principles; founded mainly on the materials collected by the Philolo gical Society. Edited by JAMES A. H. MURRAY, sometime President of the Philological Society, with the assistance of many scholars and men of science.

Now Ready—Parts i to v, $2.25 each.

Vol. 1 (A–B) strongly bound in morocco, $13.00.

Vol. iii. Part i, E to Every, $3.25.

"Ought to be not only in every gentleman's library, but in every intelligent household."—*New York Nation.*

"This Dictionary is the most important contribution ever yet made to the history of our language. No one is safe in giving the history of an English word without consulting it. No one can consult it without learning something. . . . No student of language can do without it; every Anglo-Saxon may be proud of it." *Independent.*

New and Cheaper Edition, in five volumes, cloth, gilt top, sold in box, $25.00.

A Dictionary of Music and Musicians.

(*A. D.* 1450–1889)

By Eminent Writers, English and Foreign. Edited by SIR GEORGE GOVE, D.C.L. With Illustrations and Woodcuts. New Uniform Edition, 5 volumes, 8vo, sold in sets only, $25.00. Volumes 1 to 4 sold separately, $6 each. Index, $2.50.

". . . The new Dictionary has no rival in our language."—*New York Tribune.*

"The amount of information of the greatest use to musicians and amateurs collected in this carefully prepared work makes it indispensable to every musical library. In fact, it is a little library in itself."—*Boston Saturday Evening Gazette.*

Now Ready. No. 1. 8vo, paper cover, $1.00.

Dictionary of Political Economy.

Containing Articles on the Main Subjects usually dealt with by Economic Writers, with Explanations of Legal and Business Terms which may be found in their Works, and Short Notices of deceased American, English, and Foreign Economists, and their Chief Contributions to Economic Literature. Edited by R. H. INGLIS PALGRAVE, F.R.S. First Part, A—Bede. 8vo, paper cover, $1.00.

*** *The Dictionary is published in parts of 128 pages each, at intervals of about three months; the whole will be completed in about twelve parts.*

NEW BOOKS.

Studies of the Gods in Greece

At Certain Sanctuaries Recently Excavated. Being Eight Lectures given in 1890 at the Lowell Institute. By Louis Dyer, B. A., Oxon, late Assistant Professor in Harvard University. With maps and plans. 457 pages, crown 8vo, cloth, $2.50.

"Marked throughout by wonderful reason and moderation and openness to the evidence on all sides of matters in dispute. With singular grace and felicity of phrase, with abundant learning, and with accuracy due to personal observation, Prof. Dyer explains the development of the cults of Demeter, at Eleusis and Cnidus, of Dionysus, in Thrace, Icaria, Athens, and Eleusis; of Æsculaplus, at Epidaurus and Athens; of Aphrodite at Paphos, and of Apollo at Delos. What gives the work its most admirable quality is the success of the author's effort to put himself at the Greek point of view. The gods are treated with the reverence that is due to them, and the fact is emphasized that there is much in Christianity which is of Greek rather than Jewish quality."—*New York Tribune.*

Aristotle on the Constitution of Athens.

Translated by E. POSTE, M.A. 12mo, $1.00.

As the discovery of this important addition to classical literature excited so much interest when first made known, it has been thought that a translation prepared for the unlearned, as well as for the learned reader, might be received with favor, and enable readers to form an opinion for themselves on the substantive character and interest of the work.

Mythology and Monuments of Ancient Athens:

Being a translation of a portion of the 'Attica' of Paul sanias. By MARGARET DE G. VERRALL. With Introductory Essay and Archæological Commentary by JANE E. HARRISON. With numerous illustra, tions. Large 12mo, $4.50.

"Qualified by years of study, by experience in writing and lecturing upon various archæological subjects, by long and minute examination of the monuments on the spot, and possessed of a style at once lucid and correct, at times picturesque and striking, she has produced a work which the student of Athenian culture cannot afford to ignore, and which the earnest visitor to the spot will find an ever-present help and stimulus amid the myriad perplexities of opposing theories."—*The Nation.*

Synopsis of Old English Phonology.

Being a systematic account of Old English Vowels and Consonants and their correspondences in the cognate languages. By A. L. MAYHEW, M.A. 16mo, $2.25.

Old and Middle English.

By T. L. KINGTON OLIPHANT, M.A., of Balliol College, author of 'The New English,' etc. New Edition, carefully revised and brought up to date. Globe 8vo. $2.00.

"Mr. Oliphant has produced a most useful and opportune book. He has traced, in an interesting and popular way, the changes of letters, inflections, forms, and words during the whole course of our language. It is neither too technical nor too long to prevent the general reader from understanding and enjoying the book, while he gets sound information from it."—*Athenæum.*

New and cheaper edition. 8vo, $3.

Principles of Economics.

By ALFRED MARSHALL, M.A., Professor of Political Economy in the University of Cambridge, Fellow of St. John's College, Cambridge.

Vol. I. Second edition, revised. 8vo, $3.

Nature Series. New Volume.

The Right Hand: Lefthandedness

By Sir DANIEL WILSON, LL.D., F.R.S.E., President of the University or Toronto. 12mo, $1.25.

An Introduction to the Mathematical Theory of Electricity and Magnetism.

By W. T. A. EMTAGE, Examiner in the School of Natural Science, Oxford. 12mo, $1.90,

*** *Macmillan & Co.'s New Complete Catalogue will be sent free by mail to any address on application.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 27, 1891.

The Week.

THE resolution adopted by the Republicans of Pennsylvania on the silver question is a curiosity; but since all of our silver legislation is composed of separate curiosities, it is not to be regarded with special wonder. First, the resolution endorses bimetallism without defining that term. There are several kinds of bimetallism talked of by its votaries, while some people regard it as a myth altogether and deny the existence of the thing in actual practice in any part of the world. It will be seen presently that the kind of bimetallism which the followers of Quay favor is different from any other kind ever heard of. Next, they "endorse the action of the Fifty first Congress in providing for the purchase and coinage of all the silver produced from American mines." No such bill has been passed by Congress, but, on the contrary, a bill providing for the purchase (not necessarily the coinage) of 4,500,000 ounces of silver per month, wherever produced. Next, they recommend "such tariff duties as will protect our country and its currency from the debasement which will surely follow if this nation is made the dumping-ground for all the silver in the world." Now every kind of bimetallism that was ever heard of before provides for the unlimited coinage of the two metals. In fact, that is what bimetallism means. The phrase "dumping-ground," as applied to either silver or gold, implies that one or the other metal is to be rejected in whole or in part. In the theory of bimetallism, rejecting a part is the same as rejecting the whole. Probably Mr. Quay's convention did not understand the subject at all, but believed that Protection would solve every problem in finance, like the quack doctor who threw all his patients into fits because he could always cure fits.

It is not easy to adopt a particular portion of sound economic doctrine without being led to admit the rest. There is a certain unity and symmetry in the body of truth established in this department of knowledge, that exerts a steadily persuasive influence upon a mind once turned in the right direction. Thus the New York *Tribune*, confiding in the wisdom of President Harrison, heartily applauds his declaration that the dollars coined or stamped by the general Government ought to be of equal value, and concurs in the assertion that "the poorer dollar will do its first errand in paying some poor laborer for his work." But in its natural delight at being able to maintain true doctrine after the fatigue of a long course of protectionist sophistry, the *Tribune* is carried to unexpected lengths, and commits itself to a proposition that is fatal to the theory of protection. The price obtainable for the farmers' crops, it declares, "depends upon the price which foreign countries will pay for the great surplus to be exported." This is a point which the free-traders have always made much of, and it marks an important advance in the controversy when the protectionists are brought to admit that the price of our exports is fixed in the foreign markets. The consequences of this agreement of both parties to the controversy are very obvious, and the farmer will now be far better able than before to see the precise operation of the tariff. The price of what he sells is what foreign countries will pay, the *Tribune* tells him; but how about the price of what he buys? Altogether, this admission by the protectionists is a long step in advance, and, taken in connection with their delight in reciprocity, is a most hopeful indication as to the future.

Major McKinley was wise as a serpent when he gave the first place in his first campaign speech to the silver question. He was not so wise a few months earlier when he spoke at Toledo. We can but approve of the greater part of his last deliverance, and especially of his endorsement of the position of ex-President Cleveland. We put in parallel columns what he said on this subject at Toledo on February 12, of the present year, and what he said at Niles on Saturday last:

MAJ. M'KINLEY AT TOLEDO, O., FEB. 12, 1891.	MAJ. M'KINLEY AT NILES, O., AUG. 23, 1891.
During all of his [Cleveland's] years at the head of the Government he was dishonoring one of our precious metals, one of our own great products, discrediting silver and enhancing the price of gold. He endeavored even before his inauguration to office to stop the coinage of silver dollars, and afterwards, and to the end of his Administration, persistently used his power to that end. He was determined to contract the circulating medium and demonetize one of the coins of commerce, limit the volume of money among the people, make money scarce, and therefore dear. He would have increased the value of money and diminished the value of everything else—money the master, everything else the servant.	The danger of free and unlimited coinage has been pointed out over and over again by leading statesmen of both parties. The position of leading Republicans upon this question is so well known that I need not pause to quote from them. Let me call your attention to what the leaders of the Democratic party who are chief in its counsels say. No one has spoken with greater ability on the Democratic side than the ex-President of the United States, the Hon. Grover Cleveland. His letter written but a few months ago, taken in connection with his former utterances upon this subject, shows that nothing could be more disastrous, in his judgment, to the business interests of the country and to the best welfare of all the people, than the free and unlimited coinage of silver. Let me read you, etc.

There is something almost ludicrous in the joy over the abundant harvest in this country manifested by the protectionist newspapers. They have been watching the operation of the McKinley Act in a cold sweat of apprehension, and insisting that it would not check importations and was not meant to, that it would not raise prices, but lower them; and dwelling with especial emphasis upon the free-trade clauses of the measure. All the time they were desperately afraid that the result would be a deficit in the Treasury, which would infallibly arouse public indignation, while their silver legislation was forcing gold out of currency and out of the country. The prospect of an enormous surplus of agricultural produce for export in connection with a strong foreign demand is therefore particularly welcome to them. This surplus President Harrison seems to estimate at about $1,000,000,000, which would just pay for our last Congress, and the bounty of nature will thus atone for the folly of the party in control of the Government. It is a great piece of good fortune for the country, as it will enable us to import goods even under almost prohibitory duties, and perhaps will draw back our gold. It will be tiresome to hear the abundance of the harvest and the consequent activity of trade attributed to the tariff, but we shall hear little else from the protectionist organs during the next year.

Mr. William E. Bear, the English statistician, writes to *Bradstreet's* that later information leads him to mark up the European deficiency of wheat from 281,000,000 bushels (his first figures) to 320,000,000 bushels. This change in his estimate is due to later advices from Russia, and to unfavorable weather in western Europe, including England, since his last report was made. Upon this revised estimate the editor of *Bradstreet's* counts up the sources of supply for this deficiency as follows:

"North America, surplus, say, 190,000,000 bushels, which now looks to be full, and to mean holding reserves down to the minimum; southeastern Europe (exclusive of Russia, which is, according to the writer of the letter quoted above, not regarded as a wheat exporter of moment) 45,000,000 bushels; India 26,000,000 bushels, Australia and New Zealand 8,000,000 bushels, South America 5,000,000 bushels, and exports from elsewhere, say, 14,000,000 bushels; in all, about 288,000,000 bushels. This points to a nominal deficiency of 32,000,000 bushels, with probable export totals as high as they well can be, and with reserves drawn down the world over."

The opinion here quoted, that Russia is not to be regarded as a wheat exporter of moment is, however, offset by Beerbohm's estimate of a probable export of 64,000,000 bushels. This discrepancy between the highest authorities is sufficient to account for the nervousness of the American markets, which have been characterized during the week by rapid fluctuations over a narrow range of prices. Much exhortation has been bestowed upon the speculators not to put up the price so high as to check exports. This excellent advice will probably be heeded by the speculators, because they cannot do it if they would. If exports were stopped, the incoming rush would soon fill the warehouses, glut the market, and put down the price, to the confusion and heavy loss of the daring spirits who should seek to corner

wheat. At the same time, it is as well to acknowledge that they would all do it if they could, and that exhortations to them to forbear would be considered as mummery, like the prohibition of miracles by the holy coat of Treves.

We endeavor to keep the run of all the currency schemes that find expression in the councils of the Farmers' Alliance or elsewhere. A new one has been brought forward by one Alfred B. Westrup, editor of an Alliance newspaper. He proposes to issue money on the security of movable property such as horses, cattle, wheat, pork, cotton, etc., and to do this without asking any favors of the Government. Mr. Westrup holds that, if you make your money *good*, it will go without any legal-tender laws to help it along. It is really wonderful that this idea has not occurred to the Alliance leaders before. It bears a suspicious resemblance to the Scotch banking system, and that fact will probably suffice to secure its rejection upon careful scrutiny by the Alliance committeemen. Good banking consists in the issue of money on the security of property that is actually circulating in the community between producer and consumer. The only restrictions that the Government can profitably or properly impose upon it are such as aim to secure the public against bad working of the system, against blundering and rascality in the administration of the affairs of the banks. As Mr. Westrup desires to have his new currency so good that it will not need any law of legal tender to sustain it, he will no doubt desire the best security for his circulating notes. Government bonds are the best security now; but since these are disappearing it will be necessary to find some substitute for them. The American Bankers' Association, we feel sure, will gladly avail themselves of any suggestions on this point that any Alliance man may offer. It is rather depressing to learn that Mr. Westrup's ideas were coldly received at a meeting of the Alliance held in Topeka on the evening of the 18th inst. The objection raised against it, says a special telegram from the Kansas capital, was "its non-recognition of the powers of the Government." By endorsing the National Bank Act as it stands, this defect would be remedied.

Col. W. W. Dudley, following closely in the footsteps of Messrs. Quay and Dorsey, is out for Blaine as the Republican candidate in 1892. "The people demand Blaine," he says; "they are enthusiastic for him," but "they do not warm up to Harrison in any such way." If Blaine is the candidate, Dudley does not think the campaign will be fought on the lines of 1884, because—

> "All that was brought up against Blaine then has been condoned. He has given the country an idea, as Secretary of State, of his diplomacy, ability, patriotism, and statesmanship. He is much the largest American intellectually to-day. He would make a splendid President. He would look well after the interests of the whole country. If it seemed to him that protection stood between the country and its best interests, he would not hesitate to attack it."

Mr. Blaine will hardly thank Dudley for his method of disposing of the charges of 1884. If they have been "condoned," then the truth of them has been admitted, and the verdict of the country, according to Dudley, is: "Guilty, but as you have given the country an idea, we won't say anything more about it." There can be no question that Quay, Dorsey, and Dudley are the right kind of leaders for a campaign of a candidate with this peculiar moral equipment.

In speculating upon the Presidential election of 1892, Republican newspapers throughout the country always set down New Hampshire as a sure Republican State. But "Bill" Chandler does not take this view. In his latest article under his signature in his Concord *Monitor*, the Senator frankly confesses that the prospect is dubious. He points out that last year the Republican candidate for Governor had only 93 more votes out of 86,228 than the Democratic. He declares that "Jones and Sinclair [the chief managers of the Democratic party] have at their back the rum power, the power of $100,000,000 invested in the Boston and Maine and Concord and Montreal Railroads, and unlimited corruption money. They have continuously in their pay over 200 of the most active Republicans in the State, beginning with the higher Republican lawyers and officials, and descending to the lowest town and ward politicians; while no Republican leaders or interests have in their like employment a single Democrat. Jones and Sinclair will control our nominations for Governor, Councillors, and members of the Legislature. They will select the Chairman of our State Committee, and will know all the plans, and the secrets, if there be any, of our canvass." Such being the outlook, Chandler asks himself, "Can the Republican party successfully encounter these odds in 1892?" and answers, "It is a question of the gravest doubt." As nobody understands New Hampshire politics better than this authority, it would seem that the State ought hereafter to be put in the "doubtful column."

A curious phase of political movements in this State at present is the openness with which the party bosses, Hill and Platt, go about the business of arranging the tickets in advance of the meeting of the conventions. It has for many years been the custom to arrange the tickets in this way, but heretofore there has been some secrecy preserved in the work. This year neither side makes much effort at concealment. Gov. Hill allowed it to be known months ago that he had selected his candidates for Governor, Lieutenant-Governor, and other offices, and that the work of the Convention would be entirely perfunctory, the delegates assembling merely to ratify the Governor's choice. Mr. Platt has been equally frank, and has been arranging the names on the Republican ticket with almost unrestricted publicity for several weeks past. He has, in fact, been testing the public taste in the matter by submitting to it several different combinations. Some of these have visible quantities of reform flavoring, others have imperceptible. The instructive feature of Mr. Platt's proceedings has been the general agreement that he was the absolute and controlling force in the matter, and was to decide upon the ticket which the Convention was finally to nominate. Considering that he is a private citizen, engaged in the express business, his autocratic power over his party is one of the most striking developments of modern politics.

Mr. David A. Wells has written a long and very thorough review of the wool tariff and its consequences for the *World*. Its value consists in grouping together all the facts that have been brought out since the McKinley Bill went into operation as a connected whole, showing how the new tariff, with its outrageous and perplexing regulations, has oppressed the manufacturers without the slightest help or benefit to the wool-grower. Among other resulting consequences of the duty on wool particularly mentioned, is the enormous increase in the importation and use of shoddy as a substitute for wool. This, however, is not a peculiar result of the McKinley Bill, but is common to all the tariffs we have had since 1867. Under the operation of the wool tariff of 1867 the importation of shoddy and waste rose from 512,000 pounds in 1870 to 8,662,000 in 1889, an increase of over 1,600 per cent. in nineteen years. But most of our shoddy is of domestic production. "According to the census of 1880," says Mr. Wells, "41 per cent. of the material that constituted the so-called woollen fabrics of the country was not wool." The effect of the substitution of shoddy and cotton in the manufacture of clothing upon the health of the people, Mr. Wells very properly considers highly deleterious in our changeable climate.

The McKinley tariff put a duty ranging from 350 to 1,400 per cent. on pearl buttons. The object of this imposition was not so much to promote the pearl-button industry here as to compel people to buy ivory, bone, and horn buttons, which are made here. In order that the latter should not be imported, the duty on those articles was doubled. It appears that the manufacturers of pearl buttons, for there were a few such before the McKinley Bill passed, imported a lot of contract laborers from Bohemia to work at the pauper wages of $4 per week. These wretched creatures, having been thrown out of employment at home by McKinley, thought that they might as well starve in America as starve there. So they accepted the offer made to them. But at this juncture the authorities of the Auburn Prison, being at their wits' end to find employment for the convicts, have put

them at work on pearl buttons, thus competing with the imported paupers. These facts were set forth in a recent number of the *Dry Goods Economist*, which said further:

"In the case of the reported importation of laborers under contract, it is to be hoped that, if the charge be sustained, the culprits will be heavily fined, whatever their standing, commercially or otherwise, may be, as it is of vital importance to the community that the laws relating to labor be enforced."

It is not unnatural for those who have been impressed with the beauty of the scenery of Vermont, and who saw the fine character of the people gathered last week at Bennington from the farms of that State, to wonder why its population shows no increase. There are many reasons for this, but perhaps one of the most potent is not sufficiently considered. It is the peculiarly inequitable system of taxation, which makes it practically impossible for men of wealth to make their homes in the State, unless they are willing to commit what the law regards as perjury. The burden of taxation is in itself light, but, owing to the practice of assessing real estate at perhaps not more than a third or a fourth of what it is worth, while personal property, especially if intangible, must be returned at its full value, together with the circumstance that personal property constitutes a comparatively small part of the wealth of the State, the rate of taxation is extremely high. In fact, a man whose wealth was invested in bonds bearing a low rate of interest would find that his income was practically confiscated. We have in mind the case of a gentleman who had made his home in the State from choice, and who had become much attached to it, but who was so unfortunate as to become possessed of a considerable fortune, all of which was invested otherwise than in real estate. As the rate of taxation in the place of his residence was 3 or 4 per cent., he found himself under the necessity either of paying four-fifths of his income in taxes, or of making an evasive return of his property, or of leaving the State. Very reluctantly he chose the latter alternative, and thus he was deprived of a pleasant home while the State was deprived of a good citizen and lost revenue instead of gaining it. If the people of Vermont would really like to see families of wealth and culture making homes for themselves in their beautiful State, they should revise their inhospitable and unjust code of taxation.

A case has recently gone from the Massachusetts courts to the Supreme Court of the United States that raises a curious question. The county and town of Nantucket cover the same territory, so that it is impossible to be an inhabitant of one without being at the same time an inhabitant of the other. In 1888 it was discovered that the town treasurer, Brown, had been stealing from the town by means of forged vouchers, and at a town meeting, which was very largely attended, it was voted to prosecute him. Accordingly, at the next session of the Superior Court for the County of Nantucket, a grand jury drawn by the Selectmen at a town meeting called for that purpose brought in an indictment for forgery against Brown. The trial jury was drawn in the same way. Thereupon the defendant claimed that both the grand and trial juries were incompetent because of bias and interest, and that the draft by the Selectmen was illegal because of their interest in the matter. The importance of these objections lies in the fact that the defendant could have been indicted only in the county of Nantucket, so that, if the objections were sustained, no other prosecution could have been had. The objections, however, were overruled, upon the ground that neither the jurors nor the Selectmen had sufficient interest in the result to make them incompetent. The defendant then pleaded to the indictment and was convicted, but upon the trial his counsel discovered that some, if not all, of the members of both juries had been present at the meeting at which it was voted to proceed against Brown, and he thereupon filed a plea of exception to the jurisdiction upon the ground that the members of both juries were incompetent because of their having prejudged the case, alleging, also, that, under the circumstances, an impartial jury could not be obtained in Nantucket, and claiming the protection of the Constitutions of the State and of the United States. The plea was overruled by the Massachusetts Supreme Court upon grounds so technical that it is possible that the decision may be reversed, and in that case Brown will escape. In most cases where two political organizations are conterminous, it is a city and not a town that coincides with a county, and there is no personal participation by the possible jurors in proceedings against offenders except in the case of members of the grand jury; and it has been the tendency, we believe, generally to hold that their interest is insufficient to disqualify them from finding indictments against those who have defrauded the county or municipality. It is, however, quite desirable that the constitutional question should receive a final decision.

The growing dissatisfaction in Germany with the sugar bounty laws has at last led to their practical repeal. A law of May 31, regulating the inspection of beet-grown sugar and its domestic taxation, provides for the gradual lessening and final discontinuance of the drawback and bounty heretofore paid to exporters of refined sugar. The bounty is to cease altogether at the end of five years. The bounty laws have undoubtedly extended the area of beet culture. The sugar-producers have also been benefited at the expense of the rest of the community, for while they were getting their bounty out of the public treasury, the English were getting all the cheap sugar. The authorities have at last grown tired of taxing Germans for the sake of lowering the price of sugar in England. The curious question remains, how long it will be before the other Continental countries that copied German sugar legislation will admit, as Germany now does, that it is all a delusion and a snare. The German precedent was freely cited by our own bounty advocates in the last Congress, who have nothing but contempt for the example of "abroad," except when it is a bad example and they want to follow it. Now that it fails them, they will doubtless disown all foreign models, and fall back on their favorite thesis that the United States are privileged to defy all the established canons of taxation and finance.

A noteworthy convention of farmers and landed proprietors was held in Naples in the middle of July, for the purpose of considering the depressed condition of Italian agriculture. The southern provinces are the ones particularly suffering, and it was from them that the majority of the delegates came. There was a good deal of foolish talk, of the sort furnished in abundance in gatherings of agriculturists in our own land, mostly in regard to the feasibility of a Government "agrarian credit" to furnish capital to the tillers of the soil. In the complaints on account of unremunerative prices for farm products there was, too, a failure to recognize the effect of natural causes in cheapening what the farmer has to sell. But there was a very clear and sound conviction on all hands that the one thing which was doing Italian agriculture to death was the Italian tariff. In fact, the statistics of Italian foreign trade, since the new tariff was put into force, are an unanswerable proof that the diminished demand for the oil and wine and silk which the Italian farmers have to sell, is directly due to the customs barriers raised against importations to pay for them. That the Convention was sure of this may be seen from the following resolution it passed: "The Congress shares the view expressed by the Society of Viticulturists at Rome, May 23, and petitions his Majesty's Government, in negotiating future commercial treaties, not to sacrifice the interests of agriculture to those of manufactures, and, above all, that a greater liberty and facility in the exportation of agricultural products be secured by *suitable reductions in our general tariff.*" Two things stamp this resolution as remarkable. It makes no mention of any concessions to be obtained from France, or elsewhere, in return for the reductions desired, but urges them absolutely and for their own sake. Furthermore, it makes no exception of the duties supposed to protect the farmer—those on grain and rice. But the delegates must have known that those duties would not be spared in a general cutting down, and therefore they practically say that they are ready to give up duties nominally in their own favor if only they can get rid of the taxes meant to stimulate manufacturing. These last are the intolerable burden which the Italian farmers have had to bear, and they have finally found it out.

POLITICS AND THE SILVER QUESTION.

PRESIDENT HARRISON'S Albany speech, in which he pledged himself to veto a free-coinage bill if one should be sent him, is evidently destined to produce a great effect in more than one direction. The first reflection of every reader was upon the assurance thus given that no free-coinage bill can become a law, for it is obvious that a two-thirds vote could not be obtained in the Senate for its passage over a Presidential veto. This is in itself a great gain for the country. Until Mr. Harrison spoke, there was room for doubt as to his action in case a free-coinage bill should reach him; and so long as this doubt remained, uncertainty as to the future must prevail throughout the business community. This uncertainty is now removed. Everybody knows that the silver craze can go no further at present, so far as legislation is concerned.

But the President's deliverance will, we think, accomplish more than this. It must inevitably do a great deal to arrest the silver craze itself. It is perfectly obvious that this craze has been largely the work of the politicians in both parties. Republican politicians in the West, and Democratic in the West and South, have been shouting for free coinage because they thought there was something to be made out of the issue for their respective parties. They do not care anything about the principle of free coinage. Their only concern about it is as an issue by which they can win votes.

Mr. Harrison's announcement that he will use the veto power, if he is given a chance, shows the Republican politicians in the West who have been demanding free coinage that they will simply dig their own graves if they keep up their shouting. Mr. Harrison is the head of the Republican party. He declares that he will veto a certain bill if it reaches him. The great majority of his party applaud this announcement of his purpose. The minority of the party can accomplish nothing practical in the way of legislation by continuing their agitation. Moreover, they cannot help their party in their own States, or their own standing in the party, by keeping up the cry for free coinage. They will simply array themselves against the overwhelming sentiment of their party, and will get nothing but abuse in return. In short, so far as free coinage in the Republican party is concerned, Mr. Harrison's deliverance shows that "there is nothing in it" for the party as a party, or for ambitious politicians as self-seekers; and that is all that was necessary to make them ready to drop it.

The effect of the speech will not be lost upon the Democrats. The situation for them is exceedingly simple: they cannot elect a President without carrying the State of New York; their only chance of carrying New York is on a sound-money platform. With a free-coinage plank in the Democratic platform, there would be no use in the party's making a canvass. The Republicans would be sure of the State, and so of the nation. The Albany *Argus*, which speaks with authority as a Democratic newspaper, said of this matter the other day:

"The question of the free coinage of silver in the current acceptation of the words is one that cannot be debated in New York State. It takes a difference of opinion to make a debate, and there is absolutely no difference of opinion here on the subject. One would find about as many advocates of the sub-Treasury scheme in New York State as of the independent free coinage of silver, and a corporal's guard could not be mustered for either. With the exception of one member, or at the utmost two members, New York's Democratic delegation in Congress has always been united against it. If there is a newspaper in this State consistently supporting the nominees of the Democracy which favors free coinage, we do not know its name or it has not ventured to advance its opinion. The reason for this unanimity of sentiment in the party lies on the surface. New York is the great commercial State of the Union, and anything which injures her trade strikes hard the members of the party, who make up the mass of the business men of the State and of the frugal workingmen and women whose savings would be threatened by currency fluctuations."

Mr. Harrison's Albany declaration has been endorsed not less heartily by Democratic newspapers like the Albany *Argus* and Brooklyn *Eagle* than by Republican journals. Such a spectacle will not go unheeded by the Democrats of the South, where the silver craze has raged most violently. The most earnest free-coinage Democrats in South Carolina or Alabama will see that to press the acceptance of their views in the National Convention would be simply to assure the defeat of their party. They would not hasten in the slightest the advent of free coinage, for they would only insure the election of a Republican President pledged to oppose it, while they would continue in power a party committed to the Force Bill policy. Southern Democrats, therefore, like Western Republicans, will soon perceive that "there is nothing in free coinage for them," and will be equally ready to drop it. A national convention does not meet for the purpose of adopting a platform which is certain to give the other party a victory, especially when the Convention has an issue at hand on which it can hope to carry the country. It is consequently only a question of time when Democrats throughout the country will accept the opinion expressed by the Brooklyn *Eagle* when it said, apropos of the Albany speech: "Assured beforehand that Gen. Harrison would return an unlimited-coinage bill without his approval, the only effect of the passage of it over his veto by the great Democratic majority in the House would be to make the question of a sound currency the leading issue of the Presidential campaign, and thus rob the Democracy of the winning card which they now hold in the tariff-reform issue."

"The President," says Mr. Bryce in his 'American Commonwealth,' "has a position of immense dignity, an unrivalled platform from which to impress his ideas (if he has any) upon the people." There could be no more striking illustration of the truth of this observation than is afforded by the speech of Mr. Harrison at Albany on Tuesday week. The President had a great opportunity, and he improved it. Good citizens throughout the country, without respect to party, cannot be too hearty in their recognition of the great public service which he has rendered.

REPUBLICAN TACTICS IN PENNSYLVANIA.

THERE seems to be no doubt that, but for the interference of Mr. Blaine's friends, the President would have suffered a most humiliating slight at the hands of the Pennsylvania Republican Convention last week. Senators Quay and Cameron had been at work openly for several weeks past preparing to administer this slight. They are dissatisfied for various reasons with the President, and are anxious to show him their power. Nobody believes that they are sincere in their professions of devotion to Mr. Blaine as a Presidential candidate, the universal opinion in Pennsylvania and elsewhere being that they are using him as the most convenient and effective club with which to make warfare on the President. They reasoned that if they could get a plank into the Republican platform of Pennsylvania declaring Mr. Blaine to be the choice of the Republicans of that State for the Presidency, it would be nothing more nor less than public announcement that the Republicans of the most powerful Republican State in the Union were not in favor of the President's renomination.

It mattered little to them whether Mr. Blaine would like to be made use of in this manner, or whether such use would be beneficial to his Presidential prospects. If in getting rid of Harrison they got rid of Blaine too, this pair of experienced political speculators could easily find some other candidate. But Mr. Blaine and his friends were not slow to see what the effect of a Presidential nomination of him at this time would be. They saw that it would inevitably force him to do one of two things —either decline absolutely to be a candidate, or retire from the Cabinet. As he was not willing to take either step now, his only course was to prevent the nomination. Thus it came about that the resolution which had been prepared and printed, eulogizing the "brilliant Administration," the "superb diplomacy," and the "magnificent achievements" of the State Department, and expressing the hope that the "Republican National Convention of 1892 may place in unanimous nomination for the Presidency—which nomination we feel assured will be followed by a triumphant election—the Honorable James G. Blaine of Pennsylvania and Maine," was altered in committee at the instance of Mr. Blaine's friends, and the hope above quoted was made to give way to a reaffirmation of the "loyalty and devotion of the Republicans of Pennsylvania to her most distinguished son, the Hon. James G. Blaine."

It must be said that Mr. Blaine has come out of the struggle with all the honors that were to be won in it. He will not be compelled to take any notice of this expression of loyalty and devotion, and at the same time he has the best of reasons for believing that if his friends had not interfered, the resolution in its original form would have been adopted. The President, on the other

hand, gets little comfort for himself. He has, to be sure, a resolution of approval, but so has Mr. Wanamaker; in neither case is it accompanied by anything resembling a Presidential nomination. Then, if the President reads the reports of the Convention's proceedings, or the comments of the Republican newspapers upon them, he will see that the sentiment of the Convention was overwhelmingly in favor of Mr. Blaine, and that no mention whatever is made of the existence of a sentiment in favor of Harrison's renomination. Even those journals which advocated the change in the Blaine resolution say it was done from motives of policy alone, there being no doubt whatever that Blaine is the first choice of Pennsylvania Republicans as the national candidate for 1892.

The disturbing question for Mr. Blaine and his friends is as to the purpose of Messrs. Quay and Cameron in taking Blaine up as their candidate now. That they meant harm to him in the resolution as first drawn seems to be conceded. It was designed to force his hand at a most inopportune moment. He has parried that move very skilfully, but he has not shaken their control of the Pennsylvania Machine. They are as certain now as they were before the Convention to control the delegation to the National Republican Convention, and any one who has followed the political careers of the two men will admit without discussion that they will use that control absolutely in their personal interest. The vote of the Pennsylvania delegation next year, as in the days of Cameron the elder, will be given to the candidate who will meet most fully the wants of Pennsylvania as represented by its political rulers. In other words, Quay and Cameron are moving for position next year, and a great many other "business Republicans" of the same type, including Elkins and Dorsey and our own Platt, are deeply immersed in the same occupation.

The one point in the situation which has been clear for some time, is, that many of these Republicans leaders are, for various reasons, doubtful about the wisdom of Harrison's renomination. They do not like him in the first place, and they have grave doubts about the possibility of his reëlection in the second place. At the same time they are not certain that they can do any better. They are not certain that Mr. Blaine will be either willing or able to run. Hence they are preparing now for emergencies, and are aiming to secure, first of all, a majority of the delegates in order to be in position to dictate the nomination when the time to make it arrives. Whether the President is to have it or not, they are determined that he shall depend upon them for his fate.

REVENUE UNDER THE NEW TARIFF.

The McKinley Bill was made law in the profoundest ignorance of what its effect upon the public revenue would be. Various solemn guesses were made by various Congressmen, it is true. Thus, Senator Allison, on September 2, 1890, put the reduction to be caused by the bill at $33,500,000, though three weeks later he had arrived at a revised estimate, namely, "forty to forty-five millions." When the Finance Committee reported the bill to the Senate, it stated that, according to the House schedules, a reduction of $71,064,774 was estimated, while, on the basis of the Committee's proposals, it would amount to $60,599,343. The nice calculation down to the very dollar was certainly edifying. However, at the very last moment before the new tariff was put to final vote, after the customary playing foot-ball with it in Conference Committee, Senator Aldrich was driven by Senator Gorman's nagging to give a last estimate. His figures were "forty-two to forty-three millions," though he included in that sum the reduction of $6,280,000 which it was expected to bring about in the internal revenue by the changes in the tobacco schedules. All this goes to show that Senator Carlisle was perfectly justified in beginning his final speech against the bill by saying: "It is not my purpose to attempt to state what the effect of this measure will be upon the public revenue, because it would be impossible to do so with any degree of accuracy." Thus the so-called "bill to reduce the revenues" was a leap into the dark.

But we now have ten months to look back upon, during which the law has been in actual operation, and are in a position to test prophecy by fact. The sums turned into the national Treasury from customs receipts in the ten months since last October amount to $168,755,985.38. For the corresponding months of the preceding fiscal year the collections were $195,416,296.36. Thus the apparent falling off is $26,660,310.98, or at the rate of $32,092,373.16 for twelve months. But two features of the McKinley Bill come in seriously to modify this showing—the sugar schedules and the tin-plate clauses. Sugar and molasses have been free only since April 1, and, so far as they are concerned, the full effect of the tariff has been visible during the past four months alone. Restricting the comparison to them, we find that the revenue derived from customs during that period, this year, was $54,224,031.33, while for the corresponding part of 1890 it was $82,551,083.22. Here, then, is a falling off of $28,327,051.89 in no more than four months, or at the rate of $84,981,155.64 a year. This would leave Senators Aldrich and Allison from forty to fifty millions under the mark.

But the tin-plate clause of the bill remains to be considered in its effects upon the national revenue. Going into effect no earlier than July 1 of this year, it leaves us with the customs returns of only a single month under the full operation of McKinleyism. In the first place, it is certain that an extra revenue has been derived from the extra importations made to anticipate the tax going into force July 1. A fair estimate of this would be not far from $3,000,000. This sum should then be added to the $84,981,155.64 given above. It may be objected that this deduction for tin plate will more than be made good when we resume importing under the higher rate. No true McKinleyite will make this objection, for he is bound to maintain that we are going to make our own tin plate. However, it looks very much as if we should have to continue importing, and we therefore will be perfectly fair, and leave the tin-plate revenue out of the account altogether for the present fiscal year, balancing the large stock on hand against the increased duties. In the following fiscal year (1892–3) probably the revenue from tin plate will be about $15,000,000, or twice what it was in 1889–90, which was a year of normal importation. This increase will, however, be more than offset by the bounties on home-grown sugar.

We do not say that the falling off of $85,000,000 a year which we thus obtain as the probable effect of the McKinley Bill on customs revenue is to be the absolute and final effect of that law. We simply say that it is the best estimate that can be made from four months of actual experience, and that such an estimate, faulty though it may prove to be, is worth more than blind guesses made beforehand. The future has too many uncertain elements, such as the possibility of increased imports at higher rates, to allow one to be dogmatical. But the basis of fact we have to go upon, narrow though it be, enables us to emphasize afresh the reckless and ignorant folly with which a bill of such tremendous though unknown effect upon the national income was enacted. Piling up appropriations to an unprecedented height, and then passing a tariff which will possibly cut off the revenue by $85,000,000, is the crowning proof of that "genius for legislation" which, we have been told, characterizes the Republican party.

THE SWISS CELEBRATION.

It seems a little strange that a people so fond as ours of celebrating the anniversaries of the beginnings of their institutions should have manifested so little interest in the recent celebration in Switzerland. This ancient republic has now represented the cause of freedom for 600 years, and, although not the direct source of our own institutions, has had a greater influence upon them than is generally recognized. During the period when despotism was most rampant, the Swiss gave shelter to the victims of political and religious persecution, often with much peril to themselves; and it is easy to trace the results in English and Scottish history of the sojourn of these reformers in Switzerland. Nor should it be forgotten that the primitive institutions of free government, from which the present institutions of the Teutonic races have been developed, are still flourishing among the Swiss mountains. As Mr. Freeman says, the Englishman passing through Altdorf on any first Sunday in May "may feel the thrill of looking, for the first time, face to face, upon freedom in its purest and most ancient form; for this is the land where the oldest institutions of our race still live in all their primeval freshness, in a country where an immemorial freedom puts to shame the boasted antiquity of kingly dynasties."

It is instructive to recall the words of the compact made in 1291, between the three forest cantons. They are substantially as follows:

"In the name of the Lord! Amen. It is for

the public honor and advantage that treaties relating to peace and security should be framed in a becoming manner. Be it known, therefore, to every one that the people of the valley of Uri, the members of the commune of the valley of Schwytz, and those of the commune of the lower valley of Unterwalden, in view of the troubles of the times, to the end that they may be able better to protect themselves and theirs, and maintain themselves in comfort, have bound themselves in good faith to render one another mutual assistance in succor, in counsel, and in goods, whether persons or things are involved, whether within or without the valleys, with all their power and with all their good will, against those, one and all, who offer any violence towards them or any one of them, who do them any wrong or injury either in person or goods: and each community promises the others to come to their assistance on every occasion so soon as necessary and at its own expense, to repel so soon as there is need the attacks of the evil-disposed, and to avenge injuries."

There follow provisions binding the confederates not to recognize any "judge," meaning probably an officer charged with the administration of justice by the German Empire, if he has bought his office or does not belong to the community, provisions for the settlement of disputes by arbitrators selected from the wisest, whose decisions are to be enforced by the confederates, and other clauses relating to the punishment of certain crimes. A few years later, in 1307, this agreement was confirmed by the oath of the three patriots who met, according to tradition, on the shores of the Vierwaldstättersee, near the stone converted some years since into a monument to Schiller, as the poet who had most worthily celebrated the deeds of William Tell. The famous victories over the Austrian Dukes at Morgarten and Sempach, and those over Charles the Bold at Granson and Morat, proved the power of the confederates, and canton after canton was admitted until, after many vicissitudes, the Union assumed its present form.

While there have been dark episodes in Swiss history, and while the constitutions of many of the cantons were until recently of a highly aristocratic character, the cause of human freedom has never lacked defenders in Switzerland. It was, however, in their enlightened recognition of the fact that freedom cannot maintain itself in small and disunited communities that the Swiss have taught the world their most valuable lesson. Because they would not consent to yield to one another, to relinquish their full independence, for the sake of the common defence against external foes, the Greek cities ended careers full of glorious promise to humanity, in misery and subjection. In the same way the Italian republics suffered the most terrible calamities rather than enter into any effective confederation, and finally sank under the yoke of tyrants more barbarous than those of Greece. But the rude mountaineers of Switzerland combined with their love of freedom a hard common sense that taught them that their little cantons would be conquered in detail by the powerful States with which they were surrounded, unless they abandoned their petty jealousies and made common cause against all aggressors; yet it was only gradually that the Federal Government acquired control of the army, and the tendency to centralization has been steadily held in check until recently, when the substantial unity of the country has led to a general recognition of the disadvantages attending too great diversity in cantonal legislation. It is not a centralization of administration, however, that exists, for the true governing body is the *Gemeinde*, or commune, just as the town is in New England.

The chief feature of the celebration which has just taken place was the performance of an historical play at Schwytz, much after the manner of the performance of the "Passion Play" at Ober-Ammergau, the situation of the theatre being one of the most picturesque in Switzerland. Three Helvetian families, in a semi-savage state, were represented as arriving in Schwytz 200 years before the Christian era, and from these families the hunters of Uri, the fishermen of the Lake of the Four Cantons, and the herdsmen of Schwytz trace their descent. Succeeding tableaux showed the signing of the League of 1291, the heroic deeds of Tell, the defeats of the Austrians and Burgundians, and other noted events. The costumes were intended to be historically appropriate, and the different scenes were relieved by instrumental music and popular choruses, while in the evening the whole country was illuminated. The final celebration took place upon the Rütli, where a scene from the second act of Schiller's "Wilhelm Tell" was performed by a choir of 750 male voices. Altogether, the celebration seems to have been worthy of the notable occasion and of the grand and beautiful surroundings, and to have aroused very lively interest throughout Europe, even the Austrian Minister being present.

OUR FEDERAL JUDICIAL ESTABLISHMENT.—II.

How many of the judges exercise jurisdiction in the places where they grew up professionally, does not appear except by inference. It is probable that most of them reached the bench in that ordinary way, though doubtless the war and the reconstruction troubles produced some aberration in this respect in the Southern States. But it is interesting to note that of the nine Supreme judges five are New England born or reared, two were born in New York, and two in the Southern States; but no man born in the West is now upon that bench, though Field, Brewer, and Brown are Western men in the sense that their professional training and experience were had in that section. Of the ten Circuit judges, one is a New England man, and upon the bench there; three were born in New York, two being upon the bench in that State, and one an emigrant to California; one each was born in Pennsylvania, Indiana, Maryland, and Tennessee, where, respectively, they grew up, so to speak, to the bench; one was born in Ohio, where he was trained professionally, and, settling after the war in Louisiana, was appointed to the bench there, succeeding another Ohio man similarly appointed to the Circuit bench in the South and then promoted to the Supreme bench, giving that State at the time three judges on that bench, and one, born in Virginia and trained professionally in Iowa, was, during the war, appointed by Lincoln to the District bench in Arkansas, and afterwards, and recently, to the Circuit bench from that State by President Harrison.

Of the sixty-four District judges, counting by the bare fact of birth, and following the conventional geographical divisions of the Union, there are twelve New England men, sixteen Middle State men, ten Western State men, twenty-five Southern State men, and one foreign-born. But, counting by professional training, and taking the two great political divisions which have, unfortunately, always existed, we have forty-five Northern and nineteen Southern men. In this enumeration, Bruce of Alabama, born in Scotland, but brought up in Iowa; Love of Iowa, born in Virginia, but brought up in Iowa; Deady of Oregon, born in Maryland; Woods of Indiana, born in Tenneseee; Ross of California, born in Virginia; Allen of Illinois, born in Tennessee, and Swayne of Florida, born in Delaware and brought up in Pennsylvania—all Northern men, in fact, by education and residence—are counted as such, although actually born in the Southern States; while Thayer of Missouri, born in New York, is, for the same reason, counted as a Southern man. Then we have the totals on this line of division—of the Supreme judges, seven Northern and two Southern men; of the Circuit judges, eight Northern and two Southern men; and of the District judges, forty-five Northern and nineteen Southern men, or a grand total of sixty Northern men and twenty-three Southern men in a total of eighty-three judges.

Of the Supreme judges, four Northern men exercise their Circuit jurisdiction exclusively in Northern States, and one Southern man exclusively in Southern States; one Northern man exclusively in Southern States, and one Southern man exclusively in Northern States; and two Northern men each partly in Northern and partly in Southern States.

Of the ten Circuit judges, six Northern men exercise their jurisdiction exclusively in Northern States; one Northern and one Southern man exclusively in Southern States; and one Northern and one Southern man each partly in Northern and partly in Southern States.

Of the District judges, there is no judge professionally trained in the Southern States exercising jurisdiction in any Northern State, except sometimes by special assignment in an emergency, though five of the judges of Northern districts were actually born in the South. But in the fifteen Southern States eight of the judges are Northern men by birth and professional training; and of all the thirty-four judges, Supreme, Circuit, and District, exercising the jurisdiction of the Circuit and District courts in those States, twelve are Northern men and twenty-two Southern men; while of the forty-two judges having the same jurisdiction in the Northern States, only two, Harlan and Jackson, are Southern men. The total result here is, that there are sixty Northern and only twenty-three Southern judges.

Counting the averages of population, the disparity between the North and South is still apparent. According to the population of the States by the census of 1890, of the whole eighty-three judges competent to hold the Circuit and District courts, the average gives a judge to every 744,442 people. The North should have a small fraction over fifty-three of them, say fifty-four, and the South a large fraction over twenty-nine of them. The North has, in fact, sixty and the South twenty-three, so that the South is six judges short in the present division. By a similar calculation the South is entitled to a small fraction over three of the nine Supreme judges, and has but two, the North having seven; likewise of the ten

Circuit judges there should be a large fraction over six for the North, say seven, and three for the South, while the latter has but two; and the South, by the average of population, should have twenty-three of the sixty-four District judges and the North forty-one; but the North has forty-five and the South only nineteen, so that the general result is that the South has one less of the Supreme judges, one less of the existing Circuit judges, and four less of the District judges, than her share according to the average of population.

This disparity of distribution is attributable, no doubt, to the war, but it is probably not the less distasteful to the Southern people, and perhaps accounts for much of the unpopularity of the Federal courts in that section, and the half-concealed unfriendliness to them that often exhibits itself in Congress. But it should also be noted that the South has, numerically, one more District judge than her share, albeit so many of them are Northern men. The share, according to population, of each is almost exactly forty-one and twenty-three of the existing list of sixty-four; the North has forty and the South twenty-four of them, which is, so far as mere numbers go, a remarkably even balancing of the service, though the disparity is so great in the other respects mentioned.

Of the nineteen Circuit judges that we shall have when the President appoints the new nine, the North, according to population, should have a small fraction over twelve, say thirteen; and the South nearly seven, say six. Of the ten Circuit judges now existing, the North has eight by professional training and the South only two. To equalize them, the North should have, of the new nine, five, and the South four, or one for each of the Circuits to which the Southern States are attached, except Delaware, which has heretofore been included in this analysis among the Southern States; or, again so including that State, one each for four of the five Circuits having Southern States, which would then give the North thirteen of the nineteen Circuit judges and the South six. This would also be, probably, a fair division on any other basis than that of population; and when it is considered that the North has so much advantage among the Supreme judges, who are likewise members of the new Courts of Appeal along with these Circuit judges, it would seem as if the mitigation of the existing inequality between the sections should wisely be regarded by the President as worthy of his attention.

Another interesting feature of the judicial service as exhibited by the Register of the Department of Justice, particularly since the President has shown a disposition to promote judges where it can be done consistently with other considerations, is the length of the service of the judges, as shown by the dates of their commissions. The facts as to the Supreme judges are already quite well known, but as to the others most people are perhaps not so well informed. The oldest in point of service of the Supreme judges is Justice Field, appointed by Lincoln in 1863, but, as will be presently seen, there are five other judges older than he in commission. Justice Bradley comes next, appointed by Grant in 1870; then Justice Harlan, appointed by Hayes in 1877; then the two appointees of Arthur, viz., Justices Gray and Blatchford, in 1881 and 1882 respectively; after these, Justice Lamar and Chief-Justice Fuller, appointed by Cleveland in 1888; and, lastly, Justices Brewer and Brown, appointed by Harrison in 1889 and 1890 respectively.

Here it may be noted that, notwithstanding the apparently long tenure of the Federal judges, as to whom Mr. Jefferson's often quoted taunt that "Vacancies by death are few, by resignation, none," is quite frequently remembered, only two of the Supreme judges antedate Hayes's Administration. Of all the judges there are only twenty-two (but little more than one-fourth of them) appointed prior to the Hayes Administration; in other words, three-fourths of them have been appointed within fifteen years. The data are not at hand for ascertaining the average length of service of the Federal judges, but it is doubtful if, taking them all together since the beginning, this average would be much higher than that of the State judges in those States having long terms of years as a tenure, and where the habit is to reëlect the judges once or twice until they die or are too old to serve. This would be an interesting comparison if some one had the patience to make it for a century of time in all the State and Federal courts. The more intelligent advocates of an elective judiciary agree that the terms should be long, and a reëlection certain if the judge be a satisfactory one in all respects. This would give to such a system all the advantage that comes from long experience, and, in the average, to the judge about as long a tenure in fact as he would probably have in the other. There are other advantages and disadvantages, to be sure, with either system; but sometimes the fact is overlooked that an elective Federal judiciary would quite destroy the reason of there being any Federal judiciary at all. The local influence in favor of a resident against a non-resident would be paramount in the election of the judge, and he might be subordinate to it; wherefore, since the non-resident may not vote for the judge, he can only exercise a choice about his selection through the common agent of both, the President. This consideration probably makes the selection of Federal judges by some common agency a necessity.

The Circuit judges were unknown prior to 1870, and of the original appointees by Grant in 1870, only Sawyer of California and Bond of Maryland remain; then comes Pardee of Louisiana, appointed by Garfield in 1881, who, with Boarman, one of the District judges in Louisiana, alone represents that Administration among all these judges; next are Wallace of New York, 1882, Colt of Rhode Island and Gresham of Indiana, both, in 1884, appointed by Arthur; next are Jackson of Tennessee, 1886, and Lacombe of New York, 1887, appointed by Cleveland; and, lastly, Caldwell of Arkansas and Acheson of Pennsylvania, 1891, appointed by Harrison, who has already, through factitious circumstances, appointed more judges than any of the Presidents except, possibly, Washington at the original organization, and Grant at the reconstruction period of the Union. He has within two years appointed two Supreme, two Circuit, and fifteen District judges—nineteen in all; and will probably exceed any one of the Presidents before his term expires, since he has a newly made set of Circuit judges to appoint, as Grant had, and the new States have nearly set off the reconstruction judges appointed by Grant.

The roster of the District Judges is as follows: Hoffman, California, 1851, by Fillmore; Love, Iowa, 1856, by Pierce*; Nelson, Minnesota, 1858, Deady, Oregon, 1859, by Buchanan; Jackson, West Virginia, 1861, Benedict, New York, 1865, by Lincoln; Hill, Mississippi, 1866, Dundy, Nebraska, 1868, by Johnson; Blodgett, Illinois, 1870, Locke, Florida, 1872, Dick, North Carolina, 1872, Shipman, Connecticut, 1873, Hughes, Virginia, 1874, Foster, Kansas, 1874, Bruce, Alabama, 1875, Parker, Arkansas, 1875, Billings, Louisiana, 1876, Hallet, Colorado, 1887, by Grant; Wheeler, Vermont, 1877, Bunn, Wisconsin, 1877, Hammond, Tennessee, 1878, Nelson, Massachusetts, 1879, Butler, Pennsylvania, 1879, McCormick, Texas, 1879, Morris, Maryland, 1879, Barr, Kentucky, 1880, Key, Tennessee, 1880, by Hayes; Boarman, Louisiana, 1881, by Garfield; Brown, New York, 1881, Webb, Maine, 1882, Seymour, North Carolina, 1882, Coxe, New York, 1882, Shires, Iowa, 1882, Paul, Virginia, 1883, Sage, Ohio, 1884, Woods, Indiana, 1884, Wales, Delaware, 1884, Carpenter, Rhode Island, 1884, Speer, Georgia, 1885, by Arthur; Severens, Michigan, 1886, Newman, Georgia, 1886, Simonton, South Carolina, 1886, Toulmin, Alabama, 1887, Ross, California, 1887, Thayer, Missouri, 1887, Allen, Illinois, 1888, Maxey, Texas, 1888, Phillips, Missouri, 1888, Jenkins, Wisconsin, 1888, by Cleveland; and Edgerton, South Dakota, 1889, Ricks, Ohio, 1890, Green, New Jersey, 1890, Knowles, Montana, 1890, Thomas, North Dakota, 1890, Hanford, Washington, 1890, Swayne, Florida, 1890, Bryant, Texas, 1890, Hawley, Nevada, 1890, Williams, Arkansas, 1890, Riner, Wyoming, 1890, Swan, Michigan, 1891, Reed, Pennsylvania, 1891, Aldrich, New Hampshire, 1891, and Beatty, Idaho, 1891, by Harrison. Summing up, we reckon: Fillmore one, Pierce one, Buchanan two, Lincoln two, Johnson two, Grant ten, Hayes nine, Garfield one, Arthur eleven, Cleveland ten, and Harrison fifteen. Leaving out the new States, Harrison has appointed nine of these judges within the first half of his term, which, at the same rate during the next half, would give about one-third of the whole body within a Presidential term; Cleveland, however, appointed only ten during his whole term, which, making allowance for newly created districts and judges, would bring his list very far below this estimate for Harrison, and below any average for all the Presidents suggested by existing lists. Vacancies by resignation or retirement are few, though in neither case is Mr. Jefferson's statement that "none resign" true; but, with Harrison, vacancies in the body of District judges have been increased by his policy of promotion, there being three of these; which, again leaving out the new States, somewhat accounts for his already larger list than the others.

While the facts might be accurately ascertained by a sufficient examination of other records, it may be here approximately estimated from the statistics obtainable in the Register, that at least one-fourth of the judges are changed during every Presidential term, as an average for the whole century and a little more, during the existence of the system. This would give, approximately, an average tenure of sixteen years, which may be little, if any, more than the tenure of reëlected judges in the Supreme courts of the States having the best elective systems; though, of course, the actual tenure of State judges of original cognizance would probably be found to be far less upon like averages, for it is with those judges, subject to narrower local conditions, that the elective system produces the most rapid changes.

There is no means of finding the averages of ages of the judges (though there should be) from the Register, even approximately; but since eight of the district judges (one-eighth of the whole number) were appointed prior to 1870, and these go back to Fillmore in 1851, in

*The deaths of Judges Hoffman and Love have been very recently announced.

one case, and since it is known that, until quite recently, elderly men were preferred for the bench, this average must be quite large, and, as a mere guess, from general appearances, would probably reach the age of sixty, or be very near that figure. The newspapers report one of these judges, Hill of Mississippi, who has just retired at the age of eighty, after twenty-five years of service, to be "hale and hearty," and there are six judges older in commission than he. The Grant judges must be mostly past sixty, taking forty as an average of the age of going on the bench—and it is perhaps short of the exact average some years—and many appointed since Grant must be likewise past sixty; so that that age is probably below, rather than above, the exact average.

Arranged more interestingly by circuits, and in the order of their commissions, this body of District judges presents the following result: *First Circuit*—Nelson, Massachusetts, 1879; Webb, Maine, 1882; Carpenter, Rhode Island, 1884; Aldrich, New Hampshire, 1891. *Second Circuit*—Benedict, New York, 1865; Shipman, Connecticut, 1873; Wheeler, Vermont, 1877; Brown, New York, 1881; Coxe, New York, 1882. *Third Circuit*—Butler, Pennsylvania, 1879; Wales, Delaware, 1884; Green, New Jersey, 1890; Reed, Pennsylvania, 1891. *Fourth Circuit*—Jackson, West Virginia, 1861; Dick, North Carolina, 1872; Hughes, Virginia, 1874; Morris, Maryland, 1879; Seymour, North Carolina, 1882; Paul, Virginia, 1883; Simonton, South Carolina, 1886. *Fifth Circuit*—Hill, Mississippi, 1866; Locke, Florida, 1872; Bruce, Alabama, 1875; Billings, Louisiana, 1876; McCormick, Texas, 1879; Boarman, Louisiana, 1881; Speer, Georgia, 1885; Newman, Georgia, 1886; Toulmin, Alabama, 1887; Maxey, Texas, 1888; Swayne, Florida, 1890; Bryant, Texas, 1890. *Sixth Circuit*—Hammond, Tennessee, 1878; Barr, Kentucky, 1880; Key, Tennessee, 1880; Sage, Ohio, 1884; Severens, Michigan, 1886; Ricks, Ohio, 1890; Swan, Michigan, 1891. *Seventh Circuit*—Blodgett, Illinois, 1870; Bunn, Wisconsin, 1877; Woods, Indiana, 1884; Allen, Illinois, 1888; Jenkins, Wisconsin, 1888. *Eighth Circuit*—Love, Iowa, 1856; Nelson, Minnesota, 1858; Dundy, Nebraska, 1868; Foster, Kansas, 1874; Parker, Arkansas, 1875; Hallett, Colorado, 1877; Shiras, Iowa, 1882; Thayer, Missouri, 1887; Phillips, Missouri, 1888; Edgerton, South Dakota, 1889; Thomas, North Dakota, 1890; Williams, Arkansas, 1890; Riner, Wyoming, 1890. *Ninth Circuit*—Hoffman, California, 1851; Deady, Oregon, 1859; Ross, California, 1887; Knowles, Montana, 1890; Hanford, Washington, 1890; Hawley, Nevada, 1890; Beatty, Idaho, 1891.

There is much other useful information in the Register concerning the Department of Justice. It gives the names, with other items of interest, of the Territorial judges, judges of the courts of the District of Columbia, the notaries public there, the other officials of the District connected with that Department, the Circuit Court Commissioners, the clerks and marshals of the courts, and like ready-reference knowledge that is often needed. But we have confined this notice of the publication to the Federal judicial establishment as it relates to the States, because of its importance to the country generally.

THE GREAT WAGNER FETISH.

BAYREUTH, August, 1891.

GREATER than ever this summer have been the crowds flocking to Bayreuth. The town is filled to overflowing, the hotels are charging what they please, every citizen with a room to spare has turned it to profit by taking in a lodger. The biggest bank in the place has become a ticket office, the druggists are selling Parsifal perfumery—the stationers, Wagner souvenirs—and all shopkeepers advertise the Holy Grail, in *Purpurglas und Metalfuss*, at the lowest possible price. Even the Bayreuth barmaid has figured as Kundry. In a word, as the most devout Wagnerites are admitting, the memory of the great man has been converted into a commercial commodity worked for all it is worth by the Fenstal Bank and the Sonne Hotel; the opera-house built by the Wagner societies of Europe has been made a rendezvous for Cook's tourists; and Bayreuth is already as exploited as Ober-Ammergau and Nizhni-Novgorod.

That it is not the music alone which attracts the crowd, goes without saying. So few cared for it before the opera-house was built that there was trouble enough, as is well known, to carry through the enterprise. Those few—musicians themselves, or honest, intelligent lovers of music—are to be found in Bayreuth, but they are in the minority. The large numbers who more than willingly pay their twenty marks, or five dollars, for one performance, understand as little about music as the tourists who flock to the national galleries of Europe understand about pictures. To discuss the relative merits of Wagner would be quite too late in the day, if these had anything to do with the phenomenal success of the annual Bayreuth festival. But even the initiated attribute this success chiefly to the perfect manner in which every performance as a whole is conducted; and praise of the artistic stage management has been repeated until it is accepted as an article of faith in the Wagner creed. I needed no proof of the musical greatness of the Wagner opera when I came to Bayreuth: it was, therefore, in the artistic presentation that my interest was most keenly aroused. The stage manager who is also an artist is not to be found every day.

Of course, one is specially anxious to see "Parsifal," as it cannot be performed outside of Bayreuth, and it was at "Parsifal" I received my first impressions. With the theatre itself no fault can be found. As there was not much money to be spent on it, the exterior has been sacrificed to the interior—which is as it should be, though the fact is to be regretted; for the building stands in a commanding position in the valley, of which it might be made the most striking feature. But when you first see it from the near hills, as I did coming into Bayreuth by the highroad from the Bohemian frontier, it looks like a big, bare, ugly barn backing up against the beautiful great greenwood behind it. What a glorious building an artistic architect with plenty of money to spend could have made! It does not improve in appearance when one comes closer to it. But the interior more nearly approaches perfection than any theatre I know of. The entrances and exits are most admirably arranged, and there is not a seat from which the stage cannot be seen. To be sure, from the gallery you have not such a good view as from below, and if you happen to be sitting there, you feel very doubtful as to the excellence of the plan of charging the same price all over the house. When Wagner was alive and in Bayreuth, and when the performance brought together members of Wagner societies from the world over, all in the first freshness of their enthusiasm, it was another matter. But now that the festival has degenerated into a commercial enterprise, principally for the benefit of the Fenstal Bank and the Sonne Hotel, I am irreverent enough to think that the scale of charges adopted by ordinary theatres would answer as well. Probably, general interest might grow less with the price; too many of the goods of this world are prized according to their cost.

The edifying hush that suddenly falls upon the audience, together with the beauty of the overture, heightens one's expectations. It is consequently something of a disappointment, when the curtain goes up on the first act of "Parsifal," to see a very commonplace woodland scene, neither better nor worse than that produced in the average theatre. My first thought was that Mr. Irving might give them a tip or two at Bayreuth. In this wood, with its decided attempt at realism, *Gurnemanz* and the knights and squires, posing in stained-glass attitudes, and grouping themselves into primitive compositions after Pinturicchio or Hans Memling, seemed as out of keeping as Claude Lantier's naked women rising from the Seine opposite Notre Dame. For the scenery is realistic according to the modern standard of realism, and yet the performers, one and all, are as stiff and stagy and unreal as the typical tenor of the opera of the past. There is scarcely a gesture of Grengg as *Gurnemanz*, not a movement of Van Dyck as *Parsifal*, not a pose of Reichmann as *Amfortas*, that is not conventional and academic to a fault. Materna as *Kundry*, lying on a palpably painted rubber air-bag which does duty for a mound, is no more natural or real. The flight on a wire across the scene of the swan, stiff and without a throe in its death agony, is simply funny; and its disappearance behind a bush, and the immediate entry of the knights with a stuffed bird, its neck twisted out of shape, savors too much of old stage tricks. Nor is there the least impressiveness or dramatic force in the famous walk of *Parsifal* and *Gurnemanz* through the woods. The renowned gradual shifting of the scenery, accomplished by jerks, is no better than it might be at a Sunday-school panorama, and Van Dyck and Grengg hardly increase the intended allusion by walking when the scenery stands still and standing still when it moves. But even they evidently appreciate their ridiculous position, and speedily vanish in the wings.

All this may sound like hypercriticism, but the Wagnerites have so loudly and so often insisted upon the artistic as well as musical perfection of the Wagner opera that they have led us to expect a high standard. It would be absurd to pretend that the opera depended upon the scenery for its greatness; all who have heard Mr. Theodore Thomas's interpretation of Wagner know better. It would be as sensible to run down the acting at the Théâtre-Français because the stage setting is so poor. But at the Comédie-Française no pretension to artistic or pictorial effect is made. When there is this pretension, then we look at a stage in an entirely different manner. Since Mr. Irving has shown how beautiful and artistic stage pictures can be, we must either have the thing well done or not done at all. Unfortunately, at Bayreuth there is an ambitious attempt which too often falls hopelessly short of our modern ideals.

It is even worse with the other scenes. At the Lyceum we have seen elaborate architecture perfectly and adequately rendered. In "Parsifal" the hall of the Holy Grail is but an impossible architectural hybrid, a species of Venetian St. Mark's, a Moorish scheme of decoration, while the perspective is so out that when the Knights of the Holy Grail come marching in they are taller than the distant

columns. One wishes almost that the background had been left as entirely to one's imagination as the scenery in Bottom's play, for the members of the chorus at Bayreuth have been marvellously well trained, and throughout the two hall scenes the solemnity and earnestness with which the services are conducted are as fine and dramatic as anything I have ever seen in any theatre. But even here there is much in the way of grouping and posing that an Irving might have improved; and in the first scene Van Dyck, in his desire not to detract from the central interest, stands so motionless that one begins nervously to watch him to see how long he can remain without moving hand or foot. It must be noted, too, that even the best effects are ruined by the electric light, which is thrown about on the stage with as much artistic feeling as there is in the regulation of a search-light in a man-of-war. The illumination of the Grail is really not up to the level of Niblo's or Drury Lane. Indeed, throughout, the lighting of the stage is as ineffective as that of the house is satisfactory. In the second act, where *Klingsor* summons *Kundry*, the blue light never once hits the smoke upon which it is intended to fall.

The palm for inartistic arrangement, however, must be given to the magic garden in the second act. Such gaudy coloring, such hideous crudeness, such artless composition, would hardly be expected outside of a Surreyside pantomime. It may be necessary that the flowers should be colossal in size, in order that the relations of the flower-girls to them may be duly observed. But the scene when *Parsifal* appears suggests nothing so much as the straying of a Gulliver into a Brobdingnagian garden; and, even if the flowers must be of such gigantic proportions, that is no reason why in color and form they should outrage every law of beauty. The height of ugliness is reached when Frau Materna, in a brilliant yellow satin gown, is shoved in on a wheeled couch, the flower beds having to be hauled up to the flies to make room for her, and one more inharmonious note is added to an already crude color scheme. Personalties are to be avoided in this personal age, and I shall content myself by saying that, in the scene which follows, if *Parsifal* and *Kundry* could be as effectually concealed from the audience as the orchestra is, the power of the music would gain rather than lose. Unquestionably, as an artistic spectacle, "Parsifal" does not deserve its present fame, though every Wagnerite will assure you that it far excels "Tannhäuser" or "Tristan," either of which can be as well seen in Dresden, London, or New York.

But what matter? To go to Bayreuth has been made the correct thing, and the public flock thither like so many sheep, though they could not themselves say whether the music is fine or the stage management artistic. Of course there are the few who really and genuinely appreciate the music; but to one-half of the rest of the audience the opera is a sacred rite at which they assist, as the Catholic assists at the sacrifice of the Mass, without a question, without a doubt, without a murmur; they are as much in earnest as the worshipper of Ibsen, or of Browning, or of Burne-Jones. To the other half it is a freak of fashion which it would not do for them to ignore, and they sit through the performance as conscientiously as they wear (if they are women) high sleeves and small bonnets, (if they are men) low-cut vests and linen shirts. They may be bored to death, but it is their duty, just as it is to see the "Passion Play" at Ober-Ammergau, or the Sistine Madonna at Dresden. And, after all, there is breathing-space in the three-quarters of an hour intervals, when the run on the two near restaurants is like that of hungry travellers at a railway station, the scrimmage only ceasing when the trumpeters, led by a man in a seedy top hat with an umbrella under his left arm, sound the summons to return to the holy place. But whether fashion or faith brings them to Bayreuth, all alike know beforehand exactly what will be their thoughts, their impressions, their emotions, and can tell you exactly what to admire, what to praise, what to feel; just as the American girls I saw the other day in the Munich Pinakothek were prepared by Baedeker to be "maddened" by the Murillos, though they had not a glance to spare for the Velasquez portraits in the same room.

Truly, this is an age of blither, and I am not sure that, of all, the most offensive is not the Wagner blither. That the Bayreuth performances have many good qualities, it would be senseless to deny; that Wagner cannot be as adequately rendered elsewhere, it would be equally foolish to pretend. That some of his best interpreters are to be heard at Bayreuth is true; but that their singing there without wage adds to their merit, when nowhere could they find a better advertisement or be more royally fêted, is but the sentimental fancy of a fashionably sentimental public. Of all the Bayreuth fallacies, however, none is greater than the belief that at the Wagner Theatre the problem of artistic stage management has been most successfully solved. N. N.

ANCIENT ALPINE GLACIERS.

LYONS, France, August 5, 1891.

EXTENSIVE as were the ice-fields of Europe during the glacial period, there was a wide belt untouched by glaciers between the Alps and the German Ocean. The Scandinavian glaciers barely reached the delta of the Rhine at Arnhem, in Holland, where there is a well-marked terminal moraine, behind which, to the Zuyder Zee, there is an uneven sandy accumulation much like many portions of southeastern Massachusetts, and betraying its northern and glacial origin by the frequent Scandinavian boulders which it bears.

Ascending the Rhine, I was shown by Prof. Schumacher of Carlsruhe finely glaciated boulders from the Black Forest some distance to the east of Freiburg, proving beyond dispute that during the glacial period these low mountains were a separate centre of glacial dispersion, though the glaciers did not extend more than half way down to the Rhine valley.

The ancient Alpine glaciers reached the Rhine at Schaffhausen, and evidently obstructed its drainage for some distance below, towards Basle, causing Lake Constance to rise much above its present level and to extend to the southern foot-hills of the Black Forest. The indications of this are readily seen, even from the railroad train, some time before reaching Schaffhausen, in coming down from the pass which leads to the head-waters of the Danube.

The whole valley of Switzerland between the Alps and the Jura Mountains is covered with irregular glacial deposits, which betray their Alpine origin both by their relation to the various valleys leading to the living glaciers of the high Alps, and by the characteristic boulders derived from the centres to which the valleys lead. On the upper part of Lake Constance, for example, the boulders are derived from the mountains about the head-waters of the Rhine and its tributaries, and it was long ago observed that they always keep upon the same side of the valley from which they were derived, as would be the case with such objects transported upon glaciers rather than on floating ice. The same thing has been noted also in the distribution of boulders brought down from the high Alps through the valley of the Rhone.

Upon the south side of the Alps the glaciated area is not as extensive as upon the northern side, but the moraines are in most cases more distinct and interesting. To the north the ice movement was obstructed and diverted by the Jura Mountains, which interferes somewhat with the simplicity of the problem of tracing out the distribution of morainic material. But in Italy there was nothing to interfere with the motion, and the mighty glacial currents filled all the narrow valleys leading into Piedmont and Lombardy, and deployed out upon the plains as far as their momentum would carry them. All the Italian lakes were channels of glacial movement, and all owe their origin to dams produced by the terminal moraines which were piled up in front of them.

The largest of the morainic accumulations in Italy is near Ivrea, at the mouth of the Dora Baltea, the valley which carried off the surplus ice from the southern flanks both of Mount Blanc and of Monte Rosa. The terminal moraine across this valley is really gigantic in its proportions. But travellers are most likely to see and be interested in the remarkable series of moraines which surround the southern end of Lake Garda in the vicinity of Verona. This series consists of three or four semicircular lines of drift hills, beginning near the end of the lake and extending with ever-widening enclosures until the radius of the largest is seven or eight miles in length. The railroad from Brescia to Verona intersects the outer moraine, on the west, at Lonato, and on the east at Somma Campagna.

From a military point of view, the southern end of this lake has been of great strategic importance, and Peschiera is now a strongly fortified town. But, long before the dawn of history, a natural line of defence had been thrown up by the ice of the glacial period in the semicircular moraines which I have just mentioned. In the campaign of 1859, when Louis Napoleon and Victor Emmanuel joined hands to expel the Austrians from Italy, it may truly be said that the ancient glaciers fought, but fought in vain, for the Austrians. The Austrian Army under Gen. Benedek were in possession of these natural fortifications referred to, and made good use of them. The centre of Benedek's army was at Solferino, at the southern border of the outer moraine. To the right, his troops stretched around to the end of the lake, sheltered behind the low earthworks which the ancient glaciers had so conveniently provided. To the left, the line had similar protection. The French and Italians were compelled to conduct their movements on exterior lines on the open, level plain. The Austrian General failed, however, to mass his troops sufficiently at the centre, and the day at Solferino was fatal to his cause. But it meant United Italy, and very properly the low summit of one of the moraine hills near the place occupied by the Austrian headquarters is now crowned with a noble monument to celebrate the victory and the great aspirations to which it gave free scope.

Westward from the Alps the ancient glaciers extended into the valley of the Rhone as far as Lyons, leaving a characteristic boulder seven or eight feet in diameter upon the hill upon which the upper part of the city is built. I was glad to see that it had been properly ap-

preciated by the city authorities and duly labelled by them. The accumulations of gravel in the vicinity of Lyons, corresponding to the terraces so characteristic of the streams similarly situated in America, also speak with unmistakable significance of the former reign of ice. In studying these grounds, I think I have made a discovery of much importance with reference to the origin of Lake Geneva.

As is well known, there has been a long controversy among geologists over the formation of the Swiss lakes, as over that of the fjords of Norway. One class maintains that they are mainly the product of ice erosion; the other, that they are due to water erosion. The discovery respecting Lake Geneva is that probably it is largely the result of a glacial dam like the lakes of Italy. Even the transient tourist can hardly fail to have his attention attracted by the extensive gravel plains a hundred feet or more above the water level surrounding the west end of the lake, and extending several miles to the Jura Mountains on the west, and indefinitely southwest. At Fort l'Ecluse, the Rhone is seen to cut through the limestone cliffs of the Jura in a narrow gorge unlike that occupied by streams which have had an indefinite period of existence. All this points to what we are so familiar with in America, namely, a buried channel somewhere, which has, in geologically recent times, forced the current into its present course. On reaching Seyssel, the problem seems to be solved. A straight line through a wide opening of the mountain leads from here to Geneva, and is occupied by glacial deposits. Here there is ample room for a buried channel, which, in preglacial times, might have lowered the level of the lake several hundred feet. I am confident that further investigations will confirm this hypothesis. While this may not wholly remove the ground of contention between the extreme advocates of glacial erosion and water erosion, it certainly reduces the terms of the problem to quite moderate dimensions, and leaves only a small portion of the lower depths of the lake to be accounted for.

These studies also strongly confirm the conclusions derived from the glacial phenomena of America—namely, that the recession of the glaciers of the great Ice Age was both paroxysmal and rapid. There were certain long periods of rest in the retreat, when vast lines of terminal moraines were piled up at the ice front. Then there were periods of rapid retreat, when the front did not remain stationary long enough for the formation of moraines. Certainly, during recent decades, there has been a marked recession in many of the Alpine glaciers. The Mer-de-Glace at Chamouni has withdrawn a third of a mile or more from its large terminal moraine, and its whole volume has shrunk to such an extent as to leave its old lateral moraines far up on the sides of the valley. The same condition of things is noticeable in the Bossons, and in the Fiesch glacier, as well as in the Talèfre, one of the upper tributaries of the Mer-de-Glace. According to a rough estimate made on the spot, from 1,000 to 2,000 years must have been required for the accumulation of the moraines about the front of the Mer-de-Glace and its tributaries, implying as long a period of stable conditions. But the period of present recession is so short that trees have hardly begun to cover the old moraines left behind in the retreat. The moraine extending across the valley two miles below the Argentière glacier, and just above the end of the Mer-de-Glace, is, however, densely covered with large trees. The valley of the Arve from Chamouni to Geneva contains no notable terminal moraines, a fact which indicates that when the ice began to melt back from the main valley of Switzerland, it proceeded in a pretty rapid and regular manner until reaching nearly its present limits, where it has remained for a long period.

When looking at the ruins of the noble Roman aqueduct which brought water from the hills twenty miles away to the fortified position on the eminence just west of Lyons, I was deeply impressed with the shortness of the historical period as compared with that separating us from the main events of the great Ice Age. There were these crumbling arches of substantial masonry reaching back in time nearly 2,000 years. But when they were built, the topography of the country was substantially what it is now. The valleys crossed have not been materially enlarged, and plants and animals have not suffered material change since the patient Romans constructed these cumbrous water channels! How much farther, then, must we go backwards in time to find palæolithic man struggling on the banks of these streams, both with the floods from the melting ice fields of Switzerland and with the strange array of fierce animals which soon after became extinct in Europe! Even upon the summit of the St. Bernard Pass, recent excavations have brought to light the foundations of an ancient temple and votive offerings which date back to 800 years before Christ, showing that thus early these mountain passes were as free from snow and ice as now.

The attentive observer cannot fail to see that all Switzerland is living on soil prepared and distributed during the great Ice Age. This goes without saying in reference to the great terminal deposits of the main valley, and to close inspection is equally evident in the smaller valleys of the high Alps. Geologically speaking, the Alps are recent in their origin—the principal part of the elevation having taken place since the Tertiary Age. There can be little reasonable doubt that the chief agency in eroding the minor valleys was water, acting continuously during the long period of time required for the mountains to attain their present elevation. Still, it is very clear that, with such an amount of elevation, the gradient is so steep that continuous and unobstructed water-action would have washed down all the soil from the steep sides of the valleys, and left them bare and rugged in the extreme. The obstructive and modifying agency required was furnished by the glaciers of the great Ice Age. These gave considerable lateral enlargement to the valleys, leaving them in U-shaped form, and spread over them with a good deal of uniformity the pulverized material of the ground moraine, while at frequent intervals in the retreat there was sufficient force to occasion an incipient terminal moraine, still further to obstruct the wash of the soil from the steep mountainsides. The V-shaped channels which the present streams are wearing in the bottom of the broader troughs modified by glacial action, furnish an important clue to an estimate of the period which has elapsed since the reign of ice in the region.

If only a small part of time and attention now in great part so aimlessly wasted by American tourists in Switzerland, could be wisely directed to a comparative study of the glacial phenomena of the two countries, important results might confidently be expected, while the pleasure of the tour would be greatly enhanced. The noble scenery of the Alps must lose half its value when the tourist fails with the mind's eye to see through existing forces the infinitely more majestic occurrences of the most recent of the geological ages.

G. Frederick Wright.

Correspondence.

THE ENFORCEMENT OF RESPONSIBILITY.

To the Editor of The Nation:

Sir: Your last number contains another object lesson. It points to some suspicious circumstances in the relation of the Comptroller of the Currency to the Keystone National Bank, as shown in the report of Bank-Examiner Drew. It says that the Comptroller was invited to appear before the Committee of Investigation, but that the President and Cabinet decided that he should confine himself to a statement in writing, which, of course, contained only what he and they chose to admit; and it forcibly adds that this was far less satisfactory than an oral examination and cross-examination of the Comptroller would have been. There is, however, more than this to be said. Even if the Comptroller had appeared and been cross-examined in the most public manner, it would have been at the most only a "side show." Not one in ten thousand of the voters of the country would read the proceedings, or barely know of their existence, and the few who did read an account in the papers would conclude that it was entirely colored by the party passion of the particular journal; and, moreover, the distance between this and any action upon the subject by Congress would be so immeasurable that it would pass away like so many other current events, leaving "not a rack behind."

Now let us suppose a different treatment of the case. Of course, the direct responsibility for this, as for similar matters of administration, lies with the Secretary of the Treasury, and through him with the President. A rumor spreads through the country that the Opposition intend to make this a topic of attack on the Government at the next session of Congress. The members of that Opposition select their strongest man for a leader, and their other speakers in subordination, with as much care as for carrying a fortress by storm. The Government, well knowing what was impending, would prepare their case with equal care. Of course, the Secretary of the Treasury with his colleagues on the floor of the House would bear the brunt of the attack, but would gladly welcome the most available assistance on their side of the House. As soon as the session began, after the rush of business had been distributed to the committees, and Congress was in its usual position of having nothing to do, the leader of the Opposition would bring forward a resolution, and call upon the Government to name a day for its discussion. A thrill of excitement would run through the country, and when that day came, the telegraph would hold millions of auditors in breathless suspense. As the fierce conflict progressed, shouts of enthusiasm would hail every successful blow, and equally merciless would be the cry that awaited defeat. Nothing but unsullied purity of intention could serve a Government in a struggle like that. Any exposure of corruption would bring the *pollice verso* as surely as cowardice or weakness in the Roman amphitheatre. If ever we hope to uncover the dark places in our Government administration; if ever we expect to enforce that purity and singleness of purpose which alone can ensure the permanent

stability of our institutions, it must be done, not through the criticism, however scathing, of newspapers, either party or independent, but by the joining of blade to blade in single combat, with no quarter asked or given, upon a public arena, and in the face of the nation as spectators. Then we should begin to realize that of which we have now no conception, the force and power of public opinion. G. B.

LAKE PLACID, ESSEX CO., N. Y., August 20, 1891.

BOND OF UNION IN THE EPISCOPAL CHURCH.

TO THE EDITOR OF THE NATION:

SIR: When an adult is baptized in the Episcopal Church, he declares that he "believes all the Articles of the Christian Faith as contained in the Apostles' Creed"; when a man is admitted to the Priesthood he promises to "give faithful diligence always so to minister the Doctrine and Sacraments and the Discipline of Christ as the Lord hath commanded, and as this Church hath received the same according to the commandments of God"; he further promises to "be ready, with all faithful diligence, to banish and drive away from the Church all erroneous and strange doctrines contrary to God's Word." In the Litany we pray to be delivered "from all false doctrine and heresy"; in the Prayer for all Conditions of Men we ask that men "may hold the faith in unity of spirit and the bond of peace," but we ask that they may "hold" it (the faith), and that "they may be led into the way of truth."

Now do these words and others like them really mean that the Episcopal Church cares little *what* we hold as the faith, and cares only about *how* we hold *something*? That is about the substance of Mr. Palmer's letter, I take it, when one really gets at the bottom of the meaning of its principal paragraph.

The facts mentioned in the Apostles' and Nicene Creed may be true or false—it is our business to face boldly all that can be said against them; but is it *honest* for me or any other clergyman, whatever my ethical aims and loving charity may be, to mean by an article of the Creed what no one in the past ever meant, to use words with a sort of esoteric explanation that the ordinary, intelligent, plain man would call a twisting or an inversion of their meaning?

"Let us face facts and dare to meet results wherever they lead us, but let us be honest in our obligations to the churches to which we belong." This I understand to be your position, and with it both Mr. Palmer and myself would assert our cordial agreement; but his language about "commercial contract," "common apprehensions," "community of aim," etc., seems to me to wrap up any practical application of honesty to the Episcopal Church in a mist of words and a swirl of vague generalities which make any amount of dishonesty the easiest thing in the world.

EDWARD M. PARKER.

CONCORD, N. H., August 15, 1891.

THE JEWISH QUESTION.

TO THE EDITOR OF THE NATION:

SIR: Unless your readers can find anything in my first reply to "L. N. D." indicative of sympathy with the practice of flogging women to death, or with any act of cruelty on the part of the Russian Government, their justice will class that charge with the imputations of receiving Russian rubles and of being animated by habitual contempt for the weak and oppressed, which were before cast upon me, and both of which seem now to be abandoned.

Whatever I have said in the way of justification or excuse was said on behalf of the Russian people, not on behalf of the Russian Government, with regard to the acts of which I believe we are still imperfectly informed. Mr. Arnold White, Baron Hirsch's delegate to Russia, seems, as I said before, to have been allowed every facility for inquiry. He reports to the London *Times* that "many of the stories of acts of tyranny have been distorted versions of what really occurred, and that what is represented as having taken place all over the country is often to be taken as meaning that one man, the late Prince Dolgorukoff, ordered certain acts of severity while he was in the command of the police at Moscow."

That there are three Jews who have not practised extortion on the Russian peasantry does not prove that there are not many who have. The revolt of the peasantry, however culpable in its excesses, will, if it is entirely groundless and inexcusable, be, I believe, about the first peasant revolt in history that has not had a substantial cause.

I must beg leave to decline further discussion with an opponent whose favorite argument seems to be the imputation of base motives, and who, when an aspersion which he has cast upon the character of his antagonist is shown to be inconsistent with facts, finds a refuge from apology in insult.

I propose to say no more upon this thorny though momentous question till I can treat it more fully and in a more historical form, doing the justice which I think needs to be done to our Christian ancestors, who, whatever their delusions and aberrations may have been, were the fathers and founders of our civilization.—Yours faithfully, GOLDWIN SMITH.

TORONTO, August 22, 1891.

LIGHTNING-ARRESTERS.

TO THE EDITOR OF THE NATION:

SIR: The letter of W. J. Roberts, in your Vol. 53, No. 1363, page 122, issue of 13th inst., imputes unwarranted mismanagement on the part of the electric street-railway officials in Keokuk, Iowa. From its contents, too, one might infer that the Thomson-Houston Electric Company made the only lightning-arrester on the market capable of protecting car-motor armatures or those of the dynamos at the station. Their arrester is an excellent one, but that there are others equally good I can testify from personal experience, having been on electric cars over and over again when they were struck, without any damage being done to apparatus or cars. These arresters can be purchased by the Iowa Company at any time.

It may be well to state that I have no connection, direct or otherwise, with any manufactures of electrical apparatus.

Yours truly, F. O.

August 19, 1891.

Notes.

LONGMANS, GREEN & Co. have nearly ready 'A School Atlas of English History,' edited by Mr. S. R. Gardiner as a companion to his 'Student's History of England.' It is more extensive in its scope than the British Isles, and in addition to the maps are plans of important battles and sieges. The same firm announces an English translation of the Memoirs of Baron de Marbot, of which our French correspondent has been giving an account. Their edition, which is to appear in the autumn, will be in two volumes, and will include the two volumes already issued in French, together with a third not yet published.

Mr. William Andrews of No. 1 Dock Street, Hull, England, author of 'Bygone Lincolnshire' and other antiquarian works, will issue to subscribers an illustrated 'Bygone Northamptonshire.'

T. Fisher Unwin's list of fall publications includes 'The Real Japan: Studies of Contemporary Japanese Manners, Morals, Administrations, and Politics,' by Henry Norman, with photographic illustrations; 'The Land of the Incas,' travels in Peru, by Blanche Clark, with illustrations; 'The Autobiography of an English Gamekeeper (John Wilkins of Stanstead, Essex),' edited by Arthur H. Byng and Stephen M. Stephens; 'Names, and Their Meaning,' by Leopold Wagner; 'Stammering: Its Nature and Treatment,' by Emil Behnke; 'Concerning Cats,' a book of verses, by many authors, edited by Graham R. Tomson; 'Hard Life in the Colonies,' edited by C. Carlyon Jenkins, and 'Kolokotrones: Klepht and Warrior,' from the Greek, by Mrs. Edmunds.

The Dunlap Society has tardily sent forth to its subscribers as its first volume for this year, and as the thirteenth of its series, a collection of addresses, chiefly on theatrical subjects, by Mr. William Winter. 'The Actor, and Other Speeches' contains a portrait of the author. Among the addresses, in the preparation of which Mr. Winter is seen at his best, are eulogies of Mr. Edwin Booth and of the late Lester Wallack and the late Henry Edwards. The most important oration is the first, on "The Actor and his Duty to his Time," delivered two years ago before the Actors' Fund Society at its annual meeting in New York.

'Lapsus Calami,' by "J. K. S.," is the title of a clever volume of English university verse, which has just reached a second edition (Cambridge: Macmillan & Bowes). Its author is a son of Sir James Stephen. He is an inordinate admirer of the author of 'Fly-Leaves,' and the first poem in the book is "To C. S. C." Among the skits here collected, those of most general interest are "The Ballade of the Incompetent Ballade-Monger" (with the refrain "But I hope I have kept to the rules"), a set of equally amusing "Triolets Ollendorffiens," and a pair of poems on England and America—great countries both, with most objectionable citizens now and then.

Among the latest volumes of the cheap and comely Camelot Series (London: Walter Scott), is 'The Plays of Richard Brinsley Sheridan,' edited, with an introduction, by Rudolph Dircks. The editor wisely omits "The Camp," which Sheridan did not write, although it has been strangely included in not a few editions of his works. He also leaves out "The Relapse," which Sheridan altered from Vanbrugh. His introduction is a biography of Sheridan, brief and brisk, and better in manner than the most of the lives of Sheridan, who has suffered severely at the hands of bookmakers like Dr. Watkins and Mr. Percy Fitzgerald.

The second volume of Thorpe's three-volume 'Dictionary of Applied Chemistry' (Longmans) appears within a year after the issue of the first. Its 714 pages cover the ground from Eau de Cologne to Nux Vomica in a manner which amply fulfils the promise of the first volume. It is a thoroughly creditable and useful work, characterized by great accuracy and every evidence of careful editing. Of the thirty-three names given in the list of contributors to this volume, eighteen appear for the first time in connection with the Dictionary. No American

chemists have as yet contributed to the work, although the announcement in the original preface led one to expect articles from some of our eminent specialists. Indeed, the work is thus far almost entirely the product of English hands, only two of the forty-nine contributors to the first two volumes being foreigners—Profs. Lunge of Zürich and Witt of Berlin. Some of the more important articles, with the names of the authors and the number of pages occupied by each, are: Explosives (34), by W. H. Deering; Fermentation (31), by P. F. Frankland; Coal Gas (35), by Lewis Wright; Glass (20), by W. Ramsay; Iron (14), by Thomas Turner; Lead (44), by P. P. Bedson; Matches (34), by E. G. Clayton; and Naphthalene (65), by W. P. Wynne.

A book which merits the attention of all who are interested in practical work in the chemical laboratory is the 'Anleitung zur Darstellung Chemischer Präparate,' by Dr. Hugo Erdmann. The author aims to do for inorganic chemistry what Levy, Fischer, and Cohen have already done for organic chemistry by their little volumes on chemical preparations. It contains directions for making more than eighty preparations, chiefly inorganic, including compounds of all the more common elements. A brief statement of the reactions involved, and directions for testing the products, follow in each instance the description of the process of making. The choice of preparations is varied and good. Inexpensive substances and laboratory residues and by-products are employed as far as possible; and the resulting preparations are mostly such as are constantly needed in laboratory work. All the methods which are given have been carefully proved in the university laboratory at Halle, where Dr. Erdmann has been for several years the assistant of Prof. Volhard.

The State University of Iowa has issued its 'Historical Monograph, No. 1,' being an account of the "Amana Society." This industrial and communistic organization had its rise in Germany, and its derivation and differentiation from mysticism and pietism are traced at much length in the pamphlet. Then follows the story of the migration to this country, the first settlement at "Ebenezer," near Buffalo, and the subsequent acquisition of the present site of the Society in Iowa. The constitution of the organization is printed in full, and the social and religious beliefs and practices of its simple-minded and worthy members are described sympathetically. No previous writing about these people has been so authoritative as this one, which is the work of Prof. Rufus Perkins and Mr. B. L. Wick, both of the State University.

The importance of the Platæan finds of the American School at Athens in 1889 and 1890 is receiving gratifying recognition. The Latin preamble of the Edict of Diocletian regulating prices throughout the Roman Empire, which was lately published by Professors Tarbell and Rolfe, has just been issued in a beautiful photographic facsimile by the London Palæographical Society (Facsimiles, Second Series, Nos. 127, 128). Prof. Mommsen has prepared an edition of the Greek fragment of the Edict, with English notes; it is now in press, and, with Dr. Lolling's careful facsimile, will appear in the next number of the *American Journal of Archæology*.

The Dante Society has lost its President in the late Mr. Lowell, but his name still leads the list of officers and of the Council in the tenth annual report just distributed. In this document we read of the awarding last year of a prize to Mr. Charles Sterrett Latham for a translation of the Letters of Dante, with an historical and critical comment, executed in a condition of paralysis which ended the life of this promising young scholar before the award could be made known to him. The translation will be printed. Three new topics are offered for the Dante prize of 1891-92. Appendixes to the report contain a list of additions to the Dante collection in the Harvard College Library, and a valuable reprint of Latin texts of documents concerning Dante's debts and his public life. The Harvard collection now exceeds 1,200 volumes, and, under certain restrictions, may be used by members of the Society remote from Cambridge, as well as by the public on the spot. It deserves, therefore, to be increased by gifts from every quarter of the country. The Secretary and Treasurer is Mr. George Rice Carpenter of the Massachusetts Institute of Technology, Boston.

Collectors of book-plates will be glad to learn that the English Ex-Libris Society has begun the publication of a monthly magazine of twenty broad pages devoted wholly to essays, correspondence, and notes concerning book-plates. The first number of the *Ex-Libris Journal* (London: A. & C. Black) bears date July, 1891, and contains a list of members of the Society. Apparently this periodical is intended to supplant the *Book-Plate Collector's Miscellany*. Announcement is made that future numbers will contain a bibliography of book-plates by Mr. J. R. Brown and Mr. H. W. Fincham.

The August number of the *Author*, the organ of the Incorporated Society of Authors, edited by Mr. Walter Besant, the founder and mainspring of the Society, contains a full report of the speeches made at the dinner given by the Society in London on July 16 to celebrate the accomplishment of international copyright between Great Britain and the United States. In the same number is also an announcement that an Authors' Club is about to be established in London, somewhat on the model of the club of the same name in New York, but on a far more ambitious scale.

The second paper of the series on "Britannic Confederation," which the *Scottish Geographical Magazine* is publishing, is by Prof. E. A. Freeman, who had given him for his subject "The Physical and Political Basis of National Unity." After a frank avowal that he is altogether opposed to Confederation, he dwells at some length on the meaning of the word Nation, defining the ideal nation as one "where a continuous territory is inhabited by a people united under one government, and all of them speaking the same language—a language which is not spoken by any other people." This ideal, however, is not attained by any people; Italy, perhaps, coming nearest to it. He then discusses the various schemes of federation, and, while acknowledging the theoretical possibility of all which exclude India, he shows that each of them has defects which would make them practically unworkable. If any scheme, however, should be set in action, he confidently asserts that sooner or later disunion would result. He closes, characteristically, with these words: "If it is proposed that the great and historic assembly which King Edward called into being in 1295 shall keep its six hundredth anniversary by sinking to the level of the Legislature of a Canton of a Britannic Confederation, then I shall be driven, however much against the grain, to turn Jingo and sing 'Rule Britannia.'"

Dr. Max Nordau, in the *Imperial and Asiatic Quarterly Review*, treats the partition of Africa by the European Powers within the past fifteen years as a veritable "Rabies Africana," an unaccountable epidemic. He is not wrong in saying that recently acquired African possessions have no money value as such to the respective governments, and that all commercial advantages could have been gained as readily without annexation as with. Nor can his assertion be denied that the general result of European intercourse with the negroes has been deleterious to them. But he injures the tone of his article, which contains nothing novel but its title, by dividing those who are interested in the development of Africa into two classes, hypocrites and cynics. He also takes no notice of the fact that Central Africa is fast being depopulated, and that the intervention of Europeans is the only possible check to the slave-hunters' raids.

To the August number of the *New Review*, Mr. Paul Bourget contributes an interesting paper on the element of love in fiction. In the same number Capt. Eyre M. Shaw, the head of the London Fire Brigade, has an article on theatrical fires, wherein he gives a list of those which occurred in 1890, somewhat shattering our belief in his accuracy by recording two slight fires in Paris at the Théâtre-Français and a third at the Comédie-Française! Capt. Shaw seems to be ill-informed as to American legislation for the prevention of fires in theatres, since he speaks of the Spanish law of 1888 as the first step towards a proper building law for theatres, ignoring the admirable (although doubtless not perfect) law of this State, under which five or six safe places of amusement have been erected in New York city. It is not the first time that the head of the London Fire Brigade has closed his eyes to what is going on in New York, although he has slowly adopted more than one of the devices which have approved themselves on this side of the ocean.

In his Providence *Book Notes* of August 15, Mr. S. S. Rider adds a few more sprigs of laurel to the wreath on Roger Williams's brow. He shows how Massachusetts owed to the diplomacy of her exiled son her escape from an overwhelming combination of hostile tribes, at the time of the Pequot war. This is not denied by many historians of Massachusetts, who still do not bring it out in its "real light," Mr. Rider thinks, while its deliberate suppression by Hubbard and Hutchinson "makes a lie of history." It was Williams, too, who devised and communicated to Gov. Winthrop the plan of attack on the Pequots which was adopted with such success, and of which "the credit has been given wholly to others." Another point concerning which "all writers are silent" is Williams's prevention of an Indian alliance against the colonies for forty years after the Pequot war; when the alliance was at last brought about under King Philip, the English were strong enough to sustain a shock that might have been fatal at an earlier date.

—The Salem (Mass.) Press Publishing and Printing Co. has just issued a second series of notes and additions by Mr. John J. Babson to his valuable 'History of Gloucester'—186 pages, including the index. A third of the contents consists of extracts from the diary of the Rev. Samuel Chandler, from 1751 to 1764, which supplies no little entertainment, along with much genealogical information. This clergyman was "pretty much not well" (as he phrased it) a good deal of the time, particularly in the year first named, when for his fever and ague he was, on September 11, "taking cortex peruvianus" in red wine every three hours. On the 27th he was so far convalescent that he "supd at Lieut. Collin's on Stewed Goose and Roast Duck"; on the 29th he "preached, had gt freedom and enlargement

of heart"; but on the 5th of October he had another ague fit, "fainted & fell down." In September, 1759, he left his sick-bed to pray with the family of a dying parishioner, and fainted away in the act. His call to the parish was decided in this way: "they voted by walking; those that were for me were desired to walk east, wh were 59 or 60; those opposed to walk west, which were 2; and 7 or 8 sat still." Mr. Chandler notes the preaching at Gloucester of "Mr. Whitfield" on October 29, 1754, and his is the only record of this incident. An entry of April 23, 1755, shows the diarist's miscellaneous engagements: "Dined at Dr. Rea's; an entertainment at the weaning of a child; wrote a letter to a deist; planted cucumbers." And there is a glimpse of Satan at work in this entry: "April 30 [1756]. I visited Mrs. Collins, tempted; and Mrs. Paterson, bereaved of her mother, Mrs. Cradock, who has for some months been in distress of mind, and despairing, tempted, and assaulted; and last Saturday, about one o'clock, she hanged herself with a single strand of fishing-line." Earthquakes are frequently noted, and by May 8, 1756, the news of the Lisbon catastrophe of November 1, 1755, had reached Massachusetts, so that a thanksgiving was observed, all the more because "New England was spared in a very great shock which shook off Chimney Tops and wares from shelves."

—Mr. A. L. Mayhew's 'Synopsis of Old English Phonology,' just published in the Clarendon Press Series (Macmillan), is a book that represents a great deal of patient and well-directed labor. The author, whose previous work had well prepared him for such an undertaking, has given us, in less than 200 pages, a comprehensive summary of the established facts concerning the relation of West-Saxon sounds to those of cognate languages and of the original "Indogermanic." Unlike Sweet's 'History of English Sounds,' the 'Synopsis' contains no discussion either of general phonetics or of phonetic change, and no attempt to fill in the gap between Old and Modern English. Furthermore, Mr. Mayhew offers us no new facts or theories; his aim has been merely to collect the results of the best German and English scholarship in the field that he has chosen. Almost every statement is accompanied by a reference to a special authority. Among the many names cited, those of most frequent occurrence are Sievers, Sweet, Kluge, and Brugmann. Two long tables, somewhat similar to those in Sweet's 'History,' enable the reader to find the modern equivalents of old English words and sounds, and *vice versa*. There is, moreover, at the back of the book an "Index of Words," comprising sixty-seven pages. The whole volume is clearly and beautifully printed.

—The lecture on 'Aristotle on the Art of Poetry' read last winter before the Alexandrian and Philosophical Clubs of the University of Glasgow by A. O. Prickard of Oxford, and lately printed (Macmillan), commends itself to all lovers of what is best in literature as well as to students of Aristotle's writings. It well fulfils its purpose of giving a plain account of Aristotle's chief judgments on the poetical literature known to him, and of indicating among these such as are of lasting value and application. Difficult places are clearly explained, and many of Aristotle's dicta are defended, always with acumen and appreciation. Especially deserving of mention are Mr. Prickard's treatment of the famous definition of Tragedy, and his analysis of the principle of Katharsis there included, wherein the lines laid down by Bernays are followed. The wealth of apt citations in prose and verse, drawn from recent writers of the utmost variety, not only lends brilliancy to the lecturer's discourse, but serves well to impress upon one how modern, because perennially true, is much of the great master's thought. In these days of the popularity of cheap interpretations and misinterpretations of ancient life and literature, it is a refreshment to come across a scholar who gives the evidence we find in Mr. Prickard of that happy union of careful learning, delicate taste, sympathetic insight, and grasp of principles which is absolutely essential for the performance of the task of seeing and showing things exactly as they are—at once the most difficult and the most imperative of the duties of the scholar.

—Canon Cheyne, in 'The Origin and Religious Contents of the Psalter' (Bampton Lectures for 1889; New York: Thomas Whittaker), brings the Psalms under the light of historical, and only secondarily under that of linguistic criticism, and accordingly finds them to be largely exilic and post-exilic. Archaic forms (in language) could not fail to be reproduced by later poets, who constantly recited the ancient documents, and this accounts for much of the Davidic style, while Aramaic forms which appear throughout could not well have appeared in pre-exile literature, and the historical characteristics point to the exile and post-exile period, most largely to the Maccabæan. This last great epoch must surely have produced some psalms, and many of them have survived to us in the Psalter. The most striking characteristic (because the newest) in these lectures places Canon Cheyne in advance of contemporaneous English exegetics. No one in England has anticipated him in the closer application of Zoroastrianism to the subject. Astonishing as it may seem, while scholars in England have talked for a decade about the importance of Assyriology to Biblical criticism, no one seems to have become aware of the necessity of the Zend Avesta to it. Canon Cheyne justly says that no one should be regarded for the future as a competent critic in the Old and New Testaments who does not study that one religion which, whether as teacher or taught, stands more closely related to the Holy Scriptures than any other. With book after book of the Bible dating from Persian reigns, with a Persian restorer, Cyrus, "the Lord's anointed," with Persian names, and with the literal mention (in the Apocrypha) of an Avesta demon, Asmodeus (Aêshma-daeva), with the Magi and Simon Magus, with the seven spirits (the seven Amshaspands), etc., it is no wonder if Zoroastrianism stalks through the Bible. The doctrine of God and Satan, of the creation of clean and unclean (the uncleanness here gets its first explanation: "The unclean animals were such because the Evil Spirit made them"), of angels, of immortality, of resurrection, notably of judgment, of rewards in heaven or on a restored earth, and punishments in hell, with other features too startling to be mentioned here, identify the Persian theology in many essential features with the Jewish, whether as original or derivative, and Canon Cheyne holds that the Persian was largely the original used by the Divine Spirit as the human instrumentality in imparting the ideas. Canon Cheyne disclaims special Zend studies, but he practises his usual thoroughness in the use of materials, having examined the views of all parties and schools, and relying, as is natural, with confidence on the Oxford Avesta (in the "Sacred Books of the East"), by Prof. Darmesteter and Dr. Mills.

—If ordinarily we do not look to the sodality of the Society of Jesus for anything revolutionary in religion, *à fortiori* we do not in science. In point of fact, scientific progress of the modern type is usually remarked in almost every other quarter. But the unsafe nature of such generalizations is apparent from the fact that recent days have brought to light a discovery, or invention rather, which two reverend fathers of this Society residing in Georgetown have been the first to develop in successful form, and which bids fair to revolutionize that important art of the astronomer known as "taking transits." The tediousness and in some sense unsatisfactory character of this operation are now greatly mitigated by means of a little telescopic accessory which they call the "photochronograph"—a rather unfortunate designation, as this word was originally coined years ago, and is already applied to another and entirely different apparatus. This need not hinder the effectiveness of the instrument, however, as it will doubtless do its work faithfully until a new name can be found for it. In short, it seems to be capable of freeing a large class of astronomical and physical research from the uncertain influence of "personal equation"—that dread and often indeterminable element which always lurks in observational work—where high precision is aimed at. Some novel adjunct of the standard equipment of laboratory and observatory whereby transits could be recorded with a simple, photographic automaton has long been sought by English and German scientists; but American astronomers, who nearly a half-century ago invented and first applied the chronograph to this sort of work, greatly increasing the ease and rapidity of doing it, are again to the front with the first published results of star-transits taken by photography. It should be said that the original experiments in this direction were conducted at the Harvard College Observatory by Prof. Pickering.

—A correspondent writes to us from Munich:

"Press paragraphs cleverly managed by a certain group of Americans in Paris, and the widely notorious refusal, based on political grounds, of French artists to exhibit, have made the International Art Exhibition in Berlin seem the most prominent held out of France this year. But really of more artistic interest is the Jahres Ausstellung in Munich, to which all the best men from all countries, except America, have sent their most important work. However, it is just now chiefly notable for the fact that the French, despite their patriotic scruples, have contributed to it. It is not easy to explain how this has been managed. Whether the public stand they took when invited to contribute to the Berlin exhibition satisfied their consciences, or whether individual Frenchmen are not responsible for the present show in Munich, and this is due to enterprising art-dealers or Government authorities, is an open question. The French artist cannot, after all, be blamed for his seeming childishness in this matter. It is difficult in England or America to realize how dependent he is upon the State for recognition and advancement. To take one conspicuous instance: Puvis de Chavannes has received all his most important commissions from, and executed his finest designs for, State and municipal authorities. How could he, then, afford to fly in the face of public opinion, whatever might be his own feelings and sympathies? But, as if to make up for their absence from Berlin, the French are delightfully represented at Munich, even Corots, Daubignys, Troyons, and Millets being included in the collection, as well as several fine Manets and less noteworthy Claude Monets which one has not the chance to see every day. The rest of their exhibit is made up of the principal pictures seen in the later Salons. Puvis de Chavannes, Gérôme, Besnard, Bonnat, Billotte, Montenard, Carolus Duran—in a word, all the leading French painters, contribute. The other striking features of the exhibition are the good showing made by the Eng-

lish, thanks really to the younger Scotchmen, who are so little appreciated at home and who so seldom receive a fair chance in the London galleries; and the new proof given of the artistic strength of the Scandinavians, who, owing greatly to the marvellous display of Kroyer and Thaulow, seem even more vigorous here than in Berlin. It would be a great pity were not every effort used to induce the Danes to exhibit in the coming World's Fair in Chicago. With the exception of the French, their work has more character than that of the artists of any other nationality. The Americans practically are unrepresented. The Salon pictures of Dannat, MacEwen, and Charles Sprague Pearce are hung with the French. Whistler exhibits with the English. A cattle piece by Bisbing is in one German room; "In the Dunes," by Melchers, in a second. Others, notably Carl Marr, are scattered here and there, but they are absorbed in the groups with which they have chosen to classify themselves."

HELPS TO READERS AND STUDENTS.

The Best Books: A Reader's Guide to the Choice of the Best Available Books (about 50,000) in every Department of Science, Art, and Literature. By William Swan Sonnenschein. 2d edition. London: Swan Sonnenschein & Co.; New York: G. P. Putnam's Sons. 1891. 4to, pp. (18), vii-cx, 1009.

A Guide Book to Books. Edited by E. B. Sargant and Bernhard Whishaw. London: Henry Frowde; New York: Macmillan & Co. 1891. 8vo, pp. xvi, 344.

A Guide to the Choice of Books; for Students and General Readers. Edited by Arthur H. D. Acland, M.P. London: Edward Stanford. 1891. 8vo, pp. xviii, 128.

THE three volumes above mentioned have successively made their appearance, in the order named, since the beginning of the present year, the first in the list being, however, a second and enlarged edition of a work issued in 1887. The most modest of the three is Mr. Acland's, a thin octavo, easily held in one hand, descending to no gradations of type smaller than brevier, equipped not only with an alphabetical index at the end, but with a table of classification at the beginning, which is well discriminated and effectively displayed. His plan is one of extreme condensation, whether in citing publisher or author and title, but is consistently carried through the book, and with noticeably few misprints; while the taste and judgment shown, in what is mentioned and what omitted, make the volume a singularly successful one, in its aim as a "guide to the choice of books."

In their considerably larger volume, Messrs. Sargant and Whishaw offer us what is avowedly a coöperative work; and in their list of more than 175 coöperators there are not a few names which carry decided weight. Thus we have good reason for satisfaction in what is here offered us by such men as Sir George Grove and Mr. J. Norman Lockyer, in their respective departments, as well as by the competent hand from whom we have the excellent list under "France: Language and Literature." For some of the other departments not so much can be said—in fact, the book's unevenness is its most striking characteristic; nor, indeed, for the work of the editors themselves. Among the eccentricities of their procedure is the disregard of titles of nobility of all kinds. Thus, the late Earl of Iddesleigh is simply and only "Northcote, S.", and Sir Henry Thompson always "Thompson, H." While the entries are in most particulars unabridged, as regards full name and imprint, for some unassignable reason dates are not regarded as important. A reader looking for a work on bridges finds therefore Haupt, on 'Bridge Construction,' but without the slightest intimation that it is now about forty years out of date; and on a subject where timeliness is a ruling consideration, as Africa, one might pass entirely by White's 'The Development of Africa,' although it has been published within the present year. Indeed, from language used on p. 285, it would appear that a book published in 1850 is only "a trifle out of date."

Mr. Sonnenschein's volume, which also describes itself as a "guide," is not open to the exceptions just noted. Nor does he share the error of Messrs. Sargant and Whishaw in supposing the entry of one only out of several page-numbers to be sufficient as an index-reference; nor the kindred error of making an index-reference to consist of page-numbers and nothing more. In order to cite the titles within sufficiently short compass, abbreviations are very largely employed, but with real skill and entire adequacy; and, consequently, a reader looking for one only of the nearly fifty book-titles under Professor Freeman's name is not led on a wild-goose chase through every part of the volume. In short, Mr. Sonnenschein apparently regards the relation of a key to a lock as no more essential than that of a good index to a work of this kind. His "Author and Titles Index," occupying nearly eighty four-column quarto pages, in closely printed type, is followed by a "Subjects Index," covering twenty-three pages more. From the present edition, however, he has omitted the separately printed skeleton of classification, or "Synopsis of Contents," which occupied thirty-six pages in the edition of 1887. Pressing as must have been the need of economizing space, there is very much in the present book which the reader could have spared with much better grace than this "Synopsis."

For, to speak plainly, the fundamental defect of the present edition is its over-inclusiveness. Not only was the 1887 edition far wider in compass than the earlier compilations of Perkins, Jones, and others, as well as those of Acland and Sargant mentioned above, but the difference between the two editions themselves is scarcely less striking. Over against the less than 750 pages in 1887 are the more than 1,100 pages in 1891, of larger size and in smaller type. But, far more to be regretted, in place of aiming "to select as carefully as possible what is essential, and to omit all the remainder"—to quote from one of the writers above cited—we find a sifting process with meshes so coarse as to admit into this select company of "best books" such works as 'Every Man's Own Lawyer' and 'Man and His Maladies,' such astounding achievements in biography as those of Blanche Roosevelt and Miss McCray, and in science as a volume on 'Moses and Geology,' of which the editor frankly tells us: "Its science is almost peculiar to itself"; the 'Monday Lectures' of Joseph Cook, and Clews's 'Twenty-eight Years in Wall Street.' When, moreover, one reflects that, while the earlier edition found space to mention only about 25,000 volumes, the present one pours out a torrent of about 50,000, the reader can be pardoned for feeling surprise that there are so many "best books."

"The best books" must indeed be considered by far the least felicitous portion of the book's title, suggesting in somewhat painful contrast the 'Best Hundred Books' of Sir John Lubbock and his fellow-critics. But the book is also described on the title-page as "a contribution towards systematic bibliography"; and the scale on which the work is planned is such as would tend inevitably to supply welcome assistance, as well as information, to the reader or student who uses it. Yet it would almost seem as if, with the expansion of the book itself, had expanded its opportunities for conveying the most varied misinformation, typical instances of which we shall briefly notice. For one thing, we are far from sharing in Mr. Sonnenschein's somewhat too generous commendation of what he calls the "substantial accuracy" of his printers, for few books have ever been more studded with glaring misprints. Some of these, as "Cornstock" (Comstock), are grotesque; others, as "Salvigny" (Savigny), "Maddison" (Madison), "Lesquereuse" (Lesquereux), are annoying; others, again, as "MacLellan" (J. F. MacLennan), are distinctly misleading. Others indicate an almost ingenious perversity, in distorting, for instance, Mr. G. E. Woodberry's name into "Woodbury" in the 1887 edition, and into "Woodbery" in the 1891 edition; and in printing the Cornell philologist's name three times as B. T. Wheeler, twice as B. J. Wheeler, and only once in the correct form, B. I. Wheeler. And yet we do not feel warranted in putting the entire blame upon the printer, for there are certain specific forms of misprint which occur with such regularity as to command attention, namely, the repeated substitution of one initial for another. Thus, an American general's name appears as "J. B." McClellan instead of G. B. McClellan, in every instance, and in both editions of the work; and confusions of an analogous order occur in the case of C and G, J and I (no less than seven times), F and T, and others. The reader is puzzled also by certain extremely deceptive transpositions. Who, for instance, will readily recognize the name of Dr. Howe, the philanthropist, in the distorted form, "Howe, G. S."? The reader who should send for "J. Farley Lewis's" work on 'New Bulgaria,' on the strength of Mr. Sonnenschein's entry (p. 340), might repeat his order many times before learning that the true name is J. Lewis Farley. In the index, where, of all places, the proof-reading should be accurate, misprints have been allowed to create an uncomfortably large number of false references to page-numbers. In the use of accents, diacritical marks, etc., the book is sadly disfigured, not only with such instances of omissions as "Plante" and "Friedlander," but of superfluities, as "Seguïn" and "Schürman," (and, in the index, "Müllin" and "Tholück"), and of mistakes as "Gayarrè" (p. 450). To give the printer his due, it is entirely probable that he is responsible for such fastastic work with the name "Adam" as in presenting the name of the abbot of Evesham as "Adam Abbott of Evesham," (p. 410), that of Adm. Parry of the British Navy, as "Parry, Adam Sir W. E." (p. lx), and that of Henry Adams, as "Adam, H." (p. 406). To heighten the puzzle, there is a certain ingenious device of the editor, with a view to economizing space, whereby, in the index, all punctuation is invariably omitted between the author's entry and the book-title immediately following. Whether to be able to master such a perplexing sequence as, for instance, "Argyll, Duke of *Primev. Man*" (p. ix), is really worth the expenditure of nervous energy required, may be seriously questioned. Another of the editor's "economies" is the expression of joint authorship by a cumbrous use of mathematical symbols, sometimes in such a form as "Stewart + Tait, Prfs. B. + P. G." (p. 115); sometimes in even more involved form. As no space is saved in the "Stewart" instance, above, it is difficult to see what is gained, beyond the reader's bewilderment; but it is doubtless owing to this bad habit asserting itself in the wrong place that the name of the Innsbruck

political economist is printed as if it were that of two persons, "Böhm+Bauerk, Prf." (p. 239).

In the entry of proper names, abbreviations such as "Dr.," "Rev.," "Prf.," "Adm.," etc., are repeatedly employed to indicate the person's position in life; "Am.," "Austral.," etc., his nationality; "C. E.," "R. C.," "Unit.," etc., his religious belief; and surely for such help towards identification or discrimination one ought to be duly grateful, were it not that these also are made additional agencies of misinformation. Thus the erroneous label "Am." is affixed to such names as Dr. Charles Taylor of St. John's College, Cambridge, and Lawrence B. Phillips, compiler of the biographical dictionary; numerous misapplications of the ecclesiastical abbreviations occur, as in the cases of Dr. William Carey and Dr. William Jenks, where they are exactly exchanged; and that of "Rev." precedes the names of men never entitled to it and never claiming it, as in "Murray, Rev. T. C.," and "Thompson, Rev. R. W." If the nature of the work cited in the two instances just mentioned be considered, the bestowing of the epithet would seem to be a purely inferential "guess" based thereon. Precisely the same sort of unwarranted inference appears to have been exercised in Mr. Sonnenschein's author-entry of 'A College Fetich,' the writer of which, it is to be feared, will regard his labor as all in vain if he is to be known as "Adams, *Prf.* C. F." (p. 292). Only an exceptional ingenuity could make possible the entry of Mr. and Mrs. Thwing's joint work, 'The Family,' in which the Christian name of the latter, "Carrie," becomes a separate surname (p. 389). The sexes are still further confused in making (Miss) E. A. Youmans the author of a volume properly entered under (Mr.) E. L. Youmans as editor, namely, 'The Culture Demanded by Modern Life'; but still more in the entry, "Sweetser, *Mrs.* M. F.," as the author of the series of 'Artist Biographies.' Yet even this does not quite reach the absurdity of the entries in the index, under "Preston H. W.," making the feminine author of 'Troubadours and Trouvères' (*Miss* Harriet W. Preston) identical with Mr. Howard W. Preston.

A well-known penchant of our English cousins for taking "a part for the whole," in citing proper names, often leads them to extend this treatment to others than Englishmen —as when "Mr. Cabot Lodge" is cited in the *Saturday Review* of the current summer. So also, in the pages of Mr. Sonnenschein's volume, one finds "Hunt, Wm.," instead of the more extended name, in the case of a well-known American and artist. But, unfortunately for the reader, Mr. Sonnenschein has in many cases abandoned uniformity as well as fulness. Thus, on one page, "Siemens, Sir W.," and, on another, "Siemens, Sir C. Wm.," refer to the same person, as do also "Thompson, Prf. Silvanus," and "Thompson, Prf. Silv. P." To the reader, who has not always the means of discriminating between cases like the above and others where no identity exists — as "Mayor, Prf. J. B." (of King's College, London), and "Mayor, Prf. J. E. B." (of the University of Cambridge)—such a practice is necessarily confusing. So it appears to have proved in a strikingly large number of cases to Mr. Sonnenschein himself, thus corroborating in an unexpected manner the not wholly unreasonable preference of a cataloguer for fulness and uniformity. Thus, two of Mr. Charles Wyllys Elliott's works having been cited in the text—neither of them under the full name —the list of Elliotts in the index gives us one of these under "Elliott, C.," and the other under "Elliott, W.," both having been mechanically reproduced from the body of the book, which has no entry "Elliott, C. W." So mechanically, indeed, have the names been alphabeted in the index that a well-known American orator having appeared once in the text as "Webster, Dan.," and again as "Webster, D.," reappears in these two forms in the index as two persons. An American cataloguer might perhaps have stumbled naturally into entering "Ball, R. S.," and "Ball, Sir R. S.," as two distinct persons, through not having heard of the astronomer's knighthood; but that the distinguished achievements of Sir A. H. Layard should not have availed to prevent an English cataloguer from breaking him up into two, "Layard, A. H.," and "Layard, Sir Henry" (page xlviii), is indeed cause for wonder. After this instance of the prophet without honor in his own country, it is not so easy to feel surprise at finding the two Americans, John H. Allen and Joseph H. Allen, made one, under the heading "Allen, J. H.," nor even at finding three persons made one, under "Brown, Dr. John," though one of the three is James, and not "John"; nor at the editor's failing to distinguish between the two American writers, John Bartlett and John R. Bartlett, in attributing the dictionary of 'Familiar Quotations' to the latter. But the limit of incongruity is perhaps reached when the indexer places in the list of Phillips Brooks's writings a speech on the occasion of the Sumner assault, by Preston S. Brooks of South Carolina. Kinship is a fruitful source of danger, where a cataloguer is no more cautious than Mr. Sonnenschein, who not only enters O. W. B. Peabody's Life of Israel Putnam under W. B. O. Peabody (a brother), the writings of Samuel A. Drake under Samuel G. Drake (his father), but also volunteers the gratuitous misinformation that Mrs. Elizabeth C. Agassiz, instead of being the wife of Louis Agassiz, is "Mrs. A. Agassiz" (page 517), and that George Washington Greene is son (rather than grandson) of Gen. Greene (p. 461). In both text and index, the 'Essay on the History of English Church Architecture,' by George Gilbert Scott, the younger, published in 1881, is made his father's work, regardless of the fact that the latter died in 1878. The distinction of "Jr." and "Sen.," in fact, is one to which Mr. Sonnenschein appears to have surrendered at sight; and where he has to do with the "hereditary names," as they may perhaps be called, of Josiah Quincy, Charles Francis Adams, Richard Henry Dana, and Theophilus Parsons, he has achieved some glaring confusion of identity under each one, in the last-named instance making one man into three.

A very natural hesitation to point out omissions needing to be remedied is inevitable, in view of the over-inclusiveness which does so much to vitiate the book, yet the list of omitted titles which must occur to almost every reader is neither brief nor unessential. Nor are they confined to Continental publications, such as Oncken's 'Allgemeine Geschichte,' nor to those of this country, as Hannis Taylor's 'English Constitution,' but comprise English publications in every department, from Poole's 'Ecclesiastical Architecture in England' to 'Mackay of Uganda.' When one remembers that it is chiefly an English-reading constituency to which the work addresses itself, it is surprising to find Legouvé's 'L'Art de Lecture' cited in the French original only, with no mention of either of the two English translations (1879). It is a real pleasure to be able to speak emphatically of the service rendered the reader by the numerous instances where analysis has laid open the contents of a composite book; but to do this twice for the same book—*e. g.*, Evelyn Abbott's 'Hellenica,' pages 394 and 872—is assuredly an error when the space is needed for so much else.

All the books under notice purport to be "guides to the choice of books." The purpose avowed by one of the editors in his preface—namely, to be serviceable "to the committees of the smaller free libraries, to the educational departments of workingmen's" (and other) societies, etc.—is doubtless shared also by Mr. Sonnenschein, who, in his preface, expresses the still more definite hope that his volume will be accepted by public libraries, in both England and America, as supplying "the best general catalogue." It has not been a pleasant task to point out—by typical instances only, for a simple enumeration of every specific instance would require many pages—the widely various ways in which this ambitious design falls short of even the more modest function of a trustworthy "guide." We find it easy to agree with Mr. Sonnenschein's declaration, in his preface, that it was an error to undertake the single-handed performance of a work like this; for not since Leibnitz, to paraphrase the pregnant words of one of the soundest thinkers of our time, has it been possible for one man to drive *all* the sciences abreast. However, if such a work were to be undertaken by any one man, it is difficult to conceive of a situation more favorable, and conditions more auspicious, than those under which Mr. Sonnenschein has prosecuted it — in London, at the centre of things, having at his command not only the great libraries, but the wealth of trade bibliography in the offices of the great publishing-houses. Nor can we regard it as otherwise than discouraging in the extreme that so signal an opportunity as that of revising the 1887 edition for the present one should have been so ill improved. Certain errors of the first edition were, indeed, corrected—such as the erroneous interpretation of the pseudonym, "Olphar Hamst"—but far too large a number of the worst of them are brought bodily over to the present edition (witness the entry, under "Argentine Republic," of Hayes's 'New Colorado'), while, more melancholy still, an extraordinary heedlessness has disfigured with every variety of error, in 1891, a long list of entries which were correctly printed in 1887—"St. Columbia," for example, for "St. Columba" (p. lv). There is, in fact, no sound basis for supposing that anything better than this will appear for some time to come to serve as a "general catalogue" of literature, and accordingly this "guide" will in all probability be put to that use in many libraries. Those who consult it, accordingly, should be warned that without thorough and laborious marginal corrections it is sure to prove but "a blind guide."

Ein Jahr Meines Lebens, 1848-1849. Von Alexander, Grafen von Hübner. Leipzig: F. A. Brockhaus. 1891. 8vo, pp. xii., 379.

Count Hübner is one of the distinguished band of diplomats and soldiers whose patriotic exertions have barely sufficed to save the Austrian Empire from extinction during the political and military crises which have convulsed the European continent for the past half-century. From 1849 to 1859 he filled the difficult post of Minister to France, and it was to him that Louis Napoleon made the famous New Year's speech which was generally accepted as an informal declaration of the war of 1859. He is now in his eightieth year, but apparently in the enjoyment of great intel-

lectual vigor. It is, indeed, worthy of note that so many of the great men who were with him in the service of Austria attained an extreme old age. To mention only a few prominent ones: Count Joachim von Münch-Bellinghausen, who for twenty-five successive years presided over the German Diet as representative of Austria, died in 1866 at the age of ninety; Field-Marshal Radetzky, who conducted the victorious Italian campaign of 1848 at the age of eighty-two, lived to be ninety-two; Prince Metternich was eighty-six when he died, in 1859; Gen. Clam-Gallas attained his eighty-fifth year in 1890; Gen. von Wallmoden, in 1812 a British General, but back in the Austrian Army after 1815, died in 1862, aged ninety-three; Field-Marshal Nugent Westmeath, an Irishman by birth, and also for a time in the English Army, took part in the battle of Solferino at the age of eighty-two and lived for three years after; Wessenberg, who was Minister for Foreign Affairs during the critical period from May to November, 1848, was eighty-five when he died, in 1858. This list could be greatly extended by adding the names of such comparative youngsters as were cut off just before reaching the age of eighty. The number of those who served against Napoleon I. and lived to serve again against Napoleon III., is sufficiently large to put us on our guard against the hasty generalizations of some recent writers on the increasing longevity of the race. What is true of a new and comparatively poor country may be quite the reverse when applied to a community which for centuries has possessed inherited wealth and culture. And while early retirement from public service may be the rule in republics, it is not so in monarchies. On a smaller scale a similar phenomenon is found in the fact that among us a greater number of veterans is employed in private establishments and corporations than in our civil service. An intelligent employer, whose own interest is at stake, will always give the preference to an old employee over a new one; an office-holder, who is himself only a passenger, as it were, will take care of his friends and let the service take care of itself.

Like several other Austrian magnates, Hübner has a decided taste and talent for literature. He has published a number of books, the best known of which are a 'Journey around the World' and a Life of Sixtus IV. Like most German diplomats and statesmen, he writes a much more agreeable and readable style than the professional and professorial German men of letters. It is curious, however, that instead of *Januar*, he writes *Jänner*, an exclusively Austrian locution; but this is about the only trace of dialect in the book before us, which, as its name indicates, is the diary of a year, or, more precisely, of thirteen months, from February 18, 1848, to March 19, 1849. An allowance of 379 pages for 395 days seems liberal indeed, and one shudders to think what the history of the world would be if executed on as ample a scale; but the book is not merely a diary—many pages are filled with reflections on public affairs. The author has the courage and the candor to print now the opinions which he entertained then, and many of which, although comparatively very liberal in view of the time, the country, and the surroundings in which he had been reared, have been utterly confuted by subsequent events. For instance, it was quite natural for him to believe that there could never be a united Italy, and that the Pope could not be shorn of his temporal power without impairing his authority as head of the Church. That he confesses these opinions, now that the events which he regarded as impossible have become accomplished, is, of course, only to his credit.

His diary is divided into two parts. The first deals with his residence in Milan, where for 106 days he was held as a hostage by the insurgents, though, apart from the detention itself, not put to serious inconvenience except when, for a brief space, he was exposed to the fury of a street mob. He entertains a high opinion of the native urbanity and kind-heartedness of the Italians, not excluding those of the lower classes, and intimates that their bark is worse than their bite. He says that while, on paper, they shed Austrian blood as if it were water, in practice they were much less cruel, and, in their intercourse with the hostages and with other subjects of the Emperor, were always polite and considerate. The following passage may serve as an exposition of his sentiments and also as a specimen of his style:

"I love Italy, and I also love the Italians. Among their many excellent qualities, I esteem particularly their facility of apprehension, and, what there is no German word for, their urbanity. The former continually strikes me, whether in intercourse with the higher circles, or with the middle class, or with the common people. To speak only of these last, let me assume the case of a traveller who speaks but imperfectly the language of the country in which he is sojourning. A German will laugh at his mistakes, a Frenchman will correct them, an Englishman is disconcerted, colors, utterly fails to understand, and walks off. The Italian guesses, if he does not understand, what the foreigner means, and, in order to make himself understood, speaks with his fingers, hands, arms, and, a born mimic, with his face—all with the utmost good-will and the politest manner. For the Italian not only apprehends with ease, but he possesses another gift—urbanity. This virtue is not to be confounded with civility. Civility is acquired by education, and is, therefore, more or less the privilege of the well-bred. Urbanity is inborn, or, rather, it is the inheritance of antiquity, handed down from generation to generation; in the course of centuries it has abandoned its exclusiveness and become the common property of the nation. Civility wishes to please, urbanity fears to displease. Nothing is more repugnant to it than the possibility of annoying one's fellow-man, or, still worse, of wounding his feelings. Civility facilitates intercourse among men, urbanity makes it pleasant and safe — safe in the sense that one never has to fear an offensive word. Foreigners who occasionally find that words do not correspond with actions accuse the Italians of insincerity. This is an error. They avoid touching disagreeable subjects, and, when that is impossible, assume that their obliging phrases will not be taken for more than they are—a polite way of preserving intact the questioned or disputed subject. From whatever point of view one regards Rome and Italy, in them is the cradle, and in the Italian the first-born son, of civilization."

The second part of the diary, dealing with the exciting events in Vienna in the autumn of 1848, possesses greater historical interest than the first. Hübner was directly instrumental in bringing Prince Felix Schwarzenberg from Milan to Vienna, where the latter soon took the reins of government into his hands, and, by his genius and energy, contributed in no inconsiderable degree to save the monarchy. Hübner served as his right hand, and composed all the proclamations, diplomatic communications, and other public documents which the political situation evoked. He was necessarily brought into intimate contact with the most important actors on the public stage, and his book abounds in striking characterizations of generals and statesmen, as well as of some leaders of the revolution; and there are not wanting skilful descriptions of stirring scenes.

William Wordsworth. By Elizabeth Wordsworth, Principal of Lady Margaret Hall, Oxford. London: Percival & Co. 1891.

It is inevitable that some scepticism should mingle with the pleasurable anticipation with which one approaches a fresh literary portrait of a poet who has challenged the best efforts at portraiture of more than one generation of writers. This latest attempt at making permanent still another impression of the mild yet august personality of Wordsworth justifies almost equally the scepticism and the anticipation. Miss Wordsworth is one of the few persons living who can remember, not the poet himself, but the wife who outlived him by almost a decade. She has listened to reminiscences of the thrifty habits of the most homely of men of genius from the lips of an old retainer, and has had access to some intimate family letters not published in memoirs or lives. But she must not, for these reasons, be supposed to lean too much to the side of the familiar or the trivial. Nor, on the other hand, does she represent her immortal relative solely by the pure light and "perfect witness" of his genius. "It may be mentioned," she writes, "that this [Dorothy Wordsworth's] journal is full of allusions to William's being 'ill,' 'tired,' and the like. . . . The task of composition seems to have been frequently attended with physical discomfort and uneasiness, and especially to have affected his sleep, as his poems themselves show." Yet these were the really vital moments of his life. What puts him among the immortals is the "visionary gleam" that came when he was lifted, by a power he could not command, above the usual even tenor of his way, when the mood fell for which he could not arrange in plans for poems in parts and books, and from which he came back "trailing clouds of glory" over the ordinary level of his verse.

Patiently and appreciatively as Miss Wordsworth has studied his poetry, and interesting as much of her criticism is, it is, on the whole, less the poetry than the man as seen through it that most completely fills the measure of her confidence and security. "The vision in the temple is made real to our minds by the fact that the prophet has shown his sincerity and trustworthiness in matters of which we ourselves can judge." Throughout his long life of eighty years, he gave rise to no need for the apologists who have been found for the lives of less serenely balanced poets. Of the theme of his exemplary virtues his grandniece does not weary: "The heart, though deeply, very deeply, stirred, is always controlled by the masculine will." In brief, he loved his sister, his wife, his children, the liturgy of the Church, and the "Authorized Version." His parochial duties, also, were not left undone; and finally Miss Wordsworth writes: "How one would like to have seen him being drilled" in a Grasmere volunteer corps!

If Miss Wordsworth has not found a new valuation for the poet whose work stands most in need of anthologies and selections, she has given between the lines, without the least undue use of the personal pronoun, a distinct and delightful impression of her relation to the young Oxonians (if the term may be applied to the sex) of the Hall of which she is the head. Her pages more than hint her keen sympathy with the readings of Plato, the studies in classic poetry, the eager search for English equivalents for difficult passages, and with the rest of the burning questions of "term-time." They show also a broad and liberal culture that extends beyond the palmy days of Grasmere and Rydal Mount.

Evolution of the Ordinance of 1787, with an Account of the Earlier Plans for the Government of the Northwest Territory. By Jay A. Barrett, M.A. G. P. Putnam's Sons. 1891.

THIS book is the first fruit of the Historical *Seminar* in the University of Nebraska. It is a very painstaking performance, and the author, without having had access to original sources, has worked over, in a thorough and independent way, nearly all the existing materials on the subject of his study. Adhering strictly to the documentary evidences, and rarely mixing inferences with the recorded facts, he gives to the documentary evidences a juncture and series which make them tell the story of "the memorable ordinance" with a clearness and accuracy not before attained. And, besides, the writer has no set thesis to maintain, beyond and above the recorded facts, as to the greater or less share which Dane or Cutler may have had in its authorship and enactment.

The government of the Northwest Territory passed through an evolutionary process. "The army plan" for settling a new State with officers and soldiers disbanded at the close of the Revolutionary War came first in order, because the needs of an impoverished soldiery were then most clamorous. The fiscal necessities of the Government came next to create what Mr. Barrett entitles "the financiers' plan." A clear perception that all plans for profiting by "the natural secretions of landed wealth" must depend for success on social security and political order, came in the end to pave the way for the ordinance of 1784 as drafted by Jefferson. As the ordinance of 1784 began to be studied in connection with the needs of free labor, and with the dread of State multiplication at the West to the damage and disparagement of the Atlantic States, it was seen by "men of reflection" that the number of States contemplated by that ordinance should be reduced, and that slavery should be restricted in them. These views finally culminated in the ordinance of 1787.

It is because this ordinance was in large part the product of an evolutionary process that its genesis is involved in so much obscurity. It is because the Continental Congress, in caring for the unoccupied West, was obliged to "feel its way blindly along the dark path of implied powers," that the problem was so difficult. The quarrel over the "back lands" began even earlier than Mr. Barrett hints. The question was pronounced from the first to be the article of a standing or falling Union. "Gentlemen shall not pare away Virginia," exclaimed Harrison, only three weeks after the Declaration of Independence. "Until these western lands are cut off, Pennsylvania will not confederate," rejoined Wilson. The munificent cession of Virginia, following the lead of New York, finally gave a solid footing to projects for the government of the northwest territory, and the successive stages of this movement are clearly sketched by Mr. Barrett.

Of most interest to us is the writer's minute discussion of the ordinance of 1784, as originally drafted by Jefferson, and as finally passed. Illustrating his study by maps, he thinks it a mistake to say, as most writers do, that this ordinance, as adopted, provided for the creation of ten States. The mistake, if it be a mistake, is very old, as it was shared by Rufus King in 1787 (Elliott's Debates, vol. v, p. 281.) Mr. Barrett refers to the "amusement" which in later times has been created by the fantastic names given to these Western States in Jefferson's first draft. The amusement dates from the first publication of that draft. The newspaper wags of the time proposed that the States formed by partition from the old States should also be euphemistically named—that Vermont should be called "Epithalamia," Kentucky, "Parthenissiona," and that the Wyoming region, if admitted to the honors of Statehood, should be called "Polu-phloisboia." The writer marks the first emergence of the words "Charter of Compact," as found in all these early organic acts, but he does not explain their origin and significance. They were made necessary by the fact that the assumption of Congress to legislate under the Articles of Confederation for the government of the Territories was, as Madison and Hamilton confessed at the time, without a shadow of authority, and had to depend for its legal obligation on compact between the contracting parties. Mr. Barrett thinks that the fugitive-slave clause foisted on Rufus King's anti-slavery resolution of March 15, 1785, and finally incorporated in "the Ordinance of Freedom," must have come from some "outside pressure" not now discoverable. He dismisses, with reason, the precedent found for it in the compact of 1643, between Massachusetts, New Plymouth, Connecticut, and New Haven for the rendition of runaway "servants." That would indeed be "a far cry" when we can find a nearer slogan for it in an agitation which, from 1784 to 1789, prevailed in Georgia for the mutual rendition of slaves between herself and the Spanish possession of Florida. The Continental Congress (John Jay, the Foreign Secretary, being its organ) made itself the ready instrument of these reclamations (Diplomatic Correspondence, etc., 1783–1789, pp. 249–51, 262–3, 376–9, 416). What seemed so "consistent with good neighborhood" (the phrase is Jay's), as between the slave States and a foreign nation, could not have been deemed at that time a hardship as between slave States and free States in the same Union. The apathy of the "fathers" on this subject is unintelligible to-day because of the moral progress which has left the barbarism of slavery so far behind us.

Mr. Barrett forbears to discuss "the political reasons" which induced the Southern members to vote for the ordinance. That they had such reasons is frankly avowed by Grayson of Virginia. Indeed, it would not be difficult to make an argument in support of the proposition that "the planting States" were gainers by the compact. Besides the recapture of fugitive slaves, they gained a reduction in the number of free States that could be carved out of the territory north of the Ohio. The territory west of North Carolina, South Carolina, and Georgia had not yet been ceded, and its future partition into States could be controlled by the acts of cession or by the proprietary States themselves. The attempt made by the commercial States in 1786 to wink at the occlusion of the Mississippi River for twenty-five years, and during that time to prevent the settlement of the Southwest, had been balked. The whole Mississippi Valley was virgin soil for the occupation of "the planting States." Hence the bitter opposition waged by Grayson against the adoption of the Constitution. He based that opposition avowedly on the ground that the Constitution, by its enlarged grants of power, made a new deal as between the Northern and the Southern States in "their contest for empire"—the stakes of that contest being the Mississippi valley. If Grayson had "political reasons," as he said he had, in voting for the ordinance on the 13th of July, 1787, he was true to those reasons when, a few months later, he vehemently opposed the ratification of the Constitution by the Virginia Convention, from motives drawn from the balance of power between the North and the South. If anybody supposes that the ordinance of 1787 was passed in an era of Arcadian politics, he has but to turn to the debates going on at that very moment in the Federal Convention sitting at Philadelphia, with the panic fears expressed by Northern delegates that the Western States might come "by degrees to outvote the Atlantic States," and with the exultant prospect looming before Southern delegates that "the people and strength of America were evidently bearing southwardly and southwestwardly" (Elliott's Debates, vol. v., p. 288 and p. 309).

Very interesting are the detailed references made by Mr. Barrett to the sources from which the several clauses of the ordinance seem to have been derived by its compiler. If, as the result of this inquiry, Nathan Dane comes to his own again, it is not because of any injustice done to Manasseh Cutler. Indeed, something less than full justice is done to Dane's zeal on this subject, for no mention is made of his elaborate discussion of the Western territory question in a speech delivered before the Legislature of Massachusetts in November, 1786. The report of that speech was published at length in the Boston, Hartford, and Philadelphia newspapers of the day, and we fail to find in it any evidence of the "provincialism" ascribed, on what grounds we know not, by Mr. Barrett to Dane.

It is a pity that the proof-reading of this excellent monograph should be so careless. The important resolution of Rufus King for the restriction of slavery is not printed with textual accuracy. The same resolution, as revised by the Committee to whom it was referred, is said to have been reported on the 26th of April instead of the 6th. The names of some of the men who enacted the "ordinance of '87" are cited only to be misspelled. Samuel Holten of Massachusetts masquerades as "Samuel Hal'er," and John Haring of New York as "John Herring," while James Schureman of New Jersey figures alone in the list without any Christian name. There are other inaccuracies.

The Epic of the Inner Life. Translated anew, and accompanied with notes and introductory study, by John F. Genung. Boston: Houghton, Mifflin & Co. 1891. Pp. 352.

THIS book is an expansion of an article, "The Interpretation of the Book of Job," which appeared in the *Andover Review* for November, 1888, and was favorably received. Such need was there of such a book—a hearty appreciation of the Old Testament poem, written without academic formalism or scholastic pride, making its appeal to a wide popular intelligence—and the book presented has so many admirable qualities, that it is a very great pity to find it falling short, in some important particulars, of the best results, and aggravating the popular prejudice which it should have helped to correct. It is made up of two parts: "The Introductory Study" and "The Poem." In the former, after certain preliminary observations on the right way of studying the poem, in which there is some natural exaggeration of the futility of all previous attempts, "the central and ruling idea" of Job is brought forward with more show of opposition to former critics than is justified by the amount of difference which is disclosed when at length "the central and ruling idea" is announced as follows: "There is a service of

God which is not work for reward: it is a heart-loyalty, a hunger after God's presence, which survives loss and chastisement; which, in spite of contradictory seeming, cleaves to what is godlike as the needle seeks the pole, and which reaches up out of the darkness and hardness of this life into light and love beyond." This interpretation is opposed to that of Delitzsch and many other critics—nearly all—for whom the question, "Why does suffering on suffering befall the righteous?" is the sole interest involved. Prof. Genung cannot of course deny that this question is uppermost in the great debate between Job and his friends, but the novelty of his contention is that the answer does not come out in the argument but in the experience of Job, in the development of his spiritual nature under the stress of suffering and sorrow. In Job we have a Teufelsdröckh of the early world fighting his way, like Carlyle's hero, through the everlasting no to the everlasting yea. The comparison is Prof. Genung's, and his several returns to it are as illuminative of his meaning as anything he writes. The promise of this transference of the unity of the poem from a system of thought or reasoning to a person is so pleasing to our ear that it is extremely disappointing to find it broken to our hope. It is so broken; for it is only by what Job says that we get any knowledge of what he is at heart, and there is nothing in his words that gives the sense of spiritual development ascribed to him. Yet Prof. Genung is right in his contention that in the great debate we have more than a mere intellectual argument. However it may be with his friends, Job is a living man, storm-swept by great emotions, and his thinking is for the most part done with his passionate and broken heart. This is the substantial truth that underlies Prof. Genung's exaggeration of the personal centre of the poem.

His classification of the poem as an epic is a matter of no great importance except as it involves his special point of view and the integrity of Job as it has come down to us. It is so different from any typical epic or any typical drama that perhaps we should come nearest the truth by calling it a lyrical dramatic epic. But, so calling it, we should imply the integrity of the poem if we did not make it plain that we only speak of it as it now stands. Prof. Genung is nowhere less satisfactory than in his treatment of this matter of integrity, the connection and continuity of the different parts of the poem. He exaggerates the peculiarity of his position as a defender of the absolute integrity of the book, and especially as the defender of the Elihu part as in agreement with the rest. It is, therefore, all the more strange that, imagining all critical flesh opposed to him, he does so little to beat down its arguments. Certainly no one who ever had a doubt, however faint, of the integrity of the poem, whether in regard to the prologue and epilogue, or the speech of Elihu, or chapter xxxviii., would have his doubt removed by anything offered here. There is a painful suggestion that only the ignorant are addressed, who will not know how weak the statement is. It is, too, a great injustice to represent the doubts as to the integrity of Job as arising from foregone conclusions as to the purpose of the book. Prof. Genung's defence of its integrity has much more the appearance of arising in this way. He might give up Elihu, but, without the prologue and epilogue, his occupation would be gone. If we are not mistaken, a much better case could be made out for a theory of many authors than for the theory of one. As the name of David attracted successive collections of Psalms, and the name of Solomon successive collections of Proverbs, why may not the name of Job have attracted various treatments of the problem of suffering righteousness? There is able scholarship in defence of this teaching. It posits the prologue and epilogue as the original base, makes the debate of Job and his three friends the next instalment, the speeches of Jehovah a third, and that of Elihu the fourth. This may be heroic treatment, but it is delightful in comparison with the evasive shiftiness of those arguments by which the speech of Elihu and the epilogue, especially, are retained as consistent portions of the book.

We cannot follow Prof. Genung into his translation and the commentary he has made upon it. Both of these have many admirable traits. The translation is wonderfully fresh and strong and beautiful. It may be asked, "Why retranslate a book in which the Revised Version made more changes than in any other, and with good effect?" The answer is that "there is a strong tendency in a company translation, made in the interests of the Church and Christianity, to make every clause at all hazards a source of spiritual and homiletical edification." These are hard words, and in melancholy contrast with them is the translation of the most critical passage in the book, "I know that my redeemer liveth." The foot-note says: "*My redeemer*—so it seems best to translate here, rather than disturb the associations of the passage, because not enough would be gained by the more accurate term *avenger* to pay for the change." Thus the author is false to his chosen principle, and his "sermonizing instinct" gets the better of him at the most critical moment. And the translation of the remainder of the passage, with the commentary on it, is the most doubtful feature of the book. The translation, bringing out the expectation of a future life, is equally at variance with the general drift of the poem and the "consensus of the competent" respecting this most difficult passage. Yet on this individual translation and interpretation, at the best extremely uncertain by his own confession, Prof. Genung has based the climax of his exposition. It would be hard to find a worse example of critical artfulness than this. To harmonize such a translation and interpretation with the remainder of the poem is impossible. The attempts to do so are the plainest proofs of this; and the impossible is intensified by the date which Prof. Genung assigns to the book—the eighth century B. C., much earlier than has been lately reckoned. Prof. Toy assigns it, with the body of the Wisdom literature to which it is allied, to the third century before the Christian era. Even then the idea of immortality would have been unlikely, but far less so than five centuries before.

The Criminal Jurisprudence of the Ancient Hebrews. By S. Mendelsohn, LL.D. Baltimore: M. Curlander. 1891. 8vo, pp. 270.

PUTTING aside the preface, index, etc., and the reprint of an essay on the Talmud by the same author, only 180 pages are left for the work named in the title, less than one-third of which is text, the rest footnotes. We know nothing of the practical workings of the criminal law among the Hebrews, except in the shape which it assumed, in the later times of the second commonwealth, in the hands of the Pharisaic Rabbis or Judges (for Rabbi was identical with Judge). Of the Sadducees we know only that they servilely followed the written law in all its blood-curdling severity; but they have left no literature of their own. The Talmud, the outgrowth of Pharisaic learning, refers sometimes to the Sadducean rulings, *e. g.*, to their literal enforcement of "eye for eye, hand for hand," instead of awarding moneyed damages for the loss of the eye or limb. But our author does not mention the Sadducees at all; the jurisprudence he gives us is solely that of the Talmud.

After the destruction of the Temple in 70 A. D., no Jewish tribunal was deemed competent to inflict the death penalty; indeed, jurisdiction in capital cases was wielded but for two short periods of two or three years out of the fifty preceding that event. But aside from the Apocryphal story of Susannah, there is no older written document about Jewish jurisprudence of any kind than the Mishnah, as collected by Rabbi Jehudah at Tiberias during the reign of Elagabalus, say 220 A. D. Until his day, the "oral law" was handed down by word of mouth only; and, notwithstanding the respect paid to tradition and authority, the Rabbis discussed points of criminal law which had become a mere matter of history, with the same freedom as if they were passing as judges upon cases coming before them for trial; and in this way they must have often taught and proclaimed, not how the law had been administered at Jerusalem, but how, in their opinion, it ought to be administered if Jewish independence were restored. And the same process went on during the subsequent discussions of the Rabbis on the Euphrates on the text of the Mishnah, which went on for nearly three hundred years, before they were written down in the Babylonian Talmud. The further away we get from the time when the criminal law had to be enforced in the interest of social order, the more we find of those subtilties which make the lawful punishment of even murderers and thieves, as well as blasphemers and Sabbath-breakers, utterly impossible; and a new rabbinical criminal code, with imprisonment and excommunication for its penalties, had to be constructed and projected into the past, in place of the old-fashioned sentences of death and of stripes of the Mosaic dispensation. Our author, in one of his notes (68), while speaking of the "previous warning" (*Hathrādh*) against the commission of the crime, without proof of which the penalty of death or stripes, according to the Talmud, could not be lawfully imposed, admits that this rule could certainly not have prevailed when the Jewish courts alone had to preserve the peace in Palestine against robbers and cutthroats; but he fails to notice that the refinements which render the enforcement of the law nugatory are carried much further in the Gemara or Talmud than in its foundation, the Mishnah, which, aside from being much older, and therefore better historic authority, is also the work of much more sober-minded men. Our author generally loses sight of this distinction, and, even when he quotes the Mishnah, he refers to it by the page of the Babylonian Talmud in which it is inserted.

But, making allowance for all the refinements or exaggerations of later times, enough remains to convince the searcher after truth that the Pharisaic judges of the Asmonean and Herodian times administered the law against persons accused of crime, in a spirit of fairness and humanity which has never before this nineteenth century been reached by any nation, and even in our own time is confined to the United States and the British Empire. The procedure is always accusatory, never inquisitive, the prisoner is never called

upon to criminate himself, his confession is never regarded, except in so far as it might, in offences against property, relieve him from a penalty. (But this is probably one of the Talmudical afterthoughts.) No conviction can be had upon the testimony of less than two witnesses — so says the written law; and these witnesses must be free male Israelites over thirteen years of age, of unblemished character. In capital cases the court is composed of twenty-three, in other criminal cases of three "expert" judges, who are drawn from the "disciples of the learned." Any "disciple" in the court-room may argue a point in favor of the accused (Mishnah Sanhedrim, ch. v, §4—a passage which the author seems to have overlooked when he says that advocates were not allowed to confuse the court). But none of the "disciples" were allowed to argue against the prisoner; this only the judges could do, after withdrawing for consultation. After an acquittal there could be no new trial, even upon the discovery of new evidence, though there might be after a conviction. The witnesses were in all cases confronted with the defendant; they were separated; they were closely cross-examined, first by set questions as to time and place (*Hakirah*), then at large in our English-American style (*Bedikah*); and in very early times a thorough cross-examination, in the interest of a wrongfully accused person, was made the most sacred duty of the judge.

Men were disqualified for seats on the bench if of kin to the accused or to the prosecuting witnesses; also (Sanh., ch. iii, §3) "dicers [professional gamblers], usurers, *pigeon fanciers* [our author omits these], and traders in fruits of the seventh year"; also, like jurors under the common law, for "ease and favor." Altogether, there were few, very few executions; no mutilations; no torture; no confiscation. The penalties of stoning or burning were inflicted so as to save the very letter of the law, but so as to render death almost instantaneous and painless. For here the Pharisees applied the Golden Rule, which they deduced from "Thou shalt love thy neighbor as thyself," while the Sadducees burned or stoned their victims with a cruel thoroughness worthy of Torquemada. While our author fails to compare the mildness and humanity of the Talmudic law with the ferocity of the Sadducees, he draws many parallels between the system described by him and the laws of Greece, of Rome, and of England. For Greece and Rome he relies mainly on Smith's Dictionary, on W. W. Fiske, and on Gibbon; for English law on Blackstone and on Roscoe's 'Criminal Evidence'; but he tells us in his preface that he has consulted none of the many German works on the branch of Rabbinic lore treated by him, because he wished to draw at first hand from the original sources. It has been said, however, that he has made free use of a work on the subject by Dr. Fassel, published at Vienna, a charge which we have not the means to verify. He nowhere mentions John Selden, whose 'Synedria Veterum Hebræorum' teaches all that is worth knowing on Talmudic jurisprudence with remarkable thoroughness and accuracy. If he has really, at first hand and without assistance from his predecessors, gathered all his extracts from the Babylonian and the Jerusalem Talmud, the Commentaries (*Mechilta*, *Sifra*, etc.), and the codification of Maimonides (*Yad hahazakah*), he has performed an amount of work quite disproportionate to the result.

We consider the author's want of discrimination between the Mishnah and the later documents a serious mistake. Another blemish in the eyes of many readers, though a recommendation with some of his Jewish friends, is the continual tone of praise which pervades his book: as the common law is to Blackstone the perfection of human reason, so Talmudic criminal law is to our author the perfection of justice and mercy. But the author's unidiomatic English and unfortunate choice of modern law terms also detract from the merits of the work. And for the crisp style of the Talmudic law maxims he has no taste—at least he has not the pluck to reproduce it. The law of self-defence, which, literally rendered, reads, "He who comes to kill thee, get up early to kill him," he tamely travesties thus: "Kill the one attempting unlawfully to kill thee"! We recommend the book as likely, in these days of anti-Semitism, to dispel many unjust prejudices.

War. By Col. F. Maurice, R.A., Professor of Military Art and History in the Royal Staff College. Macmillan & Co. 8vo, pp. 155.

THIS reprint in book form of Col. Maurice's excellent article in the 'Encyclopædia Britannica' would be useful and timely in any event; but the addition of an essay on military literature and a list of books with brief comment makes it an indispensable handbook for the military student. The author's summary of the changes in the conditions of strategy and tactics made by repeating weapons of precision and long range, is as authoritative as we are likely to have till the next great and dreaded collision of European armies shall change theory into science and conjecture into knowledge.

The essay on military literature is full of the soundest suggestions as to what and how to read, and gives a wise analysis of the reasons for the supreme value of military history in the soldier's education. Col. Maurice finds the military lessons of our civil war more useful to the European student than some other contemporary writers have seemed willing to admit, and in the campaigns of the German Army since 1865 he finds proof that the German officers have not neglected the study of our history. He sees more clearly than some others have done that the changes in tactical offence and defence, in strategic combinations as affected by railroads and telegraphs, and especially in the moving and subsistence of armies in the field, were all either worked out or clearly foreshadowed in the American campaigns from 1861 to 1865.

Famous Golf Links. By Horace G. Hutchinson and Others. Longmans, Green & Co.

THIS is a delightful book for the elect—that is, for golfers—but we fear it will be caviare to the general. Excluding the links at Quebec and Montreal, which are herein described, Rockaway is the only place on this side of the Atlantic where the enthusiastic golfer (all golfers are enthusiasts) can indulge in his favorite game. That such a condition of things should exist in this nineteenth century is, perhaps, due to the McKinley Bill or the fear of unlimited silver coinage; but, in any case, it is discreditable to American sportsmen. For golf is one of the very best games that the mind of man has devised. One might say of it as the Bishop in the story said of the strawberry: "Doubtless the Lord might have created a better game, but doubtless he never did." It has been played in Scotland for centuries, but became popular in England only of late years—probably because Englishmen still look with suspicion upon anything that emanates from "gentlemen of the Caledonian persuasion." But no sooner was this prejudice overcome than the whole population, young and old, male and female, took violently to golf, with the result that in England to-day golf-links are as plentiful as blackberries, and the quondam supremacy of cricket and lawn tennis is seriously threatened. In these days, when we carefully imitate so many English customs more honored in the breach than the observance, it is to be regretted that we do not take up golf as we have taken up polo. Of the two games, considered as such, golf has the immense advantage of being within reach of all, whereas polo is for the few who can afford to keep ponies. And then there is a soothing satisfaction that follows a good afternoon's golfing which is rarely attained by any other process. At such times a man feels at peace with himself and all mankind, and comes near to realizing that halcyon period spoken of by the jester—

> "When the Rudyards cease from Kipling
> And the Haggards ride no more."

Shakespeare vom Standpunkte der vergleichenden Litteraturgeschichte. Von Dr. W. Wetz. Erster Band: Die Menschen in Shakespeare's Dramen. Worms: P. Reiss.

THE title of this work, so far at least as the first volume is concerned, is somewhat misleading. The author gives us next to nothing of "Shakspere from the standpoint of comparative literary history," but instead of that several hundred pages of psychological observations upon Shakspere's characters. The ultimate object of his treatise, he tells us, is to develop the laws of Shaksperian tragedy, and to show how that differs from the tragedy of other modern poets. His method is to be that of "comparative literary history"—something new in Germany, he assures us. He argues for the possibility of a comparative method, quite different from anything hitherto exemplified, that shall rise to the dignity of an exact science. A somewhat prolix introduction attempts to set forth the *modus operandi* of this new method; but one reads it all the way with the mental comment *déjà connu*, and wonders what all the fuss is about. Dr. Wetz informs us that he follows in the footsteps of Taine, and has no predecessors among German writers, for Brandes, being a Dane, does not count. With respect to this manifesto, however, an honest critic owes it to the public to call attention to one important difference between Dr. Wetz and his famous models: Taine and Brandes are never dull.

The bulk of the volume is made up, as already remarked, of comments upon Shakspere's characters; comments that are occasionally suggestive of real critical power, but are on the whole disappointing on account of the absence of the very thing that is promised, namely, historical criticism. The discussion proceeds tamely, with an infinite deal of quotation, and very much as if the plays had fallen from the sky ready made.

BOOKS OF THE WEEK.

Anderson, E. L. The Universality of Man's Appearance and Primitive Man. Edinburgh: David Douglas; Cincinnati: Robert Clarke & Co. 25 cents.

Euripides. Iphigeneia at Aulis. Edited by E. B. England. Macmillan & Co. $1.75.

HENRY HOLT & CO.

HAVE LATELY PUBLISHED:

JAMES'S (WM.) PRINCIPLES OF PSYCHOLOGY. Two volumes. 8vo. 1393 pp. Retail price, $6.00.

"The most important contribution that has been made to the subject for many years. Certainly it is one of the most weighty productions of American thought."—*The Nation.*

DURUY'S (V.) HISTORY OF THE MIDDLE AGES. Translated from the 12th French edition. With Notes and Revisions by Prof. GEORGE B. ADAMS of Yale University. 12mo. 583 pp. Teachers' price, $1.60; by mail, $1.74.

"The best single volume work on the subject. . . . Primarily intended as a text-book, but it is perfectly adapted for general reading, and there can be no question that it gives a clearer view both of mediæval tendencies and events, than can be obtained from any other general work on the subject."—*N. Y. Tribune.*

WILLIAMS'S (G. H.) ELEMENTS OF CRYSTALLOGRAPHY, for Students of Chemistry, Physics, and Mineralogy. 12mo, 250 pp. Teachers' price, $1.25; by mail, $1.36.

"Without exception *the* text-book on modern crystallography in English."—*Prof. C. S. Palmer of Colorado College.*

JOHNSTON'S (A.) SHORTER HISTORY OF THE U. S. 12mo. 340 pp. Teachers' price, 95 cents; by mail, $1.06.

"Like the larger work, this also seems the best of its kind; that is, the best book in existence for intermediate and common school work."—*G. W. Knight of Ohio University.*

"I did not see how so good a book could be written. I do not now see how a better book can be written."—*S. W. Mason, Supervisor of Schools, Boston, Mass.*

WHITNEY'S (W. D.) BRIEF FRENCH GRAMMAR. 16mo. 177 pp. Teachers' price, 65 cents; by mail, 71 cents.

"It is just what is needed . . . being brief, systematic, scientific, and covering a necessary and extensive territory in a concrete and comprehensive manner."—*A. T. Swift o' Brown University.*

BELLOWS'S (J.) FRENCH AND ENGLISH DICTIONARY. Larger Type Edition. 12mo, 605 pp. Teachers' price, $1.00; by mail, $1.13.

A school edition, in somewhat larger type, but otherwise unaltered, of the well-known 'Pocket Dictionary' (roan, $2.55; morocco, $3.10), of which Dr. OLIVER WENDALL HOLMES says: "Your little microscopic dictionary was equal to the hard task I put upon it; surprising me by the richness of its little columns and the exceedingly knowing way in which common French colloquialisms were rendered into corresponding English ones."

CLARK'S (J. S.) BRIEF PRACTICAL RHETORIC. 12mo, 307 pp. Teachers' price, 90 cents; by mail, 98 cents.

An abridgment of the well-known larger work of which Professor WM. HAND BROWNE *of Johns Hopkins University* says: "I consider it superior for teaching purposes to any work of the kind that I have ever seen. I shall both use and recommend it."

BRONSON'S (T. B.) COLLOQUIAL GERMAN. 16mo, 174 pp. Teachers' price, 65 cents; by mail, 70 cents.

A classified collection of idiomatic English sentences of a straightforward, natural sort, together with all the apparatus in the way of glossary, grammar, and notes needed in order to turn these sentences into equally idiomatic German. The actual work of rendering is placed upon the student.

READY SOON:

JAMES'S (WM.) BRIEFER COURSE IN PSYCHOLOGY. (*In November*).

BRIGHT'S (J. W.) ANGLO-SAXON READER. (*In October*).

WHITNEY'S (W. D.) LECTURES FRANCAISES. (*In October.*) A reader composed of easy pieces of considerable length, notes, and complete vocabulary.

JACKMAN'S (W. S.) NATURE STUDY FOR THE COMMON SCHOOLS. (*In September.*) A series of lessons, which can be used in elementary schools as a set programme, or merely as suggestions for a many-sided study of natural objects and phenomena.

HALL (E. H. & BERGEN'S J. Y., JR.) ELEMENTARY PHYSICS. Chiefly by Experiment. (*In November.*) Contains the text of the pamphlet "Elementary Physical Experiments," issued as a guide to candidates for admission to Harvard, and also introductory and subordinate experiments, together with the necessary theoretical accompaniment. The matter and language of the book is adapted to ordinary high-school pupils.

BALDWIN'S (J. M.) PSYCHOLOGY. Volume II. Feelings and Will. (*In December.*)

ALLEN'S (C. R.) LABORATORY MANUAL OF ELEMENTARY PHYSICS. (*In November.*) Intended to supplement the usual text-book work by quantitative experiments suited in difficulty to high-school pupils, and in kind to laboratories of limited equipment.

MANNING'S (E. W.) SPANISH GRAMMAR. (*In October.*)

AUBERT'S (E.) COLLOQUIAL FRENCH DRILL. Part II. (*In September.*)

WHITTLESEY'S (M.) HILLERN'S HÖHER ALS DIE KIRCHE. (*In October.*)

BURNETT'S (A. W.) STORM'S IMMENSEE. (*In October.*)

CROZIER'S (A. A.) DICTIONARY OF BOTANICAL TERMS. (*In December.*)

SNEATH'S (E. H.) MODERN PHILOSOPHERS. Verbatim abstracts from their works, with biographies, etc.

LOCKE. By Professor RUSSELL of *Williams College.* (*In September.*)

REID. By Dr. SNEATH of *Yale University.* (*In October.*)

KANT. By Professor WATSON of *Queen's College.* (*In September.*)

Descriptive catalogue of these and other standard text-books, containing terms for examination and introduction, will be sent free on application to the publishers at

29 WEST 23RD ST., NEW YORK.

DON'T go to SCHOOL

To Learn Book-Keeping

When you can learn it *at home*, within 100 hours' study, without the aid of a teacher, from GOODWIN'S IMPROVED BOOK-KEEPING AND BUSINESS MANUAL (*guaranteed*).—"I learned the science of book-keeping from your work in less than three weeks, and am now keeping three different sets of books. What I learned from your work in so short a time cost a friend of mine $600, and over a year's time."—THOMAS TANTISH, Stowhegan, Maine, Mar. 29, 1890.—"You illustrate what I never saw in any other work of the kind—*practical book-keeping.*"—E. H. WILDER, book-keeper for Pratt & Inman, iron and steel, Worcester, Mass.—"Without the aid of a teacher, I studied your book just eight weeks, sent my work to you for examination and succeeded in obtaining your 'audit.' I then came to this city, without ever having seen the inside of a set of books, and immediately took control of a set of double-entry books for this firm, whose receipts during 1890 were about $1,500,000. I am now the firm's chief accountant, and have five direct assistant book-keepers under me. It is said—and I do not think exaggerated—that I have the largest set of books in Indianapolis. The above surely stand as self-evident facts that the channel of success was opened to me through the medium of your book."—WM. O. SHIREY, head book-keeper for The Parry Manufacturing Co., road carts and road wagons, Indianapolis, Ind., Feb. 23, 1891.—☞Size of book, 7¼x10¼ inches; pages 293; printed in red and black; richly bound; 28,787 copies sold and 2,532 testimonials received up to Aug. 24, 1891. PRICE $3.00. Twelfth Edition published January, 1891. Save this advertisement as you will probably never see it again. You will *surely* have to have the book *some* day, if not *at once.* Send for descriptive pamphlet. Address all orders exactly as follows:

THE HEROES OF THE NATIONS.

Biographical studies of the lives and *the work of certain leaders of men* about whom have gathered the great traditions of the Nations to which they belonged, and who have been accepted as types of the several national ideals. Edited by Evelyn Abbott, Balliol College, Ox. Large 12mo. fully illustrated; each, cloth extra, $1.50; half morocco, $1.75.

I.—NELSON AND THE NAVAL SUPREMACY OF ENGLAND. By W. Clark Russell, author of 'The Wreck of the Grosvenor,' 'The Life of William Dampier,' etc., with the collaboration of Wm. H. Jaques, late U. S. N.

II.—GUSTAVUS ADOLPHUS, AND THE STRUGGLE OF PROTESTANTISM FOR EXISTENCE. By C. R. L. Fletcher, M.A., late Fellow of All Souls College, Oxford.

III.—PERICLES, AND THE GOLDEN AGE OF ATHENS. By Evelyn Abbott, M.A., Fellow of Balliol College, Oxford. Author of 'A History of Greece,' etc.

IV.—THEODORIC THE GOTH, THE BARBARIAN CHAMPION OF CIVILIZATION. By Thomas Hodgkin, author of 'Italy, and Her Invaders,' etc.

V.—SIR PHILIP SIDNEY, AND THE CHIVALRY OF ENGLAND. By H. R. Fox-Bourne, author of 'The Life of John Locke,' etc. (*October.*)

VI.—JULIUS CÆSAR, AND THE ORGANIZATION OF THE ROMAN EMPIRE. By W. Warde Fowler, M.A., Fellow of Lincoln College, Oxford. (*November.*)

AMERICAN LITERATURE, 1607-1885. By Charles F. Richardson, Professor of Literature in Dartmouth College. Popular edition, two volumes in one, octavo, $3.50.

Part I.—THE DEVELOPMENT OF AMERICAN THOUGHT.

Part II.—AMERICAN POETRY AND FICTION.

"A book that is a credit to the writer and to the nation, and which has a grand future."—*Hartford Post.*

DOCUMENTS ILLUSTRATIVE OF AMERICAN HISTORY, 1606-1863. By Howard W. Preston. With introduction and references. Popular edition, octavo, $1.50.

"Entitled to a place in every historical and reference library in the United States."—*Boston Beacon.*

ENGLISH PROSE: Its Elements, History, and Usage. By John Earle, Professor of Anglo-Saxon in the University of Oxford. 8vo, cloth, $3.50.

"There is nothing superficial, nothing pedantic in Professor Earle's method and doctrine. It is no random collection of names or phrases that he offers to cheap popular curiosity, but a work of scholarly argument, analytical exactness, and wide observation."—*Daily News (London).*

CHAPTERS ON THE THEORY AND HISTORY OF BANKING. By Professor Charles F. Dunbar of Harvard University. 12mo, cloth, $1.25.

"The little volume is a very clear exposition of subjects considered blind and intricate by the uninitiated, but which follow laws and customs with wonderful regularity. It can be studied with both pleasure and profit."—*Boston Times.*

OLYMPOS, STUDIES OF THE GODS OF GREECE AND ROME. By Talfourd Ely, member of the Council of the Society for the Promotion of Hellenic Studies, author of a 'Manual of Archæology,' etc. With eight full-page illustrations designed from the best classical models, together with a number of designs in the text. Octavo, $1.75.

LEADERS IN SCIENCE.

I.—THE LIFE AND WORKS OF CHARLES DARWIN. By Charles F. Holder, author of 'Living Lights,' 'The Ivory King,' etc., etc. 12mo, illustrated, cloth, $1.50.

"Mr. Holder is one of the American savants who have made Darwin and his system of philosophy a subject of profound study, and his book relating to him is one of the best that has been produced for popular use."—*Philadelphia Bulletin.*

THE STORY OF THE NATIONS.

A series of graphic historical studies. Each narrative is complete in one volume, small 8vo, profusely illustrated, and containing maps and plans. Price per volume, cloth extra, $1.50; half leather, gilt top, $1.75.

THE LATEST ISSUES ARE:

XXXII.—THE STORY OF PORTUGAL. By H. Morse Stephens.

XXXI.—THE STORY OF SWITZERLAND. By R. Stead and Mrs. Arnold Hug.

XXX.—THE STORY OF SCOTLAND. By James Mackintosh, LL.D.

XXIX.—THE STORY OF THE JEWS UNDER ROME. By the Rev. W. Douglas Morrison.

"This is the very plan on which Herodotus and Livy wrote their immortal histories, or, rather, stories. . . . Historians who were also superb story-tellers, and story-tellers who were also capital historians, with a sprinkle and twinkle of poetry thrown in for full measure."—*N. Y. Critic.*

*** *Special terms to teachers for examination and introduction. Educational lists and prospectus of the Heroes and Story of the Nation Series, German and French Classics, etc., sent on application.*

G. P. PUTNAM'S SONS, 27 and 29 West 23d St., New York.

GINN & CO.'S BULLETIN.

SOME NEW BOOKS.

Sent by mail postpaid on receipt of the prices given below. Special terms for introduction.

LAWS OF THE UNITED STATES RELATING TO CURRENCY, FINANCE, AND BANKING FROM 1789 TO 1891. Compiled by CHARLES F. DUNBAR, Professor of Political Economy in Harvard University. 8vo. Cloth. 399 pages. $2.50.

This book, which has no rival, will be found of especial value in the present condition of the public mind on questions of currency and finance.

BUSINESS BOOKKEEPING. A manual of Modern Methods in Recording Business Transactions. Grammar School Edition—Single Entry. By GEORGE E. GAY. Small quarto. Cloth. x+93 pages. 75 cents. An original and sensible way of presenting the subject.

NOTES ON ENGLISH LITERATURE. By FRED PARKER EMERY, Instructor in English in the Massachusetts Institute of Technology. 12mo, cloth, xiv+155 pages, $1.10.

A history of English Literature packed with facts, criticisms, and suggestions to teachers.

PRINCIPLES OF THE ALGEBRA OF LOGIC, WITH EXAMPLES. By ALEXANDER MACFARLANE, M.A., D.Sc., F.R.S.E. 12mo, cloth, xii+155 pages, $1.35.

A HIGHER ALGEBRA. By G. A. WENTWORTH, Professor of Mathematics in Phillips Exeter Academy. 12mo. Half leather. vi+521 pages. $1.55.

This is intended to take the place of Wentworth's Complete Algebra, and is a complete course for high schools, seminaries and colleges.

SANSKRIT-ENGLISH DICTIONARY. Based upon the St. Petersburg Lexicons. By CARL CAPPELLER, Professor at the University of Jena. Quarto. Cloth. viii+672 pages. $6.25.

Indispensable to all serious students of Sanskrit.

CARDINAL NEWMAN'S ESSAY ON POETRY WITH REFERENCE TO ARISTOTLE'S POETICS. Edited by A. S. COOK, Professor in Yale University. 8vo. Paper. 48 pages.

Important as a specimen of the style of one who has been called the greatest master of English prose in our generation, and no less for the intrinsic value of its ideas.

GRAMMAR OF THE OLD PERSIAN LANGUAGE, TOGETHER WITH THE ORIGINAL TEXT OF ALL THE INSCRIPTIONS AND VOCABULARY. By HERBERT C. TOLMAN, Ph.D., of the University of Wisconsin. Square 12mo. Cloth, 100 pages. $1.00.

THE MODALIST, OR THE LAWS OF RATIONAL CONVICTION. A Text-Book in Formal or General Logic. By EDWARD JOHN HAMILTON, Albert Barnes Professor of Intellectual Philosophy in Hamilton College. 8vo. Cloth. vi+331 pages, $1.40.

A vigorous and original treatment of logic worthy of the attention of all interested in this subject.

THE ESSENTIAL USES OF THE MOODS IN GREEK AND LATIN, SET FORTH IN PARALLEL ARRANGEMENT. By ROBERT P. KEEP, Ph.D. Revised Edition. 16mo. Flexible leatherette. v+56 pages. 30 cents.

A new and enlarged edition of a book that proved extremely useful.

THE PRESENT AND FUTURE OF HARVARD COLLEGE. An Address Delivered before the Phi Beta Kappa Society at Cambridge, Mass., June 25, 1891. By WILLIAM WATSON GOODWIN, Eliot Professor of Greek Literature in Harvard University. 8vo. Paper. 42 pages. 30 cents.

DUTY. A Book for Schools. By JULIUS H. SEELYE, D.D., LL.D., Late President of Amherst College. 12mo. Cloth. 71 pages. 35 cents.

This little book covers the whole domain of duty, and treats the subject simply, and at the same time thoroughly.

ANIMAL LIFE AND INTELLIGENCE. By C. LLOYD MORGAN, F.G.S., Professor in and Dean of University College, Bristol, England. 8vo, Cloth. xvi+512 pages. Illustrated. $4.00.

Warmly endorsed by Wallace, the celebrated naturalist, as clear, interesting, and scientific.

MECHANISM AND PESONALITY. By FRANCIS A. SHOUP, D.D., Professor in the University of the South. 12mo. Cloth. xvi+341 pages. $1.30.

An original and scholarly study of a subject that is of vital interest to all who think.

POLITICAL SCIENCE AND COMPARATIVE CONSTITUTIONAL LAW. By JOHN W. BURGESS, LL.D., Professor of Constitutional and International History and Law, and Dean of the School of Political Science in Columbia College. Two volumes. 8vo. Cloth. 781 pages. $5.00.

A great work, endorsed by the leading authorities of Europe and America.

A HYGIENIC PHYSIOLOGY. For the use of schools. By D. F. LINCOLN, M.D., late Secretary Medical Department of American Social Science Association. 12mo. Cloth. Illustrated. v+206 pages. 90 cents.

As the title indicates, this recognizes the fact that physiology and anatomy should be made, in school text-books, subordinate to hygiene.

GUSTAV E. STECHERT,
Importer of Books and Periodicals

828 Broadway, New York.

Employs no agents in Europe, but has his OWN OFFICES at
London: 30 Wellington Street, Strand, W. C.;
Leipzig: Hospital Strasse, 10,
and thus has facilities SUPERIOR to those of any other firm.

Books for Libraries, Professors, and Students a specialty. Also rare and scarce books and sets of periodicals.

Foreign Books, Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

Ready Sept. 1st.
Always issued on the first day of the month.

The Century For September.

"A great living picture of the world's interests and movements."

CONTENTS:

A Winter Journey through Siberia.
By GEORGE KENNAN. The first of two papers,—Mr. Kennan's return from Eastern Siberia to St. Petersburg.

Country Newspapers.
By E. W. HOWE, author of "The Story of a Country Town," and himself an editor.

To California in '49 through Mexico.
A narrative of adventure. Illustrated.

The Distribution of Ability in the United States.
By HENRY CABOT LODGE. A striking paper, showing in what localities and from what races noted Americans have sprung.

A Painter's Paradise.
A charming travel paper by MRS. PENNELL, with illustrations by JOSEPH PENNELL.

The Government of Cities.
A suggestive paper by the Hon. SETH LOW, President of Columbia College, and ex-Mayor of Brooklyn, answering the question, "What is the best form of government for our cities?"

War Prisoners at Camp Morton.
A reply to the recently published criticism of the treatment of Confederate prisoners at Camp Morton, Indianapolis—indorsed and approved by the investigating committee of the Grand Army. With a rejoinder by the author of the original article, "Cold Cheer at Camp Morton."

The Poems of Thomas Bailey Aldrich.
Reproducing some of Mr. Aldrich's most charming lyrics, and with a frontispiece portrait.

The Possibility of Mechanical Flight.
A brief paper by Prof. S. P. LANGLEY, Secretary of the Smithsonian Institution, suggesting the probability that aërial navigation will be an accomplished fact within the century. To be followed by an article (in October) by HIRAM S. MAXIM, the inventor, describing his nearly completed aërial machine.

Cheap Money Schemes.
The short articles on this subject which *The Century* has been printing have attracted wide attention. The present number discusses the Sub-Treasury Scheme of the Farmers' Alliance.

Serial novels by EGGLESTON and STOCKTON, two complete stories (illustrated), poems, three full-page engravings of famous paintings, "A Soldier's View" of the Pension Question, "Bric-à-brac," etc. Sold everywhere; price 35 cents. Published by The Century Co. N. Y.

SAMPLE FREE

To any teacher contemplating a change of text-books on any one of the subjects on which the following new and live books treat, and *provided he has ten or more pupils in the class.* Give the name of your school when you write.

BOWSER'S GEOMETRY AND ALGEBRA, "made by a great mathematician who is also a great teacher."

HAWTHORN AND LEMMON'S AMERICAN LITERATURE, "bright, incisive, and will lead pupils to do their own thinking." Over 5,000 copies ordered already.

DOLE'S AMERICAN CITIZEN, "far the best book yet made for teaching Civics and Morals."

SHEPARD'S BRIEF CHEMISTRY contains sixty pages of organic chemistry and "is admirably adapted to schools somewhat limited in time and laboratory faculties."

COLTON'S ZOOLOGY, CHUTE'S PRACTICAL PHYSICS, SHALER'S GEOLOGY, AND CROSBY'S MINERALOGY are the best exponents of the laboratory method and are widely used.

SHELDON'S GENERAL HISTORY also follows laboratory method. Doubled in sale the past year. SHELDON'S AMERICAN HISTORY, on same plan, will be ready in August. You'll be sorry if you don't wait for it.

EDGREN'S FRENCH GRAMMAR, SUPER'S FRENCH READER, JOYNES-MEISSNER GERMAN GRAMMAR, JOYNE'S GERMAN READER. Have all nearly doubled in sale the past year.

MEIKELJOHN'S ENGLISH LANGUAGE AND WILLIAMS'S COMPOSITION AND RHETORIC BY PRACTICE give English the chance it deserves and treat it so that the student will get the most *practical* aid from its study.

Special circular on any of the above sent free to anybody.

CLASS TEXT-BOOKS

FOR

COLLEGES AND TECHNOLOGICAL INSTITUTIONS.

THEORETICAL MECHANICS,

With an Introduction to the Calculus. Designed as a Text-Book for Technical Schools and Colleges, and for the Use of Engineers, Architects, &c. By JULIUS WEISBACH, Ph.D. Translated from the German by ECKLEY B. COXE, A.M., Mining Engineer. Eighth American Edition, One Volume, large 8vo. 1112 pages. 902 Illustrations.....$10.00

The Graphical Statics of Mechanism.

A Guide for the use of Machinists, Architects, and Engineers; and also a Text-Book for Technical Schools. By GUSTAV HERRMANN, Professor in the Royal Polytechnic School at Aix-la-Chapelle. Translated and Annotated by A. P. SMITH, M.E. 12mo. cloth. illus., $2 00

Contents—§1. The Efficiency of Mechanisms. §2. The Equilibrium of Mechanisms. §3. Sliding Friction. §4. Journal Friction. §5. Rolling Friction. §6. Chain Friction. §7. Stiffness of Ropes. §8. Tooth Friction. §9. Belt Gearing. §10. Examples. Concluding Remarks.

Elementary Mechanism.

Text-Book for Students of Mechanical Engineering. By ARTHUR F. WOODS, Assistant Engineer U. S. Navy, Assistant Professor of Mechanical Engineering, Illinois State University, etc.; and ALBERT W. STAHL, M.E., Assistant Engineer U. S. Navy, Professor of Mechanical Engineering, Purdue University, La Fayette, Ind., etc. 12mo. Cloth. Illustrated.....$2.00

Plattners's Manual of Qualitative and Quantitative Analysis with the Blow-Pipe.

From the last German edition, revised and enlarged, by Prof. TH. RICHTER, of the Royal Saxon Mining Academy. Translated by Prof. H. B. CORNWALL, assisted by JOHN H. CASWELL. With eighty-seven woodcuts and Lithographic Plate. Sixth edition. Revised. 568 pages. 8vo. Cloth.....$5.00

The Blow-Pipe.

A Guide to its Use in the Determination of Salts and Minerals. Compiled from various sources by GEORGE W. PLYMPTON, C.E., A.M., Professor of Physical Science in the Polytechnic Institute, Brooklyn, N. Y. 12mo. Cloth.....$1.50

Manual of Blow-Pipe Analysis, Qualitative and Quantitative,

With a complete system of Determinative Mineralogy. By Prof. H. B. CORNWALL. 318 pages. 69 Woodcuts and 1 Plate. 8vo. Cloth.....$2.50

Hand Book of Mineralogy.

A Description and Classification of the Minerals of the U. S. By Prof. J. C. FOYE. 16mo. Boards. 50c.

Prescott's Proximate Organic Analysis.

Outlines of Proximate Organic Analysis for the Identification, Separation, and Quantitative Determination of the more commonly occurring Organic Compounds. By ALBERT B. PRESCOTT, Professor of Organic and Applied Chemistry in the University of Michigan. 12mo. Cloth.....$1,75

Douglas' and Johnson's Qualitative Chemical Analysis.

A Guide in the Practical Study of Chemistry and in the Work of Analysis. By ALBERT B. PRESCOTT, M.D., and OTIS C. JOHNSON, M.A. Fourth fully revised edition. With descriptive Chemistry extended throughout. By OTIS COE JOHNSON, M.A. 8vo. Cloth....$3.50

First Book in Qualitative Chemistry.

By ALBERT B. PRESCOTT, Prof. in Univ. of Michigan. 12mo. Cloth.....$1.50

Prescott's Organic Analysis.

A Manual of the Descriptive and Analytical Chemistry of Certain Carbon Compounds in common use, for the Qualitative and Quantitative Analysis of Organic Materials. Commercial and Pharmaceutical Assays, the Estimation of Impurities under authorized Standards; Forensic Examinations for Poisons, and Elementary Organic Analysis. 500 pages. 8vo. Cloth. $5.00

Chemical Problems,

With Brief Statements of the Principles Involved. By Prof. J. C. FOYE. 2d Edition, revised and enlarged. 16mo. Boards.....50c.

A Compendious Manual of Qualitative Chemical Analysis.

By CHARLES W. ELIOT and FRANK H. STORER. Revised with the coöperation of the Authors, by WILLIAM RIPLEY NICHOLS, Professor of Chemistry in the Massachusetts Institute of Technology. New Edition. Revised. 12mo. Illustrated. Cloth.....$1.50

A Practical Treatise on Chemistry,

(Qualitative and Quantitative Analysis), Stoichiometry. Blow-pipe Analysis, Mineralogy, Assaying, Pharmaceutical Preparations, Human Secretions, Specific Gravities, Weights and Measures, etc., etc. By HENRY A. MOTT, Jr., E.M., Ph.D. 8vo. 650 pages Cloth.....$4.00

An Introduction to Qualitative Chemical Analysis.

By F. BEILSTEIN. Third Edition, translated by J. J. OSBUN. 12mo. Cloth.....75c

Manual of Introductory Chemical Practice,

For the Use of Students in Colleges and Normal and High Schools. By Prof. GEO. C. CALDWELL, and A. A. BRENEMAN, of Cornell University. Fourth Edition, revised and corrected. 8vo. Cloth. 188 pages. Illustrated. New and Enlarged Edition.....$1.50

Experimental Organic Chemistry.

For Students. By H. CHAPMAN JONES. 16mo. Cloth. $1.00

Bowser's Analytic Geometry.

An Elementary Treatise on Analytic Geometry, embracing Plain Geometry and an introduction to Geometry of Three Dimensions. 13th Edition. By EDWARD A. BOWSER, Professor of Mathematics and Engineering in Rutgers College, New Brunswick, N. J. 12mo. Cloth.....$1.75

Bowser's Analytic Mechanics.

An Elementary Treatise on Analytic Mechanics. With numerous examples. Fifth Edition. By EDWARD A. BOWSER, L.L.D. 12mo. Cloth.....$3.00

Bowser's Calculus.

An Elementary Treatise on the Differential and Integral Calculus. With numerous examples. Twelfth Edition. By EDWARD A. BOWSER, L.L.D. 12mo. Cloth.....$2.25

Bowser's Elementary Treatise on Hydromechanics.

With numerous examples. Third Edition. By EDWARD A. BOWSER, L.L.D. 12mo. Cloth.....$2.50

Common Words Difficult To Spell.

A practical spelling-book, with dictation exercises, containing only common words which experience has shown are likely to be misspelled. Thoroughly endorsed by prominent teachers. Price, 20 cents. Sample copies postpaid, 24 cts. JAMES H. PENNIMAN, 2816 St. Albans Pl., Philada., Pa.

"When completed it will be the most comprehensive and satisfactory book of general reference yet produced—a book which every one will want, and which ought to have a place in every public library."—THE NATION.

THE CENTURY DICTIONARY

is now nearly finished. Five volumes are ready, and the sixth and last will be issued early in the fall. Any reader of *The Nation* who has not yet sent five two-cent stamps for the illustrated, descriptive pamphlet of the Dictionary should do so now. Even if one does not intend to become a subscriber he will be interested in the specimen pages contained in this pamphlet. They show better than anything else with what care and completeness the 225,000 words included in this great work have been defined; how it has been possible to combine in one a dictionary and an encyclopedia; and how the highest skill of artist and engraver has been taxed in producing the 8000 engravings which illustrate the work—engravings, a single glance at one of which, *The Nation* says, "makes all plain when a column of words would fail."

The following extracts from letters from subscribers show in what high estimation The Century Dictionary is held by those who have seen and used it:

PRESIDENT ELIOT, *of Harvard University.* I value The Century Dictionary very highly for its fullness, clearness, and accuracy. It is a great credit to the scholars and business men who have made it; and it will be a great help to students of English for generations to come.

JAMES RUSSELL LOWELL. The most thorough and complete English Dictionary of which I can hope to see the concluding volume.

PRESIDENT GILMAN, *of Johns Hopkins.* A noble work—a wonderful combination of learning, capital, enthusiasm, and patience.

EX-PRESIDENT PORTER, *of Yale.* I do not hesitate to recommend it.

PROF. YOUNG, *of Princeton.* A perfect treasure-house of condensed and accurate information.

PROF. FRANCIS A. MARCH. Just the dictionary for every one who wishes to know what anything means.

PROF. CHARLES WALDSTEIN, *of Cambridge, England.* A remarkable monument of what intelligent coöperation of well-qualified men can do.

GEORGE WILLIAM CURTIS. The most important enterprise of the kind ever undertaken in this country.

THE LATE REV. DR. HOWARD CROSBY. It will prove the standard authority for all who use the English language.

VICE-CHANCELLOR MACCRACKEN, *of the Univ. of the City of New York.* The greatest treat which the dictionary-maker has ever given us.

REV. DR. MORGAN DIX. I find myself continually referring to it for information and guidance.

J. W. BABSON, *Editor U. S. Patent Office Gazette.* Valuable in proof-reading the specifications of patents. . . . It covers all and is indispensable.

Send for the pamphlet of specimen pages—10 cents in stamps. Address The Century Co., 33 East 17th st., New York.

REMINGTON

Standard Typewriter,

To-day, as it ever has been, the leading Typewriter.

CAREFULLY TESTED IMPROVEMENTS ARE CONSTANTLY ADDED TO THIS FAMOUS MACHINE. AS AN EDUCATIONAL FACTOR ITS IMPORTANCE IS NOW RECOGNIZED BY MANY LEADING EDUCATORS.

IN a recent letter from Mr. WM. E. BUCK (Supt. of City Schools at Manchester, N. H.), speaking of a Remington purchased by him for the use of his children, he says: "I did not buy the typewriter in the expectation that they are to gain a livelihood as operators, though that may be easily possible, if necessary. I bought it rather *as an educational means*, whereby they may pleasantly and most efficiently learn a proper *use* of the English language—terseness and elegance of expression, spelling, capitalization, punctuation, paragraphing, business, and other forms, etc.

"I also have in mind that in their day and generation *the typewriter will be the common means, as now the pen, for correspondence and general writing in every vocation.* An acquaintance with the machine early in life is not only most easily acquired, but its subsequent use will be agreeable, natural, *and of inestimable value.*"

SEND FOR AN ILLUSTRATED CATALOGUE.

Wyckoff, Seamans & Benedict, 327 BROADWAY, NEW YORK.

THE COSMOPOLITAN

FOR SEPTEMBER

CONTAINS THE FOLLOWING:

THOMAS NELSON & SONS'

NEW AND RECENT PUBLICATIONS.

THE GLOBE HAND ATLAS. A Series of Fifty-four Maps, illustrating Political, Physical, Commercial, Astronomical and Classical Geography, along with Sixty Sectional Maps of Important Cities and Districts, and a General Index giving the Situation, Latitude and Longitude of over Five Thousand Places throughout the World. By J. G. Bartholomew, F.R.G.S. 8vo, cloth extra, $1.00.

This Atlas has been carefully prepared, and contains all Recent Discoveries and Changes, and its Physical and Classical Maps and other Educational Features make it valuable for *Schools and Colleges.*

THE POPULAR HAND ATLAS OF THE WORLD. By John Bartholomew, F.R.G.S. With Descriptive Index of Thirty-five Thousand places. This Atlas contains Sixty Full-page beautifully colored Maps, with all Recent Discoveries and Political changes in the Continent of Africa and other parts of the World, and will be found invaluable for reference and general use. Large imperial 4to, cloth extra, $6.00.

DICTIONARY OF IDIOMATIC ENGLISH PHRASES. By James Main Dixon, M.A., F.R.S.E., Professor of English Literature in the Imperial University of Japan. 12mo, cloth, $1.50.

"The arrangement is logical and convenient, and the whole work will be found exceedingly useful. With nearly all the items is given the name of the author, where the word or phrase is to be found, and the definitions are concise and for the most part remarkably accurate."—*Journal of Commerce.*

"Will be a valuable work of reference for those even most familiar with the language; its definitions are trustworthy, its illustrative quotations appropriate, its classification of usage into good prose, conventional prose, familiar prose, and slang, helpful."—*Commercial Advertiser.*

GRAPHIC HISTORY OF THE BRITISH EMPIRE (The). From Celtic Times to the Present Day. Illustrated with Maps, Plans, and Tables. 8vo, cloth extra, $2.00; roxburgh, $3.00.

The title, THE GRAPHIC HISTORY, is justified not only by the picturesque style of the work, but also by its contents and its plan. It consists of a series of pictures showing, on a broad canvas and without too many details, the great movements—political, social, educational, and religious—which embody essentially the history of the British Islands and the British people. The narrative ends with the jubilee of Queen Victoria.

DARWIN'S JOURNAL. Journal of Researches into Natural History and Geology of the Countries Visited during the Voyage of H. M. S. "Beagle" Round the World, under command of Capt. Fitz Roy, R. N. By Charles Darwin, M.A., F.R.S. Profusely illustrated. 12mo, cloth extra, $2.00; roxburgh, $3.00.

"The most delightful of all Mr. Darwin's works. . . . In many respects it exhibits Darwin at his best. . . . We have Darwin here before he was a Darwinian."—*The Duke of Argyll, in The Nineteenth Century.*

SHAKESPEARE (W.). Dramatic works, with explanatory notes, historical and critical illustrations, contemporary allusions, a copious glossary, biographical sketch, and indexes by Frank Howard. 2 vols., 12mo, cloth, $2.50; 2 vols., 12mo, roxburgh, $4.00.

WANDERINGS IN SOUTH AMERICA, ETC. By Charles Waterton, Esq. With 16 illustrations. 8vo, cloth extra, $2.00; roxburgh, $3.00.

"The first thing which strikes us in this extraordinary chronicle is the genuine zeal and inexhaustible delight with which all the barbarous countries he visits are described. He seems to love the forests, the tigers, and the apes—to be rejoiced that he is the only man there."—*Sydney Smith.*

WEALTH OF NATIONS (An Inquiry into the Nature and Causes of the). By Adam Smith. With an Introductory Essay and Notes by Joseph Shield Nicholson, M.A. 8vo, cloth, $1.75.

STORIES OF THE TREES (The). Talks with the Children. By Mrs. W. H. Dyson, author of 'Children's Flowers,' 'Apples and Oranges,' etc. With illustrations. 12mo, cloth extra, $1.25.

"An extremely well-written and interesting book that cannot fail to be popular with youthful readers. The descriptions of all the more familiar trees of the forest are written with brevity, simplicity, and spirit."—*Scottish Leader.*

"Well suited by its pleasant, chatty style to interest young people."—*Saturday Review.*

"Her stories are science and poetry combined."—*School Journal.*

FRITZ OF PRUSSIA. Germany's Second Emperor. By Lucy Taylor, author of 'The Children's Champion, and the Victories He Won,' 'Going on Pilgrimage,' etc. 8vo, cloth extra, $1.75.

A deeply interesting and well-written account of the life and death of this noble hero.

"Lucy Taylor describes with enthusiasm the career, in peace and war, of the first of truly popular emperors, his courage and skill on the field, and his great courage under the assault of a dire disease."—*Brooklyn Daily Eagle.*

ALISON WALSH. A Study of To-day. By Constance Evelyn. 8vo, cloth extra, $1.50.

An extremely interesting and suggestive character study. The heroine, losing faith in the Christian religion, passes through great tribulation and anguish of soul. By the persuasion and example of loving friends, and by earnest effort on her own part to follow the precepts of our Lord, she finds at last in His religion that "peace which passeth all understanding."

LOYAL HEARTS. A Story of the days of "Good Queen Bess." By Evelyn Everett-Green, author of 'Winning the Victory,' 'Heiress of Wylmington,' 'Birdie's Resolve,' etc. 8vo, cloth extra, $1.75.

A story of the time of Queen Elizabeth, affording interesting glimpses of court life, and of the character and strange policy of that remarkable woman. Its interest is enhanced by the stirring pictures that are given of the war in the Low Countries, and of the defeat and destruction of the Spanish Armada.

THE "WORLD AT HOME" READERS. A New Series of Geographical Readers. With beautiful maps and diagrams.

No. I. 1. Simple Lessons on the plan of the School and the Playground. 2. Simple Lessons on the Plan of the School. 3. The Meaning and use of a Map. 64 pp., 16mo, cloth, limp, beautifully illustrated, 25c.

No. II. 1. Simple Lessons on the Size and Shape of the World. 2. Geographical Terms Explained and Illustrated by Reference to the Map of England. 3. Physical Geography of Hills and Rivers. 96 pp., 16mo, cloth, boards, beautifully illustrated, 30c.

No. III. The Physical and Political Geography of England and Wales. 160 pp., 16mo, cloth, boards, beautifully illustrated, 50c.

No. IV. The Physical and Political Geography of the British Islands, British North America, and Australia with knowledge of their productions, 240 pp., 16mo, cloth, boards, beautifully illustrated, 75c.

No. V. The Physical and Political Geography of Europe. Latitude and Longitude. Day and Night. The Seasons. With numerous maps and illustrations, 75c.

No. VI. The Geography of the World, generally, and especially of the British Colonies and Dependencies. Interchange of Productions, etc. With numerous maps and illustrations, 75c.

"These delightful books, beginning in the first number with simple lessons on the plan of the school and the playgrounds, progress in the true direction from the known, reaching out gradually to the physical and political geography of the whole world. The truest and most progressive teachers are the ones most highly to appreciate them."—*School Journal.*

ROYAL ENGLAND READER. THE EMPIRE. A Complete History of Britain and the British People from Roman Times to the Present Day. 12mo, cloth, profusely illustrated, $1.25.

This complete history will be found suitable as a two-years' book in elementary schools, middle-class schools, and for pupil teachers.

THE ROYAL HISTORIES:

History of England. 12mo, cloth, $1.25.

History of Scotland. By the Rev. James Mackenzie. *New Edition.* Illustrated, 658 pages, $1.50.

Brief History of England. 12mo, cloth, limp, 30c.

COLLIER'S HISTORIES:

Advanced Class Book of British History. 12mo, cloth, $1.75.

Senior Class Book of British History. 12mo, cloth, $1.25.

History of the British Empire. 12mo, cloth, $1.00.

Junior Class Book of British History. With Copious Questions. 12mo, cloth, 75c.

Outlines of General History. 12mo, cloth, $1.50.

History of Rome. 12mo, cloth, 75c.

History of Greece. 12mo, cloth, 75c.

Great Events of History, *Revised and Enlarged Edition.* With numerous maps and illustrations, 416 pages. $1.25.

History of English Literature. In a Series of Biographical Sketches. 12mo, cloth, $1.75.

"All teachers of advanced ideas are interested in good historical literature, particularly when this is thrown into the form of practical, available class-books. A favorably recognized series of this description is that known as Collier's Histories. These all have a well-earned reputation."—*The School Journal.*

MACKENZIE'S HISTORIES:

Mackenzie (R.). The Nineteenth Century. A History. *New Edition revised and enlarged.* 8vo, cloth, $1.00.

America. A History. 8vo, cloth, $1.00.

. . Any of the above sent postpaid on receipt of published price.

Important New Publications.

THE American Book Company (New York, Cincinnati, and Chicago) announce, and have partly published, a series of Latin and Greek text-books of a novel and highly interesting character, on which William R. Harper, President of the new University of Chicago, is engaged. They embody, as far as school-books can, the characteristics which have given the editor-in-chief his great renown as a teacher. The books of this series already published are:

Caesar's Gallic War, eight books, by William R. Harper, Ph.D., and Herbert Cushing Tolman, Ph.D., of the University of Wisconsin (late of Yale University), 12mo, full cloth, 502 pages, $1.20, designed to meet the existing demand for an attractive and comprehensive edition of Caesar to a fuller degree than any work of the kind heretofore issued. Although published late in the spring term, the book has already proved an unprecedented success. It may be used with any Grammar, as it has references to all the leading authorities.——*An Inductive Latin Method*, by William R. Harper, Ph.D., and Isaac B. Burgess, 12mo, full cloth, 323 pages, $1.00.——*An Inductive Greek Method*, by William R. Harper, Ph.D., and William E. Waters, Ph.D., 12mo, full cloth, 355 pages, $1.00.——The following are in preparation, and will form part of this series of preparatory text-books in Latin and Greek on the Inductive Method:

An Inductive Latin Primer, for younger students, by William R. Harper, Ph.D., and Isaac B. Burgess, A.M., Boston Public Latin School, nearly ready. This work is more elementary and simple than the Latin method of the same authors, and is suited to pupils less thoroughly trained than those who have found the *Method* so helpful.——*Vergil's Æneid*, by William R. Harper, Ph.D., and F. J. Miller; *Cicero's Orations; Supplementary Reading in Latin;* and *Latin Prose Composition.*——*An Inductive Greek Primer;*——*Xenophon's Anabasis; Homer's Iliad; Supplementary Greek Readings;* and *Greek Prose Composition.*

Other recent Latin text-books on the modern method, by the same publishers, are:

Harkness's Easy Method for Beginners in Latin, 12mo, cloth, illustrated, 348 pages, $1.20. In commendation of this work, attention is called to it as one of the notable school-books published during the past six months, and as embodying both the results of the author's ripe and experienced scholarship and the principles and ideas of modern pedagogy.

The Satires of Juvenal. Edited by Thos. B. Lindsay, Ph.D., Boston University: 16mo, half seal, pages xvi., 236. Fully illustrated, $1.00. A carefully edited edition, prepared with special reference to the requirements of schools and colleges. The distinctive features are: A text that embodies the results of the latest German critical research; judicious expurgation; selections of the most important various readings placed at the bottom of each page; full use of artistic and descriptive illustrations in both text and notes.

Coy's Greek for Beginners, by Edward G. Coy, M.A., Professor of Greek in Phillips Academy, 12mo, cloth, pages xvi–152, $1.00, is a companion to the Hadley-Allen Greek Grammar, based on "Coy's Mayor's Greek Lessons," but radically and thoroughly rewritten, and like the other school books named above, an admirable example of modern pedagogy in its best form.

In other departments of study this Company have just issued some important works, such as

The Principles of Agriculture, by Isaac O. Winslow, A.M., cloth, 12mo, illustrated, 60 cents. This is the first attempt to present in simple form, in a single book of handy size, the natural laws and principles which underlie rural life. It embraces such elements of Chemistry, Physics, Geology, Physical Geography, and Botany, as should be known to every person in any way interested in farms or farming.

Plane and Solid Geometry, by Seth T. Stewart, A.B., 12mo, cloth, 406 pages, $1.12, is a handsome and substantial example of book-making and of modern pedagogy. The editor and publishers believe it to be a great improvement in method and arrangement, and that it is constructed with more intelligent and intelligible attention to educational principles than any previous text-book on this subject.

Appletons' First Lessons in Arithmetic, including the Fundamental Rules, by Andrew J. Rickoff, A.M., LL.D., 36 cents. This is essentially a pupil's book, and is devoted to producing clear, accurate, and rapid work in the four fundamental rules—addition, subtraction, multiplication, and division—and to training the judgment on the proper application of these processes.

Ray's Complete Algebra. Prepared for high schools and colleges, by George W. Smith, of Woodward High School, Cincinnati, Ohio. 12mo, cloth, 358 pages, $1.00. A complete work in one volume, combining all the principles a pupil needs from the time he begins the study until he enters college, together with additional chapters for the benefit of those who do not have the advantages of a university education. Special care has been taken to adapt the book to the needs of students who are without the aid of a teacher; hence, every principle of importance is carefully explained and profusely illustrated by examples.

Sensenig's *Elementary Algebra*, 12mo, cloth, 315 pages, $1.08, is the introductory text-book which leads to *Advanced Algebra*, by David N. Sensenig, 12mo, cloth, Part I., $1.20; Part II., $1.08. These school-books are the outgrowth of twenty years' experience, and have features which at once commend them to careful consideration.

Elements of Civil Government, an Elementary Text Book for Public Schools, High Schools, and Normal Schools, by Alexander L. Peterman, late Principal and Professor of Civil Government in the Normal School of Kentucky State College. 12mo, 218 pages, 60 cents. Arranged on a new plan, it is a simple, logical exposition of the principles of civil government, and will be found not only a valuable text book for class use, but also a handy volume of reference for teachers and other citizens.

Appletons' School Physics, 12mo, cloth, 544 pages, $1.20, is an exceptional text book in many ways, edited by Prof. John D. Quackenbos, Columbia College. The scientific substance has been prepared by Prof. Silas W. Holman, Massachusetts Institute of Technology, Boston; Prof. Francis E. Nipher, Washington University, St. Louis; Prof. Alfred M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; and Prof. Francis B. Crocker, Columbia College School of Mines. Apart from what the standing of the editor and contributors would lead us to expect, the work makes a strong impression in its own favor as one of the most creditable school books of the year.

Maxwell's Advanced Lessons in English Grammar, by William H. Maxwell, Ph.D., Superintendent Brooklyn, N. Y., Public Schools, 12mo, cloth, 327 pages, 60 cents. Designed for use in the last two years of the Grammar School, or as a full High-School course, it embraces all the theory and practice necessary for those grades. It is clear, full, judicious, sufficiently conservative in its treatment of old authorities, and yet ready to adopt new definitions and new forms when the innovation is a real improvement. It restores word analysis to its proper place as a department of grammar.

Waddy's Elements of Composition and Rhetoric. With copious Exercises in both Criticism and Construction. By Virginia Waddy, Teacher of Rhetoric in the Richmond High School, Richmond, Va. 12mo, cloth, 416 pages, $1.00. A practical treatise sufficiently elementary for the lower grades of the high school, and at the same time comprehensive enough to give a fair knowledge of the principles and graces of Rhetoric.

Manual of the Botany of the Northern United States. Pocket Edition. — Including the District east of the Mississippi and north of North Carolina and Tennessee. By Asa Gray, late Fisher Professor of Natural History in Harvard University. Sixth edition, revised and extended westward to the 100th Meridian by Sereno Watson, Curator of the Gray Herbarium, Harvard University, and John M. Coulter, Professor of Botany in Wabash College, assisted by specialists in certain groups, with twenty-five plates illustrating the sedges, grasses, ferns, etc. New issue for the Practical Botanist. 1 vol., 12mo, full leather, limp sides, 760 pages and plates. Price by mail, post paid $2.00

This edition of Gray's Manual of Botany is especially adapted to the working botanist. The plates are the same as those from which the large 8vo volume is printed, but the paper used is thin and tough, and is cut flush. The book is bound in full leather, with limp sides.

A GREAT CATALOGUE.

The publications of THE AMERICAN BOOK COMPANY are so numerous and cover so many topics that they have found it necessary to issue their catalogue in twenty-one different sections, covering as many subjects or departments. The subjects are: 1, Reading. 2, Supplementary Reading. 3, Arithmetic. 4, Higher Mathematics. 5, Penmanship and Stenography. 6, Geography. 7, History. 8, Spelling. 9, English Language. 10, Drawing. 11, Music. 12, Book-keeping. 13, Ancient Language. 14, Modern Language. 15, Science. 16, Botany. 17, Philosophy, Psychology, and Ethics. 18, Civics and Economics. 19, Pedagogy, School Registers, Records, and Teachers' Aids. 20, Elocution. 21, Maps and Charts. It is their custom to mail any of these sections free, to those interested, from their offices in New York, Cincinnati, or Chicago.

LITERATURE AND LOGIC.

Notable School and College Text-Books published by Harper & Brothers, Franklin Square, New York.

LITERATURE.

Swinton's Studies in English Literature.

Being Typical Selections of British and American Authorship, from Shakespeare to the Present Time; together with Definitions, Notes, Analyses, and Glossary, as an aid to Systematic Literary Study. For Use in High and Normal Schools, Academies, Seminaries, etc. By Prof. WILLIAM SWINTON, Gold Medalist Paris Exposition, 1878. 670 pages. With Portraits. Crown 8vo, Cloth, $1.20.

Collections of typical passages from the writings of the masters in English literature are many, but we have seen none which seemed to us to be so judiciously made or so well adapted to the use of high schools as the work prepared by Mr. William Swinton. . . . The selections are well chosen, the notes are judicious and helpful, and in general the work is admirably fit for its purpose.—*N. Y. Evening Post.*

Miss M. G. Phillips's Manual of English Literature.

A Popular Manual of English Literature. Containing Outlines of the Literature of France, Germany, Italy, Spain, and the United States of America. With Historical, Scientific, and Art Notes. By MAUDE GILLETTE PHILLIPS. Illustrated. Vol. I., 600 pages. Vol. II., 575 pages. Index to each volume. Crown 8vo, Cloth, $2.00 per volume. *The volumes sold separately.*

There certainly can be little doubt as to the value of the two volumes. . . . It is a most exhaustive compilation of all that is fitted to throw into relief, or to give light, shade, or color to the life and works of writers who have had a marked influence upon English thought.—*Boston Daily Advertiser.*

Rolfe's School Edition of Shakespeare.

Edited, with Notes, by WILLIAM J. ROLFE, A.M., formerly Head Master of the High School, Cambridge, Mass. Copiously Illustrated. 16mo, Flexible Cloth, 50 cents per volume; Paper, 40 cents per volume.

I have not seen any edition that compresses so much necessary information into so small a space, nor any that so completely avoids the common faults of commentaries on Shakespeare—needless repetition, superfluous explanation, and unscholarlike ignoring of difficulties.—Rev. EDWIN A. ABBOTT (*Author of the "Shakesperean Grammar"*), *City of London School, England.*

LOGIC.

Bowne's Psychological Theory.

Introduction to Psychological Theory. By BORDEN P. BOWNE, Professor of Philosophy in Boston University. 345 pages. 8vo, Cloth, $1.75.

This is not a dogmatic treatise of empirical psychology, much less a digest of physiological psychology and the fanciful theories that cluster round that shadowy border-land of research, but a series of essays in pure psychology, the basis of the whole performance being facts, not theories.—*The Beacon, Boston.*

Bowne's Metaphysics.

A Study in First Principles. By BORDEN P. BOWNE, Professor of Philosophy in Boston University. 550 pages. 8vo, Cloth, $1.75.

Will mark an era in the discussion between materialists and intuitionalists, and between sceptics and theistic believers. . . . To read this thoughtful volume will be a wholesome intellectual discipline, as well as a strong confirmation of faith in revealed religion as the true philosophy of the universe and of man.—*Zion's Herald*, Boston.

Bowne's Philosophy of Theism.

By BORDEN P. BOWNE, Professor of Philosophy in Boston University. 280 pages. 8vo, Cloth, 175.

Professor Bowne is widely known to students of philosophy by his masterly and lucid treatises on metaphysics, studies in Theism, psychology, etc. He is an acute and original thinker, and a profound logician. . . . Materialism has one of its most forceful opponents in Professor Bowne, whose writings furnish strong confirmation of faith in revealed religion.—*Albany Press.*

Davis's Theory of Thought.

A Treatise on Deductive Logic. By NOAH K. DAVIS, University of Virginia, pp. x. 316. 8vo, Cloth, $2.00.

His work has merits of a high order which educators will be likely to appreciate. It deserves the special attention of teachers and college professors as a book for practical service.—*N. Y. Evening Express.*

A comprehensive account of the science of Logic from its earliest days, with every variety of example to illustrate the principles. . . . The author is to be commended for his industry, his earnestness, his intelligence in the arrangement of his material, and the general excellence of his literary style.—*Phila. Ev'g Bulletin*

Dewey's Psychology.

A New Book written on a new basis. By JOHN DEWEY, Ph.D., Professor of Philosophy in the University of Michigan. 440 pages. 12mo, Cloth, $1.25.

It avoids all material not strictly psychological, and embodies the results of the latest investigations. . . . It is a successful effort to treat psychology scientifically by itself as an introduction to the study of philosophy in general. It is learned and strict in its method, both analysis and definition are clear, and the subject is developed well to make principles and their application readily understood by thoughtful students.—*Boston Globe.*

As a philosophical text-book its claims to the recognition of thinkers are very great, while as an exposition of one of the most interesting of sciences, it will be a hand-book of inestimable value to students.—*Commonwealth*, Boston.

I consider it a masterly work. More than any other book of the kind in English that I have ever read, it is a real contribution to self-knowledge.—*George S. Morris, Late Professor in the University of Michigan.*

A sample copy of any of the above-named books will be sent, postpaid, on receipt of price. Special rates made for introduction and exchange.

A Complete Catalogue of School and College Text-Books Works of Reference will also be forwarded on application.

HARPER & BROTHERS.

FRANKLIN SQUARE, September, 1891.

Successful Educational Works

PUBLISHED BY

A. C. Armstrong & Son,

51 EAST 10TH ST., NEW YORK.

New Edition—from New Plates.

TEXT REVISED BY A. L. MAYHEW, WADHAM COLLEGE, OXFORD.

SUPLÉE S TRENCH on WORDS.

From the latest English Edition. With an exhaustive Analysis, Additional Words for Illustration, and Questions for Examination. By Prof. Suplée. 1 vol. net, $1. For examination 75c. postpaid.

These questions were prepared not only to call forth the facts stated by the author, but also to follow up lines of thought suggested by him. To *each* lecture a list of words has been added, illustrating its various topics, and intended to encourage original research on the part of the pupil. *The new arrangement of the text, analysis, and questions cannot fail to be of great assistance.*

INTRODUCTION to the STUDY

of Philosophy. By J. H. W. Stuckenberg, D.D., Member of the Philosophical Society of Berlin. Crown 8vo, cloth, $2. (For examination, $1.35.)

"*This work must command the respect of all schools of thought. It is not a philosophy nor a psychology, nor a book to defend a particular system of metaphysics. It is simply what it purports to be, an introduction to the subject. In this respect it supplies for teachers and students alike a much-felt want. The problems and relations of philosophy are clearly analyzed and set out before the student, so that he may gain some familiarity with its questions, without having to plod through too many original systems or their history.*"—N.Y. Nation.

Unabridged Student's Hallam.

FOR USE IN COLLEGES AND SCHOOLS.

THE MIDDLE AGES. A View of the State of Europe during the Middle Ages. Revised and corrected edition. Complete in 2 vols., cr. 8vo, $2.50.

CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VII. to the Death of George II. Including Mr. Hallam's Supplemental Volume of Revision up to 1848. (Indispensable to students.) Complete in 2 vols., cr. 8vo, $2.50.

INTRODUCTION TO THE LITERATURE OF EUROPE in the 15th, 16th, and 17th Centuries. Revised and corrected edition. Complete in 2 vols., $2.50.

MAY'S CONSTITUTIONAL HISTORY OF ENGLAND, since the Accession of George III., 1760 to 1871. By T. Erskine May, 2 vols., cr. 8vo, price $2.50.

This is substantially a continuation of Hallam's great work, tracing the progress and development of the British Constitution during an entire century.

Special prices offered for use as text-books.

New and Cheaper Edition (Uniform with 'May's History.')

DEMOCRACY IN EUROPE.

A HISTORY. By SIR THOMAS ERSKINE MAY. 2 vols., crown 8vo. cloth. Price reduced to $2.50.

"Those of our readers who will recall Mr. Erskine May's 'Constitutional History of England since the Accession of George the Third,' need not be told that he has executed this 'History of Democracy in Europe' with great skill, painstaking accuracy, and erudition, and yet he is earnest and vigorous, and his book, once taken up, will not be laid down again until the greater part of its contents is mastered."—*N. Y. Evening Post.*

STUDIES IN LITERATURE AND STYLE.

By Prof. T. W. HUNT of Princeton College. 12mo, cloth, $125; for examination, 75 cents. *Postpaid.*

It is the aim of these studies to state and illustrate the fundamental types of style, with primary reference to the needs of English literary students. The discussion is both philosophical and practical, developed in scholarly and yet popular form.

REPRESENTATIVE ENGLISH

Prose and Prose Writers. By T. W. HUNT. 12mo, 540 pages; full index. Net $1.20. *Examination copies sent postpaid for 90 cts.*

Opening with a careful discussion of the leading historical periods of English prose, it proceeds to the examination of its various literary forms, and, as a third and final division of the subject, presents a critical study of representative English authors as exponents of English prose style. In subject-matter, as in method, it is thoughtful and logical, while the English in which it is expressed is clear, vigorous, and tasteful.

THE PRINCIPLES OF WRIT-

ten Discourse. By T. W. Hunt, Professor of Rhetoric and English Language, Princeton College. 12mo, $1. Sent, for examination, 75c., postpaid.

This work gives a full and philosophic discussion of the subject with particular reference to collegiate needs.

A New Edition, with a Complete Analysis in Twenty Pages, of

THE STRUCTURE OF ENG-

lish Prose. A Manual of Composition and Rhetoric. By Prof. J. G. R. McElroy of the University of Pennsylvania. 12mo, $1.20. (Examination copies 90 cts., postpaid.)

"*Though theory is by no means lost sight of, the aim of the author is eminently practical, thus adapting his work for use in both College and advanced classes in High Schools and Academies.*"

ARMSTRONG & SON, NEW YORK.

THOMAS NELSON & SONS'

NEW AND RECENT PUBLICATIONS.

THE GLOBE HAND ATLAS. A Series of Fifty-four Maps, illustrating Political, Physical, Commercial, Astronomical and Classical Geography, along with Sixty Sectional Maps of Important Cities and Districts, and a General Index giving the Situation, Latitude and Longitude of over Five Thousand Places throughout the World. By J. G. Bartholomew, F.R.G.S. 8vo, cloth extra, $1.00.

This Atlas has been carefully prepared, and contains all Recent Discoveries and Changes, and its Physical and Classical Maps and other Educational Features make it valuable for *Schools and Colleges.*

THE POPULAR HAND ATLAS OF THE WORLD. By John Bartholomew, F.R.G.S. With Descriptive Index of Thirty-five Thousand places. This Atlas contains Sixty Full-page beautifully colored Maps, with all Recent Discoveries and Political changes in the Continent of Africa and other parts of the World, and will be found invaluable for reference and general use. Large imperial 4to, cloth extra, $6.00.

DICTIONARY OF IDIOMATIC ENGLISH PHRASES. By James Main Dixon, M.A., F.R.S.E., Professor of English Literature in the Imperial University of Japan. 12mo, cloth, $1.50.

"The arrangement is logical and convenient, and the whole work will be found exceedingly useful. With nearly all the items is given the name of the author, where the word or phrase is to be found, and the definitions are concise and for the most part remarkably accurate."—*Journal of Commerce.*

"Will be a valuable work of reference for those even most familiar with the language; its definitions are trustworthy, its illustrative quotations appropriate, its classification of usage into good prose, conventional prose, familiar prose, and slang, helpful."—*Commercial Advertiser.*

GRAPHIC HISTORY OF THE BRITISH EMPIRE (The). From Celtic Times to the Present Day. Illustrated with Maps, Plans, and Tables. 8vo, cloth extra, $2.00; roxburgh, $3.00.

The title, THE GRAPHIC HISTORY, is justified not only by the picturesque style of the work, but also by its contents and its plan. It consists of a series of pictures showing, on a broad canvas and without too many details, the great movements—political, social, educational, and religious—which embody essentially the history of the British Islands and the British people. The narrative ends with the jubilee of Queen Victoria.

DARWIN'S JOURNAL. Journal of Researches into Natural History and Geology of the Countries Visited during the Voyage of H. M. S. "Beagle" Round the World, under command of Capt. Fitz Roy, R. N. By Charles Darwin, M.A., F.R.S. Profusely illustrated. 12mo, cloth extra, $2.00; roxburgh, $3.00.

"The most delightful of all Mr. Darwin's works. . . . In many respects it exhibits Darwin at his best. . . . We have Darwin here before he was a Darwinian."—*The Duke of Argyll, in The Nineteenth Century.*

SHAKESPEARE (W.). Dramatic works, with explanatory notes, historical and critical illustrations, contemporary allusions, a copious glossary, biographical sketch, and indexes by Frank Howard. 2 vols., 12mo, cloth, $2.50; 2 vols., 12mo, roxburgh, $4.00.

WANDERINGS IN SOUTH AMERICA, ETC. By Charles Waterton, Esq. With 16 illustrations. 8vo, cloth extra, $2.00; roxburgh, $3.00.

"The first thing which strikes us in this extraordinary chronicle is the genuine zeal and inexhaustible delight with which all the barbarous countries he visits are described. He seems to love the forests, the tigers, and the apes—to be rejoiced that he is the only man there."—*Sydney Smith.*

WEALTH OF NATIONS (An Inquiry into the Nature and Causes of the). By Adam Smith. With an Introductory Essay and Notes by Joseph Shield Nicholson, M.A. 8vo, cloth, $1.75.

STORIES OF THE TREES (The). Talks with the Children. By Mrs. W. H. Dyson, author of 'Children's Flowers,' 'Apples and Oranges,' etc. With illustrations. 12mo, cloth extra, $1.25.

"An extremely well-written and interesting book that cannot fail to be popular with youthful readers. The descriptions of all the more familiar trees of the forest are written with brevity, simplicity, and spirit."—*Scottish Leader.*

"Well suited by its pleasant, chatty style to interest young people."—*Saturday Review.*

"Her stories are science and poetry combined."—*School Journal.*

FRITZ OF PRUSSIA. Germany's Second Emperor. By Lucy Taylor, author of 'The Children's Champion, and the Victories He Won,' 'Going on Pilgrimage,' etc. 8vo, cloth extra, $1.75.

A deeply interesting and well-written account of the life and death of this noble hero.

"Lucy Taylor describes with enthusiasm the career, in peace and war, of the first of truly popular emperors, his courage and skill on the field, and his great courage under the assault of a dire disease."—*Brooklyn Daily Eagle.*

ALISON WALSH. A Study of To-day. By Constance Evelyn. 8vo, cloth extra, $1.50.

An extremely interesting and suggestive character study. The heroine, losing faith in the Christian religion, passes through great tribulation and anguish of soul. By the persuasion and example of loving friends, and by earnest effort on her own part to follow the precepts of our Lord, she finds at last in His religion that "peace which passeth all understanding."

LOYAL HEARTS. A Story of the days of "Good Queen Bess." By Evelyn Everett-Green, author of 'Winning the Victory,' 'Heiress of Wylmington,' 'Birdie's Resolve,' etc. 8vo, cloth extra, $1.75.

A story of the time of Queen Elizabeth, affording interesting glimpses of court life, and of the character and strange policy of that remarkable woman. Its interest is enhanced by the stirring pictures that are given of the war in the Low Countries, and of the defeat and destruction of the Spanish Armada.

THE "WORLD AT HOME" READERS. A New Series of Geographical Readers. With beautiful maps and diagrams.

No. I. 1. Simple Lessons on the plan of the School and the Playground. 2. Simple Lessons on the Plan of the School. 3. The Meaning and use of a Map. 64 pp., 16mo, cloth, limp, beautifully illustrated, 25c.

No. II. 1. Simple Lessons on the Size and Shape of the World. 2. Geographical Terms Explained and Illustrated by Reference to the Map of England. 3. Physical Geography of Hills and Rivers. 96 pp., 16mo, cloth, boards, beautifully illustrated, 30c.

No. III. The Physical and Political Geography of England and Wales. 160 pp., 16mo, cloth, boards, beautifully illustrated, 50c.

No. IV. The Physical and Political Geography of the British Islands, British North America, and Australia with knowledge of their productions, 240 pp., 16mo, cloth, boards, beautifully illustrated, 75c.

No. V. The Physical and Political Geography of Europe. Latitude and Longitude. Day and Night. The Seasons. With numerous maps and illustrations, 75c.

No. VI. The Geography of the World, generally, and especially of the British Colonies and Dependencies. Interchange of Productions, etc. With numerous maps and illustrations, 75c.

"These delightful books, beginning in the first number with simple lessons on the plan of the school and the playgrounds, progress in the true direction from the known, reaching out gradually to the physical and political geography of the whole world. The truest and most progressive teachers are the ones most highly to appreciate them."—*School Journal.*

ROYAL ENGLAND READER. THE EMPIRE. A Complete History of Britain and the British People from Roman Times to the Present Day. 12mo, cloth, profusely illustrated, $1.25.

This complete history will be found suitable as a two-years' book in elementary schools, middle-class schools, and for pupil teachers.

THE ROYAL HISTORIES:

History of England. 12mo, cloth, $1.25.

History of Scotland. By the Rev. James Mackenzie. *New Edition.* Illustrated, 658 pages, $1.50.

Brief History of England. 12mo, cloth, limp, 30c.

COLLIER'S HISTORIES:

Advanced Class Book of British History. 12mo, cloth, $1.75.

Senior Class Book of British History. 12mo, cloth, $1.25.

History of the British Empire. 12mo, cloth, $1.00.

Junior Class Book of British History. With Copious Questions. 12mo, cloth, 75c.

Outlines of General History. 12mo, cloth, $1.50.

History of Rome. 12mo, cloth, 75c.

History of Greece. 12mo, cloth, 75c.

Great Events of History. *Revised and Enlarged Edition.* With numerous maps and illustrations, 416 pages. $1.25.

History of English Literature. In a Series of Biographical Sketches. 12mo, cloth, $1.75.

"All teachers of advanced ideas are interested in good historical literature, particularly when this is thrown into the form of practical, available class-books. A favorably recognized series of this description is that known as Collier's Histories. These all have a well-earned reputation."—*The School Journal.*

MACKENZIE'S HISTORIES:

Mackenzie (R.). The Nineteenth Century. A History. *New Edition revised and enlarged.* 8vo, cloth, $1.00.

America. A History. 8vo, cloth, $1.00.

Any of the above sent postpaid on receipt of published price.

THOS. NELSON & SONS, 33 East 17th Street (Union Square), NEW YORK.

Uniform with Dr. Buchheim's well-known selection of German lyrics published in the same series under the title "Deutsche Lyrik."

STANDARD MATHEMATICAL BOOKS.

WORKS BY THE REV. J. B. LOCK, Senior Fellow and Bursar of Gonville and Caius College, Cambridge.

Arithmetic for Schools.

Third Edition. Revised. Adapted to American Schools by Prof. CHARLOTTE A. SCOTT, Bryn Mawr College, Pa. 16mo, 70 cents.

The Trigonometry of One Angle. 16mo, 65 cents.

This little book is intended for those students who require a knowledge of the properties of "sines and cosines," for use in the study of elementary mechanics.

Trigonometry for Beginners.

As far as the Solution of Triangles. 16mo, 75 cents.

"A very concise and complete little treatise on this somewhat difficult subject for boys; not too simple in its explanations; an incentive to thinking, not a substitute for it."—*Journal of Education.*

WORKS BY CHARLES SMITH, M.A., Master of Sidney Sussex College, Cambridge.

A Treatise on Algebra. 12mo. $1.90.

"Your Smith's 'Treatise on Algebra' was used in our University Classes last session, and with very great satisfaction. . . . The general adoption of these texts would mark an epoch in mathematical teaching."—*Prof. W. B. Smith, University of Missouri.*

Elementary Algebra.

Second Edition. Revised and Enlarged. 16mo. $1.10.

"The examples are numerous, well selected, and carefully arranged. The volume has many good features in its pages, and beginners will find the subject thoroughly placed before them, and the road through the science made easy in no small degree."—*Schoolmaster.*

An Elementary Treatise on Conic Sections. New Edition, 1888. 12mo, $1.60.

An Elementary Treatise on Solid Geometry. New Edition. 12mo, $2.50.

WORKS BY H. S. HALL, M.A., and S. R. KNIGHT, M.A.

Elementary Algebra for Schools. 16mo, 90 cents. With Answers, 16mo, $1.10.

"This is, in our opinion, the best Elementary Algebra for school use. It is the combined work of two teachers who have had considerable experience of actual school-teaching. . . . and so successfully grapples with difficulties which our present text-books in use, from their authors lacking such experience, ignore or slightly touch upon. . . . We confidently recommend it to mathematical teachers, who, we feel sure, will find it the best book of its kind for teaching purposes."—*Nature.*

Higher Algebra for Schools. 12mo, $1.90.

Algebraical Exercises AND Examination Papers. 16mo, 60 cents.

CLASSICAL.

ARISTOTLE.—On the Constitution of Athens.

Translated by E. POSTE, M.A. 12mo, $1.00.

As the discovery of this important addition to classical literature excited so much interest when first made known, it has been thought that a translation prepared for the unlearned, as well as for the learned reader, might be received with favor, and enable readers to form an opinion for themselves on the substantive character and interest of the work.

BLACKIE.—Greek Primer. Colloquial and Constructive. By J. STUART BLACKIE. 12mo, 60 cents.

EURIPIDES. — Iphigeneia at AULIS. Edited, with Introduction and Critical and Explanatory Notes, by E. B. ENGLAND, M.A. 8vo, $1.75.

"Shows a thorough acquaintance with the Greek dramatists and an accurate scholarship."—*Scotsman.*

MONRO.—A Grammar of the HOMERIC DIALECT. By D. B. MONRO. Second Edition, revised and enlarged. 8vo, $3.50.

MUNK.—The Student's Manual OF GREEK TRAGEDY. Edited, with Notes and an Introduction, from the German of Dr. MUNK'S "Geschichte der Griechischen Literatur," by A. W. VERRALL, Litt.D., Fellow of Trinity College, Cambridge. 12mo, $1.00.

SCIENTIFIC.

EMTAGE.—An Introduction to the Mathematical Theory of Electricity and Magnetism.

By W. T. A. EMTAGE, Examiner in the School of Natural Science, Oxford. 12mo, $1.90.

FLOWER.—Mammals, Living AND EXTINCT. By WILLIAM HENRY FLOWER, C.B., F.R.S., D.C.L., Director of the Natural History Departments, British Museum, and RICHARD LYDEKKER, B.A. 8vo, cloth, illustrated with 357 figures, $6.00.

PARKER.—Lessons in Elementary BIOLOGY. By T. JEFFERY PARKER, B.Sc., F.R.S., Professor of Biology in the University of Otago, Dunedin, New Zealand. Illustrated. 12mo, $2.25.

The structure, physiology, and life history of the selected types have been described in such a way that the entire work gives a fairly connected account of the general principles of Biology.

WILSON.—The Five Gateways OF KNOWLEDGE. By GEORGE WILSON, M.D., F.R.S.E. *Globe Reading Series.* 16mo. 50 cents.

**** Macmillan & Co.'s New Complete Catalogue will be sent free by mail to any address on application.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 3, 1891.

The Week.

It was in August of last year that Balmaceda made his first surrender to the Congressional party. The struggle at that time had not gone beyond the methods of peaceful debate in Congress, though even then the tension was so great that a warlike outbreak seemed imminent. The President yielded, however, though it is now evident that he did so only to gain time and prepare himself for the resort to arms which he had determined upon. It has taken but a year, therefore, for the verdict of battle to go as strongly against him as that of parliamentary debate had previously gone. The worst that has ever been said of his opponents is that they were an oligarchical group, representing the wealth and best families of the country, who were unwilling to relinquish the political predominance they had long enjoyed. But this charge may very easily be a hostile version of the fact that they stood, as they claimed, for time-honored and constitutional methods. At any rate, they have won their victory under a banner bearing that device. It must be a humiliating reflection to Americans that the influence of our Government, though nominally neutral, has really been cast throughout upon the side of illegality and despotism. The indications are strong that this was brought about through a secret understanding arrived at by the State Department and Balmaceda. The latter appears to have openly boasted that he had the power of the United States at his back, and to have used that fact, or assumed fact, as a whip to keep his supporters in line, and thus as the means of prolonging the warfare. Two years ago he was the man of all men who brought to naught Mr. Blaine's plans in the Pan-American Congress. His sudden veering about suggests powerful motives which could probably be made public by a Congressional investigation. Mr. Blaine has no reason to desire a repetition of the inquiry into his performances on the west coast of South America: the one of nine years ago was an experience to satisfy any man's ambitions in that line.

According to the Washington correspondent of the *Times*, the *Itata* case is the subject of considerable speculation in Washington "as to whether the new Chilian Government will demand the payment of heavy damages by the United States for interfering with the delivery of the arms carried from the United States in that vessel." The correspondent goes on to say:

"If Balmaceda had been victorious, there would never have been any question raised as to the propriety of the course pursued by the United States, inasmuch as his side profited by the failure of the *Itata* to carry out her mission as well as by the prolonged absence of the *Esmeralda*, which went north to convoy her down and was delayed at Acapulco while waiting for coal. That the action of the United States in not allowing arms and munitions of war to be transported without interference to Chili hampered the insurgents somewhat is undoubted, but it is said by some authorities on international law that they will have no good claim for damages against the United States, for the reason that the *Itata* was not finally seized in the harbor of Iquique, but was given up by the insurgents as the result of diplomatic correspondence. If this view holds good, the insurgents can have no claim, it is said, even if the United States court at San Diego should decide that the original detention of the vessel in that port was unwarranted."

But suppose the *Itata* had been captured on the high seas by the *Charleston*, as Secretaries Blaine and Tracy, with the warm support of the *Times*, were proposing in May last, would not the new Chilian Government have a very pretty claim against the United States at this moment?

The rule established, or sought to be established, by Secretary Tracy in the Barrundia case has borne fruit in another quarter. News comes from Central America that the authorities of the republic of Salvador sent an officer of police on board the Pacific Mail steamer *City of Panama* to arrest five persons, four of whom were native Salvadorians and one an American citizen. This occurred on the 8th of August in the Salvadorian port of La Libertad. Capt. White of the *Panama* refused to surrender these persons. Then the commandant of the port went on board the *Panama* to arrest the men by force, but, the narrative proceeds:

"Capt. White's indignation was aroused at once, and, without waiting to discuss the matter at all, he told the commandant that if he did not leave the steamer immediately, he would throw him overboard. The commandant evidently perceived that Capt. White was disposed to carry out his threat, for he withdrew from the steamer without any further discussion. A short time before the steamer sailed from La Libertad, Capt. White was informed that President Ezeta had been notified of the occurrences on the *City of Panama*, and that he had gone with a large armed force to Acajutla, the next port in Salvador at which the steamer was to stop. The Captain's information was to the effect that Ezeta intended to await the arrival of the steamer at Acajutla, and to take off the refugees at all hazards. Capt. White accordingly determined not to go to Acajutla, and as there was no other port in Salvador at which the steamer was scheduled to stop, he proceeded to San José de Guatemala, arriving August 11."

In examining the Barrundia case we cited the despatches of Secretaries Everett, Marcy, Frelinghuysen, and Bayard, and the textual opinion of Mr. Soley, the present Assistant Secretary of the Navy, to the effect that a merchant ship in the harbors or waters of a foreign Government is subject in all respects to the jurisdiction of that Government unless exempted by treaty. Mr. Soley, in his article on International Law in the 'Naval Encyclopædia,' says: "Public officers may go on board such vessels, their officers or seamen may be arrested on board, writs may be served, and crimes occurring on board, by whomsoever committed, are triable in the local courts." That is to say, if the attempt had been made by the constituted authorities of Salvador to arrest Captain White himself instead of certain passengers on his ship, he could not lawfully have resisted such arrest. This is simply like saying that if the authorities of New York find or believe that the Captain of the *Etruria* has committed an offence against our laws, and if he is in our waters, he may be arrested, and that he has no right to resist arrest; and so *a fortiori* as to any passengers on his ship. But our "spirited foreign policy," for which we are no doubt indebted to Mr. Blaine, has reversed, for the time being, all the precedents of the State and Navy Departments, and has instructed our merchant captains that they are to disobey and defy the jurisdiction of foreign Governments in their own waters, and told our naval commanders that in cases where the merchant captains fail so to disobey and defy, they shall come forward and make good the deficiency to the extent, for example, of forcibly taking charge of a refugee who has not asked their protection.

The reciprocity idea is working as might have been expected, but more rapidly than the most sanguine free-trader could have anticipated. At the Maryland Republican Convention on Thursday, ex-Congressman Mudd announced that he had been thinking a great deal about reciprocity; and, as he evidently did not see why we should trade only with South America, he proposed that the idea should be extended to other countries. It was an absolute necessity for southern Maryland, he declared, that England, France, and Germany should reduce their import duties upon tobacco, in return for which this country should reduce its import duties upon their products. These sentiments were embodied in a resolution by Mr. Mudd, which was adopted unanimously by the Convention. It is a remarkable thing to see how eagerly the principle of free trade is swallowed when it is disguised under some other name. "A rose by any other name would smell as sweet," and if the Republicans will commit themselves as enthusiastically to a rational reform of the tariff as they did last week in Maryland, it does not make much difference whether it is done under the name of reciprocity or free trade. It is not impossible that Mr. Blaine may live to see the little fire that he has kindled in the south end of the temple of protection, extend itself until it consumes the whole structure.

According to Mr. Lodge of Massachusetts, whose prophecies are written in the September *Forum*, the dominant issue in the election of 1892 will be the question of the free coinage of silver. The tariff, he thinks, is a dangerous thing for any party to meddle with. The Democrats got up the Mills tariff

in 1888, and the country was so displeased with them that they lost their majority in the House of Representatives. Then the Republicans passed the McKinley Bill, and "in the skilfully wrought panic which ensued about high prices, the Republican party suffered severely." In 1892, therefore, the Democrats will pass another tariff bill in the House, and the country will be again disgusted with them and vote for the Republicans. From these premises, by a logical process that we are unable to follow, Mr. Lodge draws the conclusions that a majority of American voters are in favor of a protective tariff, and that neither party can make the tariff "a leading issue in 1892 if any more exciting question arises." In the language of another eminent character, "an two men ride of a horse, one must ride behind." The silver question is more exciting than the tariff, and therefore the election of 1892 will turn upon it. The next Congress will pass a free-silver bill, which the President will veto, and on this issue the parties will go to the polls. "Whatever differences may exist within the parties upon this question, the conditions are such that one must sustain and the other oppose it. They cannot both get upon the same platform in regard to it, and it therefore seems inevitable that the free coinage of silver will be the leading issue in the next campaign, the one upon which most popular feeling will be excited, and upon which most votes will turn." At all events, Mr. Lodge concludes, the question of free silver or cheap money must find its final and only settlement at the hands of the voters of the United States. Mr. Lodge's reasoning is not clear, and he fails to consider that the free-silver men among the Democrats may be brought to see that, if they insist upon their scheme, they will split their party and fail of their desire.

The Republicans of Maryland are very much exasperated because the Democrats of that State did not favor the free coinage of silver in their platform. Accordingly, they passed a resolution at their own State Convention, which we take leave to print side by side with the Democratic resolution on the same subject:

MARYLAND REPUBLICAN PLATFORM.	MARYLAND DEMOCRATIC PLATFORM.
(3.) We denounce the Democracy of Maryland for its meaningless silver platform, while its leaders unite with the Democracy of Ohio and Iowa in demanding the free coinage of cheap silver dollars to cheat labor of its daily wages and the farmer of the value of his grain. The Republican Silver Law is now rapidly increasing the currency to meet the wants of the people, while it guarantees a dollar—silver, gold, or paper—worth 100 cents, honest money, the same every day in the year, in the pockets of our people.	(9.) No State can coin money, or make anything but gold and silver coin a tender in payment of debts. Congress only can coin money and regulate the value thereof. The dollar is the unit of value in the United States. The power of Congress to coin gold and silver ought not to be so exercised that gold coin or silver coin will become a commodity and so disturb the operations of trade, but in such manner that the dollar in gold coin and the dollar in silver coin shall be of equal exchangeable value in all the markets of the United States. Any attempt to depreciate by legislation either of these metals ought to be deprecated and condemned.

It is very clear that both of these platforms mean the same thing, and run to the same conclusion, which is, that the Government ought by some means to maintain the gold standard. Keeping all kinds of money at par with each other means keeping them all at par with gold. Yet the Democratic platform expresses this intention more directly and decisively than the Republican. The latter merely recites that "the present silver law guarantees a dollar—silver, gold, or paper—worth 100 cents, honest money, the same every day in the year." A captious man might ask what kind of 100 cents are here referred to, there being a difference between 100 cents silver and 100 cents gold, if we look at their metallic value only. Moreover, the silver men contend that 100 cents in their favorite metal is just as "honest money" as 100 cents in gold. The Democratic platform declares flatly that the dollar in gold and the dollar in silver should be kept at equal, exchangeable value. If there is any difference between the two platforms, it is in favor of the Democrats—in this particular instance.

Some of the newspapers seem to be trying to make a sensation over the practice of accumulating gold followed by the Sub-Treasury in this city. One of them represents that Secretary Foster has artfully induced or cajoled the New York bankers who had occasion to send money to their Western correspondents, to deposit gold or gold certificates, while the Treasurer slily remitted greenbacks, thus increasing the supply of gold in the Treasury by nearly $12,000,000 in two months. The simple-hearted bankers, having just found out the game that was being played upon them, are now indignant at Mr. Foster's trick, and, according to this authority, have obliged the Treasury to ship West at least half the gold it receives. The motive of the New York bankers in thus driving gold away from this city is not explained, nor is it easily explainable. It does not appear that there is any occasion for excitement, surprise, indignation, or remonstrance in this matter. The facts are simply that the express companies have a contract with the Government for the transportation of money, by the terms of which the Government is charged a much lower rate than other customers. The business of the Government is so large that this is a perfectly justifiable proceeding. Accordingly, when a Western bank sends an order to New York for money to help move the crops, the New York bank, instead of sending the money by express itself, takes it to the Sub-Treasury and gets it sent by Government. If the Sub-Treasury had insisted that the banks must deposit gold if they wished to avail themselves of the Government's low express rates, it does not seem that the bankers would have had much reason to complain. They were under no compulsion to hand over their gold to the Treasury, for they could have kept it and remitted notes instead at a very trifling expense. The idea that the New York bankers suddenly "got their eyes open" to the nature of this transaction early in the week, is certainly refreshing. Such guileless simplicity is not commonly attributed to this astute class of men, and the whole story is more amusing than credible.

Lieut. Foote of Washington, whose address upon the abuses in our pension legislation we commented upon recently, has followed up his words with deeds that may have important consequences. With some other old soldiers, he has organized the "Society of Loyal Volunteers," the object being to compel a revision of the pension system, to the end that only those who are actually in need shall receive money from the Government. This end is to be attained to a considerable extent through voluntary and unpaid work on the part of members of the new society. It is proposed to have branches, if necessary, in every county, each branch to keep a list of all pensioners residing in its county, showing the amount of the payments and the claims which have been granted. In cases of fraud the society is to coöperate with the Government in securing the cancellation of the pension and the conviction of the guilty persons. Each society is to recommend guardians when requested, to act without compensation for the families of soldiers, and to employ attorneys, at its own expense, to protect the rights of those who are unable to protect themselves. It is impossible to say whether this scheme will succeed, but it would be very encouraging if it should. What is unfortunate about it is that it should have been so long delayed. The Grand Army has now grown very strong, and will regard the new society with hostility, it is to be feared, for it is formed to do what the Grand Army ought to have long since undertaken, but has hitherto neglected.

Another test of the color prejudice, not on geographical lines, was had in Philadelphia on Wednesday week at the annual meeting of the Patriotic Order of Sons of America, an organization whose object is stated to be "the perfecting of American institutions," the point of discussion being a motion to strike from the constitution the word "white," by which colored citizens are barred from membership. A majority report was presented in favor of the change, but the minority of the Committee vigorously defended the constitution's existing form. The vote when taken stood 58 to 36 in favor of admitting colored men, but it required a four-fifths vote to make the change. A strong plea for the black man was made by the president of a "camp" of colored men organized in Philadelphia. "Slavery," said he, "is a thing of the past, thank God, and now all we want is, that you put us in an equal position, not socially, but that we may be able to uphold equally with you our American institutions, for they are our inheritance. Try us, and you will see that

our color will not rub off and that you will not suffer for your pains; and when the old flag is assaulted, either from nations abroad or from strife within, none will rush to its defence quicker than we. We will protect your homes; we will protect everything American. We will stand shoulder to shoulder with you in every advance you may make for yourself." The delegates who refused to be convinced by this argument came from States like Colorado and Illinois, where pleas for "negro rights" in the South are heard yearly from every Republican stump.

The report of the Government scientist in charge of the microscopical station for meat inspection at Chicago calls attention to the good work done by women at the station, and dwells upon the opportunities for women in investigations of that description. This ought to occasion no surprise. Members of the superior sex have often alleged, as proof of their superiority, that women are incapable of the highest scientific generalizations. Many recent achievements in science go to show that she is rapidly acquiring the power to generalize with the best. However that may be, no one can deny her deftness and delicacy of touch or keenness of observation, and these are the qualities most in demand in microscopic research. Her advantage over the heavy-fingered lords of creation in the former particulars is, in fact, indisputable, and the proverbial quickness of a woman in detecting minute variations in another's dress might easily pass, it would seem, into special skill in observing abnormal appearances in the slides under a microscope. That instrument has come to play such a prominent part in medical and biological research that, if women develop aptitudes in its use, it must mean a considerable enlargement of their opportunities for work. It might even happen, on the theory of ex-Speaker Reed in regard to women's influence on an election where the tariff is involved, that they could get the barbarous McKinley taxes on microscopes reduced or abolished.

The English papers are commenting upon an event that illustrates in a striking manner the almost invincible resistance opposed by custom to the demands of scientific theory. It is maintained by some persons that the wheels of the Roman chariots were five feet apart, evidence for this view being furnished by the ruts to be found in the stone gateways of the camps on the Roman Wall. At all events, Stephenson found that five feet was the distance between the wheels of the wagons that were in use when he built his first railway, and the "standard" gauge of 4 feet 8½ inches, the distance between the rails, was therefore adopted by him—just as the railway carriage was a frank adoption of the coach body. But the great engineer, Isambard Brunel, a man who fairly captivated commercial bodies and fascinated Parliament by the brilliancy of his genius, declared that a gauge of seven feet would permit of a greater speed with less oscillation, and would also provide far more comfortable accommodation for passengers, and the Great Western Road was constructed according to his designs. It is undeniable that the latter end was attained to a degree that is now for ever hopeless, for we shall no more abandon the standard gauge than we shall adopt Volapük as a language; and that greater speed was in the first place attained by the passenger trains on the Great Western Road than by its rivals. But it was found that the expense of the broad-gauge railway was much greater than that of the standard gauge, and that it was difficult to provide axles of the required length without a dangerous diminution of their strength. For a time the battle of the gauges was doubtful, but it was not long before the standard gauge showed that it must prevail. Its greater cheapness in moving freight overcame whatever advantages the broad gauge had in transporting passengers. The number of miles of broad-gauge railway has steadily decreased of late years, and now it is announced by the Chairman of the Great Western Railway that on the 20th day of May next all that remains of the system in England will come to an end, as it has already done in this country. Mr. Brunel's prestige was, perhaps, not greater than his abilities would explain, but we can hardly go to the length of the *Daily News* in saying: "It is merely the irony of fate that, after many triumphant struggles with physical difficulties and many brilliant conquests, he should be popularly remembered only by two splendid failures—a Brobdingnagian steamship and a Utopian railway."

The budget for 1892 submitted by the Argentine Minister of Finance shows receipts estimated at $44,740,000 in gold and $16,720,000 in currency. The estimated expenditure is $27,640,000 in gold and about $51,000,000 in currency. If currency is taken as worth one-third of its face in gold, the currency revenue would be equivalent to less than $6,000,000 and the expenditure to $17,000,000. Hence a surplus of about $6,000,000 in gold may be anticipated. The expenditure includes the cancellation of $15,000,000 of paper money, but seems to make little provision for the interest upon the public debt. But, of course, the first step towards solvency lies in the direction of reducing the excessive supply of "legal tenders." The imports for 1890 were valued at $142,000,000, those of 1889 having been $164,000,000. The exports for 1890 were $100,000,000, or about 40 per cent. more than in the previous year. The Minister predicts that in the two years 1891 and 1892 the exports will amount to $240,000,000 in gold, and that the value of the imports will not be more than $145,000,000, making a balance in favor of Argentina of $95,000,000. In the figures for imports the value of railway material is not included, for the strange reason that it is paid for by European capitalists. It is difficult to believe that the anticipations of the Minister of Finance are not too sanguine as to the future extent of Argentine commerce. The sudden check to the inflow of capital cannot fail to compel marked changes in the habits of the people. A country of less than 5,000,000 inhabitants that imports in a single year from France alone over $10,000,000 worth of wines, and $2,500,000 worth of perfumery and "notions," while it cannot pay its debts, is in a bad way. We learn through the *South American Journal* that the moratorium act has been repealed by the Senate, which has also voted to create the new Bank of the Argentine Nation. If the capital of this bank is to consist, as proposed, of an issue of $50,000,000 of notes, the proposed withdrawal of $15,000,000 by the Government would scarcely improve the situation. The reports are, however, so confused that it is impossible to speak positively at present in regard to the outlook.

In this connection may be mentioned a plan for the collection of duties upon imports into the Argentine Republic and for the payment of interest upon its debt, that has much to recommend it. The transfer from Buenos Ayres to Europe of the funds required to meet this interest, which is practically all payable abroad, is a matter of some difficulty and cost, as well as delay. If customs duties, or a part of them, could be collected on merchandise at the ports of shipment in Europe through the Argentine consular agents, a considerable saving might obviously be effected. This suggestion led to a further one, that the duties might be collected through the sale of stamps, to be used in the manner devised by Mr. Wells for the collection of our own internal revenue, and finally a still broader scheme was developed. It is now proposed to establish in London an institution to be called the Foreign Customs Bank, which shall have the especial function of collecting duties for the various States that have large payments of interest to make in London, and of applying to those payments the duties so collected. The existing financial agencies of these States may not look with favor on a scheme of this kind, which would deprive them of their customers, and there are some features in the scheme (which is known as the Holmes-Malcom plan) that are objectionable. To combine the operations of a "Real-estate Trust" with the functions of such a bank does not suggest sound finance. But the principal idea, that of collecting revenue where it is to be disbursed, is ingenious and not impracticable. Unfortunately, the borrowing States are generally afflicted with corrupt governments, the members of which would view with alarm the transfer of the lucrative business of the customs service to foreign shores. But borrowers sometimes have to submit to terms which they dislike, and it is not at all impossible not only that customs duties will be pledged for debt in the future as at present, but that their collection will be transferred to the residence of the creditor.

THE SILVER QUESTION IN NEW YORK.

THE attitude of the Democratic party in New York as to the silver question is now the most agitated and agitating question in State politics, overtopping the question who shall be nominated to the several State offices. Indeed, the question who shall be elected to these offices depends very much upon the kind of platforms adopted by the two parties on this particular matter. If the public are convinced that business interests require the maintenance of the gold standard, they will vote for the party which best represents the gold standard. It is to be remarked that the present revival of activity in Wall Street dates from the very day on which President Harrison said, at Albany, that he felt himself pledged to keep all the different kinds of money in the country of equal value with each other. Nor can there be any doubt that the President's speech was the cause of the turning tide. Until then a cloud hung over the financial horizon which not even the magnificent crops, the increased railway earnings, and the alluring prospects of foreign trade could dissipate. Stocks would not rise, bonds would not sell, business would not move except in the hand-to-mouth way that had characterized it ever since the great Baring disaster of last year. The cause of such anomalous conditions was nothing else than the doubt which overspread the commercial heavens—the doubt as to what would be a dollar six months or a year hence. The few words which the President let fall lifted this cloud for the time being They gave the assurance that the gold standard would not be abandoned without the utmost possible resistance on the part of the Chief Executive. While this was not an absolute assurance, it created a general belief that the basis upon which business and bargains now rest would not be changed during President Harrison's term of office. And this was just enough to remove the weight that had rested on the spring of business.

The Democrats are not usually as good observers of the undercurrents of political life as the Republicans, but they can hardly fail to perceive the coincidence between President Harrison's Albany speech and the revival of confidence in commercial circles. That this coincidence was a real causal relation, we have not the least doubt. The renewed activity in Wall Street was only a symptom of the improved condition of trade in general. It was the outward and visible sign indicating that investments would be safe for some considerable time at all events. The Democratic party in New York has been generally wise on financial questions. It has been fortunate in having leaders who understood these questions and had the courage of their convictions. Seymour, Tilden, and Manning represented the best traditions of the party, and their influence kept it out of dangerous bogs as long as they lived. The question now is, whether those traditions have lost their weight and those illustrious leaders their authority. We shall soon see.

Meanwhile the *Tribune* reprints the speech made by Gov. Hill on the silver question at Brooklyn on the 23d of September last, from which the inference is drawn that the coming State Convention of the Democrats will "squint toward free silver coinage." Of course we cannot predict what the Convention will say, but it is not exactly fair to Gov. Hill to say that his Brooklyn speech squints towards free silver coinage, unless the same may be said also of Senator Sherman's recent speech at Paulding, Ohio. Each of these speeches shows some tenderness for silver, as is due from a careful politician who does not know how far away he may be from a Presidenial nomination. Both of them favor international bimetallism. The only important difference between the two is that Gov. Hill attacks, while Senator Sherman defends, the present Silver Law (the Act of July 14, 1890). Gov. Hill says that "this Act puts a heavier strain upon our resources than free bimetallic coinage without foreign coöperation would do, and obstructs our progress towards that end, which we all desire to reach—the free coinage of silver upon a proper international ratio." He went on to tell what he considered the proper international ratio to be, deciding in favor of 15½ to 1, because that is the ratio at which the larger part of the silver coin of Europe has been struck. There is nothing in the speech which warrants the belief that Mr. Hill is in favor of free coinage without international agreement. His remark about "the heavier strain upon our resources than free bimetallic coinage" may be correct or incorrect as a matter of opinion. It does not commit him to free coinage, while everything else in the speech commits him against it unless it shall be undertaken in concert with other nations.

It scarcely needs to be said that Gov. Hill's views are not in any case conclusive upon the Democratic party of New York. We have given thus much attention to them, in connection with the coming convention, because Gov. Hill is the only important personage in the party as to whom some doubt has been expressed.

RAILWAY CONSOLIDATION.

PRESIDENT C. P. HUNTINGTON of the Southern Pacific, in the current *North American Review*, under the title "A Plea for Railway Consolidation," states his well-known view that the remedy for all our railroad ills is the amalgamation of American roads into one gigantic corporation. There can be no doubt that consolidation would help the public in removing many of our present abuses. There would be no more secret rate-cutting, the source of all our dangerous and unjust discriminations. The different shipping interests could be adjusted fairly towards each other. A most important result would be the saving of the present wastefulness in operating expenses, brought about by the competition of a number of roads, each having equipment and facilities enough to handle the traffic which all are now carrying. Since railway charges cannot be made materially higher without loss to carriers as well as to shippers, the question of economy in operation is a most important one, whether it be secured through consolidation or not. President Huntington puts these possible advantages none too strongly. It is fair to say that under existing conditions the railways need protection as much as the public.

But Mr. Huntington leaves untouched the question which the Grangers will be sure to ask. The "accomplishment of this [consolidation into one controlling corporation] would reduce the cost of transportation to the minimum, which would *admit* of the lowest possible rates to shippers and passengers." True enough; but would shippers and passengers receive these lowest possible rates? In short, allowing all that may be said in favor of consolidation, can we do without competition in some form among carriers any more than among traders? This is not to say that things should be left as they are; that we should continue to forbid the pooling of railway traffic, for example, for regulated pooling would not stifle rivalry but would change it from rates to facilities. The destruction of all competition, however, would be another and much more serious matter.

Some of the minor points made by President Huntington do not seem well taken. "We have yet to learn," he says, "of a single instance where it has been considered advisable, either by those financially interested or by the public, to disrupt a system thus consolidated, or to make any part independent of the others"—which leads one to wonder whether he has forgotten the Wabash. "Lean ores," he continues, "should be moved at a small profit over actual train expenses, but this cannot be done under the present law." Fixing the rate of transportation for precious ores on a sliding scale, according to percentage of silver, is a not uncommon thing on Rocky Mountain roads. After consolidation, "when a fair return upon invested capital has been received, the people, through the courts, can prevent rates from going up, and thus restrict the earnings of a railroad to reasonable figures." Courts of law interpret statutes, but do not make them. Does Mr. Huntington mean that our judges would take the active supervision of railway matters of their own original motion? If not this, then, apparently, the only alternative would be Federal ownership, or, at the very least, such a decisive control as would amount to the same thing. The theory that a fair return upon invested capital can be a measure of the rightfulness of railway tariffs, is one which can easily be pressed to a dangerous extreme; for a rate is primarily a commercial question, and is to a great extent independent of the after results upon the bonds and stock.

But it is not necessary to follow the theory to the end, for there is no consolidation of the kind in sight. Mr. Huntington is not quite definite enough about this point. He quotes the well-known instance of the New York Central, made up of a dozen little local roads forming one continuous line of rails between New York and Buffalo. But to argue from this to a consolidation of competing roads is to confuse an important distinction. It might

be even praiseworthy, from the public point of view, to unite the New York Central with the Lake Shore, since the exigencies of geographical position admit of a close alliance in any case; but to amalgamate the New York Central with the Pennsylvania, for example, might not deserve the same praise. Precisely this latter kind of amalgamation is the most difficult of accomplishment; so much so that the most ardent anti-monopolist need have no fears. A striking instance of this truth is furnished by President Huntington himself. He cannot agree with the Missouri Pacific and the Atchison people as to the values of their respective properties for the purpose of consolidation; and yet these three systems touch each other at many vital points; could, if combined, "dictate rates" in their common territory (that is, could get all that commercial conditions make possible); could, if involved in a war of rates, almost destroy each other. If to these statements we add that the control of these three vast systems rests with but half-a-dozen men, it is obvious that we have a railway situation exceptionally favorable for consolidation. If a few men of experience and ability cannot, under such circumstances, come to an understanding with each other as to what share of a consolidated corporation each shall have, it is not necessary to say that the immense multitude of shareholders of all our railroads, scattered throughout the United States and Europe, will not easily agree as to the values of all these properties, no matter how many arguments favorable to the theory may be put forth.

THE PROPOSED ADIRONDACK PARK.

THE special report of the Forest Commission of New York, which, although rendered to the Legislature last winter, has only recently been circulated, is a very well-considered document. After reviewing the legislation and attempts at legislation that have taken place, the Commission refers to the unanimous approval with which the proposal to establish a State park in the Adirondack region has been received, and proceeds to consider the conditions of the undertaking in detail. It is unnecessary, they say, to lay again before the public the familiar results of scientific forestry. It is to be assumed that the desirableness and the necessity of maintaining areas of forest are beyond question, and the present investigation relates to the method by which this result may be best attained.

The principal questions that the Commissioners put to themselves are four in number:

(1.) Is the establishment of a State park in the Adirondack wilderness feasible?

(2.) If it be, what shall be the area of the park?

(3.) What lands shall be embraced within the park?

(4.) How shall the lands, not now owned by the State, that ought to be included in the park, be acquired?

The area of the Adirondack Wilderness, which in earlier times was estimated at 12,000 square miles, has now been reduced by clearings to about 5,600 square miles, or 3,600,000 acres. This includes lakes, ponds, and rivers, overflowed lands, and some clearings and settlements. It also includes many outlying parcels of land, which, although wild, would not fall within the limits suitable for a park. Of this wilderness the State has now acquired title, under various tax sales, to but a comparatively small portion, some 765,000 acres, and these lands do not lie in a compact mass, but are interspersed among lands held for different purposes by individuals and corporations. It is plain that these scattered parcels do not of themselves constitute a park, especially as many of them are in the outlying regions above mentioned. Two methods have been suggested by which an area suitable for a park might be acquired by the State. One method is for the State to condemn the lands required, under its right of eminent domain. The Commissioners are of opinion that an attempt of this kind would arouse hostility from so many interests that it could not be carried out. The other method is to acquire the lands by purchase, which would be practicable if the owners would sell at a price which the State could pay. Unfortunately, these lands are no longer to be obtained at moderate prices, and some of them are not for sale at all. The owners of lands no longer allow them to be sold for taxes, and the expense of purchasing the whole area required would probably be greater than the Legislature could be induced to incur.

It becomes necessary, therefore, in the opinion of the Commission, to adopt a modified form of State proprietorship. The clubs, and hotels, and wealthy individuals that have purchased lands in this region for pleasure-resorts of various kinds, have no purposes that really conflict with those of the State. A prominent representative of the owners of these private reserves stated their case as follows:

> "It does not appear to me that there is any good reason why private clubs or associations having in view precisely the same objects which the State has in founding this park, should be in any way interfered with so long as they assist in preserving the fish and game, and cut lumber only in such a way as to preserve the forests. Should any club or organization at any time undertake to clear the land by wholesale, for making charcoal or for any purpose other than a small, necessary clearing for cultivation, then the State might, with propriety, step in and prevent their so doing."

It appeared that if certain privileges were conceded to them, these owners would be unanimously in favor of the park. It was also intimated to the Commission that if the park should be extended around the private reserves, the present somewhat vexatious regulations forbidding trespassing would be abolished.

A different class of interests was encountered in the case of the lumber and wood-pulp companies. With them the question was one of a purely business character. They have bought land and erected mills, and very properly insist upon making something out of their investment. As to these parties, the Commission protests against the injustice of a wholesale condemnation of their industry. In many cases it is carried on in accordance with the precepts of forestry, and the tendency to cut timber only in such a way as to secure a renewed growth is decidedly increasing. At all events, these industries are too powerful to be attacked. If the park is to exist, there must be a compromise of some sort, which the Commission does not regard as difficult of attainment.

In the first place, much land owned by lumbermen in the heart of the wilderness could be obtained advantageously by the State in exchange for the outlying tracts which it owns and which are not suitable for park purposes. Much land can also be had by the State upon the condition that the "soft" wood growing thereon—pine, spruce, hemlock, and tamarack—may be cut when of a prescribed size and under State regulations. The heavy timber upon lands already owned by the State might also be exchanged for lands desirable for the park. In this way large tracts of land could be gradually acquired by the State at a comparatively small expense, most of which could be met by the sale of timber. As already stated, the owners of the private reserves are willing to allow their lands to be thrown into the park upon conditions that are not regarded by the Commission as unreasonable; and, these owners being quite as much interested in preserving the forests as the State, and the preservation of the forests being the main end, there is no reason for disagreeing with the report. As to the first question, therefore, the answer is that the establishment of an Adirondack park is feasible. We may add, also, that forestry gives no countenance to the sentimental idea that trees should never be cut down. Sooner or later they will fall and decay if left to themselves, and their removal when mature defeats none of the objects for which the park is required. It is to be remembered that lumbermen take out only the "soft" wood; so that after they have "lumbered" a tract the inexperienced eye would not discover that they had been at work.

As to the area of the park, suggestions have been made ranging from 1,000,000 to 4,000,000 acres. The smaller area would not be sufficient to produce much effect upon climate or rainfall, and would not include all of that portion of the Adirondack region covering the mountains and lakes at and around the headwaters of the rivers. Probably 2,300,000 acres would be as little as would answer the purpose, but we do not observe that the Commission limits itself to any fixed number. That, however, is the area indicated by their map, and if from this be deducted 57,000 acres covered by water, 64,000 acres of improved lands, 341,000 acres of private reserves, and 512,000 already owned by the State, there remain about 1,326,000 yet to be acquired. For the location of these lands, the map accompanying the report must be consulted; but, as the Commissioners say,

> "The park as here projected includes the chief lakes and headwaters of the principal streams fed by the Adirondack forests; the highest mountain peaks and ranges; the most desirable portions of the wilderness for sanitary and recreative purposes; the best localities for fish and game preservation, and the larger part of the virgin forest of the Adirondacks."

Upon the whole, the showing of the report is hopeful and gratifying.

THE FRANCO-RUSSIAN DEMONSTRATION.

PARIS, August 17, 1891.

IT is impossible to overrate the importance of the manifestations which have taken place in Russia on the occasion of the visit and the review of the French fleet at Cronstadt. The visit had been premeditated for some time, and the French Government was fortunate in the choice of Admiral Gervais, who was to represent France in all the circumstances attending such a demonstration. Admiral Gervais is a cool man, a man of much tact and sense, and it must be said to his credit that he never lost his head during all the ovations paid to him, that he did not indulge in any chauvinistic tirades, and never pronounced one of those unhappy words which sometimes have disastrous consequences. M. de Laboulaye, who had been for some time our Ambassador in St. Petersburg (he is the son of Laboulaye, well known in America and author of 'Paris en Amérique'), had just retired from the diplomatic service for family reasons, but, much to his own inconvenience, he was asked to return to St. Petersburg, to present Admiral Gervais and the officers of the fleet to the Russian Emperor, and to enable Admiral Gervais to profit by his great knowledge of the Russian court and of Russian society. The new Ambassador who had been appointed, M. de Montebello, would have been of little use in the difficult circumstances of the French visit.

Between them, M. de Laboulaye and Admiral Gervais succeeded in maintaining the correct character which the visit was to have; but their wisdom and moderation detract nothing from the spontaneous outburst of political passion which has characterized the visit. There is nothing in it which ought to surprise any one who has followed the development of events during the past few years. Ever since the Congress of Berlin, it had been evident that Russia and Germany had become completely estranged, and that, notwithstanding the differences in their political institutions, Russia and France were, so to speak, instinctively drawing together. It was thought for a long time that there could be no serious understanding between the Emperor of Russia and the leaders of Republican France; people remembered how angry the present Emperor, who was then the Tzesarevitch, was with the lawyer who dared to say to his father, who was going down the steps of the Palais de Justice, "Vive la Pologne, Monsieur!" Only a few weeks ago the "Marseillaise" was a forbidden song in Russia; but political and national interests are stronger than all prejudices, all personal likes or dislikes. Gen. Le Flô, who was for a few years French Ambassador at St. Petersburg, and who was himself *persona grata*, was once talking with the Emperor of Russia on the situation of Europe. The Emperor is a man of few words; he merely said to him: "Make yourselves strong" (*Faites vous forts*). This was clear enough; if France were strong, the door might be open to negotiation; as long as she was not strong, there was nothing to be done with her.

Under the Presidency of M. Grévy, the political antipathy arising from the difference of institutions remained very marked, though France was making herself stronger by degrees, and though her army had become every day more formidable. M. Grévy had no personal prestige, and the painful incidents which brought about his forced resignation had for a time a detrimental influence. The choice of his successor was a fortunate one, and, ever since he has been President, M. Carnot has behaved in the most proper manner, and has gained the esteem of every government in the world by his unimpeachable attitude. At the same time, for a while, his position at home left diplomatic relations as they were before, on account of the extraordinary instability of the Cabinet. It seemed almost impossible for a foreign minister to become acquainted with the French Ministers, as they were changing every three months. The extraordinary popularity of Gen. Boulanger was another disturbing element; nobody could see clearly what would be the future of France if Gen. Boulanger became master of the country, and for a moment it seemed not only possible but almost probable that he would be a new Bonaparte. Since the emotion caused by the Boulangist campaign, the Republicans have felt the necessity of giving more stability to the Administration, and it was almost a watchword during the last session to avoid, at any price, a ministerial crisis. M. Constans, who is the man of the day, the man who instituted the trial of Boulanger, and who conducted the last electoral campaign, is more firmly in power than any Minister has ever been for twenty years.

We have now, therefore, better conditions for entering into close relations with foreign Powers: a respectable, dignified President, who is essentially what the English call a safe man; a lasting Cabinet, having at its head a man who, whatever may be said of him, has shown much intelligence and firmness. It was natural that France should reap the benefit of such a situation. The renewal of the Triple Alliance furnished the occasion. Notwithstanding the downfall of Crispi and the visible signs of some reluctance in the public opinion of a part at least of Italy, the Alliance has been renewed for five years. England has not positively joined the Alliance, she has kept entire liberty of movement. Lord Salisbury has repeatedly declared that he had not much faith in alliances when they were not in exact accordance with the interests and feelings of the people at the moment when they were to bear their immediate results; at the same time, England has given a sort of moral support to the Triple Alliance, in so far as this alliance means the preservation not only of peace, but of all the existing territorial arrangements. There has been much talk about the equilibrium of the Mediterranean, which means practically that England will see with satisfaction whatever tends to increase the importance of Italy, as opposed to France. An English sailor, a man well known in the military circles of England and France, said candidly the other day to a French friend: "I am very fond of France [which means that he is fond of going to Paris], and I wish her well; but you must consider two things: in spite of all the revolutions, the personnel of the French navy has remained almost the same; it is admirable, it has traditions. As for Italy, the personnel of her navy is very inferior, but she has some magnificent ships. If the French made a *coup de main*, and seized the whole of the Italian fleet and manned it with their own men, they would become too formidable even for us." Do not believe that this is an idle dream; there was a real panic created in Italy at one time by the rumor of an attack on Spezia.

There are certainly two currents in England. There is a new French current formed by all who are drawn towards the French democratic ideas; but there is always the old current, the traditional attraction of England towards Germany, who has been for centuries the soldier of England on the Continent, her ally against the omnipotence of Louis XIV. and Napoleon. There was a French party even at the time of Napoleon; it was composed of a small number of men, some very remarkable, but they had no real influence on events, and they did not leave a permanent mark in history. What would be the policy of England in case of a new European struggle? Strong as may be the sympathy for France, it would be counterbalanced by the sentiments which England openly professes towards Russia. Russia is to her an "Erbfeind": she meets Russia everywhere—in Europe, in Asia; her sentiments, her principles are at utter variance with Russian culture, if you may give the name of culture to what is almost the reverse of Occidental culture. It is therefore not to be wondered at if the review of the French fleet at Cronstadt really excited more uneasiness in London than in Berlin; certainly more than in Vienna.

In the face of the constellation, "Northern Germany, Austria, Italy," there rises the new constellation, "France, Russia." The feelings of popular enthusiasm which have manifested themselves in Russia have been reciprocated in Paris. Everything Russian is the order of the day. The Grand Duke Alexis, who came here incognito to take quietly the waters of Vichy, has much difficulty in escaping the indiscretions of the reporter. It is difficult to judge at a distance of the value of the Russian enthusiasm, of the degree of control which the Government could possess over this enthusiasm in a given emergency. But, if we have a right to an opinion on what is going on under our own eyes, it is impossible to deny that the enthusiasm for Russia which is now dominant here, is really a new form of what used to be called chauvinism: it is the expression of a sentiment of revolt against the standing and formidable menace of the Triple Alliance, as well as an expression of the belief in the increasing strength of France. It is needless to say that such a sentiment may breed many illusions; it is obvious that the desiderata of France and Russia have nothing whatever in common. France made war against Russia for the protection of the Turkish Empire, but this war was purely dynastic; it gave to Napoleon III. the alliance of England and the position among the sovereigns which had at first been grudged him. But even at Sebastopol, after so long and terrible a struggle, as soon as the armistice was signed, the French and Russian officers fraternized and fell into each other's arms.

"Major a longinquo reverentia." France really knows little about Russia, and this ignorance allows her to have great expectations which may perhaps never be realized. It is impossible not to be somewhat uneasy at the outburst of unconscious sentiments which have no direct object, and which, if you analyze them carefully, have for their foundation only common fears and common hatred. The course of civilization is altered. France makes me think at times of a train which is off the track. Occidental culture implies naturally some harmony among all the Occidental nations. There is really much more in common between France and Germany than between France and Russia; but the conditions of the peace of 1871 have been such that France has been thrown, so to speak, into the arms of an Oriental nation, and that the two extremes of

European civilization and European barbarism have found themselves united.

ITALY ON THE SEA.

ITALY, August 15, 1891.

UNTIL quite lately the Italians were more than satisfied with, they were proud of, their navy; and when we remember the condition of decrepitude into which the fleet had fallen during the ten years following on the disaster of Lissa, so that in 1876 Italy scarcely counted in the list of naval powers, they may be pardoned for some elation when, ten years later, they found themselves in possession of a navy that became at once the admiration of Europe, heard their *Duilio* and *Dandolo*, their *Italia* and *Lepanto*, praised by "intelligent foreigners" as the biggest and swiftest battle-ships, carrying the biggest guns in the Old World or the New, and saw themselves placed third on the list of naval powers. But during the last four years, when England, Russia, and France have been reinforcing their fleets with such extraordinary energy, each nation striving to bring up the strength of the navy to a level with its own special requirements, keeping in view the relative strength of rival powers, the spectacles through which the Italians view their sea-girt shores are not of that rose-colored hue which gave enchantment to those former years, and they begin anxiously to inquire whether their navy is really in a condition to fulfil its several duties, which, though not as vast or as far-reaching as those of the British navy, are quite as vital, if not more so, for the supreme necessities of home defence. Italy has few colonies or foreign dependencies to protect, nor has she, alas, commerce to protect on foreign seas; but she has to defend an enormous seaboard, the unprotected towns and villages on her coast, to prevent the debarkation of a hostile fleet, to coöperate as a defensive weapon in all the operations of her land forces, to cover the flanks of her army in the valley of the Po, to debark masses of troops in support of these, and be able at any moment to contend against a powerful foe who would probably make a simultaneous attack by land and sea.

"The first necessity of a United Italy," wrote the great Napoleon, "is to become a great maritime power, in order to maintain the supremacy of the seas, to defend her numerous islands and her coasts"; and when we look on the map of Italy, the duties of her fleet appear at once to be of a most serious nature. The coast line of France is but 2,535 kilometres; that of Italy is 6,341 kilometres, or 3,424 geographical miles. Her continental coast line extends from the confines of France at Nice to the Magra, 314,000 metres; from the Magra to Torre Scilla, 1,055,554 metres; from Torre Scilla to Cape Leuca, 731,460 metres; from Cape Leuca to the Austrian possessions on the Adriatic, 1,112,110 metres. Then come the chief islands: Sardinia, with 1,098,147 metres, and Sicily, 1,016,635, Elba, and a host of coast islands, bringing the number of miles to be defended up to the aforesaid 3,424 geographical miles.

Nearly all Italy's great cities are on the sea, if we except Turin, Milan, and Bologna. The great railway arteries of Italy run for a long extent along the sea coast, exposed to the shots of the enemy's fleet. France, England, and even Austria, with her ports at Trieste and Fiume, can communicate with every point of their territory independently of the sea; but if Italy were to lose dominion of the sea, she would lose in great part that of the land. Hence, for Italy to possess a powerful fleet, and a fleet absolutely adapted to meet all these requirements, is a question of "to be or not to be." The once favored design of girdling peninsular Italy with strong works has been entirely abandoned, denounced as useless to repel maritime attacks, and quite beyond the power of her finances, even in those halcyon years when she believed in surpluses and voted for all the proposals for armament on land and sea. To secure the combined action of the fleet and the field forces, to perfect the mobilization of her armies of reserve, is her objective point, and for this a thorough understanding between the services is her constant aim. Without this, say her military authorities, "an enterprising enemy might throw her mobilization schemes into extreme disorder, make bold raids along her coastline against unprotected centres of commerce, arsenals, military districts, manufacturing districts, depots; while, again, he might debark considerable forces at almost any point of the extensive coastline and thence move either to effect temporary objects or to conquer the country." And as early as 1832 Baron Félix de Beaujour wrote: "An attack by the gulfs of Naples or Tarentum only strikes Italy at her extremities, but an attack by the mouths of the Arno strikes at her heart and cuts her in two."

All these considerations were present to her naval chiefs when they laid down the lines of her naval programme with these chief objects in view. Admiral St. Bon, Secretary of the Navy between 1870 and 1876, who occupies the same position to-day, must be regarded as the creator of the present Italian navy. Finding that it was not possible for the young country to build the same number of ships as her maritime rivals, that she could not compete with them in the amount of tonnage, he affirmed that, autonomy, speed, and power being the desiderata, her best policy was to create a fleet of a few great battle-ships, larger, stronger, swifter, and more heavily armed than any afloat, to insure secure bases, such as Spezia, Venice, Taranto (his successor added the Island of Maddalena), then an attendant fleet of rapid cruisers and torpedo-boats. Seeing that Italy was at that time almost devoid of metallurgic industries, it was notorious that the preparation of her war fleet would engender a vast outlay; but the nation, especially after the seizure of Tunis by France, has never until the present moment permitted the word "economy" to be uttered in the discussion of her naval budget. But now that "economy to the backbone" in every department of the State is, of dire necessity, the order of the day, people are beginning to count the cost of the enormous ironclads and to doubt whether the vast sums have given a relative gain.

Of her first-class armored ships, the *Sicily* was launched the other day at Venice with great éclat, in the presence of the King and Queen of Italy and of the British squadron, but the national enthusiasm was not at all equal to the overpowering joy manifested at the launch of the *Dandolo* and the *Duilio*. The enormous cost of the monsters—$6,000,000 each, on an average—is now reckoned up; also the time that elapses between the day they are laid down and their final armament. The *Duilio*, laid down in 1873, was launched in 1876 and armed in 1880. The *Dandolo* took eleven years to complete; the *Italia* and the *Lepanto* the same. Her ten biggest battle-ships have cost the nation $47,357,355. We doubt whether any more such monsters will be built when the *Sardinia* and the *Re Humberto* are completed.

Another question is much agitated just now. It is remembered that France and England have splendid ports, with deep waters, grand arsenals, enormous supplies, and powerful means of reinforcing their coal stores; and numerous mercantile ports and docks able to receive their battle-ships. In this respect Italy is sadly inferior; if we except Spezia and Venice at the extremities of her seaboard, she has no docks capable of receiving these vessels, and, when they are anchored off her ports, the distance of her coal deposits is a serious consideration. It is now affirmed that the coal endurance of her big battle-ships has been considerably exaggerated. As early as 1888, an ex-sailor, George Molle, pointed out these and many other defects, and above all things dwelt on the unwisdom of trusting the offensive power of her big battle-ships to a few monster guns whose mechanism is so complicated, and whose hydraulic gear is so delicate, that the slightest injury would disable them and render the vessel useless for offence, nay, expose her to destruction, especially since the quick-firing armaments have come into fashion and the enemy can pour a hail of bullets on the turrets, towers, and open ports. He severely criticised the insufficient armor of the big battle-ships, and precisely in 1888 wrote strongly in favor of the smaller second-class battle ships such as the *Stromboli*, the *Vesuvius*, the *Fieramosca*, the *Etna*, and the *Bausan* (torpedo-ram). This author dwells much on the necessity of home manufacture, showing that it is one thing for England and France to vote enormous sums for their navies, and a "quite other thing for Italy," since in the former countries the money does but change pockets, passing from that of the taxpayer in general into the hands of employers of national labor and of the working classes employed, whereas in Italy the sums voted go out of the country.

These opinions of course now gain great value from the Hamilton programme and Lord Brassey's treatise on the "Future Policy of War-Ship Building for 1891." Lord Brassey, in noting how necessary it is, in framing a ship-building programme for the British Navy, to provide for strengthening the fleet with vessels of *every* serviceable type, quotes with approbation the policy so well described during the recent debates in the Italian Chamber by Signor Morin, and warmly approved by Brin, then Secretary of the Navy and by no means in accord with St. Bon on many vital points. "I fully share," said Brin, "Signor Morin's opinion that the eclectic system which we have adopted of composing our fleet of vessels of various types, and of endeavoring to make each type as perfect as possible, is the best solution, and I see with pleasure that this is no longer disputed by any one." The Italians have a profound belief in the use of torpedo vessels for coast and harbor defence, but, finding the smaller torpedo boats unseaworthy, they incline to the bigger vessels of 150 tons and over. In this last month of July twelve new torpedo vessels have been ordered at three private shipbuilding establishments, and the gunboats *Castor* and *Pollux*, transferred from the war to the naval department, are now registered on the royal navy. This year will also be completed three war-ships of the type of the *Dogali* of 2,800 tons, three of the *Tripoli* type of 1,200 tons each. As none of the constructions decreed in the programme of 1890-91 have been abandoned, it is difficult to see how the expenses of the naval department can be diminished. These, in the estimates for 1890-91, stood at nearly seven millions of dollars for ordinary expenses; of

this, nearly a million was assigned to the mercantile marine or merchant service, which is only now beginning to recover from the state of decline verging on decay into which it had fallen between the years 1870 and 1885, when the law granting shipping bounties to ocean-going vessels was passed. In that year, the inquiry into the causes of the decline of the merchant service was concluded, and it was found that Italy occupied only the sixth rank as regards steam vessels, and the fifth as regards sailing vessels. Considering the total tonnage, a constant diminution was shown since the year 1876, when it was 1,078,369 tons, falling in 1880 to 999,196 tons, in 1885 to 953,419 tons, and in 1889 to 824,474; but as one ton of steam is equivalent to three tons of sailing vessel, the diminution is not so significant. From the first of January, 1886, to the end of December, 1889, the Italian Government paid in shipping bounties close upon three millions of dollars, of which over two millions represent the repayment of duties levied upon the importation of materials for construction, the rest bounties for the transport of coal and bounties for construction and repairs of Italian-made boilers.

On the whole, the advantages to be gained by a cordial alliance between Italy and England on the seas would appear to be greatly on the side of Italy; but England and Italy have no clashing interests and many in common on the Mediterranean, so that the deficiencies of the younger nation may be in great part supplied by the greater and older mistress of the seas. If Italy can balance her income and expenditure, and this without any addition to her overburdening taxation—if peace be ensured by the quadruple alliance, and on the other hand by the dual alliance between France and Russia—there is little doubt but that in ten years United Italy will become a great, strong, and flourishing naval power. Since the publication of the articles in the *Times* on the American navy in April, the world seems now to look to America as the nation which will probably have the last word to say on naval construction, but the fact remains that until some great naval war proves which of the armored monsters can best defend and offend, all the new models are so many experiments. J. W. M.

Correspondence.

MASSACHUSETTS AND THE LOBBY.

To the Editor of The Nation:

Sir: If your readers find me excessively tedious, they will please to remember that it is you who are the "agent provocateur" in furnishing a continual supply of facts for the explanation of which my theory gives the master key. Thus, the interesting article in your issue of the 20th, on the Federal Judicial Establishment, is one long plea, indirectly, for the presence in Congress of some national authority, responsible for administration, having power to prepare and submit necessary legislation, and forced up to it both by party opposition and by individual criticism. What sort of an agency is the committee system, with its pulling and hauling of private and local interests, and its manipulation by the lobby, for regulating the even-handed administration of justice, upon which so much of the welfare of the country depends? If the Federal Constitution preserves us, at least for the present, from an elected judiciary, no one principle, on the other hand, calls more loudly for the admission of the Cabinet officers to Congress than the organization of the courts. What a different office would be that of the Attorney-General, and what a different class of men it would attract, if it carried the responsibility and the honor of such work as that!

But that which appeals to me most is the article on the anti-lobby law in Massachusetts. I think you overrate its effect, and it is important that it should not be overrated, as it is the beginning, as I believe, of a struggle as fierce as that with slavery itself, and which, in the long run, must end in one of two ways, either the defeat of the lobby, or the overthrow of our institutions, and a reduction to anarchy, civil war, and military despotism. The lobby is equally rampant around Congress and every State legislature, but inasmuch as, so far as I know, the first definite stand against it has been made in Massachusetts, it is important to determine exactly what has been accomplished. In the first place, a large number of the interests registered as employing lobbyists (speaking from memory, I think sixty) have failed to make returns of expenses as required by law. A list of them has been sent to the Attorney-General, but whether they will be prosecuted remains to be seen. If they are, it will show an administrative energy which is by no means the rule in the State. But, even so, the legal fine, $100 to $1,000, is quite inadequate as a deterrent, so that only those who have nothing to conceal will conform to the law, while those who have will take the risk, and, in the remote contingency, pay the fine. Again, by no means all those engaged in lobbying were registered at all. In the matter of the Redistricting Bill, one of our leading members of Congress did some very active and notorious lobbying without being on the official list. In another case a member of the Legislature was bent upon forcing through a law relating to labor. A leading manufacturer from the country came to the State House to oppose the law on behalf of himself and his fellow-manufacturers. As his opposition began to make itself felt, he was fiercely pounced upon by the member in question with the inquiry whether he was registered as a lobbyist, and, upon replying in the negative, was threatened with arrest, the member apparently forgetting that he was himself lobbying in the grossest manner. Then there is all the lobbying to which you refer outside of the State House, including the rigging of nominating conventions.

The fact is that lobbying is so bound up with the mode of doing business in our legislatures that all attempts to control it from the outside are like trying to stop a stream by damming its mouth instead of diverting it at the source. The first effective step will be to take the business out of the committee-rooms to the floor of the houses, with public discussion, personal leadership, and individual responsibility. This can be done in the Federal Government by bringing the Cabinet officers upon the floor of the houses, and this would have an immediate visible effect, because there is a chain of administrative responsibility from the top down, with one man in every place. But in the State there is another and serious obstacle to be overcome. The chief executive officers, corresponding to the President's Cabinet, are elected separately from the Governor, and are independent of him and of each other. There is no unity of action, no subordination, and no responsibility, and this is why State administration is everywhere so inferior to that of the general Government. In the State, therefore, there is a double task to be accomplished, the change from the election of the executive officers to their appointment by the Governor, and then their admission to seats in the Legislature.

Gov. Russell, in his inaugural message last winter, took strong ground as to the lobby and the government of the State by commissions instead of by the nominal Executive, but the Legislature not only paid no attention to his recommendations, but went rather in the other direction. The campaign this autumn is to be a purely State campaign, and ought to turn upon State issues. It will depend almost wholly upon Gov. Russell whether it does so, or is made a mere stalking-horse for the Republicans and Democrats, with a view to the Presidency next year. Gov. Russell cannot, however, insist upon his views without assuming an attitude of more or less hostility to the Legislature and its traditional methods of business, and that requires moral courage in a high degree. Of one thing, however, I am sure: that the man who, with adequate physical and intellectual qualities, shall have the courage to go to the people and point out to them that the condition of State affairs is all wrong, explain to them how they can be made right, and ask for their assistance in making them right, will achieve a success and a reputation which will astonish himself and the country. G. B.

Lake Placid, Essex Co., N. Y., August 22, 1891.

CHARLES KINGSLEY AND THE NEO-PLATONISTS.

To the Editor of The Nation:

Sir: In your notice of Dr. Martineau's 'Essays, Reviews, and Addresses,' in No. 1363 of the *Nation*, appears the following sentence: "There are two admirable studies of Charles Kingsley's writings, and that on his 'Alexandria and Her Schools' will, let us hope, send some to it who did not know it in its day."

We hope that no one will go to Kingsley's book expecting to get an accurate representation of the teachings of the great Neo-Platonists, for he will be badly disappointed. The idea of writing the book in question, or rather the series of lectures of which it consists, did not originate with Kingsley. The subject was selected not by him, but for him, as he states, and it is plain that he performed his task perfunctorily and reluctantly. He had little or no previous acquaintance with his subject, and "read up" for the occasion. His work should not be quoted or referred to as an authority. The fact is, that Kingsley was not qualified to apprehend the doctrines of Plotinus, Porphyry, Proclus, and other philosophers of the same exalted type. He was, I presume, a fair Greek scholar; but something more—much more—than a grammatical knowledge of Greek is required to enable one to grasp the ideas of thinkers of the Platonic School.

Another of Kingsley's works—'Hypatia'—shows conclusively his inability to adequately appreciate and understand the objects or teachings of the so-called Neo-Platonists. His portrayal of the famous Hypatia, the brilliant and accomplished successor of Plotinus in the Alexandrian School, is in many respects a mere caricature. Thos. M. Johnson,

Ed. *Bibliotheca Platonica.*

Osceola, Mo., August 24, 1891.

NOT SHAKSPERE, BUT JONSON.

To the Editor of The Nation:

Sir: Allow me to call your attention to an inaccuracy in the review of Mrs. Moulton's

'Stories Told at Twilight,' which appeared in the *Nation* of August 6 (p. 107). "The Stories," says the reviewer, "in other respects recall yet another line of Shakspere: 'Oh! so soft, oh! so sweet!' are they." The line thus partly quoted is not Shakspere's, however, but Ben Jonson's, and may be found in the fourth of the "ten lyric pieces" forming "A Celebration of Charis" in 'Underwoods.' The sentiment and melody of the stanza in which the line occurs are so exquisite that I cannot refrain from copying it in full:

"Have you seen but a bright lily grow
Before rude hands have touched it?
Have you marked but the fall of the snow
Before the soil hath smutched it?
Have you felt the wool of beaver?
Or swan's down ever?
Or have smelt o' the bud o' the briar?
Or the nard in the fire?
Or have tasted the bag of the bee?
O so white,—O so soft,—O so sweet is she!"

F. B. W.

CAMBRIDGE, MASS., August 26, 1891.

Notes.

ALBERT SOREL'S 'Madame de Staël' is to be the next translation in the "Great French Writers" Series, published in Chicago by A. C. McClurg & Co.

S. C. Griggs & Co., Chicago, announce for early publication 'A Study of Greek Philosophy' by Mrs. Ellen M. Mitchell, with an introduction by W. R. Alger.

Not to be outdone by Mr. Howells, Mr. C. D. Warner has made a collection of his stated contributions to *Harper's Magazine*, and it now appears under the title, 'As We Were Saying' (Harpers). The book is extremely tasteful in its get-up.

Mr. Andrew Lang has in preparation a volume of angling sketches which will be published in the fall by Longmans, Green & Co., with illustrations by Mr. S. Murdoch Brown. Encouraged by the success of the "Blue" and "Red" Fairy Books, Mr. Lang has prepared for the same publishers a "Blue Poetry Book," also to appear this fall, and to contain the poetry which the editor judges best fitted for juvenile readers.

Mr. Austin Dobson has enlarged and rewritten the biographical study of Hogarth which he prepared for the Great Artists Series some ten years ago. The new edition will be elaborately illustrated, and will appear early in the fall. Mr. Dobson is also editing Goldsmith's 'Citizen of the World' for the Temple Library, published in America by Macmillan & Co. A selection of Mr. Dobson's poems is in preparation to fill one volume of Heinemann & Balestier's new "English Library."

We have more than once noted that the volumes of the Tauchnitz Series were chosen wholly to please the taste of the travelling British, and that only such American authors were included as had been taken up in London. It is a pleasure to see that the new English Library just mentioned is to be managed with more regard for the taste of American travellers. Mrs. Deland's 'Sydney,' Mrs. Burton Harrison's 'Anglomaniacs,' and Mr. James's 'A London Life' were among the first thirty numbers of the English Library, and among the volumes in immediate preparation are Mr. Howells's 'Shadow of a Dream' and 'Tuscan Cities,' Miss Wilkins's 'Humble Romance,' Mr. J. C. Harris's 'Uncle Remus' and 'Mingo,' Mrs. Burnett's 'Surly Tim,' Mr. Warner's 'Winter on the Nile,' and a new novel by Miss Blanche Willis Howard. The managers of the new venture have been well advised in copying the handy form of the Tauchnitz Series. Heinemann & Balestier have also undertaken a Continental edition of the *Review of Reviews*.

Mr. Ruskin's 'Political Economy of Art' assumes in the new "Brantwood Edition" of Charles E. Merrill & Co. the title, '"A Joy for Ever,"' which really restores the text furnished the lecturer by the Manchester Exhibition of 1857. Mr. Norton, in his introduction, relates that he was in Oxford in daily intercourse with Mr. Ruskin at the time when the lectures were being written, and remarked then (and resisted as he could) the tendency which was to deepen in Mr. Ruskin, to turn "from the pleasant, open fields of nature and of art into the rugged path of political economy." The introduction is otherwise instructive as giving a glimpse of Mr. Ruskin's almost humorous spirits in private letters, which were ere long to be exchanged for depression to the verge of aberration. Like all the early volumes, this one can be reread with profit by reason of the lapse of time.

Mr. J. M. Eustace's 'Notes on Trigonometry and Logarithms' (Longmans, Green & Co.) is, contrary to what might be inferred from the title, not only intended for learners having no previous knowledge of trigonometry, but is especially designed for those who wish, if possible, to become acquainted with that science without the aid of a teacher. It is a systematic treatise on plane trigonometry, treating, as a book designed for those who have no tutor should treat, with rather more than ordinary fulness all the matters usually included in text-books designed for use in high schools and colleges. A more than usually large number of examples is worked out and explained with great thoroughness, and the number of examples, mostly taken from university and civil-service examinations, given for the student to exercise his ingenuity and test his knowledge, is extraordinarily large. The answers alone, at the end of the book, occupy seventeen pages. A change in the title might rightfully increase the profit of the publisher even if it offended the modesty of the author.

Peter Paul & Brother, Buffalo, N. Y., publish a large 8vo pamphlet of 32 pages, in stiff covers, beautifully printed on fine paper, bearing the title 'The Circle of Trigonometric Functions.' The author is Mr. William S. Waith. Its object is "to assist in memorizing the mutual relations of trigonometric functions." Mr. Waith's system is extremely ingenious, and well worth the attention of those who have occasion to make much use of trigonometrical formulæ. The flexibility, if we may so call it, of the trigonometric functions is so great, the interchanges and substitutions of which they are susceptible are so multifarious, and the ability to handle them with rapidity and accuracy is to the professional mathematician, the astronomer, and the engineer, a matter of such vital importance, that time is not wasted in looking at them from any novel point of view in which they may be placed, provided it is not purely arbitrary. Mr. Waith divides the circle into six equal sections. In each of these he writes the name of one of the six trigonometric functions. These follow each other in a certain order around the circle, so that, according as two or more functions are in adjacent, alternate, or opposite sections, their algebraical combinations into formulæ can be inferred. It is a system of mnemonics for plane trigonometry analogous to Napier's rules in spherical trigonometry, which, though once taught in all schools in which spherical trigonometry was taught, are now almost obsolete.

The compiler of 'Chicago and its Environs: A Handbook for the Traveller' (Chicago: Louis Schick), speaks deprecatingly of his own work, as a first essay, and promises an entire overhauling, with the introduction of much new matter. He is really, however, deserving of much credit and wide patronage, having abundantly demonstrated his fitness for his task in all that relates to the proper conception of a guide-book. The information he brings together is lucidly arranged and indexed; there is a good folding map of the city, with a great number of views, some of which, being photographic, are very ornamental, while the woodcuts are fairly good. The historical portion has not been stinted. A blemish of no consequence is an occasional lapse in the English idiom, as when we read of the (sleeping-car) "servant, mostly a negro." Some condensation, too, could be effected. But, we repeat, the book is to be praised.

From the practised hand of Mr. E. Poste of Oriel College we receive the first English translation of 'Aristotle on the Constitution of Athens' (Macmillan). It is written in clear and appropriate English, is happy in its turning of technical words, and is handsomely printed. But here commendation must end. At too many points the translation, which is often of the nature of an exegetical paraphrase, gives a false idea of the original, at least to a reader unfamiliar with the Greek; it abounds in explanatory words and phrases imported without warning or designation into the text, not a few of which are misleading, and in the rendering of numerical expressions in particular it goes astray again and again.

A most admirable and attractive critical text of the 'Constitution of Athens' can now be had for less than half a dollar. The edition promised by Kaibel and Wilamowitz-Möllendorff (Berlin: Weidmann) has just reached us. It is dedicated to Bona Fortuna, and, with its terse and eloquent Latin introduction, its appendix containing fresh material, and its full index, is a model of careful and independent editing. Mr. Kenyon's great skill in making out the readings of the papyrus is amply and generously recognized: his detractors, characteristically enough, are charged with ignorance and envy. An elaborate commentary is to follow in due time, in which questions relating to authorship, sources, language, style, and text will be treated.

The Shaksperian rarities offered to the city of Birmingham by the late Halliwell-Phillipps in his will at a fixed price did not find a purchaser in the Corporation, and the collection is now on deposit awaiting disposal to any chance comer at £10,000. In 1887 the owner issued, in a limited edition, a 'Calendar' of the several articles, and it has seemed advisable to issue a second. This has been done, under the editorial care of Ernest E. Baker, and with the imprint of Longmans, Green & Co. The work has been enlarged by annotations, many of them derived from memoranda written in the books by Halliwell-Phillipps himself. The 'Calendar' is, therefore, all the more worthy of a place on the shelves of public libraries, and it may tempt some American of means to transfer the collection to this side of the water.

We have received from Macmillan & Co. the first part of a new 'Dictionary of Political Economy,' the whole to consist of twelve or fourteen parts of 128 pages each, which are to appear at intervals of about three months. The plan of it includes a statement of the position of Political Economy at the present time, references to history, law, commerce, and business in their economic relations, articles upon the leading topics in the science, and biographical and bibliographical features. To judge from this part, the matter is somewhat fresher than a good deal of that

in Lalor's Cyclopædia, which was a little too extensively drawn from French sources, but the general plan resembles that of the American work. It is not easy to strike the happy mean, if any there be, between a dictionary and an encyclopædia, and some of the longer titles in the part of the new dictionary that has been completed, such as "Agricultural Community," are not at all adequate. In several cases ("Abolitionist," "Banking") the view taken of the subject is rather insular. In fact, for most purposes we incline to think that a regular encyclopædia, if special books of reference were not at hand, would be preferable to this dictionary. Space is allowed to the expression of opinion that would be better reserved for facts, especially as the opinions are in a number of instances that we have examined quite open to question.

The latest discoverer of the identity of the Man with the Iron Mask is a certain Captain Bazeriès of the garrison of Nantes. One of the newspapers of that town gives an account of his researches and their result, which is copied with no expressed reserves by the *Temps* of August 7. It appears that M. Bazeriès has succeeded in translating some despatches of Louis XIV. and of Louvois relating to the mysterious prisoner. These despatches are in a cipher that consists of figures only, spaced by dots, and which until now has baffled everybody's ingenuity. They are said to throw light on many points hitherto obscure in the history of the campaigns of 1691 and 1692 in Piedmont. It was in 1691 that Gen. de Bulonde, unnecessarily and against the orders of Catinat, raised the siege of Coni, and compromised the success of the campaign. He was really a traitor, but for some reason Louis XIV. wished that he should not be put to death. He was shut up at Pignerol, and the order for his imprisonment contained a provision that he should be allowed to walk about during the daytime, but that he should always wear a mask. At what time he was removed to the Bastille does not appear.

Dr. S. Mendelsohn, author of the work on the 'Criminal Jurisprudence of the Ancient Hebrews' which we reviewed last week, writes us, with reference to a charge which we took notice of without adopting: "I deny that I have ever 'made free use,' or any use whatever, 'of a work on the subject by Dr. Fassel, published at Vienna,' or at any other place, and denounce the statement to the contrary as a malicious falsehood."

—The September *Century* has a quiet tone, in the main, befitting the emergence from the dog-days. An exception is the shrill note emitted by the parties to the controversy over the question of the treatment of Confederate prisoners at Camp Morton, Indianapolis. The rejoinder to Dr. Wyeth's former article is by W. R. Holloway, and is followed by the doctor's counter-rejoinder. The debate consists mostly in opposing cold official figures to flesh-and-blood experience, with a probable element of error on either side. It seems a pity to revive all this at this late date, except that it is never a pity to establish the truth of history. Mr. Lodge's paper on "The Distribution of Ability in the United States' is based upon statistics which he admits to be capable of yielding only approximate inferences; his comparisons of distinguished citizens of native with those of foreign birth are probably as little vitiated as any. President Seth Low has a short but weighty paper on the government of cities, in which the practical knowledge of the ex-Mayor and the ideals of good citizenship cherished by the educator are in perfect harmony. E. W. Howe writes of "Country Newspapers" with an agreeable mingling of fact and humor, though neither is very sharply marked; his article will scarcely serve to inform those who are ignorant, or to amuse those who are keenly sensible of the humorous possibilities of his subject. Francia and Ghirlandaio figure in the Italian Masters series. Mr. Kennan's article will fall in with the prevailing interest in things Russian.

—"Much Ado about Nothing" is the latest of the Abbey-Lang series of Shakspere's comedies; given first place in the September *Harper's*, it presents no divergences of moment, either in the illustrations or comment, from the characteristics that have marked the handling of the foregoing plays. Beside this literary feature of the number, may be mentioned the first instalment of unpublished letters of Dickens to Wilkie Collins. Furnished by Miss Hogarth and edited by Laurence Hutton, they go little below the surface, mainly serving to show again the huge store of animal spirits possessed by Dickens; an occasional note seems to suggest the application of the spur when the spirits flagged. The well known Paris correspondent of the London *Times* mounts the tripod with an immense deal of ostentation, to tell "the simple, real, and undisguised truth" about "Germany, France, and General European Politics." He has "long been tormented by the desire of telling" this, and has "been stupified at seeing that . . . not one [European diplomat] has fixed a steady eye on the mysterious horizon," the secrets of which only a De Blowitz can divine. After these flourishes one is scarcely prepared to find it all coming down to some commonplace remarks on the political situation in France, and an alarmist prophecy of what will happen to Austria after the death of the present Emperor. The article on "Chinese Secret Societies" has the quality of timeliness, and that on "The New York Chamber of Commerce" a local interest. Walter Besant's second article on Plantagenet London is copiously illustrated, as is also F. Hopkinson Smith's impressionist paper on Constantinople. The serials take up nearly all the rest of the number.

—In the September *Atlantic*, Prof. E P. Evans singles out Max Müller as a type of the dogmatic philologist who declares that speech is, and for ever must be, a barrier between man and beast. Testing some of his more extreme dicta by fact, the Professor concludes that the philologist as such is incompetent to solve the problem of the origin of language, and must "resign this field of inquiry to the zoöpsychologist." The paper would have been a very complete presentation of the question could it have taken account of Prof. Garner's late experiments to determine and ape the language of monkeys. Many will find great suggestiveness in Mr. John Fiske's article on "Europe and Cathay." It asks the question why the discoveries of the Northmen made no stir in Europe. The answer is to be found in the conditions prevailing on the Continent at the beginning of the eleventh century and for 400 years afterwards. Everything faced Asia. Commerce and geographical explorations spent their forces in that direction, and it was not till the Ottoman Empire rose like a wall between Venice and Genoa and the Orient, where their foreign trade lay, that the genius of Columbus learned from travels to the East to strike out westward. Even then, of course, it was only in order to find access to the Orient from behind, as it were. John Burroughs has "A Study of Analogy" which is half argumentative, half oracular. His arguments are directed against other people's oracles, but they are as fatal against his own. Other articles deserving mention are Prof. Woodrow Wilson's, on "The Author Himself"; and "Courts of Conciliation," a Norwegian contrivance to lessen litigation, by Nicolay Grevstad. Kipling's story is in his usual vein.

—Prof. Royce's article on "Present Ideals of American University Life" is the most noteworthy contribution to the September *Scribner*. It begins with a brief historical sketch of the changes which have supervened since such hesitant concessions were made to those "who look upon the mind in connection with the body" as were suggested by the trustees of Columbia College in the year 1853, in the shape of "parallel courses" which should in a measure meet the public demand for "practical and progressive knowledge." Summing up the whole movement thus far, he concludes that the fears of the opponents of the innovations have been disappointed, and that the "materialistic interests," once so dreaded, "have proved to the lovers of true literature and of human life the most inspiring of rivals, the friendliest of allies." His definition of the "highest business" of "the modern University" is "the organization and the advance of Learning," as contrasted with the older idea of "the training of individual minds." The chief illustrated articles are Lieut. Ridgely Hunt's "Steamship Lines of the World," and James Ricalton's paper on travel in Ceylon. The literary interest, narrowly considered, is catered to in Andrew Lang's rambling reminiscences of his reading as child and boy, and in Felix Moscheles's account of a pious pilgrimage to Browning's Italian home at Asolo. A still more specialized interest finds recognition in the adventures of "A China Hunter in New England."

—In the *Revue Internationale de l'Enseignement* of August 15 Prof. Louis Weill makes a recent provincial "lendit," or athletic tournament, the text for some remarks on the question of the introduction and encouragement of athletic sports in the national *lycées* and colleges. To an American his discussion has an almost prehistoric flavor, so close to the rudiments of the matter is it confined; yet one can scent the beginnings of trouble in his question: "How, then, are we to reconcile the interests of hygiene and study?" Still, there can be little question that the tardy movement in France in the direction in which we have travelled such a distance, is one of good promise for both the physical and moral tone of French students. In the same number a Spanish correspondent gives an account of recent receptions and addresses in the Academy, the most striking utterance reported being Valera's semi-apology for the deficiencies of the Dictionary, that Sisyphean labor in which he and his colleagues are engaged. It is of this work that a witty Spanish writer says: "It has the gift of omitting the commonest words of educated speech in order to put in others which, not having been used for six hundred years, or being current only in the Philippine Islands or in Cuba, we, of course, are very anxious to employ."

—Apropos of Mr. Conway's letter regarding the neglected graveyard at Fredericksburg, Mr. Worthington C. Ford kindly permits us to print the following letter from the forthcoming volume (XI.) of his edition of Washington's Writings. It is addressed to Charles Carter:

MOUNT VERNON, 28 June, 1788.

DEAR SIR: When Mrs. Washington was at

the Church in Fredericksburg she perceived the Tomb of her Father, the late John Dandridge, Esqr., to be much out of Sorts and being desirous to have it done up again, will you permit me to request the favor of you to engage a workman to do this, the cost of which I will remit as soon as you shall signify to me that the work is accomplished, and inform me of its amount. I would thank you, my dear Sir, for the ascertainment of this before hand. I have (not inclining to dispute Accounts) felt, in too many instances, the expansion of Tradesmen's consciences when no previous agreement has been made, ever to put it in their power to charge what they please in future. My best wishes, in which Mrs. Washington joins me, are tendered to Mrs. Carter. With much truth, &c. G°. WASHINGTON.

—We have received from Mr. John Vance Cheney, librarian of the San Francisco Free Public Library, his new catalogue of 'Classified English Prose Fiction, including Translations and Juvenile Works,' filling 300 large octavo pages. Mr. Cheney has followed the example of the Boston Public Library, but has gone further, and has taken a most decided "step towards bringing the library into closer relationship with the schools," as well as towards making the innate childish love of "a story" lead to more solid and enduring reading. The classification is very varied, as into biographical stories, ghost stories, legal tales, musical novels, tales of the useful arts, etc.; but the geographical subdivisions are most insisted upon. Under each topic, as Animals, Astronomy, Aerial Voyages, there are references to serious works in the same library, carefully selected; under each country, references to books of travel and history; under the more important authors, references to biographies or critical appreciation of them. If we have here and there detected an obvious omission, it is to be set down, we have little doubt, to the absence of the work from the general collection. Countries, like Austria, England, or (most minutely) the United States, and famous towns, like Boston, have the appropriate novels arranged under them by periods, institutions (slavery), events (the civil war), etc. The contents of books of short stories are stated, and the Seaside Library (pocket edition) is catalogued in full. There are constant references to Poole's Index and to bibliographies. A single title, like Harriet Martineau's tales in illustration of political economy, often serves to introduce an important section, and it is surprising, in the sum, to see to how large a range of human knowledge a clue is here afforded. We must not overlook the rubric Books and Readings, with its lists of authors for boys, for girls, for little ones; and lists of good books for the young, not a few. But, above all, the rubric Literature deserves admiration for its orderly conspectus and full indications. It fills ten pages or twenty columns of fine print, and passes in review the literature of every nation. To crown the whole, there is a topical index. The proper complement of this almost ideal performance is found in Mr. W. M. Griswold's 'Descriptive Lists of Novels and Tales,' which, as far as they go, furnish a criterion between good and bad in the mass of fiction which Mr. Cheney has been at such pains to register. Both these guides should find a place in every public library, large or small.

— That Shakspere's Sonnets should be unknown in Italy, the land of the sonnet, sounds strange at first. Luigi De Marchi says, in the Milan *Perseveranza* of August 2, that they were "completamente ignoti" till last year, despite a long and accurate article upon them in the *Nuova Antologia* in 1878. A recent prose translation by Olivieri has drawn attention to them, and Signor De Marchi improves the opportunity to discourse on them at length in four successive issues of the *Perseveranza*. Besides relating their history, and analyzing the several groups, and touching on the question of the dedication, he offers several metrical translations, in which it is noticeable that he does not always follow the Shaksperian form (which he praises), and never abandons the female rhyme. He does not shun difficulties, for he begins with Sonnet xv. and essays cxxix. among the rest. The condensation of the Italian sonnet line, as the despair of English translators, is proverbial, yet in this instance of a reversed procedure it is worthy of remark how much more compact is Shakspere's line than his translator's. A signal example is (in Sonnet xxx.) the line

"And with old woes new wail my dear time's waste."

which De Marchi renders

"E de' giorni il lamento rinnovello."

—It is interesting to compare the capacity of the German and the Italian for coping with English metrically; but can we be sure that we are not comparing the poetic faculty of De Marchi and (say) Otto Gildemeister? We append the latter's masterly version of Sonnet xxix., "When, in disgrace with fortune and men's eyes," to that of the writer in the *Perseveranza*, which has no little merit, though the after part falls off:

Quando, inimico al mondo e alla fortuna,
Io piango, solo, il mio deserto stato,
E il muto cielo con voce importuna
Invoco, e fremo e maledico il fato;
E invidio ad altri sua verde speranza,
A quello la beltà, l'amico a questo,
All'uno il genio, all'altro la possanza,
E del mio meglio più scontento resto;
Avendo in tal pensier me stesso a sdegno,
A te penso.. ed allor l'anima affranta,
Come l'allodoletta al primo segno
Dell'alba, s'erge fino al cielo e canta.
Penso al tuo dolce amore e d'esser parmi
Ricco, che non vorrei nel re cangiarmi.

Wenn ich, verachtet von Geschick und Welt,
Einsam mein ausgestossenes Los beklage,
Und schrei' umsonst zum tauben Himmelszelt,
Und schau' mich an und fluche meinem Tage,
Und wünsche, dass ich wie ein and'rer wäre,
So hoffnungsreich, so schön, befreundet so,
Und dieses Kunst und jenes Macht begehre,
Des eignen Köstlichsten am mind'sten froh:
Wenn so ich selbst mir fast verächtlich werde,
Da denk' ich dein, und dann steig' ich empor,
Der Morgenlerche gleich von dumpfer Erde,
Und singe Hymnen an des Himmels Thor:
Denn deiner Lieb' Andenken macht so reich,
Dass ich mein Los nicht tausch' um Kron' und Reich.

THE PHILOLOGICAL SOCIETY'S DICTIONARY.

A New English Dictionary on Historical Principles. Edited by Dr. James A. H Murray. Vol. III., Part I. E—Every. By Henry Bradley, Hon. M.A. Oxon., President of the Philological Society. Oxford: Clarendon Press; New York: Macmillan. 1891.

MR. BRADLEY'S fortunate accession to the great work committed to Dr. Murray has resulted in the publication of his first instalment of a new volume in advance of the concluding parts of vol. ii, which it is now seen will comprise the letters C and D. The point thus reached leaves nearly or quite a third of the vocabulary disposed of, and insures the completion of the entire Dictionary within a reasonable period—not twice the seven years already consumed in printing, but even, it may be, at most, the nine which fulfil the present century. For it must be remembered that the etymological difficulties of the first three letters of the alphabet are out of proportion to those of the remainder; that the technical impediments to such an enterprise are massed at the beginning; and, finally, that Mr. Bradley added to Dr. Murray doubles the divisor and halves the quotient. At the present stage it becomes superfluous to indulge in criticism of the plan or its execution, for the Dictionary has taken its crease, as the French say. On the other hand, it would be a ridiculous affectation to "accept it as it is," with condescension for its shortcomings. The reviewer's path is clear, to assume the surpassing merit of it, and to help make it so widely known that no cultivated person or family will consent to be without it. We shall accordingly run over Mr. Bradley's 344 pages, and note briefly what we have found curious and interesting in them.

In the matter of pronunciation, Mr. Bradley calls attention to a natural embarrassment which he has experienced in indicating the pronunciation of words in his present domain which "are much better known in their written than in their spoken form." This should be true of a considerable part of the technical scientific terminology in which the E division abounds. There is also a two-fold usage in the case of "words beginning with unstressed *e* before two (written) consonants, like *effect*, *ellipse*, *entail*"; the rapid and familiar pronunciation being quite different from the careful, except when *e* stands before *s*, as in *essential* and *estate*. For the former series the careful sound has been preserved in the marking. The subject again comes up under the letter which opens the new volume, where we read of *ee* that "in *been* many persons sound it as [*i* in *sit*]; it has also this sound in *breeches*, *coffee*" This intimation of the Englishman's shibboleth perhaps requires to be supplemented with the statement that the majority of English-speaking persons now say "bin" instead of "bean." But Mr. Bradley's "many persons' was possibly meant to include Americans. The diphthong in *either* and *neither* is "variously sounded," we are told; like long *i* by most educated people in London, though Garrick pronounced long *e*, which is the prevailing American usage. In connection with the silent *e* final, we are informed that it "is omitted before flexional suffixes beginning with a vowel, as in *moving;* before *-able* it has been usually retained, . . . though many writers now prefer to omit it, especially when the verb is a polysyllable." What will our friends the spelling-reformers say to the uniform practice of this Dictionary in inserting, "in accordance with English analogies," the silent *e* after *dg*, as in *judgement*, etc? They may trust the conservative habit of the printing-office to maintain its customary exceptions to this rule, which, for the rest, is a very convenient one.

The pronunciation of foreign words incessantly adopted into the language opens another chapter. With the spread of the higher education, no doubt it will be found true in the field of common nouns, as it is in that of proper names, that the tendency is to preserve the foreign sound—again to the distress of the spelling-reformers. Nevertheless, if *espalier*, which is quoted as far back as 1741, has now an English pronunciation, *envelope*, dating from 1707, still fluctuates between French and English; it was French in Walker's time (1791), and yet the spelling has been Anglicized for nearly two hundred years. *Entresol* is to be sounded "enterːsɔl," though we doubt if that be the American usage among architects; the quotation from a Builders' Dictionary of 1711 spells "entresole," betokening a long final and perhaps also a nasal initial syllable. *En passant* (1665), *entrepôt* (1721), *entrepreneur* (1878), and (generally) *encore* (1712 in its pseudo-French use) are sounded as in French; *environs* in the English way. *Eloign* is not allowed a different sound from *eloin*. It would have been a pretty thing to embalm in the

quotations under this word the charge in the South Carolina ordinance of secession, against the free States, that they permitted the abolition societies to "eloign the property of the citizens of other States"—*videlicet*, run off slaves. This odd euphemism revealed the fact that it was a lawyer (Mr. Memminger) who drafted the ordinance.

Prefixes and suffixes are, as usual, most minutely accounted for—*en-* in five columns, *-er* in two and a half. *Em-*, *im-*, and *en-* are treated as identical, and the alphabetical place of any given word beginning thus is determined by the most common form. The discordant usage in the case of *-ence* and *-ance* is remarked, while, with respect to the parallel ending *-ency*, discrimination is made in these terms: "When the same word exists in both the *-ence* and the *-ency* forms, the tendency is (where the sense of the verbal etymon permits) to restrict the former to action or process (*i. e.*, to connect its meaning rather with that of the verb than with that of the adjective), while the latter is used to express quality." Under *-ed* a world of useless and heated discussion is squelched in these words: "The suffix is now added without restriction to any substantive from which it is desired to form an adjective with the sense 'possessing, provided with, characterized by' (something). . . . (Groundless objections have been made to the use of such words by writers ignorant of the history of the language; see quot.)" The quotations are from Johnson, who grieved over Gray's use of *honied*; and from Coleridge, who wrote: "I regret to see that vile and barbarous vocable, *talented*. . . . The formation of a participle passive from a noun is a license that nothing but a very peculiar felicity can excuse."

The "subordinate words" and "special combinations" cut a great figure here, as do the phrases and proverbial expressions which are appropriately recorded. *Ear* is very fertile in all these; so are *egg* and *earth*; and *end* (sb.) requires nearly seven columns for itself—it is "End *und kein Ende*." We miss here *end-man* of our negro minstrels, though the Ethiopian (serenader) is admitted. And, speaking of Americanisms, it seems that our British cousins meekly accepted *eventuate* from us. Jay Gould is cited as using the verb *engineer* coupled with "a job" (London *Standard*, December 28, 1882, to be precise). We doubt if many more instances could be cited of *escape* ("U. S., An escaped person, a fugitive") than the Philadelphia *Record*, No. 3464, p. 4, 1881. We should incline to think it a freak of the reporter, and that we have, therefore, in this case, an instance, not of usage, but of fruitless experiments in the development of language. The distinction is one which must be constantly borne in mind in studying the 'New Dictionary.' The Australians, it appears, have evolved *escapee*. Mr. Lowell is cited for the New England expression, "about east." That this quarter of the compass has, meteorologically, the same character for the mother country and for her offspring on the Atlantic seaboard, is observed under *east wind:* "In England and New England proverbially bleak, unpleasant, and injurious to health." It is the English custom to put *esquire* last (as, Tom Taylor, of the Inner Temple, Esquire); the Scotch, like the American, is to put it immediately after the name. The Scotch are responsible for the recent literary revival of the word *enow*, which was used as the plural of *enough* in standard English even in Johnson's time. The English (or at least the *Saturday Review*) apply the term *Ebenezer* contemptuously to dissenting chapels; the New Dictionary does not take cognizance of the Yankee idiom, "to get his Ebenezer up," in the sense of "to get his dander up," "to get mad." *Euchre* is set down as "a game at cards, of American origin," and the play is succinctly described; but the word is "of uncertain etymology," and is not traceable to the German, to which the term *bower* belongs. Having formerly been spelt *uker*, *yuker*, *eucre*, it may, the guess is hazarded, have sprung from the Spanish-American *ser yuca*, "to be cock of the walk." Our *everglade* also baffles inquiry as to its derivation. *Egg-nogg*, again, is shown by the citations to be of American origin, and its ingredients are indicated. An American invention, the *Eozoon Canadense*, "a supposed genus of foraminifers or rhizopods, at one time regarded as the earliest-known animal," is "now believed to be of inorganic origin."

What may not be learned in a Dictionary in which the word *enter* fills six columns, the word *even* (in all the parts of speech) ten! We write *encyclopædia* oftener than *encyclopedia* because of the Latin titles of books of this class, like the 'Encyclopædia Britannica.' Milton, in "L'Allegro," perhaps took *eglantine* for the honeysuckle. *Elfin* was invented by Spenser in 1596. Brougham it was, rather than Burke, who dubbed the press the "fourth *estate*." Pepys (1668) wrote "somebody *else's*," and did not trouble himself with the pedagogical refinement, "somebody's else." The first quotation under *elephant* (of whose "ultimate etymology nothing is really known," and it may be as fantastic as that of *mammoth*) is of 1300; the figurative use of "white elephant" as "a burdensome possession" finds here no earlier illustration than 1883, which is, of course, much too late. Nor is the shorter usage in the like sense, "he has an elephant on his hands," recorded, as it is in the 'Century Dictionary.' The rise and fall of words and of meanings it is the great function of the 'New Dictionary' to mark with all possible precision. The oldest of the *electro-* compounds, *electrometer*, goes back to 1749; *electrophore* and *electrophorus* date from 1778. All the rest, without exception, belong to the present century, and especially from the time of Faraday (say 1830). *Ensilage* is postdated 1881. No earlier quotation for *editor* (of a journal) than 1803 is given; the *Spectator* uses the substantive *editorial* in quotation marks in 1864, and the *Pall Mall* without in 1887. *Enclave* becomes familiar in 1868. *Eating-room* (1613) is quite obsolete; but *eating-house* (1440) has held its own. So has *eavesdropper* (1482). *Economy* (1530) begets *political economy* (1767); but *economically*, as the adverb of the latter expression, is first credited to Mr. Frederick Law Olmsted in 1856. *Egotism* is as old as 1714, and *egoism* as 1722; the differentiation of them as 'self-conceit' and 'selfishness' respectively is shown not to be firmly established. The current socio-scientific use of *environment* is first found in Carlyle (1827).

It would be easy to protract these comments, but space forbids, and Dr. Murray will presently give us a fresh occasion to take the floor.

KEARY'S VIKINGS IN WESTERN CHRISTENDOM.

The Vikings in Western Christendom, A. D. 789 to A. D. 888. By C. F. Keary, M.A., F.S.A. G. P. Putnam's Sons. 1891.

MR. KEARY'S history, as the title indicates, is not a full record of the expeditions of the Northmen down among the Christian nations of the West, which, from first to last, stretched themselves over a space of three centuries, but limits itself to the century that begins the period. The book, however, is really the history of Western Europe during the latter part of the eighth century and nearly the whole of the ninth. Not only are the incursions of the northern pirates during this time chronicled in all their causes and bearings, but the religion and ethics, politics and social conditions, of nearly all contemporaneous Europe are taken into account as well. The work is, accordingly, a most ambitious one, since from not a few points of view this is an extremely difficult period to observe accurately in detail. The present plan has succeeded none the less in giving an intelligible and in the main orderly impression of this time of apparently almost hopeless confusion. There are, however, one or two faults of construction. To gain in breadth of treatment, the author has in some places overweighted the book by material that might better have been omitted. It is safe, for instance, to assume at the present time a fundamental knowledge, at least, of Teutonic antiquities, and this failing, there are available accounts elsewhere from the nature of the case much more exhaustive than that contained in the chapters, the first and second, on "Heathendom" and "The Creed of Heathen Germany," which, with the third chapter on "Christendom," might for every purpose here have been disposed of in a few well-placed paragraphs; and "The Creed of Christendom," the last chapter in the book, after it has logically reached its end, had better have been omitted. It is not meant, in either instance, that the work is ill-considered or badly done. The mythology usually follows Rydberg, and assumes, accordingly, a radical and not always defensible standpoint. Some of its conclusions are, nevertheless, as astute as modern criticism has proved them to be true. Such a one, for instance, occurs on page 75, where the author says: "It is evident that many parts of the Eddaic mythology, instead of being newly invented, have decayed from their primitive condition." The sentence deserves to be quoted, since it embodies in a nutshell the whole present advanced state of criticism of the Teutonic mythology as it is contained in the Eddas; and it might be supplemented by not a few others as pertinent.

The fundamental purpose of the book is to tell the story of the successive incursions of the Vikings, and to trace the track of devastation that followed like a wake wherever their ships had been. In the year beginning the period, 787, according to the 'Anglo-Saxon Chronicle,' three ships appeared in a harbor of the Dorset coast manned by "northern men," who killed the port reeve and sailed away again. It was an occurrence in itself unimportant, and only in the light of subsequent events would it apparently have been deemed worthy of special mention at all, for the accompanying remark that these were the "first ships of the Danish men that sought the English land" was manifestly written only when the true significance of the scourge had become apparent. So far as we have record, only once before, early in the sixth century, had Western Europe seen these Northern pirates, but they were now soon to become a constant menace to life and property over its whole length and breadth. The limit of the period here assumed, 888, the year of the division of the Frankish Empire, is the last appearance of the Northmen before the walls of Paris. It marks, according to the author, a change in their mode of warfare, in that hereafter their depredations are confined to the open country. It is, too, the first sign of a decline of the wave of conquest, and,

though the invaders by no means disappear from the scene, nor are their ravages for a long time sensibly ameliorated, the great movement from the North toward the West had apparently none the less reached its extreme height.

The period, as limited by the author, includes the expeditions of Godfried and Sigfried on the Continent and the Great Army in England, parts of which long before the close of the period had been systematically occupied by the Northmen. The author is himself apparently not quite sure of his division. A truer one is pointed out by Freeman in his 'Norman Conquest,' where three periods of invasion are made for England: a first period of simple plunder, from the beginning in 787 to 855, the first winter spent on English soil; a second period of local settlement, to 897; and a third, final period of political conquest. That such a succession of events is not accidental is shown by the almost exact analogy of the Teutonic occupation of England itself. The experiences of that earlier time were repeated now. In the same way this new swarm of Teutons gradually settled down upon the land they had first plundered and burned; and though this second time the conquest was not carried to such a point of ultimate dispossession, the difference between it and the first in this respect was only in degree. The same general course of events is traceable as distinctly, again, in Ireland and on the Continent, although in this latter instance the last stage fails, as there was no such political conquest even in attempt as is seen in England, and dates, from the very nature of the case, where so many diverse causes were at work, do not necessarily at all closely coincide. The only point that it is intended here to make is the existence of distinct periods in the history of the Vikings in the West. The author himself recognizes such a first period when he says the middle of the ninth century is about the time when the Vikings cease to be summer visitors only, but begin to pass whole years in the enemy's territory. Any other date, however, than that chosen might with equal propriety have been taken for the limit of his narrative. It is rather a pity, since he must have had the material at hand, that he could not have given us the history, from first to last, of the Vikings in Western Christendom without limitation of time.

Every historic people, says the author in his preface, has its age of *Sturm und Drang*. The Viking Age was for the whole Scandinavian people such a period. Within it, and only through storm and stress, formative influences were worked out that resulted in their separation into distinct nationalities at home, and made them abroad, for the first time, an active factor in European history. Of the earliest part of the period we have no authentic records from Scandinavian sources; but as horde after horde poured out of this *vagina nationum*, as Jordanes once called it, and swarmed over Western Europe, they are almost constantly a subject for chronicle, however scant, in the lands they attack. It is only later on that these alien records are gradually supplemented by the Sagas, which, by and by, furnish extended and less objective historical material.

This great popular movement, in the last quarter of the eighth century, was not confined to any one part of Scandinavia. In the earliest time it is impossible to distinguish nationalities, which, in point of fact, were not at all sharply defined, and no appreciable differentiation had as yet affected the language, which was at this time, to all intents and purposes, common over all Scandinavian territory. Later, when the sporadic voyages had grown into an established order of things, it is easy to see that the point of attack was determined to some extent by geographical location. The Swedes, apparently from the first, turned their attention to the East, and later on a Swedish dynasty is enthroned in Russia. Swedish soldiers of fortune form the celebrated Varingian Guard at the Byzantine Court, and piratical expeditions are made down on that side of the world into the Ægean. It was the Danes and Norsemen, then, who were left to harry the countries of western Europe; and as the result of their position it is the Norsemen, when we can distinguish them, who especially have taken the more northern countries of Ireland, Scotland, the Hebrides, and the Orkneys for the scene of their operations, while the Danes are principally occupied in the east and south of England. On the Continent, Danes and Norsemen together, direct from their homes in the north or by way of the British Isles, are usually only distinguishable as Northmen. Mr. Keary imagines the Danes to have been in the majority, not only in England, but in Continental Europe as well. The point, however, that he makes on page 192, that "the traces of Norse language in Ireland and Scotland are much more numerous than the traces of Danish," is wholly a misapprehension, for there had been as yet, as has been indicated, no differentiation in the common parent Scandinavian. This is a favorite *crux* of the author's, and he recurs to it again and again, in his, from this point of view, utterly futile attempts to prove the distinct nationality of the Northmen from the evidence of place names left behind them.

In the face of a popular movement of the character of the one we are considering, so widespread that it was participated in by a whole race, it is of paramount importance to understand the causes and conditions that led to it. The first Viking voyages were undertaken solely for the sake of plunder. The author sees this clearly enough, too, in that he states that "on the whole they were only plundering expeditions, with scarcely any other conscious object than the amassing of treasure." There were, of course, causes at work at home thus to direct attention abroad. Foremost among these was the poverty of the North as compared with the rest of Europe, and its overpopulation. A severe climate and a stern struggle for very existence had made the Northmen as a race hardy, defiant, and indifferent to danger. They were the best navigators of their time and the fiercest fighters, upon whom Christianity had not as yet exercised its humanizing influence. It is no wonder that when the news of easy victory over the rich and less active nations of the South was brought back by Viking ships loaded with plunder, the whole North should be fanned into a fire that needed but little encouragement to become all-consuming. Last of all the causes, and to a great extent purely incidental, was the religious element involved. One gets an idea from Mr. Keary's book, although it is nowhere directly formulated, and, indeed, the contrary is once distinctly expressed, that here was a struggle of creed—a conscious attack of heathenism upon Christianity. There is evidence that the Northmen both hated the new religion for its innovations and despised it for its effeminacy, and they apparently left unused no opportunity that incidentally presented itself to prove their animosity; but their attacks upon Christendom were in no sense because it was Christendom. The monasteries and churches that were so frequently the objects of pillage, from Lindisfarne and Jarrow down, were the great storehouses of treasure and usually incapable of any but a weak defence. In a period a little later, agrarian difficulties both in Norway and Denmark, the absorption of the petty kings, and the loss of allodial rights, furnished causes as far-reaching as any for the settlement and conquest of lands outside of Scandinavia.

The first wintering in Ireland, according to the dates given by the author, was in 835; in Frisia, the Vikings had before that time often wintered; in France, they stayed for the first time in 843; in England, on the Island of Thanet, in 851. At first they chose, almost uniformly, some island close to the mainland for their permanent quarters, and notably at the mouths of the largest rivers, where they could have the sea upon one side and a highway up into the land on the other. Although so often successful, particularly in their first attacks, these pirates who were now beginning to settle down upon the land did not, by any means, always have things their own way. In England they met with their first decisive reverses in 851, and the tables were so far turned upon them that for the first time on record they were defeated on the sea and nine of their ships were captured. But in spite of temporary set-backs, often, no doubt, because of them, they continued to come in increasing numbers, and to widen the scene of their operations. In the northern islands and in Ireland they had acquired a firm footing. London itself had once been plundered; and they had not only ravaged almost the whole Saxon and Frisian coast, but had already sailed, besides, up the great rivers of France, the Seine, the Loire, and the Garonne, and had plundered the whole coast of Spain as far as the Pillars of Hercules. In place of isolated ships there was now concerted action. In the spring of 845, a fleet of no less than 600 sail appeared off Hamburg, which was taken within twenty-four hours. This same year, a fleet of 120 ships made its way, almost unopposed, up the Seine to Paris, which was pillaged and burned. In 851 (these dates are the author's), still another fleet, of 350 sail, set out from Frisia for the English coast, ruined London, and killed the Mercian king. In 859, a fleet of seventy Northern vessels sailed, for the first time in history, down into the unknown waters of the Mediterranean. Before they returned they had plundered the Spanish coast, both western and eastern, ravaged the Balearic Isles, attacked Pampeluna and Narbonne, and ended by starting out for Rome itself. The capture of Luna by mistake for Rome belongs, perhaps, to tradition more than to sober history.

It is impossible here to trace further the career of the Northern Vikings. The separate expeditions and their connection with each other, from the beginning to the end of the period that he has selected, Mr. Keary follows out as much in detail as available material will allow; and to the story that, with unquestioned persistence, he has thus pieced together, the reader may be safely referred for an interesting and unvarnished record of one of the most stirring episodes in the whole history of the Germanic people. The book leaves the Northmen still in the midst of their "storm and stress," though with no little definite accomplishment already behind them. Iceland and the Faroes had received a permanent Scandinavian population. Shetland, the Orkneys, and the Hebrides were also Scandinavian, as was a part of Ireland, while in England the "Danes" were ruling in Yorkshire, East Anglia, and a part of the

Marchland. On the Continent they were still engaged, in various places, in their old business of pillage or in buying a release from it with exorbitant ransom. From Paris, in the very year of the close of the book, 888, such blackmail had just been extorted, after a fierce but ineffectual siege of the city, by an army that, according to Abbo, the only authority we have, at first had numbered, afloat and ashore, 30,000 or 40,000 men! The result of the Viking raids upon the countries they despoiled is also considered in the last chapters of Mr. Keary's book. They were a scourge dreadful beyond all imagination; yet ultimately the infusion of sturdy blood which they brought as settlers into the less active population of the West, showed its result in the characteristics that, to no small extent, have enabled the nations with whom they amalgamated to play so important a part in the political history of Europe. And although at the time the attacks of the Northmen apparently tended only to dismemberment and the destruction of all social stability, both in England and on the Continent they were one of the most pronounced and unmistakable factors of national unification.

THE LEGAL CONDITION OF THE JEWS IN RUSSIA.

La Situation Légale des Israélites en Russie. Par Nicolas de Gradowsky, conseiller d'état. Tome premier. Du Règne du Czar Alexis Michaïlovitch au Règne du Czar Nicolas Ier. Traduit du Russe. Paris: Léopold Cerf. 1890. Pp. viii, 348. 8vo.

THE Jewish question in Russia is not a phenomenon of recent origin; some of its most salient features have existed for more than a century. Hence the present anti-Semitic movement cannot be fully comprehended without a careful consideration of the past, without a thorough examination of the origin of Jewish disabilities in Russia. Such an examination clearly reveals the fatuity of Russia's present policy regarding the Jews—her blind neglect of the lessons taught by her own history.

De Gradowsky's work aims to give a detailed account of the early legislation concerning the Jews down to the end of the reign of Nicholas I. (1855), and thus shows how most of the present restrictive laws came into existence. Volume i extends to the year 1825. The author seems to be quite impartial, and draws his material from excellent sources, relying mainly on the complete collection of Russian laws and on official reports of commissions, etc. The chief defect of the work is a tendency towards repetition and prolixity. The same argument is sometimes repeated in almost the same words; and much space is devoted to mere episodes in the history of the Russian Jews, which, though interesting and illustrative of Russia's general policy, often divert the mind of the reader from the main current of legislation.

There were, according to De Gradowsky, Jewish colonies in South Russia long before the Slavs accepted Christianity. These Israelites came from the countries of the Chersonese and from the Greek colonies of the Crimea. They were harassed by no restrictions, and mingled freely with the Slavs, speaking the Slavic language and adopting Slavic names. This state of things continued until the second half of the seventeenth century, when, under the Emperors Alexis and Theodore, certain Polish territories were annexed to Russia. In these conquered districts there were many Jews, whose privileges had been restricted since the fifteenth century. In this period, under Alexis, we meet with the first legislation against the Jews, but in a very mild form; in fact, the religious zeal of the Government, at this time, was directed as much against Christian dissenters as against Jews. The latter were allowed to reside anywhere in Russia, even in Moscow. The racy anecdotes that are related concerning Peter the Great's hostility to the Jews, are untrustworthy. Their status underwent no change during his reign; they were still tolerated in Russia.

Under the three Empresses, Catherine I., Anne, and Elizabeth (1725 1762), the Jews were more rigorously dealt with. Expulsion edicts were issued in 1727, 1740, and 1742. But these were, to a large extent, evaded with the connivance of the Russian people. Many Jews continued to live in Little Russia, as well as in the districts conquered from Poland, and they even entered Great Russia to carry on trade. Moreover, these rigorous measures were so detrimental to commerce that the Government found it necessary to make a new law permitting the Israelites to visit Russian fairs. The main cause of the expulsion edicts of this period was the religious zeal of the three Empresses, coupled with general prejudice against the Jews.

The reign of Catherine II. (1762–1796) is of great importance in the history of anti-Semitic legislation. She began by issuing a decree of expulsion in 1762; but in 1769 she allowed Jews to reside in New Russia. In 1772, by the annexation of a large part of Poland (*i. e.*, White Russia), the Jewish population of the Muscovite Empire was greatly increased, and the real foundation of the Russian-Jewish question was laid. Catherine ordered that all the conquered people, including the Jews, should be treated with toleration, and that their rights should be observed. The Jews thus became naturalized Russian subjects, whereas, before 1772, they had not been so regarded, and hence could be expelled with impunity. Catherine, in fact, seemed disposed to give them all the rights of other Russian subjects. But two ukases of 1791 and 1794 indicated a change of policy. That of 1794 clearly showed that it was the intention of the Government to confine the Jews' right of residence to certain provinces in the west and southwest of Russia, and at the same time enacted that Jews must pay double taxes. This law really marks the origin of the present Pale of Settlement, which is the most irksome of all existing Jewish disabilities, and has exerted a most injurious influence upon the welfare of the Israelites. The double tax, which became a terrible burden to them, was not abolished until 1835. Thus the legislation of Catherine II., by limiting the right of domicile and by giving the Jews an exceptional status, created the Jewish question. These restrictions were due to the initiative of the Senate and local authorities, and were not in accord with the general principles of government laid down by Catherine herself.

Passing over the reign of Paul I., which is of little importance in the history of the Jews, we come to the legislation of Alexander I. (1801–1825). In 1802 a commission was appointed to investigate the condition of the Israelites. In 1804 the commission presented an extensive project of reform, which was accepted by the Czar. The most important features of this new legislation relate to the education, occupation, and residence of the Jews. They were admitted to the public schools and universities; they were offered some inducements (reduction of taxes, etc.), to turn their attention to agricultural and industrial pursuits; and they were forbidden to carry on trade in villages or rural districts. But this project of reform did not improve their condition. The public schools were too few to be of much use; and, in most cases, the Israelites were so ground down by taxation that they could not afford to educate their children. Hence their ignorance, isolation, and devotion to the Talmud remained unchanged. Nor did the law of 1804 induce many of them to substitute agriculture for trade. Little land was offered to them for this purpose; and those who might have been tempted to devote themselves to husbandry, had not the means to emigrate to the districts in which the land offered by the Government was situated. The attempt to expel the Jewish tradesmen from villages and rural districts also failed. This change of residence was to be made within three years in some provinces, in others within four years. The village authorities petitioned against the execution of the law; and the migration to the cities was postponed in 1807, and again in 1809. In the latter year a commission was appointed to study the question. In 1812 it reported against the enforced migration, on the ground that the cities could not support such an influx of new inhabitants, that the Jews were helpful, not harmful, to the prosperity of the peasantry, and that it was unjust to ascribe to the former the drunkenness of the latter, as the commission of 1802 had done. This report virtually stopped the execution of the law of expulsion, which, however, was allowed to hang over the heads of the Jews until 1835, when it was repealed.

Besides the legislation of 1804, the most important anti-Semitic laws of Alexander I.'s reign were those of 1820 and 1825, which, in a somewhat modified form, are still in force. In 1820 the Jews were forbidden to hire Christian servants, for fear that the former might make proselytes of the latter. In 1825 an edict was issued which made it unlawful for the Jews to dwell within fifty versts of the frontier. The main reason assigned for this prohibition was the Jews' proclivity to smuggle goods over the frontiers in order to evade the payment of duties. This law applied, however, only to Jews renting houses, shops, etc., in distinction from those who occupied property of their own. The following is an extract from De Gradowsky's commentary (pp. 329-332) on this law of 1825:

"The sudden expulsion of the Israelites residing in the districts adjoining the frontier could not have good results. On the one hand, it deprived the landed proprietors of revenues which they derived from the renting of their property; and, on the other hand, it threatened the Israelites with complete ruin by depriving a considerable number of them of their movables, without any plausible motive, and without any wrong on their part. . . . It should have been remembered that the general misery prevailing in the centres where the Jews were crowded together, was the principal cause that led them to establish themselves in the districts near the frontier. . . . The expulsion could only augment the number of Israelites in the localities in which they were tolerated, and consequently would increase still more the proletariat, which in those localities was already considerable. . . . Thus the measure in question was justifiable neither from the point of view of practical utility nor from the point of view of justice and equity. . . . It is a well-known fact that the proclivity to smuggle exists in all countries among the inhabitants living near the frontier, without distinction of race or creed. . . . The imperial treasury could gain nothing by these measures unless it reorganized the corps of custom-house officers. The only ones who gained by the new law were the smugglers, who were thus relieved of the competition of the Israelites, and hence could sell their wares at a higher price."

This meagre outline of the first volume of De Gradowsky's book will scarcely give an adequate idea of its contents, as the author devotes much space to a consideration of the causes and effects of the anti-Semitic legislation down to 1825. Many pages of his work might be cited *verbatim* as strong arguments against Russia's treatment of the Jews at the present day. The anti-Semitic policy of Alexander III. is governed by the same principles, or lack of principles, as that of Alexander I.; the arguments against the latter apply with increased force against the former. The translation of De Gradowsky's book is particularly welcome, because it is the first treatise, accessible to the nations of Europe and America, that gives a detailed account of the early history of the Jews in Russia, and hence affords a clear insight into the origin of the Russian anti-Semitic movement.

Life of Jane Welsh Carlyle. By Mrs. Alexander Ireland. New York: Charles L. Webster & Co. 1891.

To write acceptably about the domestic life of a woman in every way worthy of biographical celebrity, who was for forty of her sixty-five years the wife of one whose friend and literary executor could write of him, "If matters went well with himself, it never occurred to him that they could be going ill with any one else," requires, even though that one be a literary colossus, no small measure of self-restraint on the part of the writer. Such self-restraint, together with a generous comprehension of two uniquely constituted persons, Mrs. Ireland has shown. The lovely and somewhat caustic heiress, known to the world through Mr. Ritchie's collection of 'Early Letters,' changed much during her married life. The Carlyle who at first wrote of a semi-invalid, "Jane is far heartier now that she has got to work—to bake," was in effect the same Carlyle who, later, in the small house in Cheyne Row, where hero-worshippers now gaze at the medallion in the front, preferred to eat his dyspeptic dinners by himself.

Mrs. Ireland thinks, and her readers will be inclined to agree with her, that "the causes which militated most strongly against her happiness" were to be found in Mrs. Carlyle's own complicated nature, rather than in circumstances. "A cross between John Knox and a gypsy"—both were among her ancestors—her intense temperament would of necessity have brought her suffering, and very likely ill health, even if domestic drudgery had not been ruthlessly exacted of her. The exaggeration, the highly colored sense of fact, that appear in every line of her brilliant letters, are an index to the refracting power of her mind. Only a distortion of mental vision could have blinded so clever a woman to the real meaning of Carlyle's attitude in the "adventure" that came to no happy conclusion for either. He had made it clear enough during their engagement that, for him, contemplation of the "Ewig-weibliche" failing to suffice, the only happy union would be with a woman of the type he so admired in his laborious, kindly, pipe-smoking mother.

There can be little doubt that ambition, always in the case of "Jeannie" Welsh of a noble kind, was a strong motive in her marriage. But it was not in her nature to be satisfied with vicarious greatness. Hence the tragedy to her to realize that she was not to be a companion to Carlyle; that the "spirit of fire" and "towering intellect," which were to command her, could only work in solitary throes, of which the manifestations to her were chiefly of the splenetic sort which he himself describes in his well-known style of invective. The paradox of the Carlyles' relationship is the tone of their letters. No sooner had absence, as Mrs. Ireland expresses it, "removed the inexorable difficulties of personal contact," than all the feeling each might have had for the other, and had not, rushed to their pens in torrents of such words as only they could command. In spite of the witness of her many friends to her rare attractiveness, her power of sympathy, her courage, and her witty speech, one is tempted to believe that the best of Mrs. Carlyle was, after all, in her pen. At least, any one who has been disposed to draw this conclusion from Mr. Froude's and the several memorial volumes, will find nothing to contradict it in Mrs. Ireland's excellent summary, nor in the three or four hitherto unpublished letters it contains.

A History of Chemistry, from Earliest Times to the Present Day. By Ernst von Meyer. Translated by George MacGowan. Macmillan & Co. 1891. 8vo.

THE first systematic work on the history of chemistry which deserves special notice is that of Hermann Kopp, which began to appear in 1843 and was concluded in 1846. Two supplementary works by the same author, containing the more recent history of the science, have since appeared. These are now far behind the times. Hoefer's 'Histoire de la Chimie' is an inferior work, though not without value. Minor portions of the subject have been treated separately by various writers, but a good and at least tolerably complete résumé of the history of modern chemistry was still needed. Dr. von Meyer's work is intended to supply this want. In his own words, he has endeavored to give "a fair synopsis of theories and facts which constitute the foundation of chemistry as we now know it."

The work begins with a good and, for most readers, sufficiently extended account of the chemical knowledge of the ancients and of the age of alchemy. A certain glamour of romance with which this last has been invested disappears under the passionless analysis of the historian, and there remains only a record of charlatanry and sordid motives, together with a beautiful theory lacking a philosophic basis, but destined to reappear in the light of modern science. The history of the iatrochemical period follows, in which chemistry and medicine were held to be mutually dependent and interacting, and is not less interesting than that of alchemy as to detail, while it presents a greater number of phases of thought. The sketches of Paracelsus—a charlatan of genius—Libavius, Van Helmont, and, later, of Agricola and Glauber, are full of interest. Next comes the history of the phlogistic period, which is made to extend from Boyle to Lavoisier, inclusive. The account of this period is, on the whole, excellent, and does not require special analysis. We think, however, that Odling's paper on the element of truth in the doctrine of phlogiston deserved notice.

Our author gives full credit for the discovery of oxygen to Priestley, to whom it unquestionably belongs, French historians to the contrary notwithstanding. Yet Priestley died a defender of the doctrine of phlogiston, and modern chemistry began with Lavoisier. This part of the work is well and clearly written, and is sufficiently full. It gives a general view of the progress of the science from Lavoisier to the present time, treating the subject mainly by means of notices of the work of different chemists. Short biographies of some of them are given in foot-notes. The special history of the various branches of chemistry is then taken up. In that of inorganic chemistry we miss the firm grasp which comes from fulness of knowledge. Much important work is passed over, and papers of trivial value are sometimes noticed, as if by way of compliment. The special history of organic chemistry is much better, the author standing upon his own ground. Within the last few years physical chemistry has attained an extraordinary development so as to require a special journal, and many chemists are working in this field alone. The sections of Dr. von Meyer's work which relate to the different subdivisions of the new science are far too brief, even for a work which does not profess to be more than a synopsis. Mineralogical chemistry comes next, and is sufficiently treated. The section on agricultural chemistry is less to be praised. It is rather a surprise to find the experiments of Lawes and Gilbert passed over without notice, while more than justice is done to Liebig's work. Physiological chemistry comes next, with a number of subdivisions which must be regarded as fairly well handled. We note, however, as a remarkable omission, the absence of any allusion to the action of bacteria in the development of ptomaines, now generally regarded as direct causes of disease. The history of technical chemistry during the last hundred years follows. It is not easy to condense such a subject and still give necessary details, but the author has been quite successful.

The work closes with a very interesting account of the growth of chemical instruction in the nineteenth century, especially in Germany, and, finally, with brief notices of some points in chemical literature. All chemists will heartily agree with the author's remarks on the disappearance of criticism from the science. He might have added that the editing of the yearly reports is now left, to a great extent, to a very inferior class of chemists, who not only have no profound acquaintance with the science, but who admit almost everything without regard to what has been done before upon the same subjects.

Dr. von Meyer's work is, upon the whole, a really valuable addition to scientific literature. It is written in a spirit of entire fairness, and rarely claims for German chemists more than is justly their due—though chemistry is now a German science.

Études sur les Origines de l'Episcopat. La valeur du témoinage d'Ignace d'Antioche. Par Jean Réville. Paris: Leroux. 1891.

IN this fragment, reprinted from the *Revue de l'Histoire des Religions*, the author draws his own conclusions from the investigations of Zahn and Lightfoot upon the authenticity of the seven letters of Ignatius of Antioch. As to the fact of authenticity he is quite in accord with both these writers; but in his deductions therefrom he makes a distinctly new departure. The great interest taken by students of Church history in the discussion arose from the conviction that if these letters were written in the first quarter of the second century, the whole Protestant theory as to the antiquity of the episcopate must be revised. This conviction rested upon the view that the episcopal powers described by the alleged Ignatius were such as really existed as a rule in the Church of the author's day, and that the nature of the episcopate then must have been very much what it was later. M. Réville does not accept this view. He regards the exaltation of the

episcopate by Ignatius as rather an exhortation towards an ideal of what it ought to be than as a simple reflection of what it actually was. He supports his position by the entire absence of such lofty conceptions in the contemporary literature, and reminds us that the function of the bi hop at the time was far narrower than it became later—hardly more, in fact, than the headship of a single city church. The authenticity of the text, therefore, so far from invalidating the conclusion as to the later origin of the episcopate in the catholic sense, is quite in harmony with it.

BOOKS OF THE WEEK.

HENRY HOLT & CO.'S

STANDARD TEXT-BOOKS FOR SCHOOLS.

Remsen's (Ira) Chemistries.

BRIEFER COURSE. 12mo, 389 pp. Teachers' price, $1.12; by mail, $1.23.

"By far the best text-book of Elementary Chemistry."—*Prof. S. B. Newbury of Cornell University.*

ELEMENTARY COURSE 12mo. 272 pp. Teachers' price, 80 cents; by mail, 89 cents.

"I know of no book so well adapted to beginners in the science in our ordinary high schools."—*Prof. F. C. Robinson of Bowdoin College.*

Martin's (H. N.) The Human Body.

BRIEFER COURSE. 12mo, 377 pp. Teachers' price, $1.20; by mail, $1.32.

"The best elementary work of the kind."—*Prest. J. M. Coulter, Indiana University.*

ELEMENTARY COURSE. 12mo. 261 pp. Teachers' price, 75 cents; by mail, 84 cents.

"I find in it the same accuracy of statement and scholarly strength that characterize both the larger editions. . . . The most admirable feature of the book is its fine adaptation to the capacity of younger pupils."—*Supt. W. S. Perry, Ann Arbor, Mich.*

Packard's (A. S.) Zoologies.

BRIEFER COURSE. 12mo, 338 pp. Teachers' price, $1.12; by mail, $1.23.

"I have uniformly advised it for High School teachers who use a text-book."—*Prof. J. H. Pillsbury of Smith College.*

ELEMENTARY COURSE 12mo. 290 pp. Teachers' price, 80 cents; by mail, 90 cents.

"It is the best thing of the kind I have ever seen."—*Prof. J. F. Woodhull of the College for the Training of Teachers, New York City.*

Newcomb (S.) and Holden's (E. S.) Astronomy.

BRIEFER COURSE. 12mo, 366 pp. Teachers' price, $1.12; by mail, $1.24.

Walker's (F. A.) Political Economy.

ELEMENTARY COURSE. 12mo, 323 pp. Teachers' price, $1.00; by mail, $1.10.

"The book is well adapted for use in the public schools, from the clearness, directness, and simplicity of style with which the subject is treated."—*Prof. J. W. Jenks of Cornell University.*

Johnston's (A.) Histories.

A HISTORY OF THE UNITED STATES FOR SCHOOLS. 12mo, 473 pp. Teachers' price, $1.00; by mail, $1.15.

"The 'History,' so far as I have examined it, seems decidedly the best school history of the United States that has yet appeared."—*Prof. A. B. Hart of Harvard University.*

A SHORTER HISTORY OF THE UNITED STATES. 12mo, 340 pp. Teachers' price, 95 cents; by mail $1.06.

"It is incomparably the best history for use in Grammar School grades."—*H. P. Warren, Prin. of Albany (N. Y.) Academy.*

Clark's (J. S.) Rhetorics.

A PRACTICAL RHETORIC. 12mo, 381 pp. Teachers' price, $1.00; by mail, $1.12.

"I consider it superior for teaching purposes to any work of the kind I have ever seen."—*Prof. Wm. Hand Browne of Johns Hopkins University.*

A BRIEFER PRACTICAL RHETORIC. 12mo, 307 pp. Teachers' price, 90 cents; by mail, 98 cents.

"Preserves the chief characteristics of the author's larger and deservedly popular treatise."—*Wisconsin Journal of Education.*

Whitney's (W. D.) German Grammars.

A COMPENDIOUS GERMAN GRAMMAR. *Sixth edition, thoroughly revised and with new exercises.* 12mo, 472 pp. Teachers' price, $1.30; by mail, $1.44.

"The Whitney German Grammar has justly been considered as the foremost book of its kind published in America."—*Prof. A. N. Van Daell of the Mass. Inst. of Technology.*

A BRIEF GERMAN GRAMMAR. *Third edition, revised and enlarged.* 16mo. 143 pp. Teachers' price, 60 cents; by mail, 66 cents.

"I find that it is admirably adapted to the elementary work of a beginner's class."—*Prof. W. H. Carpenter of Columbia College.*

Whitney's (W. D.) French Grammars.

A PRACTICAL FRENCH GRAMMAR. 12mo. 442 pp. Teachers' price, $1.30; by mail, $1.43.

"The best of Grammars in English, both for school and college use."—*Prof. H. A. Todd of the Leland Stanford University.*

PRACTICAL FRENCH. 12mo. 304 pp. Teachers' price, 90 cents; by mail, $1.00.

Taken from the author's larger Grammar and supplemented by conversations and idiomatic phrases.

A BRIEF FRENCH GRAMMAR. 16mo. 177 pp. Teachers' price, 65 cents; by mail, 71 cents.

"It is just what is needed, . . . being brief, systematic, scientific, and covering a necessary and extensive territory in a concrete and comprehensive manner."—*A. T. Swift of Brown University.*

Otis's (C. P.) Elementary German.

Sixth edition. Arranged and edited by H. S. WHITE, Professor in Cornell University. 16mo. 431 pp. Teachers' price, 80 cents; by mail, 87 cents.

"In its present form this will prove a most valuable text-book for first-year students in German."—*M. D. Learned of Johns Hopkins University.*

The Wenckebach German Text-Books

DEUTSCHE GRAMMATIK FÜR AMERIKANER. 12mo. 298 pp. Teachers' price, $1.00; by mail, $1.11.

"It is the best thing of the kind I have yet seen."—*Prof. H. B. Richardson of Amherst College.*

DEUTSCHES LESEBUCH. 12mo. 361 pp. Teachers' price, 80 cents; by mail, 88 cents.

"I regard it as a most admirable work, and I shall use it here."—*Prof. O. B. Super of Dickinson College.*

Stern's (S. M.) Studien und Plaudereien.

FIRST SERIES. 12mo. 226+36 pp. Teachers' price, $1.10; by mail, $1.20.

SECOND SERIES. 12mo. 380 pp. Teachers' price, $1.20; by mail, $1.30.

"Our beginners are extremely delighted with the book."—*Dr. Wilhelm Bernhardt of the Washington (D. C.) High School.*

Stern (S. M.) and Mera's (B.) Etude Progressive.

12mo. Teachers' price, $1.20; by mail, $1.29.

IMPORTANT NEW EDUCATIONAL WORKS.

UNIVERSITY EXTENSION MANUALS

For study and reference both by students and by the general public. Published simultaneously both in England and America. The success of University Extension is in the union of scientific with popular treatment, and of simplicity with thoroughness. The Manuals will also be contributions to the literature of their subjects. Each 12mo, $1.00, net.

NOW READY.

MONEY, THE USE AND ABUSE OF. By Dr. W. CUNNINGHAM, Trinity College, Cambridge. Capital in its relation to social progress. Emphasizes the element of personal responsibility. Thorough and practical. Clear, interesting, popular discussion under the heads: Social Problems, Practical Questions, Personal Duty.

ENGLISH COLONIZATION AND EMPIRE. By ALFRED CALDECOTT, St. John's College, Cambridge. 12mo, with Maps and Diagrams.

The diffusion of European civilization is the subject, a bird's-eye view of the British colonies, from their origin until the present, with a summary of the wars and great events which have occurred, and a careful examination of questions, economical, commercial, and political, which now affect the colonies.

THE FINE ARTS. By G. BALDWIN BROWN, Professor of Fine Arts in the University of Edinburgh. With illustrations.

The whole field of the fine arts of painting, sculpture, and architecture, their philosophy, function, and historic accomplishment, is covered in Prof. Baldwin Brown's compact but exhaustive manual.

THE PHILOSOPHY OF THE BEAUTIFUL; Being the Outlines of the History of Aesthetics. By WILLIAM KNIGHT, Professor of Philosophy in the University of St. Andrews.

Traces the sequence of opinion in each country as expressed in its literature and its art works, and shows how doctrines of art are based upon theories of Beauty and how these theories often have their roots in the customs of society itself.

Animal Life, Ethics, Daily Life of Greeks and Romans, French Literature, Nature, English Literature, Shakespeare and his Predecessors in English Drama, French Revolution, Logic, Astronomy, English Poets, Botany, History of Education, Physiology of the Senses, Jacobean Poets, India, the Novel, Geology, Psychology, Mechanics, Political Economy, and Comparative Religion, are volumes in preparation by Professors Thomson, Minto, Brooke, Stuart, Seth, Gosse, Lyall, and others.

INTERNATIONAL THEOLOGICAL LIBRARY. Edited by Prof. CHARLES A. BRIGGS, D.D., of Union Theological Seminary, New York, and Prof. S. D. SALMOND, D.D., of Aberdeen, Scotland.

This library, undertaken by Messrs. Charles Scribner's Sons in connection with Messrs. T. & T. Clark of Edinburgh, is designed to cover the whole field of Christian Theology, each volume being complete in itself and yet part of an organic whole. It is to be a series of text-books for students of Theology, and yet a systematic exposition of the several departments of theological science for all intelligent persons. The library is international, interconfessional, catholic, and scientific. The authors have been chosen for their eminent ability in the departments assigned them.

NOW READY:

THE LITERATURE OF THE OLD TESTAMENT. By Prof. S. R. DRIVER, D.D., Canon of Christ Church, Oxford. Crown, 8vo, $2.50 net.

IN PREPARATION.

APOLOGETICS. By Prof. A. B. BRUCE.
HISTORY OF DOCTRINE. By Prof. G. P. FISHER.
SYMBOLICS. By Prof. PHILIP SCHAFF.
COMPARATIVE RELIGION. By Prin. A. B. FAIRBAIRN.
THEOLOGY OF THE OLD TESTAMENT. By Prof. A. B. DAVIDSON.
CHRISTIAN ETHICS. By NEWMAN SMYTH, D.D.
CHRISTIAN INSTITUTIONS. By Prof. A. V. G. ALLEN.
THE PHILOSOPHY OF RELIGION. By Prof. ROBERT FLINT.
THE CONTEMPORARY HISTORY OF THE OLD TESTAMENT. By Prof. FRANCIS BROWN.
THE LITERATURE OF THE NEW TESTAMENT. By Prof. S. D. F. SALMOND.

AMERICAN HISTORY SERIES. A Connected History of the United States from the Discovery of America to the Present Day. Four distinct epochs, each treated by a special and eminent authority. Five vols., maps and plans. Sold separately. In Press.

This series will be eminently *history*, as distinguished from the chronicle of annals, and explain the significance as well as recount the course of events. Philosophic, rather than purely narrative, and dealing with causes and inferences as fully as with incidents, it will still make specially prominent the social picture of each epoch, and occupy itself with the manners, habits, beliefs, aims, and conduct of the great public, rather than the acts of individuals, however representative. It will be, in a word, a literary and philosophical history of the *people* of the United States.

DISCOVERY AND COLONIZATION. By Rev. GEORGE P. FISHER, D.D., LL.D., Professor of Ecclesiastical History in Yale University.

THE FRENCH WAR AND THE REVOLUTION. By WILLIAM M. SLOANE, Ph.D., Professor of History in Princeton University.

THE ADOPTION OF THE CONSTITUTION AND NATIONAL CONSOLIDATION. By Gen. FRANCIS A. WALKER, President of the Massachusetts Institute of Technology.

FROM THE CONCLUSION OF PEACE IN 1815 TO THE END OF RECONSTRUCTION. (2 vols.) By JOHN W. BURGESS, Ph.D., LL.D., Professor of History, Political Science, and International Law in Columbia College.

"THE GREAT EDUCATORS SERIES" is to begin at once in the volumes:

ARISTOTLE; AND THE ANCIENT EDUCATIONAL IDEALS. By THOMAS DAVIDSON, M.A., LL.D.

ALCUIN; AND THE RISE OF THE CHRISTIAN SCHOOLS. By ANDREW F. WEST, Ph. D., Professor in Princeton University.

ABELARD; AND THE ORIGIN AND EARLY HISTORY OF UNIVERSITIES. By JULES GABRIEL COMPAYRE of France.

LOYOLA; AND THE EDUCATIONAL SYSTEM OF THE JESUITS. By Rev. THOMAS HUGHES, S.J., of Detroit.

All by recognized authorities in Pedagogy, the Series edited by Prof. NICHOLAS MURRAY BUTLER of Columbia College. Each 1 vol., 12mo, $1.00 net. Other volumes on Pestalozzi, Froebel, Horace Mann, Rousseau, Herbert, and on Thomas Arnold are in preparation.

In addition to the above great educational undertakings several special text-books, by distinguished scholars in various departments of higher education, are now ready, viz.:

ENGLISH COMPOSITION. By Prof. BARRETT WENDELL of Harvard. 12mo, $1.50. Goes to the root of the subject and treats fundamentally, originally, and with lively interest, the art of writing English.

Above all practical, and chiefly distinguished by its value to the student.

CONTENTS: I. Elements and Qualities of Style in General.—II. Words.—III. Sentences.—IV. Paragraphs.—V. Whole Compositions.—VI. Clearness.—VII. Force.—VIII. Eloquence.

THE SCIENCE OF LANGUAGE. By F. MAX MULLER, Oxford. Revised Edition. 2 vols. $6.00.

OUTLINES OF PHYSIOLOGICAL PSYCHOLOGY. By Prof. G. T. LADD, Yale. $2.00.

PROF. J. K. HOSMER'S SHORT HISTORY OF GERMAN LITERATURE. Revised. Cr. 8vo. $2.00.

A revised and greatly enlarged edition of

RAE'S CONTEMPORARY SOCIALISM. Cr. 8vo. $2.50.

NATURE AND MAN IN AMERICA. By PROF. SHALER of Harvard. 12 mo, $1.50.

AN ASSYRIAN MANUAL. By. DR. LYON of Harvard. 8vo, $4.00 net.

SYRIAC GRAMMAR AND SYRIAC METHOD AND MANUAL. By PROF. R. D. WILSON. Each 8vo, $2.50 net.

INTERNATIONAL LAW. By THEODORE D. WOOLSEY, late of Yale. Revised Edition. $2.50.

PRINCIPLES OF POLITICAL ECONOMY. By PROF. A. L. PERRY, Williams. $2.00.

☞ Privileges of Examination, Introductory Prices, Regular Rates to Instructors, to Libraries, and to the Trade, furnished on application. Full Descriptive Catalogue of these and many other distinguished text-books in all departments of education sent free. Also Miscellaneous Catalogue of American and Foreign Publications. All current books promptly supplied. Special facilities for procuring such as are rare or scarce.

LATIN DICTIONARY.

(Latin-English and English-Latin.)
By J. R. BEARD, D.D., and C. BEARD, B.A.
Crown 8vo, extra cloth, 914 pages. Price, $1.50.

A MANUAL OF

GREEK ARCHÆOLOGY.

By MAXIME COLLIGNON,
Deputy Professor of Archæology in the Faculty of Letters of Paris (Sorbonne).
Translated by JOHN HENRY WRIGHT,
Professor of Greek in Harvard University.

Large 12mo. Extra Cloth. Gilt Top. Illustrated. Price, $2.00.

The value of this work is attested by the fact that it has been adopted and recommended by the American School of Classical Studies at Athens, and by the instructors in Greek archæology and art at Johns Hopkins University, Brown University, Dartmouth College, University of Wisconsin, University of Kansas, and elsewhere.

CASSELL PUBLISHING COMPANY'S

NEW BOOKS.

A GIRL IN THE CARPATHIANS.

By MÉNIE MURIEL DOWIE.

1 vol., 12mo, extra cloth, illustrated, $1.50.

Miss Dowie, who is still in her early twenties, has attracted much attention abroad by this vivacious account of her travels alone through a comparatively wild and unknown region; and her book, now issued by arrangement with its English publishers, is likely to achieve as great a success here as it has already won in England.

"Fresh, utterly unconventional, and wholly charming. . . . It must be read."—*The Nation, New York.*

MORRINA.

(Homesickness.)

By EMILIA PARDO BAZÁN, author of 'A Christian Woman,' etc., etc. Translated by MARY J. SERRANO. With numerous illustrations. 1 vol., 16mo, cloth, gilt top, $1.50.

"The range of life is wider than our fiction commonly permits itself . . . and the tragedy is pathetic beyond reporting."—MR. HOWELLS, *in 'Editor's Study,' Harper's New Monthly Magazine.*

GINN & CO.'S BULLETIN.

SOME NEW BOOKS.

Sent by mail postpaid on receipt of the prices given below. Special terms for introduction.

LAWS OF THE UNITED STATES RELATING TO CURRENCY, FINANCE, AND BANKING FROM 1789 TO 1891. Compiled by CHARLES F. DUNBAR, Professor of Political Economy in Harvard University. 8vo. Cloth. 399 pages. $2.50.

This book, which has no rival, will be found of especial value in the present condition of the public mind on questions of currency and finance.

BUSINESS BOOKKEEPING. A manual of Modern Methods in Recording Business Transactions. Grammar School Edition—Single Entry. By GEORGE E. GAY. Small quarto. Cloth. x+93 pages. 75 cents. An original and sensible way of presenting the subject.

NOTES ON ENGLISH LITERATURE. By FRED PARKER EMERY, Instructor in English in the Massachusetts Institute of Technology. 12mo, cloth, xiv+155 pages, $1.10.

A history of English Literature packed with facts, criticisms, and suggestions to teachers.

PRINCIPLES OF THE ALGEBRA OF LOGIC, WITH EXAMPLES. By ALEXANDER MACFARLANE, M.A., D.Sc., F.R.S.E. 12mo, cloth, xii+155 pages, $1.35.

A HIGHER ALGEBRA. By G. A. WENTWORTH, Professor of Mathematics in Phillips Exeter Academy. 12mo. Half leather. vi+521 pages. $1.55.

This is intended to take the place of Wentworth's Complete Algebra, and is a complete course for high schools, seminaries and colleges.

SANSKRIT-ENGLISH DICTIONARY. Based upon the St. Petersburg Lexicons. By CARL CAPPELLER, Professor at the University of Jena. Quarto. Cloth. viii+672 pages. $6.25.

Indispensable to all serious students of Sanskrit.

CARDINAL NEWMAN'S ESSAY ON POETRY WITH REFERENCE TO ARISTOTLE'S POETICS. Edited by A. S. COOK, Professor in Yale University. 8vo. Paper. 48 pages.

Important as a specimen of the style of one who has been called the greatest master of English prose in our generation, and no less for the intrinsic value of its ideas.

GRAMMAR OF THE OLD PERSIAN LANGUAGE, TOGETHER WITH THE ORIGINAL TEXT OF ALL THE INSCRIPTIONS AND VOCABULARY. By HERBERT C. TOLMAN, Ph.D., of the University of Wisconsin. Square 12mo. Cloth, 100 pages. $1.00.

THE MODALIST, OR THE LAWS OF RATIONAL CONVICTION. A Text-Book in Formal or General Logic. By EDWARD JOHN HAMILTON, Albert Barnes Professor of Intellectual Philosophy in Hamilton College. 8vo. Cloth. vi+331 pages, $1.40.

A vigorous and original treatment of logic worthy of the attention of all interested in this subject.

THE ESSENTIAL USES OF THE MOODS IN GREEK AND LATIN, SET FORTH IN PARALLEL ARRANGEMENT. By ROBERT P. KEEP, Ph.D. Revised Edition. 16mo. Flexible leatherette. v+56 pages. 30 cents.

A new and enlarged edition of a book that proved extremely useful.

THE PRESENT AND FUTURE OF HARVARD COLLEGE. An Address Delivered before the Phi Beta Kappa Society at Cambridge, Mass., June 25, 1891. By WILLIAM WATSON GOODWIN, Eliot Professor of Greek Literature in Harvard University. 8vo. Paper. 42 pages. 30 cents.

DUTY. A Book for Schools. By JULIUS H. SEELYE, D.D., LL.D., Late President of Amherst College. 12mo. Cloth. 71 pages. 35 cents.

This little book covers the whole domain of duty, and treats the subject simply, and at the same time thoroughly.

ANIMAL LIFE AND INTELLIGENCE. By C. LLOYD MORGAN, F.G.S., Professor in and Dean of University College, Bristol, England. 8vo, Cloth. xvi+512 pages. Illustrated. $4.00.

Warmly endorsed by Wallace, the celebrated naturalist, as clear, interesting, and scientific.

MECHANISM AND PESONALITY. By FRANCIS A. SHOUP, D.D., Professor in the University of the South. 12mo. Cloth. xvi+341 pages. $1.30.

An original and scholarly study of a subject that is of vital interest to all who think.

POLITICAL SCIENCE AND COMPARATIVE CONSTITUTIONAL LAW. By JOHN W. BURGESS, LL.D., Professor of Constitutional and International History and Law, and Dean of the School of Political Science in Columbia College. Two volumes. 8vo. Cloth. 781 pages. $5.00.

A great work, endorsed by the leading authorities of Europe and America.

A HYGIENIC PHYSIOLOGY. For the use of schools. By D. F. LINCOLN, M.D., late Secretary Medical Department of American Social Science Association. 12mo. Cloth. Illustrated. v+206 pages. 90 cents.

As the title indicates, this recognizes the fact that physiology and anatomy should be made, in school text-books, subordinate to hygiene.

HAVE JUST PUBLISHED

the Eleventh Edition of

Oratory and Orators.

By Prof. WILLIAM MATTHEWS, LL.D.

1 Vol., 456 Pages, 12mo, Cloth, $2.

CONTENTS: The Power and Influence of the Orator.—Is Oratory a Lost Art?—Qualification of the Orator.—The Orator's Trials.—The Orator's Helps.—The Tests of Eloquence.—Personalities in Debate.—Political Orators: English.—*Political Orators:* Irish.—*Political Orators:* American.—*Forensic Orators.—Pulpit Orators.—A Plea for Oratorical Culture.*

This Book contains information that would take half a lifetime to gather elsewhere. Lawyers, politicians, statesmen, clergymen, and all public speakers will find it a mine of wealth, full of practical suggestions and directions of great value, while the general reader will be fascinated by the gems of thought, the vivid portraitures and sparkling anecdotes of celebrated orators with which its pages abound.

"It would be difficult to find, in the whole range of literature, a book which contains an equal amount of information about orators and oratory."—*Chicago Tribune.*

"The orator that can succeed in fascinating his audience as completely as the author of this book does his readers may be regarded as a splendid success."—*Boston Home Journal.*

BY THE SAME AUTHOR.

Wit and Humor	$1 50
Men, Places and Things	1 50
Hours with Men and Books	1 50
The Great Conversers	1 50

CHICAGO.

LONGMANS, GREEN & Co.'s LIST.

Mr. S. R. Gardiner's New History of England

A STUDENT'S HISTORY OF ENGLAND.

From the Earliest Times to 1885. By SAMUEL RAWSON GARDINER, M.A., LL.D., Fellow of All Souls College, Oxford, etc. Three Volumes. Illustrated under the Superintendence of Mr. ST. JOHN HOPE. Secretary to the Society of Antiquaries.

Vol. I. B. C. 55–A. D. 1509. With 173 Illustrations. Crown, 8vo, $1.20.

Vol. II. A. D. 1509–1689. With 96 Illustrations. Crown, 8vo, $1.20.

Vol. III. [In October.]

*** The work will also be issued in a single volume, The complete edition will probably be ready in October.

"Never, perhaps, in such a treatise has pictorial illustration been used with so good effect. The alert teacher will find here ample material for useful lessons, by leading the pupil to draw the proper inferences and make the proper interpretations and comparisons. . . . The style is compact, vigorous, and interesting. There is no lack of precision; and in the selection of the details, the hand of the scholar thoroughly conversant with the source and with the results of recent criticism is plainly revealed."—*The Nation.*

Companion Atlas to Gardiner's 'Student's History of England.'

A SCHOOL ATLAS OF ENGLISH HISTORY.

Edited by SAMUEL RAWSON GARDINER, M.A., LL.D. Fcp. 4to. $1.50. [Nearly Ready].

*** This Atlas is intended to serve as a companion to Mr. S. R. Gardiner's 'Student's History of England.' In addition to the historical maps of the British Isles, in whole or in part, are others of Continental countries or districts which were the scenes of events connected more or less closely with English History. Indian and Colonial development also obtain due recognition. Some of these maps have been prepared for this Atlas, whilst others, though taken, with the permission of the authors and publishers, from other sources, have all been carefully examined by Mr. Gardiner, and some of them have been more or less corrected. In addition to the maps is a series of plans of important battles and sieges.

EPOCHS OF AMERICAN HISTORY.

Edited by ALBERT BUSHNELL HART, Ph.D., Assistant Professor of History in Harvard College, author of 'Introduction to the Study of Federal Government,' etc.

THE COLONIES, 1492-1750.

By REUBEN GOLD THWAITES, Secretary of the State Historical Society of Wisconsin, author of 'Historical Waterways,' etc. With four colored maps. pp. xviii.—301. Cloth. $1.25.

"Both physical and political geography receive attention in their relation to history, which may be regarded as a main and extremely valuable feature of the work. . . . Several interesting and valuable maps and a carefully prepared index add to the value of the book."—*Boston Advertiser.*

OMAN'S HISTORY OF GREECE.

A History of Greece. By C. W. C. OMAN, M.A. F.S.A., &c. Fellow of All Souls College, and Lecturer at New College, Oxford. 12mo, with 12 Maps and Plans, Side Notes and full Index. $1.50.

*** The Harvard University Catalogue gives 'Oman's History of Greece' as indicating the amount of knowledge in Greek history required for admission.

"This is the best school history of Greece which has appeared for many a day. While the style is never heavy, nothing of importance has been omitted. The book is, moreover, not a mere summary of larger histories; it gives proof of independent judgment, and it passes beyond earlier books in finding room for the most recent information derived from archæological discoveries."—*English Historical Review.*

TEXT-BOOK OF ENGLISH HISTORY.

From the Earliest Times. For Colleges and Schools. By OSMUND AIRY, Author of 'The English Restoration and Louis XIV.,' etc., etc. With 15 Maps. $1.50.

*** It is hoped that this may prove useful as a text-book both for teachers and for those students who, while their knowledge of facts is incomplete, are mature enough to desire to connect events with their causes and effects, and to feel an interest in constitutional questions.

AN ELEMENTARY TEXT-BOOK OF BOTANY.

For the use of schools. By EDITH AITKEN, late scholar of Girton College, and certified student in first-class honors of the University of Cambridge. With 131 illustrations. Crown 8vo, $1.50.

"A good teacher, with a small class of bright and willing students, would find not only profit but much pleasure in pursuing Miss Aitken's system for a season. The real originality is in the charming treatment of the whole subject, and in omitting much non-essential matter which one usually finds in so-called elementary text-books."—*The Nation.*

THE RETREAT OF THE TEN THOUSAND.

By Prof. C. Witt. Translated from the German by FRANCES YOUNGHUSBAND. Twelve full page illustrations, $1.25.

EPISODES FROM MODERN FRENCH AUTHORS.

Edited by W. E. RUSSELL, M.A., Assistant Master at Haileybury.

*** The aim of the Series is to choose stories which are simple and interesting. Each volume consists of a detached portion of some French novel or story of good style, or of a series of portions of the same story pieced together by short "arguments" in English, so as to keep up the thread of the narrative, and preserve continuity of interest in the tale.

The following Volumes are ready:

MALOT'S SANS FAMILLE. Edited by W. E. Russell, M.A. *Editor of the Series.* 40 cents.

DUMAS'S LA BOUILLIE DE LA COMTESSE BERTHE. Edited by Cormell Price, M.A., B.C.L., Head-Master of the United Services College, Westward, Ho. 40 cents.

DUMAS'S ADVENTURES DE LYDERIC. Edited by A. K. Cook, M.A., Assistant Master at Winchester College. 40 cents.

DUMAS'S PÉPIN ET CHARLEMAGNE. Edited by J. D. Whyte, M.A., Chief Master of Modern Languages at Haileybury College. 40 cents.

PROSPER MÉRIMÉE'S MATEO FALCONE TAMANGO, and L'Enlèvement de la Redoute. Edited by W. E. Russell, M.A. 40 cents.

DUMAS'S LE CHATEAU D'IF. Edited by D. B. Kitchin, M.A. 40 cents.

EPISODES FROM MODERN GERMAN AUTHORS.

Edited by H. S. Beresford-Webb, author of "A Practical German Grammar," &c.

The aim of the Editor has been to select works distinguished for their interesting subject-matter, variety of style, and general popularity in their own country, and to connect the passages in such a manner that the interest may be sustained throughout.

The text of each volume is made the theme of suitable notes, explanatory of the allusions, and containing practical information on the idioms, structure, and derivation of the language; and each work has been entrusted to an editor of sound practical experience in teaching.

The following volumes are ready.

FEODOR DOSE OF THE VII. BRIGADE. Episodes from Hackländer's Wachtstuben-Abenteuer. Edited by H. S. Beresford-Webb. Editor of the Series. 45 cents.

EPISODES FROM FELICITAS. By Felix Dahn. Edited by the Rev. G. A. Bienemann, M.A., Assistant Master at Sherborne School. 60 cents.

TALES OF THE BLACK FOREST. Selected from Auerbach. Edited by A. H. Fox-Strangways, M.A. Assistant Master at Wellington College. 45 cents.

FOR KING AND FATHERLAND—1870. Being Episodes from Captain Karl Tanera's Erinnerungen eines Ordonnanz-Offiziers, im Jahre 1870-'71. Edited, with Notes, by E. P. ASH, M.A., Master of the Modern Side, Haileybury College, 50 cents.

Messrs. Longmans, Green & Co. will be happy to send their classified Catalogue of School and College Text-Books to any address upon request.

LONGMANS, GREEN & CO., 15 East 16th St., New York.

BRENTANO'S

NEW TEXT-BOOKS.

I. A Spanish Grammar.

A new method for learning Spanish as taught by the masters of the language, and for acquiring the Castilian pronunciation, with the *new rules of accentuation by the Royal Academy of Spain,* and an alphabetical index of the conjugations of all irregular, defective, and impersonal verbs, by A. M. SOTELDO, author of the Gramática Inglesa para los Españoles—the actual national text-book in Venezuela. 12mo, bound, $2.00.

This grammar is reliable and practical. It has been composed by one of the foremost contemporary Spanish grammarians, and will be recognized as an authority on the Spanish language and a standard hand-book for the acquisition of Spanish by English-speaking nations.

II. The "Phonetic" Series

OF HAND-BOOKS TO THE STUDY OF LANGUAGES.

No. 1. Colloquial French for Travellers and Students.

Handy sized 16mo; tastefully bound in cloth, 50 cents.

This is the first volume of a series of hand-books which has two aims—one to give a careful analysis, for students, of the sounds employed in speaking various languages, as compared with English, with an explanation of the differences in easily understood terms; and the other to be thoroughly useful phrase-books for travellers.

No. 2. Colloquial German for Travellers and Students.

Uniform with 'Colloquial French.' 75 cents.

French, German, Spanish, Russian, Italian, Danish, Dutch Grammars, Dictionaries, Leaders, Conversation Books, etc. Grammars, Dictionaries, etc., of any language of the world can be obtained through us.

Guides, Maps, Reference Books, Works on History, Science, and Art in any language of the world.

We keep always on hand a complete stock of the latest American text-books.

The Open Court Publishing Co.,

175 LA SALLE ST., CHICAGO.

The Odyssey of Homer.

Translated into English Rhythmic Prose. By GEORGE H. PALMER, *Professor in Harvard University.* Crown 8vo, $2.00. Complete in one volume.

"The real merits of Mr. Palmer's translation are its transparent diction, its directness, its combination of fidelity with idiom, of dignity with ease, and its eminent readableness. It shows the fluent grace of the original like a Coan robe. In some of the qualities just enumerated it is a strong contrast to Butcher and Lang's 'Odyssey.'"—*The Nation, New York.*

TWO

Educational Specialties.

READING MATTER FOR SCHOOLS.

Riverside Literature Series.

Fifty-nine numbers already published, containing complete masterpieces from the writings of *Longfellow, Lowell, Whittier, Emerson, Holmes, Hawthorne*, and other famous writers.

SUITABLE FOR PRIMARY, GRAMMAR AND HIGH SCHOOLS.

Each single number, paper covers, 15 cents, *net.*

JOHN FISKE'S

Civil Government in the United States.

WITH QUESTIONS AND BIBLIOGRAPHICAL NOTES.

Price, 16mo, $1.00 *net.*

"It gives me very great pleasure to say that our experience in the use of Fiske's Civil Government has been exceptionally satisfactory. The subject has been presented in such a logical and scientific manner that the class have gone from step to step until they have acquired a very clear and accurate idea of the principles underlying the science of government with an ease and certainty very marked. The book has commended itself to our continued use."—*John S. Irwin, Supt. of Schools, Fort Wayne, Indiana.*

Correspondence solicited.

HOUGHTON, MIFFLIN & CO.,

4 Park St., Boston,

11 East Seventeenth St., New York.

THE PRINCE IMPERIAL.

The splendid, pathetic, tragic tale, from the birth in the French palace and the childhood on the steps of the French throne to the day he was speared by howling savages in South Africa, is told by Mrs. Goddard Orpen in the

September Number of **Wide Awake.** Everywhere 20 cents.

4 portraits, from paintings and photographs.

An account, with pictures drawn from life, of

THE BABY LEOPARDS

in the Philadelphia Zoölogical Gardens, by E. F. Bonsall.

In Margaret Sidney's serial there are some very delightful chapters of the college life of the boys and the home life of the girls already famous in

Five Little Peppers Grown Up.

The two other serials, "Miss Matilda Archambeau Van Dorn" and "Marietta's Good Times," are both most enjoyable.

Short Stories for Vacation Reading,

realistic and romantic, include a Black Forest fairy tale.

FOUR PRIZES

for the best drawings, based on Miss Rimmer's September article on "Figure-Drawing for Children."

☞ 100 pages entertainment for 20 cents.

D. LOTHROP COMPANY,

BOSTON.

Important Educational Works published by J. B. Lippincott Company.

Adopted by School Boards, and used in the leading Colleges and Seminaries throughout the United States.

Chauvenet's Geometry.

A Treatise on Elementary Geometry, with Appendices containing a Copious Collection of Exercises for the Student, and an Introduction to Modern Geometry. Crown 8vo. Cloth. $1.60.

Chauvenet's Geometry has been the text-book in use in the leading Colleges of the country since its publication. Yale College, School of Technology, Boston, West Point Military Academy, and Naval Academy, Annapolis, are *among this number.* The great merit of the book is so generally recognized that it may justly be called a "classic" in this branch of study.

Chauvenet's Geometry, Abridged.

By W. E. BYERLY, Ph.D., Professor of Mathematics, Harvard College. 8vo. $1.20.

The changes made are mostly in that portion of the book used in preparatory schools. Therefore the new edition, while better adapted for beginners, retains all the strength of the original in that portion used in College. The following are some of the colleges using the New Edition: Harvard College, Boston University, Vassar College, Ohio University, Randolph and Macon College, Drury College, Davidson College, Thurman University, Hillsdale College, Carlton College, etc.

Sharpless & Philips's Natural Philosophy.

An Elementary History of the United States.

By CHARLES MORRIS, author of 'Half-Hours with American History,' 'The Aryan Race,' etc. Illustrated. 12mo. Cloth. $1.00.

"Worcester's Dictionaries should be used by the youth of the country, and adopted in the common schools."—*N. Y. Evening Post.*

WORCESTER'S SCHOOL DICTIONARIES.

The Standard in Spelling, Pronunciation, and Definition.

Adopted and used in New York City, Philadelphia, Boston, Cambridge, Chicago, St. Louis, Worcester, Lowell, Salem, Washington, and hundreds of cities and towns throughout the United States and Canada.

POINTS OF SUPERIORITY.

1. They are THE LATEST SCHOOL DICTIONARIES PUBLISHED, and include all the common new words in the language.
2. They contain a MUCH LARGER NUMBER OF WORDS than any other school dictionaries.
3. They give the correct usage in PRONUNCIATION.
4. They give the correct usage in SPELLING.
5. The DEFINITIONS are complete, concise, and accurate.
6. They give the principal SYNONYMES in the language.
7. In the New Comprehensive and the New Academic THE PAST AND PRESENT PARTICIPLES are given with the *verb, and each spelled in full.* This is a new and important feature.
8. They contain many TECHNICAL TERMS found in the ARTS and SCIENCES.
9. They contain an Appendix which gives an UNUSUAL AMOUNT OF INFORMATION, and which in the New Academic and the New Comprehensive contains A DICTIONARY OF MUSICAL TERMS.

THE WORKS OF OUR STANDARD AUTHORS FOLLOW WORCESTER. IT IS THE NATIONAL STANDARD OF AMERICAN LITERATURE.

THE LEADING MAGAZINES AND NEWSPAPERS FOLLOW WORCESTER.

MILLIONS OF THE SCHOOL BOOKS FOLLOW WORCESTER. If our standard and current literature is according to Worcester, then WORCESTER should be the standard taught in the schools.

TESTIMONIALS.

From PRESIDENT ELIOT of Harvard College: "I have always referred to this work (Worcester's Unabridged Dictionary) as the standard."

From EX-PRESIDENT MCCOSH of Princeton College: "I am amazed at the amount of knowledge in this volume, *which every scholar should possess.* Worcester's Dictionary, so well known, needs no commendation from me."

From PRESIDENT BARTLETT of Dartmouth College: "I have always regarded Worcester's Dictionary as the true representative of English Orthography and pronunciation, and I wish a wide circulation to this new and improved edition."

Write for specimen pages of the Standard Dictionary.

Special terms to teachers for examination or introduction. Complete List of Educational Works cheerfully mailed to any address.

VOL. LIII.—NO. 1367. THURSDAY, SEPTEMBER 10, 1891. PRICE 10 CENTS.

Houghton, Mifflin & Co.'s New Books.

The Being of God as Unity and Trinity.

By P. H. STEENSTRA, Professor in the Episcopal Theological School, Cambridge, Mass. Crown 8vo, $1.50.

Lectures to theological students, and of interest to all students of this subject. The earlier consist of arguments for the existence of God; the later, arguments relating to the doctrine of the Trinity. The treatment is intended to be strictly scientific, yet takes account of modern phases of thought.

Points of View.

Essays by AGNES REPPLIER, author of 'Books and Men.' $1.25.

CONTENTS: A Plea for Humor; English Love Songs; Books that have hindered me; Literary Shibboleths; Fiction in the Pulpit; Pleasure: a Heresy; Esoteric Economy; Scanderbeg; English Railway Fiction.

Charles Scribner's Sons'

NEW BOOKS.

Marie Antoinette at the Tuileries.

A New Volume in the FAMOUS WOMEN OF THE FRENCH COURT. Translated from the French of IMBERT DE SAINT-AMAND. Each vol. 12mo, with Portrait, $1.25.

The vicissitudes of the Royal Family, and incidentally the political history of the time, from the forcible removal from Versailles in 1789 to the end of 1791, including the unfortunate attempt at flight and the arrest at Varennes, are the subject of this book.

PREVIOUS VOLUMES:

MARIE ANTOINETTE AND THE END OF THE OLD REGIME.
CITIZENESS BONAPARTE.
THE WIFE OF THE FIRST CONSUL.
THE COURT OF THE EMPRESS JOSEPHINE.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.
MARIE LOUISE AND THE INVASION OF 1814.
MARIE LOUISE, THE RETURN FROM ELBA, AND THE HUNDRED DAYS.

"We can cordially recommend these books to the attention of our readers. They will find them attractive in their arrangement, never dull, with much variety of scene and incident and admirably translated."—*The Nation.*

English Composition.

By Prof. BARRETT WENDELL of Harvard University. 12mo, $1.50.

This work, the result of the author's experience as instructor, is an original and valuable addition to the literature of the subject. It is thoroughly popular in form and simple in style.

History of the Jewish People.

IN THE TIME OF JESUS CHRIST. By Dr. EMIL SCHURER, Professor in the University of Giessen. Translated from the second German edition—revised and enlarged. 5 vols. 8vo, $8.00 *net.*

"Under Professor Schürer's guidance we are enabled to a large extent to construct a social and political framework for the Gospel History, and to set it in such a light as to see new evidences of the truthfulness of that history."—*English Churchman.*

A Short History of German Literature.

By Professor JAMES K. HOSMER, of Washington University. Crown 8vo, $2.00.

The broad field of German letters is covered from the period of the early myths down to the age of Goethe, attention being concentrated upon the epoch-making men and books.

ANCIENT CHRISTIAN BAPTISTERIES

Under the above title we have published a hand-book, showing the adaptation of the Ancient Baptistery to modern requirements. This article is written by the

Rev. LEIGHTON WILLIAMS,

and contains many hints of service to those interested in the erection of a new church or the renovation of an old one.

For points in regard to other items of church renovation, we would call attention to our hand-book on work done for the

TABERNACLE BAPTIST CHURCH

of New York, for which we executed the Stained Glass and Color Decoration.

Hand-books sent free on request.

Schools.

Polytechnic Institute of Brooklyn.

Institute Courses in Arts, Chemistry, Civil and Electrical Engineering, for the Degrees of Bachelor of Arts, Bachelor of Science, Civil Engineer, and Electrical Engineer.

Academic Department preparatory for the Institute, for other Colleges, or for Mercantile career. Gymnasium, swimming-baths, etc. Completely equipped. Fall Term begins Sept. 16, 1891. For Catalogue address
DAVID H. COCHRAN, Ph.D., LL.D., President,
Brooklyn, N. Y.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the System of Delsarte. Send for catalogue to MOSES TRUE BROWN, M. A., Boston, Mass.

Schools.

THE LAW SCHOOL
OF THE
COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

THE FACULTY.

JAMES C. WELLING, LL.D., President,
And Professor of Public and Private International Law.
THE HON. JOHN M. HARLAN, LL.D.,
(Associate Justice of the Supreme Court of the United States,)
Professor of the Constitutional Jurisprudence of the United States, of the Law of Domestic Relations, of Commercial Paper, and of Torts.
THE HON. WALTER S. COX, LL.D.,
(Associate Justice of the Supreme Court of the District of Columbia,)
Professor of the Law of Real and Personal Property, of Contracts, and of Crimes and Misdemeanors.
THE HON. WILLIAM A. MAURY, LL.D.,
(Assistant Attorney-General of the United States,)
Professor of Equity Jurisprudence, of Common Law and Equity Pleading, and of the Law of Evidence.
THE HON. DAVID J. BREWER, LL.D.,
(Associate Justice of the Supreme Court of the United States,)
Professor of the Law of Corporations.
THE HON. EDWARD EDMUND BERMUDEZ, LL.D.,
(Chief-Justice of Louisiana.)
Lecturer on the Civil Law.
HENRY E. DAVIS, A.M., LL.M.,
(Sometime Assistant Attorney of the District of Columbia,)
Professor of Common Law Practice and Lecturer on the History of Law.
THE HON. AUGUSTUS S. WORTHINGTON, LL.B.,
(Sometime District Attorney of the United States,)
Lecturer on Legal Bibliography and the Use of Authorities in Court.
WILLIAM F. MATTINGLY, ESQ.,
(of the Washington Bar,)
Lecturer on Practical Commercial Law.
THE HON. WILLIAM EDGAR SIMONDS, A.M., LL.B.,
(United States Commissioner of Patents,)
Professor of the Law of Patents.
THE HON. ANDREW C. BRADLEY,
(Associate Justice of the Supreme Court of the District of Columbia.)
Lecturer on Criminal Law and on Criminal Pleading and Practice.
WILLIAM G. JOHNSON, LL.M.,
(of the Washington Bar,)
Judge of Moot Court.

The School has a two years' and a three years course of studies, leading respectively to the degree of Bachelor of Laws and of Master of Laws.
The Lectures are delivered from 6 to 9 o'clock P. M.
For catalogues address JAMES C. WELLING, Pres.

UNIVERSITY LAW SCHOOL *The Thirty-third year begins October 1, 1891.*
Confers LL.B.; also (for new graduate courses) LL.M.
For catalogues, showing reorganized Faculty, address Prof. I. F. RUSSELL,
Equitable Building, 120 Broadway, New York.

THE NEW YORK LAW SCHOOL, 120 Broadway, New York City, opens Oct. 1, 1891. Two years' course, leading to degree of LL.B. Tuition fee, $100. "Dwight Method" of instruction. For catalogues, etc., address GEORGE CHASE, Dean.

New York College for the Training of Teachers,
9 UNIVERSITY PLACE, NEW YORK.

A Professional School for the equipment of College Graduates and others who combine ability, scholarship, and practical power. Information furnished on application.

WELLS COLLEGE FOR WOMEN, AURORA, N. Y.
Three Full Courses of Study. Location beautiful and healthful. A refined Christian Home. New Building with Modern Improvements. Session begins September 16, 1891. Send for Catalogue.
E. S. FRISBEE, D.D., President.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.
56TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

THE BEST PLACE TO STUDY ENGINEERING and ASTRONOMY is the Western University of Pennsylvania. CLASSICS AND ENGINEERING in all its branches. For Catalogue, address
W. J. HOLLAND, Ph.D., D.D., President,
Pittsburgh, Pa.

THE CLAVERACK COLLEGE
AND HUDSON RIVER INSTITUTE
for Young Men and Women, will open its 38th year Sept. 14th. For catalogues, address
REV. A. H. FLACK, A.M., Prest., Claverack, N. Y.

A FIRST-CLASS BOARDING SCHOOL for Girls will receive a few pupils at reduced rates in order to fill existing vacancies. Address
PRINCIPAL, P. O. Box 116, Phila., Pa.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON W.

A New Text-Book in Political Science.

By an authority whose work has been pertected under tests of the classroom, of debate, and of time.

PROF. PERRY'S
"Principles of Political Economy."
Crown 8vo, 600 pp. $2.00.

New arrangement, fresh language, vigorous style. Contents: Value, Commodities, Services, Credits, Money, Trade, Taxation.
Special rates for examination and introduction.

CHARLES SCRIBNER'S SONS.

Schools.

New England Conservatory OF MUSIC. Founded by Dr. EBEN TOURJÉE.
CARL FAELTEN, Director.
INSTRUCTION IN PIANO, ORGAN, VOICE, VIOLIN, etc.
Systematic Courses in class and private lessons. Tuition, $10 to $30 for 20 class lessons. Many *free Classes, Lectures, Recitals, etc. Elocution, Oratory and Dramatic Action, Fine Arts, Literature, Languages, Piano and Organ Tuning. COMFORTABLE HOME for Lady Students.* Calendar free.

Fall term begins September 10, 1891.

FRANK W. HALE, General Manager,
Franklin Square, Boston, Mass.

MICHIGAN MINING SCHOOL.
A State School of Mining Engineering, located in the heart of the Lake Superior mining region, giving practical instruction in Drawing, Blue-printing, Mechanics, Mechanism, Properties of Materials, Graphical Statics, Mechanical and Electrical Engineering, Shop practice, Analytical and Technical Chemistry, Assaying, Ore-Dressing, Metallurgy, Plane, Railroad, and Mine Surveying, Hydraulics, Mining, Mineralogy, Petrography, General, Economic, and Field Geology, etc. Has Summer Schools in Surveying, Shop-practice, and Field Geology. Laboratories, Shops, and Stamp Mill well equipped. Tuition free. For Catalogues apply to the Director, HOUGHTON, MICH.

Wilson College for Young Women.

Fifty miles southwest of Harrisburg, in famous Cumberland Valley. From Baltimore 4 hours, Philadelphia 5, New York 7, Pittsburgh 9. Six trains daily. Border climate, avoiding bleak north. $250 per year for board, room, etc., and all college studies except music and art. Large Music College and Art School. Music Department this year 154, independent of free classes. Full Faculty; College Course B.A. degree; Music College B.M. Handsome park, large buildings, steam heat, electric light, gymnasium, observatory, laboratory, etc. For Catalogue, address
Rev. J. EDGAR, Ph.D., Pres., Chambersburg, Pa.

School of Drawing and Painting,
AND DEPARTMENT OF DECORATIVE DESIGN,
MUSEUM OF FINE ARTS, BOSTON.
For circulars and detailed information apply to the manager.

Haverford College Studies
Nos. 6 AND 7,

Containing "THE APOLOGY OF ARISTIDES," by J. RENDEL HAINS, with an Appendix by J. ARMITAGE ROBINSON. Price, $2.00.

Address SECRETARY.
Haverford College, Penna.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1891.

The Week.

THE news has come at last that the Administration has recognized the Congressional Junta in Santiago as the legitimate Government of Chili. This ought to be accompanied with the recall of "Pat" Egan, which we are glad to see even the *Tribune* has been obliged to recommend as a necessity. Nothing more discreditable has marked the Blaine episode in our national politics, and yet it seemed, when the appointment was made, as if it was a perfectly safe thing to do—that is, that, after the first Mugwump growls over it, nothing more would be heard of it, and that Egan would get back to the United States at his convenience without any complete exposure either of him or his principal. But somehow Providence seems to keep its finger on Mr. Blaine, and always, or nearly always, touches the explosive button just as the little scheme—whatever it may be—is ripe. Balmaceda's *coup d'état* seemed at first just what was needed to make Egan a success, but it finally proved his ruin at the decisive moment. That story about Balmaceda's having the Congressional army "cut off" and ready to surrender *en masse*, which was believed for two or three days, was doubtless Egan's dream. With that result, he would have been quite happy, and so probably would the "American of Americans," for what would either care about the ruin of a free Government as long as contracts were "fat" and "channels of usefulness" were numerous?

We can recall few situations in our diplomatic history which required more imperatively the presence in a foreign capital of a first-class man as the American Minister, than the quarrel between Balmaceda and the Congress. It was, in the first place, an absolutely novel situation. Two branches of a Republican Government had quarrelled and taken the field against each other with apparently equal chances of success. Neither was legitimate without the other. Balmaceda was no more to us legally than the Legislature. Morally, we were bound to discountenance him as far as we could. The President of a republic who disperses the Legislature and closes the courts by armed force, ought to be presumptively a wrongdoer in the eyes of all other free governments. His possession of the capital was an accident which should, *per se*, have counted for nothing. The Commune held Paris for three months against 300,000 men. The question for us was, pending the issue of the armed struggle, Was Balmaceda, under the Chilian Constitution, a legitimate Government? We ought to have had in Santiago an American of the best type to report to the Administration on all the law and facts of the case, and give opinions on the final outcome which would inform the public judgment here, and, if the opportunity offered, throw his mediating influence there in favor of law and liberty. What we did have was a wandering foreign adventurer, whose residence in the United States had been very brief, whose reputation was very shady, and who had made himself "solid" with the would-be dictator in the old-fashioned business way so well known in Blaine circles. The result was that the *Itata* was seized, and we were brought within a hair's breadth of armed interference in the struggle on the side of arbitrary power. For when she was seized, on the ground that she was carrying arms to be used against a Power with which we were at peace, we did not know what the Power in Chili was with which we were at peace. There was just as much reason for supposing that she was rendering a legal service to a friendly Power as that she was engaging in hostile operations against one. The difficulty of deciding which was right in a domestic quarrel between an Executive and a Legislature would have been ample excuse for not meddling with her at all. But having Egan and new cruisers, in an atmosphere charged with buncombe, we chased, and fumed, and cursed, and vowed vengeance dire, and accumulated, little by little, a huge moral and political and commercial blunder. By all means, let "Pat" now come home. He has done his best and worst, and doubtless has something to the good for himself.

We suspected all along that the English were at the bottom of Minister Egan's troubles in Chili, and now he tells a *Herald* correspondent, "with a trace of bitterness in his voice," that such is the case. "The English," he says, "are naturally antagonistic to me." For the present he leaves this natural antagonism unexplained, but we advise all those interested to make a note of the fact. It may have portentous consequences hereafter. If it shall appear, as it very easily may, that the English hate Egan because he is a "Blaine Irishman," or because he is opposed to free trade, it will be a very perilous thing to disturb him. That "trace of bitterness" in his voice means a warning to those who trifle with the "Irish vote." If the records at Santiago reveal any private agreement between Egan and Balmaceda, as the Congressionalists assert they will, unless tampered with, we shall doubtless see that "trace" become a pronounced and unmistakable "bitterness."

The past week has been full of incidents affecting the conditions of trade and speculation, but for the most part they have been of a favorable kind. The redemption of the 4½ per cent. bonds has not caused the Treasury any difficulty. The holders have been very slow in sending them forward, and there are still $17,000,000 held back for some reason. Probably the owners consider the Government as safe a depository as a bank, and prefer to let their money lie there without interest while they are considering what they shall put it into for permanent investment. The rise in stocks here has stimulated more buying than selling on the other side of the water, and this has accelerated the importation of gold, the movement of which was not expected before the middle of September by those who looked to commercial causes alone. The removal of the German embargo on our pork products is one of the happy auguries of the time, although its importance may be a trifle exaggerated. All the news from the West confirms the previous reports of the excellence of the crops, the rumors of damage by frost in the corn belt having proved unfounded or greatly exaggerated. General trade does not show much improvement as yet, but is in a hopeful way, and railroad earnings are increasing, although the effect of the new crop is scarcely felt as yet.

The President's private secretary, Mr. Halford, sent out over the country last week, through the Associated Press, a carefully prepared statement of the pork negotiations, in which occurs the following: "The conclusion was reached, while the President was at Saratoga, by Gen. John W. Foster, representing the United States Government, and Count von Munn, Chargé d'Affaires, representing the German Government, and was approved by the President. The removal of the pork restriction has nothing to do with any question of reciprocity, but is based upon the acceptance by the German Government of the inspection of imported meats by this Government under the law of the last Congress." The quiet notification that there is no "reciprocity" in this Administration achievement, coupled with the official information that Gen. Foster represented the American Government in the negotiation, no mention whatever being made of Mr. Blaine, would seem to show that Mr. Halford was speaking for somebody who suspected that an effort had been made to give Mr. Blaine credit for something which did not belong to him, but to the President.

The Pennsylvania Democratic Convention has shown itself equal to its opportunity. It has nominated a ticket which is so excellent in character that not a single one of the Republican newspapers of Philadelphia is able to say a word against it, while one of them, the sometimes-independent *Public Ledger*, says of its two candidates that they "are men of marked ability and perfectly clean character, and have been selected, not because either of them sought for or desired the nomination, but because the nomination

sought them as belonging to the style and type of men that are in the strongest degree needed for the offices named, and which are at this time imperatively demanded by all opponents of the 'spoils' system of State government." This is high praise, coming as it does from a friend of the opposite party; but the *Ledger* is no less hearty in its commendation of the platform which the Convention adopted, saying that the resolutions on the "condition of our State revenue and State treasury laws," and on the "discreditable practices under them in the Auditor-General's and State Treasury Departments, which have scandalized our commonwealth everywhere, and have cost to the State the probable loss of a million and a half of dollars, are levelled straight at the right targets." Furthermore, the *Ledger* says the proceedings of the Democratic as compared with those of the Republican Convention "were much more to the point, much more business-like and direct to the all-important home subjects now engrossing public attention"; calls the Republican resolutions a "miscellaneous jumble in which our vitally important State affairs are subordinated to puffy personal resolutions and far-off matters that are altogether irrelevant to State exigencies"; denounces the Republican resolutions upon the Revenue and Treasury exposures as "half-hearted and halting expressions," and closes by saying:

"It is indispensably necessary that the 'spoils' system shall be struck by a crushing defeat in Pennsylvania. It is for the voters of the State now to judge—now that the issue is joined as to the deliverances in the resolutions of both Conventions—which party and which nominees are most likely to strike the blow that will defeat and stamp out the system. Is it the organization that shows a disposition to confuse and belittle the vital issues in the State canvass—or is it that opposing party which goes at the important work in the clearest, most direct, earnest, and energetic way?"

The special Legislative Committee which is investigating the affairs of the State Treasury of Pennsylvania is having much difficulty in commanding the presence at its sessions of the most desirable witnesses. No sooner was it known that the Committee was to begin its work than all the ex-Treasurers still in the flesh hastened to leave the State, and many minor officials who had served with them in the Treasury followed their example. One went to Canada, one to Milwaukee, and another, Matt Quay, went to Atlantic City. As all other Treasurers of recent years are dead, the Committee is left practically at a standstill. It is their intention to serve a subpœna upon Quay, and thus give him an opportunity to obey it or to decline to obey it as he sees fit. If the Committee could get him on the stand to give a full account of his Treasury transactions, and then could get Senator Cameron and Mr. Wayne MacVeagh to follow him, we should have at last the whole truth about this most interesting subject. If Quay declines to take the stand, as there is every reason to believe he will, we suggest to the Committee that they begin with Senator Cameron or Mr. MacVeagh. What they should testify would be likely to make Quay leave Atlantic City either for the witness stand or some other point more distant from Pennsylvania.

To celebrate Labor by compelling people to be idle who would prefer to work, is one of the notable victories achieved in recent years by the office-holders in the labor unions coöperating with the office-seekers in politics. If this compulsory idleness on the first Monday of September were limited to those who voluntarily put themselves under the rules of the labor unions, it would not be for others to complain; but a legal holiday has the virtue of imposing idleness upon a large part of the community who are quite outside the jurisdiction of Master Workmen and walking-delegates. The first Monday of September became a legal holiday in this State in 1887, at the time when boycotting was rampant and when Powderly was a great man. That was a time when politicians were most industriously coddling Labor, and when Gov. Hill was urging the necessity of a fair day's wages for a fair day's work. It was a pendant and consequence of this great maxim that the laboring man should have a day of rest of his own added to the fifty-seven that he already enjoyed in common with the other members of the community. There would have been no harm in this except that there is always a loss in the stoppage of machinery and production. It was only the subtraction of one three-hundred-and-eighth part from the preëxisting force, so far as the producers joined in observing Labor Day by discontinuing labor. But in order to give dignity to labor it was necessary to decree that all bills of exchange, bank checks, and promissory notes falling due on Labor Day should be presentable for acceptance or payment on the next following day, and so forth. We have never made concealment of our opinion that Labor Day is in this particular an impertinence and a nuisance, and that the statute which makes it a legal holiday ought to be repealed. There is no more reason for stopping the payment of checks and drafts on Labor Day than on St. Patrick's Day or St. Vitus's Day.

A very destructive criticism of the recent census report upon pauperism appears in the Springfield *Republican*. The most striking feature of this criticism is the fact, which is very plainly brought out, that the Census Bureau could have avoided the worst of its blunders by making use of information that is accessible to every one. Thus, in Massachusetts the Census Bureau reports 4,725 paupers in June, 1890, while the average for the year is given by the State authorities at 5,759, and there is no such falling off in June as to make these figures reconcilable. In that month the United States discovered 1,591 persons who were in receipt of outdoor relief, but the State found that on the 1st of July this number was 14,800. The average number of the poor receiving outdoor relief in midsummer has been for the last ten years about 14,000. Turning to New York, we find that according to the census there were 2,032 outdoor poor in a population of nearly 6,000 000, while the amount expended for their relief was $571,000, which would be five times what the relief of such a number should cost. It is probable, therefore, that the number is nearer 10,000 than 2,000. In Ohio, the census gives only 553 outdoor poor, yet the amount expended for their support is greater than in New York, and would amount to about $1,000 per head. Pennsylvania had, according to the census, only 2,000 poor of this class, but according to the State authorities this number should be 23,000. The estimate of Mr. F. B. Sanborn is that the average number of poor in the United States receiving outdoor aid from the public at any one time is not less than 250,000. If the rate in Massachusetts prevailed elsewhere, this number would be 450,000. The cost of this relief is perhaps $10,000,000 a year, while that of paupers in almshouses and asylums is probably $15,000,000 additional. While pointing out the disgraceful blunders of the census, we will add a complaint that comes from Maryland. The Baltimore *Sun* calls attention to the fact that Census Bulletin No. 104 gives the assessed value of property in Maryland in 1880 at $497,000,000 and in 1890 as $482,000,000, or a decrease of $15,000,000. But the report of the Comptroller of the State shows that the assessed value was not $497,000,000 but $459,000,000 in 1880, so that instead of decreasing $15,000,000 it has increased about $23,000,000. We consider, however, that an error no greater than this must be reckoned as substantial accuracy in the case of the present census

---

The excellent gentlemen who made their arguments against Sunday opening before the directors of the World's Fair last Thursday, are probably aware that they spoke for a sentiment and a generation that have passed away. There is no better way of showing this than by comparing the form and manner of their appeals with the methods used fifty years ago. The Illinois Revised Statutes contain Sunday legislation still in force nominally, though no longer really enforced, which mostly dates from about 1845. It provides a fine of $25 for "whoever disturbs the peace and good order of society . . . by any amusement or diversion on Sunday." Lest this might prove too vague and general, another law threatened with a similar fine any one guilty on Sunday of "any noise, rout, or amusement . . . whereby the peace of any private family may be disturbed." Now, why did not the Sabbath Union go to Chicago, point to these laws, and tell the directors that they must conform to them? Simply because those laws, and the sentiment which led to their enactment, and which could alone secure their enforcement, are obsolete. Consequently, the delegates appealed not to the law-abiding principles, but to the religious feelings, of the directors. But if the legal view of the proper observance of Sunday has undergone sweeping changes in the last half century, so has the religious view. There are religious, or at least ecclesiastical, laws on the subject of

Sunday observance which are just as obsolete as the civil laws relating to the same matter. We observe that two at least of the delegates and speakers were distinguished Presbyterian divines. They are therefore fully cognizant of the fact that the Presbyterian laws governing Sunday observance are not enforced, and cannot be enforced, in the case of great numbers of Presbyterian church-members. Again and again has the General Assembly drawn attention to these church laws and their continued violation by those subject to them; but nothing is ever done about it. The laws remain nominally in force, but, like their civil analogues, are dead letters. A similar state of things exists in other churches. In fact, it is perfectly idle to talk of the dreadful things which will happen if we give up "the Sunday of our fathers." We have given it up already. It sprang from and was supported by a sentiment which, in Church and State alike, has vanished.

The recent achievement of the Canadian Pacific and New York Central Railroads in transporting the Japan mail deserves notice. One of the steamers of the Canadian Pacific Line left Yokohama on the 19th of August and reached Victoria, British Columbia, on the 29th, covering a distance of some 3,900 miles in less than ten days. Upon her arrival after this remarkably quick passage, the officers of the Canadian Pacific Road determined to make corresponding speed on land, and deliver the mail to the *City of New York*, which was to leave this port at five o'clock on the morning of September 2. A special train was at once made up at Vancouver, and made the run to Brockville on the St. Lawrence River, a distance of 2,803 miles, in eighty hours and twenty minutes, or, allowing for the difference in time, in seventy-seven hours and twenty minutes. A delay seems to have taken place here, as it was reported that the Canadian Pacific train was several hours late, which, if true, would have rendered the proposed feat impossible; but, after the New York Central train started, it bravely made up for lost time. The schedule time for the run between Utica and Albany, a distance of ninety-five miles, was 105 minutes, but the run was actually made in 90 minutes, probably the highest speed ever attained in this country for so long a distance. The time between Albany and New York was two hours and forty-one minutes, an average speed of 53.6 miles an hour, and the mail was finally delivered on the steamer only ten minutes after her regular time of sailing. The average speed over the whole length of the Canadian Pacific, including all stops and delays, was 36.3 miles an hour, and the reduction of the regular time between Japan and England was ten days. By the *City of New York* the mail was delivered in Liverpool in twenty days after leaving Yokohama.

The depths of the wisdom of the English common law appear sometimes to the mind of the laity to be unfathomable. Such is probably, at least, the opinion of a lady of Enfield, who supposed herself to be the owner of a jackdaw, but who discovered that her title was only that of precarious possession. She allowed the bird his liberty for a few minutes, and he, true to the nature attributed to him in common parlance, stole away, and was captured and sold in "market overt" to a purchaser who declined, when the bird was found in his possession, to relinquish him. His former possessor called the law to her aid, but the law, through the Enfield magistrates, declared its inability to respond. The law protects persons and property; but the jackdaw was evidently not a person, and it was equally clear, according to the Court, that it was not property. Had the jackdaw been a cat or a dog it would have been different, or had it been, like the parrot, of foreign birth, it might have attained the dignity of a chattel. But, being only a native wild bird, this character flies back to it as soon as it flies from captivity. Although, therefore, the present possessor of the jackdaw has no title to him, yet he has the bird, and there is no way known to the law of dispossessing him. If the former possessor should entice the bird back to herself, she in turn would illustrate the maxim, *beati possidentes*. But unless she succeeds in this undertaking, she will probably repeat for the rest of her days that hasty and irreverent speech of Mr. Bumble, "The Law is a Ass."

One section of the new Mexican tariff, to go into effect on November 1, relates to duties within the so-called Free Zone. The reasons for the establishment and continuance of this anomalous customs territory, about ten miles wide and running along the entire Mexican-American frontier, were fully set forth by Minister Romero, in a communication to Secretary Bayard, early in 1888. It was about that time that Senator Coke and Congressman Lanham complained of the encouragement to smuggling offered by the Free Zone, and took steps to induce our Government to urge its abolition on Mexico. Their charge was, that large quantities of goods imported from Europe were transported in bond to Mexican territory, and then smuggled back over the border to be sold in the United States. The Mexican Minister admitted that a process of the kind might be carried on to some extent, though he forcibly argued that the Mexican Treasury must suffer far more than ours from the contraband trade. He went on to show that the Free Zone was a direct result of the war with this country, as it would have been impossible to support a population on the Mexican side of the new dividing line agreed upon in 1848, unless some way could be devised of equalizing prices for the necessaries of life on the two banks of the Rio Grande. The device adopted has been forced on the Mexican Government at the distinct expense of the customs revenue. The announcement that goods imported into the Free Zone are hereafter to pay 10 per cent. duty, shows the growing strength of the central Government, as well as its desire to make the most of its sources of income.

Republican institutions in Brazil continue to work with a good deal of friction. The Congress has been in session over two months, but has practically done nothing, to the great impatience and disgust of the people. The Opposition lay all the blame on the Government, alleging that it does not furnish the Congress with sufficient information to enable it to legislate properly, and that it is bent on bringing representative government into contempt so as to justify the Administration in encroaching upon the sphere assigned to Congress by the Constitution. They have publicly pointed out and denounced several such acts of encroachment on the part of President Fonseca. Indeed, many vehement speeches against him and his ministers have been made in the Senate. What appears to have angered him most was the statement made by Admiral Custodio de Mello, that Fonseca was at one time disposed to abandon the soldiers at the time of the revolution, and, but for the Admiral's remonstrances, would have done so. The President has a mouthpiece in the Senate in the person of his brother, who made a violent reply to the speeches of Fonseca's enemies. Some of them, he said, were criminals who had found their way into Congress; others were debauchees; some merely buffoons; while still others were irresponsible epileptics and nervous wrecks. This is not exactly conciliatory language, and the bad impression made by it was heightened by the speaker's introduction, on July 22, of an amendment to the Constitution providing for the election of Representatives and Senators alike by the State Legislatures, each State to be entitled to the same number.

Rumors of the inclusion of Spain in the Franco-Russian good understanding have been propagated in Paris, and *Le Matin* has triumphantly given it out that France will soon have a Triple Alliance of her own. Some color has been given the reports by meetings of prominent Spaniards and Russians at Biarritz. The Spanish Premier was summering there, and, when his Minister for Foreign Affairs joined him, there was thought to be something in the wind. Suspicions were greatly heightened when the Russian Minister to France dropped in upon the pair. Still, it might easily have been that here was but a coincidence, had not the subsequent announcement been made that the Grand Duke Vladimir was to pay the Spanish Queen-Regent a ceremonious visit at San Sebastian. When it was further added that her Majesty had ordered the Minister of War to be present at the interview, the gossips were set wild. It is hard to say how much there may be in it, but it seems scarcely possible that anything more is intended than a bit of agreeable flattery to Spain, in the hope of winning her good will. Spanish pride would be stimulated by an invitation to enter the field of European alliances, but her serious financial embarrassment would remain a powerful argument in favor of her previous policy of strict neutrality.

RESPONSIBILITY FOR THE STANDARD OF VALUE.

THE Republicans are perhaps at present in a little better position than the Democrats as regards the money question. It is true that the Senate, which is Republican, is for free silver coinage, but the Democratic House is also in favor of it, while President Harrison has intimated that he will veto a free-coinage measure if passed. The balance is therefore slightly in favor of the Republicans, especially since the blunder made by the Ohio Democrats in framing their platform—a blunder that was, under the circumstances, almost worse than a crime, for it enables the Republicans to appeal for votes to those who believe in honest money, and will enable them to boast, if they are victorious, that they won on the issue of the McKinley tariff. On the other hand, if the Democrats succeed, it may be disastrous for them in the national contest, for the silver-men will maintain that free coinage has shown itself to be a winning cry in Ohio, and will insist upon its being made a national issue.

The virtue of the Republicans, however, exceeds that of the Democrats in such small degree that any boasting upon their part is at present uncalled for. The entire responsibility for the fluctuations in the value and amount of our money belongs with them. The Democrats have not had full control of the Government at any one time for thirty years. They have sometimes been able to prevent the passage of Republican measures, but they have not been able to carry any of their own against Republican opposition. Thus the entire financial system and policy of the nation is the work of the Republican party. Traditionally, the Democratic party is opposed to national banks and in favor of hard money. It never admitted the doctrine that it was the function of Government to supply money to its citizens, in any other sense than that coinage was a necessary duty of Government; and it is committed by all its principles and most of its precedents against the doctrine that Government has any right, constitutional or otherwise, to compel men who have loaned gold on a contract for its repayment to receive paper promises-to-pay in satisfaction of their loans. This is the doctrine of Republican Congresses, Republican Administrations, and the Republican Supreme Court—at first adopted with an apology, as a yielding to the imperative necessity of national self-preservation, but more recently announced as a prerogative inhering in our Government, and to be exercised at its discretion in peace as well as in war.

Such principles and a corresponding policy necessarily impress themselves upon the thoughts and appear in the habits of the community. The Government comes to be looked upon as the creator of value, and as having unlimited resources for the production of money. The Treasury Department not long since prepared a statement of the amount of money of all kinds in circulation in this country at different times since 1860. We have no intention of endorsing the accuracy of this statement, but it serves to illustrate the situation. In 1860 the money in circulation was $13.85 for each person. On the first of January, 1891, it was $24.10. Since the Government under Republican management has done so much in giving money to the people, is it wonderful that the people should ask it to do more? If it can increase their money from $14 to $24 per caput, why can it not as well make it $50, or even more? There is no answer to this demand from the Republican point of view. The party doctrine, as shown by legislation and judicial decision, is that the amount of money in circulation should be regulated, not by the laws of trade, but by acts of Congress. The extent of the demoralization may be judged from the comment of the New York *Tribune* upon this Treasury statement. "The Democratic party," it says, "after sixteen years' continuous control of the Government, had provided for the people in 1860 a circulation of only *$13.85 for each inhabitant*, whereas the present circulation is $23.57, and it has been about one-half greater during all the period since the war, in proportion to population, than it was at any time when the Democratic party controlled the Government."

The idea of the Democratic party of the *ante-bellum* period being engaged in providing circulation for the people is enough to rouse the statesmen of that era from their graves. The fact that such utterances as these come from what might be supposed to be the mouthpiece of conservative Republicanism, so far as finance is concerned, shows how far the country has drifted from sound principles. Nor is this the worst, for the *Tribune* goes on to take credit to the Republican party for the Silver Act of 1890. Our population, it declares, increases about 1,400,000 yearly, while this act increases the supply of money by $54,000,000, so that the increase in currency is at the rate of more than $38 for every additional inhabitant. No one familiar with finance can doubt that in no long time this act will produce a redundant currency, or that when the excess of notes beyond what is needed for business is presented for payment, payment will be demanded in gold rather than silver. If there are too many greenbacks afloat, they will displace gold and gold certificates.

To say of this measure, as is said by Mr. McKinley, that "it will work out the most beneficial results," is to exhibit the effects of financial debauchery. No trust can be placed in the financial wisdom of a party whose leader says of this act:

> "It will tend to advance silver to its old parity with gold. It has already advanced the value of our vast store of silver in the Treasury. It has given great activity to the production of silver. It has furnished an increase of circulation. It has maintained the gold standard while utilizing and benefiting silver to the utmost extent short of demonetizing gold. It is the key to our exalted, almost preëminent, standing in commercial credit and national honor among the nations of the world. It treats both silver and gold, like all other commodities or productions, as subject to the universal rule of being worth what they will bring in the markets of the world. This is the Republican doctrine now proclaimed in our Ohio platform."

If this is the Republican doctrine in the Ohio platform or elsewhere, the country wants none of it. It is not so frank as the claim for free silver coinage, but it tends in the same direction, and it contains as much mischievous folly and falsehood as can be packed into so many words. It is enough to make credible the *Commercial Bulletin's* report from Washington that the Republicans have agreed upon a measure for the free coinage of all the silver produced in American mines, and that the President will approve such a measure. These wretched attempts to ride two horses can have but one result, which will certainly not be one to boast of. As Major Beatty, a leading Republican of Ohio, who is not running for office, observed: "If the short dollar is a good thing, it would be better to reach it at a bound than to go to it by stages. If bad, the sooner we are confronted by its disastrous effects, the more speedily we shall abandon it and place ourselves upon a solid and sensible business footing." Continuing, Major Beatty said very truly:

> "The platform that Maj. McKinley endorses, and which he endeavors to maintain and uphold, proposes to issue 5,000,000 eighty-cent dollars per month, or 60,000,000 a year. This means 600,000,000 of short dollars in ten years. Therefore, when, in one breath, he prates about paying honest money to soldiers, and in the next advocates the issue of 60,000,000 of eighty-cent dollars per annum, the most he can say truthfully is that he don't propose to give the country quite as many short dollars as some other fellow. But the other fellow may very pertinently reply that if we are to have short dollars at all, the more we can get of them the better, and it strikes me that the other fellow, whoever he may be, would have the best of the argument."

Responsibility for the standard of value is, next to the national defence against invasion, the highest responsibility that can attach to a government. Like the national defence, it rests with the party in power. It will be upon the Republicans this winter and next. They have the Executive and the Senate. If they cannot hold their own members in line, they will be responsible for the defection. If the present law brings us to the silver standard, they will be responsible for the result. Meanwhile, let us hope that both parties will adhere to the tariff issue until it is disposed of. Both have been working upon it four years and saying that they asked nothing but a clear battlefield for it in 1892. It would be vastly strange if both should abandon it for something else just as the field is reached.

UNION PACIFIC AFFAIRS.

THE affairs of the Union Pacific are at present both complicated and interesting. The transfer to the floating-debt syndicate of all the bonds and stocks owned by the Union Pacific Company changes the circumstances of that corporation materially, and raises questions which have not received adequate discussion. The Union Pacific system consists of two main lines of road through Nebraska and Kansas, together with a number of connections or branches built in its interest as feeders of the main lines.

As evidences of moneys advanced to these branch lines and for the purpose of control, the Union Pacific Railway received from its auxiliary lines, and held until lately in its treasury, a majority of their stocks and a large portion of their bonds. These subsidiary roads differ greatly among themselves as to their earning capacity, some not earning their operating expenses. Notwithstanding this fact, it is beyond dispute that the auxiliary lines, taking them as a whole, furnish such traffic to the main lines as enables the latter to meet all their yearly obligations. The Investigating Committee of 1887 found that about one-third of the gross earnings of the main lines came from traffic interchanged with these auxiliary roads. If we take two-thirds of the gross earnings in 1890, and assume the ratio of net to gross earnings at a little higher than the actual ratio because of diminished volume of business, it will appear that the income of the main lines last year, excluding branch-line interchanged traffic, would have been enough to pay the interest on prior mortgages, though leaving nothing for the Government and other minor creditors. Practically, therefore, the Union Pacific guarantee of branch-line bonds is equitable, for branch-line interest is earned by the carriage of branch-line traffic. An additional mortgage upon the main lines made in favor of the floating-debt holders would only express the actual situation more sharply, though, of course, such a mortgage would give the syndicate an advantage over the other holders of branch-line bonds.

The proposed loan, gathering up the floating indebtedness, is stated to be $20,000,000, while the official valuation put upon the securities turned over is twice that amount. How the amount necessary to be raised was arrived at has not been made public. If rumor has given one or two items in this sched ule correctly, the amounts necessary to be had have been understated; nor need we be surprised to find the total requirements considerably larger than the sum stated. On the other hand, the valuations put upon the hypothecated bonds are largely based upon continued guarantee and payment on the part of the Union Pacific. What these securities would be worth if the roads covered were separated from the main lines, is a difficult question. The syndicate can rightly protect itself against all contingencies. We may assume, therefore, that the value of the collateral is none too large for the probable loan.

The transaction appears to be legal. The Thurman Act of 1878, section 9, provides "that all sums due to the United States are hereby declared to be a lien upon all the property, estate, rights, and franchises of every description granted by the United States, and also upon all the estate and property, real, personal, and mixed, assets and income, from whatsoever source derived, subject to any lawfully prior and paramount lien, mortgage, or claim. But this section shall not be construed to prevent said companies from using and disposing of any of their property or assets in the ordinary proper and lawful course of their current business, in good faith and for valuable consideration." Under this language it is difficult to see how the Federal Government can object; the utmost that could be alleged would be bad judgment on the part of this or the former management. A year ago the Senate passed a resolution inquiring into Union Pacific guarantees of auxiliary bonds. The Secretary of the Interior replied in substance that so long as the 25 per cent. of net earnings required by the Thurman act was paid by the Company, it was not the business of the Department to inquire further. But while the Thurman act and the rulings of the Department apparently permit this action of the Union Pacific, the practical effect is to take from that corporation and give to the syndicate the control of the branch roads whose traffic interchanged with the Union Pacific alone makes possible any yearly payments to the United States. The security for the Government debt is impaired by this practical sale of the branch lines, or, rather, it would be more exact to say, in consequence of the accumulation of the large floating debt. And this is true whether the old management of the Union Pacific was wise or not in its use of the borrowed money. No more value can be got out of the Union Pacific system than there is in it, no matter whether the creditor be the United States or any private capitalist. It is, therefore, not easy to see what steps the Government legitimately can take, even granting the impairment of its security.

The debt due to the United States comes to maturity in instalments, the first in November, 1895. All impartial students of this problem are agreed that the Government ought, in its own interest, to make a fair compromise with its debtors, the Pacific roads; and also that the terms of the compromise ought to be arranged without delay, since, for financial adjustments of such magnitude, time is required. A serious problem of adjustment of conflicting interests is likely to arise in any case. Let us suppose for a moment that Farmers' Alliances or private blackmailers defeat any compromise, and that the Government must foreclose. With the outlying parts of the system in other hands, the Government could not recover its sixty millions. On the other hand, the position of the owners of the auxiliary lines would not be easy. The Federal Government, once in possession of the main lines, would be a strong party in any negotiation. The United States could not be bullied like an ordinary creditor. What could the auxiliary roads do, if the Government demanded severe terms in any reorganization? These branch roads without the main lines would be like limbs without a body, while for the owners of these lines to build their own connections to the Missouri River would be almost an impossible task. They might, and doubtless would, try to divide up the feeders among other roads, though the most natural course would be such an arrangement with the Government as would lead to the formation of a new corporation in which all interests could be fairly adjusted. In view of such a possibility, it will be seen that the collateral deposited with the syndicate is not larger than is warranted by the risk. So, whether Congress agrees upon a compromise as to the Union Pacific debt to the United States, or whether foreclosure follows, the practical result is the same: the creditor cannot recover the full amount of his money. It is this fact which is brought into prominence by the hypothecation of all the stocks and bonds of branch and auxiliary lines formerly held by the Union Pacific, in order to keep the system intact.

THE RATE OF PROFIT.

THAT it would be upon many accounts advantageous were the rate at which capital increases in production definitely ascertained, does not admit of doubt. Very many questions that cannot now be answered would be at once and finally disposed of. Many exalted anticipations would be shown to be hopelessly unattainable, and many vague apprehensions would be allayed. If it still appeared that the existing constitution of things worked as much injustice as is represented by some agitators, the way would be opened for the adoption of measures of reform such as common sense could accept; and if it appeared conclusively that the present system results in a reasonable approximation to justice, agitation would soon expire for lack of material whereon to feed. The prodigious difficulty of an investigation intended to determine accurately the rate of profit prevailing in any society has generally deterred economists from undertaking it; but where they have feared to tread, the Massachusetts Bureau of Statistics rushes in, and returns with a solution which it offers with confidence to the world. Those who share that confidence may now feel that they know the profit made by Massachusetts manufacturers upon every sale of $100 worth of goods to be on the average $3.90, or $4.83 upon every $100 of capital invested.

Upon this basis, with the aid of previous investigations made by the same Bureau, a series of tables is constructed containing some suggestive comparisons. On an average, the workmen, of both sexes and all ages, employed by individuals and firms engaged in manufactures receive for their wages $362.23 each per annum, while their employers receive for both salaries and profits $517 each. In the case of corporations, the workmen get average wages of $333.22, while the stockholders receive an average return upon their investments of $379. If the employers and stockholders were entirely deprived of their net profits, and these profits were all added to wages, the result would be an average increase of $57.55, or 16.40 per cent. upon the present rate. If net profits and wages were added together and divided equally between workmen and employers, the average amount received would be $349.47. With such a division, the average receipts of workmen would be $1.55 less than they receive under the present system of employment. Even if no allowance were made

for interest on money invested and borrowed, for depreciation in the value of machinery and plant, for selling expenses, or for bad debts, and all the gross profits were then divided among the workmen, their earnings would be increased by but little more than a half of their present amount.

It is obvious that these results are subversive of the fabric of the socialist vision. The evidence is overwhelming that no government can carry on any productive enterprise at anything like the cost of private individuals. The expense under Government direction is frequently twice what it is under individual management, and we venture to say that, even under the most efficient State control, this expense is generally at least 25 per cent. greater than that incurred in the best-managed private concerns. It follows, therefore, that the attempt on the part of the State to engage in productive undertakings would be followed by speedy disaster. A loss of 5 per cent. upon the present returns would extinguish profit, and a loss of 10 per cent. would mean ruin. If all industries were monopolized by the State, it would very soon become bankrupt, for it would be deprived of its present revenue from taxation, while its expenses would be greater than its receipts. Whatever alleviation might be temporarily obtained by borrowing would be followed by more complete collapse.

While the calculations furnished by this Bureau are well fitted for the refutation of the Socialists, or Nationalists, as they style themselves in Massachusetts, and tend to cover them with confusion, we are unable to attach much value to them for other purposes. We shall briefly point out some of the reasons why we cannot regard them as trustworthy. In the first place, as we understand the report, which is exceedingly confused and repetitious, the figures as to the total number of manufactories in the State, their capital and product, are taken from the census of 1885, while many of the other data are derived from inquiries made during the past year. It is obvious that the changes which have taken place during five or six years may have been sufficient to cause a considerable percentage of error. In the second place, of the whole number of establishments in the State, over 57 per cent., employing about 25 per cent. of the capital supposed to be invested in 1885, made no return at all. In the third place, there is evidence that the returns which were made are not to be depended upon. The considerable industry embraced under the head "Print Works, Dye Works, and Bleacheries," employing a capital of over $16,000,000, reported a net loss amounting to 38.54 per cent. of the selling price of their products, and equivalent to 36.25 per cent. of the capital invested. This incredible return is explained by the Bureau as due to the fact that some of the establishments did not make their statements upon correct principles, and accordingly the Bureau undertakes to "rehabilitate," to use its own expression, this industry. But it is unreasonable to expect that science should accept statistics that have to be "rehabilitated" by the arbitrary act of the bureau that collects them. We cannot tell how many of these establishments made correct returns and how many made incorrect ones, and we therefore cannot tell whether the correction made by the Bureau, if proper in amount, is proper also in degree. Moreover, there are several other industries in which a loss is sustained instead of a profit being earned, and we cannot be sure that some wrong principle may not have been adopted by these manufacturers in making their returns. The same criticism applies to the 762 establishments that report no profits, although they have nearly one-fourth of the capital of those reporting profits.

A more serious criticism relates to the allowance of interest upon quick capital as an item of expense, while no allowance is made for rent proper, or, if we understand the tables, for interest upon capital invested in buildings and machinery. Thus, if an establishment had a building worth $200,000 erected upon land worth $50,000, containing machinery worth $250,000, and had also a cash capital of $500,000, the Bureau would allow 5 per cent. interest upon the latter item as an expense of production, and would allow no interest at all upon the plant. No useful result can be expected from such a method of keeping accounts. If the proper allowance were made for interest upon fixed capital, it would seem that what the Bureau calls "net profits" would be reduced to about 2 per cent. We venture the opinion that a still further reduction must be made, for the Bureau apparently made no attempt to ascertain the losses due to bad debts and other causes, or to determine the expenses incurred in selling the products of manufacture. It was arbitrarily assumed that these items amount to 5 per cent. of the selling price, but we apprehend that very few establishments escape so easily as this. The expense of selling is frequently as great as that of manufacture. We will not attempt to suggest any figure as a proper allowance to be made, on the average, for bad debts and losses and expenses of sale, because we do not consider that anything is to be gained by striking an average where the conditions vary so much in different lines of business. Business men generally, we believe, think it safe to allow considerably more than 5 per cent.

There are some other respects in which this compilation seems to us defective, but we have said enough to show that it affords no solid basis for economic argument. Great labor has evidently been spent upon the tables and calculations, and much expense has doubtless been incurred by the State, but the figures have no more practical value than those of a school-book. The arithmetical problems may be worked out correctly, but the problems of business are not touched. It is unfortunate that the State of Massachusetts should publish documents that can only excite ridicule in the scientific world, but it seems to be supposed by legislators that any one who can add up a column of figures is a competent statistician. A work of the scope of that of which the results are now before us, would task the abilities of the most thoroughly trained economist. To commit it to such incompetent hands as now direct it is to insure its failure in advance.

THE CANADIAN CENSUS.

THE results of the census of the Dominion of Canada have proved disappointing to the inhabitants of that country. During the last decade, population has increased only about 11½ per cent., while during the previous decade the increase was more than 17 per cent. It had been hoped that the adoption of a protective tariff, and the expenditure of vast sums upon public works, would bring about a great increase both of prosperity and population, but these expectations have not been fulfilled. Such expectations, indeed, seldom are fulfilled, except temporarily. The expenditure of the Dominion in 1867 was $13,500,000. It is now about $37,000,000, while the debt has increased during the last twenty years by $150,000,000 and is now about $237,000,000. The growth of population is not promoted by a policy of this kind, which has charged every family, on the average, with a debt of $250 or $300, and with expenses for the support of Government of from $35 to $40 per annum, while it has decreased the purchasing power of wages by levying protective duties. The Canadians had a capital opportunity to profit by the blunders of the United States, but, instead of seizing it, they were persuaded that they ought to copy these blunders, and their present condition is due to their own folly.

But the comments of some of the newspapers published on this side of the Canada line upon the results of this census may afford comfort to those who look upon the failure of mankind to multiply like rabbits as a calamity. The organs of protection of course could not allude to the fact that our own census showed that the rate of increase of our population had fallen off, except in the most gingerly manner, but they have availed themselves of the Canadian census to pour out their suppressed wisdom. One of them informs its readers that the trouble with Canada was that Sir John Macdonald tried to apply our industrial system to a country where every condition was different. This entire difference of condition is explained by the statement that Canada is not a land of many climates, but only one. That is to say, the climate of Labrador is the same as that of Ontario—much of which is south of the northern part of New England and New York—and that of British Columbia is the same as that of Manitoba. In the same article British Columbia is described as "as fair a country as nature could devise," which may be reconciled with the assertion of uniformity of climate in such way as the reader chooses. The rest of the article is devoted to a statement of the diversities in soil and products between the different provinces. Such a diversity is one of the stock argu-

ments for protection in this country, but the principle does not apply universally. Sir John Macdonald unfortunately had "no conception of the fact that Protection is a policy, not an invariable principle, and that its usefulness depends on a variety of physical and social conditions." The article, it must be admitted, is not very intelligible, but, so far as it has any meaning, it seems to be that protection has checked the increase of population in Canada—a proposition that we have no inclination to dispute.

Another organ declares that decay necessarily awaits Canada unless it is annexed to the United States. It is stated that, "after all its prodigious expenditures to attract population and stimulate trade, it has, in all its broad domains, all told, less population than a single State of the Union extending from the Atlantic to the Pacific." This strange circumstance is thought to prove that symptoms of decrepitude have manifested themselves in Canada "as marked as those which appear in an old and fully developed country." It follows that "real independence and sovereignty and material prosperity" are only to be secured by the Canadians through an incorporation into the United States. Why this change should affect the situation is not explained. Possibly, as the mean temperature of Canada would be raised by being averaged with that of the United States, an improved climate may result which will prevent Canadians from moving South. Of course some relief might be felt if the United States should assume the Canadian debt. But otherwise we do not see how the condition of Canada would be ameliorated unless by throwing down the tariff wall. But if that will be a good thing for all parties when Canada is admitted to the Union, it would be a good thing now; and if all the benefits of annexation can be had by simply removing tariff obstructions, why should Canada be incorporated into the Union? The supply of wisdom available for governing the United States is a little scanty, and if the government of Canada were added to that of our own country, Congress might not be quite equal to the increased burden.

There is nothing to occasion surprise in the movement of population in Canada. The causes that have prevented increase in Maine and New Hampshire and Vermont affect Nova Scotia and Quebec and Ontario. If we look further west, we find a rate of increase in Manitoba and Columbia that would be regarded as enormous were it not compared with the still more rapid increase of North Dakota and Washington. It has been the policy of the Dominion Government to tax the whole country in order to establish great through routes both by rail and water. But it is obvious that the transportation of grain from the region west of Lake Superior through to Liverpool without breaking bulk can have no particular tendency to increase the wealth and population of Nova Scotia, and this is still more true of the transportation of cargoes of tea from Puget Sound to Montreal by rail and thence to England by water. What the people of Canada suffer from is an excess of public in proportion to private works, with all the attendant waste and corruption. But even with a wiser and more economical government, Canada can never contain much more than a fringe of population along its southern border. Climatic considerations are against it. As to annexation, it is enough to say that if Vermont and New Hampshire and Maine and northern New York do not increase in population although they are within the United States, there is no reason why the neighboring regions of Canada should fare differently if annexed. The great crop in all those regions on both sides of the line is men, and men will migrate from places where they are superfluous to those where they are needed.

MR. GLADSTONE AND LORD SALISBURY.

It seems to be generally conceded by the English Tories that the Liberals will come into power at the next general election, which will take place this year or the beginning of next year. This concession is, in fact, so freely made that they have begun to discuss openly what their policy in opposition will be. The hope of Gladstone's death or breakdown, though not wholly abandoned, has lost nearly all its value as a political force. There is every sign that he will hold out at least two years more. Consequently, the contingency of his return to office, with a sufficient majority to pass a Home Rule Bill, has to be discussed as a practical question and provided for somehow.

The situation is for the Tories, from every point of view, very disheartening. Their expectation, after the victory in 1886, was that, even if Gladstone did not disappear from the political arena, the objections to the Home-Rule scheme would grow larger in the minds of the English voters through reflection, and that this hostility to it would be nourished by the effects of Mr. Balfour's "resolute government" in Ireland in promoting material prosperity. The discredit, too, which overtook Parnell, and the shocking dissensions, as they were considered, among the Irish members which followed it, were expected to create disgust and despair about the Irish question generally. The bulk of the Irish voters were expected to cling to Parnell with all his imperfections, and Lord Salisbury advised his supporters to "put their money" on him, that is, to bet that Parnell would carry the day against his colleagues in Parliament with the bulk of the Irish people.

Things, however, have not gone in this way. The trend of English opinion, in so far as indicated by the by-elections, seems to be decidedly in the Gladstonian direction. That is, the voters seem more and more to incline to the opinion that Home Rule is, after all, the only solution of the Irish question. The Balfour policy, whatever it may have done in the way of putting down boycotting, has not sensibly affected the political situation. The Irish voters have abandoned Parnell, showing how little Lord Salisbury understood them, and there is every probability that the Irish party will possess as much strength and be as united in the next Parliament as in this. The statistics of ten years, too, as recently collected and arranged, show that the Balfour policy has had no sensible effect on Irish material prosperity. They show that the stories long current that the political agitation was ruining Ireland, had little foundation. The truth seems to be that Ireland has been prospering steadily for ten years, and in no greater ratio under Balfour than under Morley, and that the alleged close connection between the political agitation and agricultural distress did not exist—or, in other words, that the political agitation had a sentimental as well as a material basis.

What this means is, that there is no likelihood whatever that the Irish question will in the next Parliament have changed its character, for the Irish difficulty, as far as England is concerned, consists, not in anything that takes place in Ireland, but in the presence in the House of Commons of eighty-five members hostile to both English parties, and hostile to the English Crown and Government, and ready at all times, if it suits their purposes, to bring confusion on English legislation. As long as this lasts, the Irish trouble remains, and it is now apparent that Mr. Balfour's policy has not made the smallest contribution to its solution. In fact, there was a certain simplicity in his notion that he was making some progress by the distribution of money in charity in the West, and by promising some sort of local government just as the general election was approaching.

Consequently, the English Conservatives have now to face the question: What shall we do when Gladstone passes another Home-Rule Bill? Lord Salisbury answered this, with his usual indiscretion, by promising to use the House of Lords to defeat it as often as presented, or, in other words, to make the same sort of defence for the Union as the Tories tried to make for the old Constitution against the Reform Bill of 1832. Gladstone was not slow to perceive the advantage which this gave him. The Liberals could hardly enter on the campaign of next year with a better cry than that the Lords were going to resist the popular will, for the Lords are now the very weakest point in the old aristocratic constitution, and a rising against them on a really great occasion might have far more serious consequences than any dissolution of the union with Ireland. Luckily for the Tories, one of the chief Liberal-Unionists, Sir Henry James, here came to the rescue and put a gloss on Lord Salisbury's rash utterance which has made it fairly presentable. What Sir Henry says is, that not only have the by-elections failed clearly to indicate the popular sentiment touching Home Rule, but the general election is likely to fail in the same way, for the reason that in every locality the Irish question will be presented to the voters mixed up inextricably

with a good many English ones of greater or less importance, so that the result will not be an unmistakable popular verdict on this one issue. Therefore, in order to secure such a verdict it will be the duty of the Lords to throw out the bill, and compel Mr. Gladstone to dissolve and go to the country once more, on Home Rule, and on it only. This is a very different thing, of course, from using the House of Lords as a forlorn hope to fight to the last in defence of "the integrity of the Empire," and perish, if need be, in the ruins. But it is none the less a counsel of despair. Should Mr. Gladstone return to power and pass a Home-Rule Bill by any majority over fifty, there can be little doubt that the resistance of the Lords would make the second popular vote on the measure a tremendous burst of enthusiasm for the "Grand Old Man," of whom, somehow, over half the English people cannot be got to take the "Society" view.

ENGLAND'S COAL SUPPLY.

CARDIFF, Wales, August 26, 1891.

THE speculations of Jevons and others a few years ago concerning the impending exhaustion of the coal supply of the British Isles have been revived by two important papers which were read at the meeting, just closed, of the British Association for the Advancement of Science, at Cardiff. The first paper was by Mr. T. Foster Brown upon the present coal resources of the kingdom; the second, by Prof. Boyd Dawkins upon the discovery of new coal fields in southeastern England. Naturally, the second of these served as a partial sedative to the alarm created by the first.

According to Mr. Brown's estimates, there remain now but 16,000,000 of tons of coal in the best and thickest seams existing at a moderate depth below the surface. At the rate of the present and prospective production, these seams will be exhausted within the next fifty years, and the industries of England subsequent to that time will be burdened with the tax of a marked increase of expenditure in obtaining fuel. Already the supply of iron ore is running short, and large quantities are imported from Spain. But this can easily be borne by reason of the constantly increasing facilities for the rapid mining of coal.

The prospect of an enforced economy in the use of coal, even though the evil day is put off for half a century, is one which English economists and statesmen do not like to consider. Already, however, they are recognizing the importance of liquidating their public debt while the days of prosperity last, and of preparing for a respectable, if not for a prosperous old age. It is, of course, some consolation to reflect upon the possibility of unknown forces of nature which may come to their relief. Recent reports of the discovery of vast stores of oil in Peru which can easily be transported to England, are hailed with delight, even though there is not much encouragement to look for oil or gas in their own territory. But the prospect of indefinitely lengthening the period of national prosperity through the discovery of new coal-fields in England itself is regarded with the greatest satisfaction.

As long ago as 1826, Buckland and Conybeare recognized the possibility that the belt of coal-fields on the Continent, extending from Düsseldorf on the Rhine through Liége and Charleroi in southern Belgium, into northern France, might continue under the Straits of Dover and reach to the fields of South Wales. Little progress, however, was made towards positive establishment of the fact until five years ago, when Prof. Dawkins persuaded the managers of the Southeastern Railway to begin a boring at Dover for the purpose of testing the theory. In beginning this work the company had before them the discouraging fact that in 1872 another company had sunk a boring at Netherfield, near Battle, in Sussex, with unfavorable results, having penetrated the rocks to a depth of 1,904 feet without reaching carboniferous strata. But the new place further north chosen for experiment was thought to be upon the other side of a fault in the rocks having great extension in an east and west direction, while a boring at Calais, in France, had already proved that on that side of the Channel the coal measures were reached at a depth of about 1,100 feet.

To their great satisfaction, the coal measures were struck in the new boring at Shakspere's Cliff, at a depth of 1,000 feet, and a seam of coal was reached at a depth of 1,140 feet. Five other seams were struck in the next 100 yards, some of them being two and one-half feet thick. In all, ten feet of coal have been penetrated by the boring so far accomplished. The prospect of reaching many other and thicker seams at lower depths is thought to be good, since in Belgium the strata contain a hundred seams of coal, with a total thickness of more than 200 feet. The coal obtained at Dover is also of good quality. Nor is the depth at which the coal is likely to be found any serious objection. Many British coal fields are already worked with profit at a depth of 3,000 feet, while some of the pits in Belgium are 4,000 feet deep. With the rapid improvements now making in the use of compressed air to serve the double purpose of working the machinery and of securing ventilation, still greater depths may doubtless be worked with safety and profit.

The extent of this coal field underlying southeastern England is, of course, as yet unknown. Not unlikely, however, it may prove larger than all the other fields of England put together. A serious hindrance to further exploration exists in the difficulty of securing such rights to the coal that those who are at the expense of the experimental work shall reap a due proportion of the benefit. According to English law, the owner of the surface of the land owns everything down to the centre of the globe, so that a company which should demonstrate the existence of coal over that extensive region would confer an inestimable boon upon the land-owners without reaping any adequate advantage to themselves. Doubtless this difficulty will in due time be removed, and the great question of an extensive and profitable coal field in southeastern England be definitely settled.

But already the prospect is so bright as greatly to reassure the public mind. In glowing phrases Prof. Dawkins concludes:

"It is not improbable that the southeastern coal field will be worked in the immediate future, and that centres of industry similar to Liége and Cardiff will spring up in time in the secluded region of Kent. The iron fields of the Wealden area were largely worked down to the days of Elizabeth, until the fuel necessary for smelting the ore was almost exhausted, and the ironmasters were compelled to transplant their industry elsewhere, and more especially to North Wales. It would be a singular and not impossible revolution of the wheel of time if again the lost industry should be restored to southeastern England through the discovery of the coal measures which lie buried under the North Downs. Whether, however, this happens or not, the discovery of the southeastern coal field will lead to the discovery of other fields which are concealed by the newer rocks in England, and will postpone the evil day when our coal will become exhausted, and when the industries depending upon it will depart to new regions. It is likely to upset all the calculations of the duration of our coal fields which have excited so much attention."

In view, however, of the uncertainty still hanging over the existence of these fields, the more hopeful line of encouragement to the English public would seem to lie in the prospect that the legislators of the United States will continue their policy of promoting high prices in America through protective legislation. If only this policy is continued, the indirect tax upon manufactured articles there will fully keep pace with the increased future cost of English coal, and enable the British manufacturers continually to drive the American out of all foreign markets, and limit him to trade with his own countrymen. The American press scarcely gives the Briton due credit for his sincerity in wishing well to the McKinley tariff. Some industries are temporarily disturbed, but, on the whole, a real advantage is given him in the markets of the world. G. FREDERICK WRIGHT.

Correspondence.

THE PROTECTION OF SILVER.

TO THE EDITOR OF THE NATION:

SIR: In quoting the curious phrases of the resolutions as to silver adopted by the Pennsylvania Republicans, you charitably assume that they did not understand the subject; but is it not probable that at least Mr. Quay thought that the resolutions were well adapted to help on the plan he had in view?

Here is a new article to be protected, that was neglected by the McKinley Bill. To be sure, silver has been exported for years, so that under natural and ordinary conditions we control the American market and compete in foreign markets with success, and we produce silver under most favorable circumstances and almost shamefully cheap (and they say we ought not to have cheap things); but, as the law now stands, American silver has no monopoly. Therefore, the quack remedy of protection must be given to it.

"Protection" now definitely means *exclusion*. If competing goods are not excluded, a manufacturer is not "protected." If cheap and good wool comes here from Australia or South America, the Ohio shepherd is not "protected." If excellent cheap woollen goods come in from Germany, the manufacturer in America, with his foreign machinery and foreign-born operatives, using largely foreign wool, is not "protected"; and the German farmer is not "protected" unless a duty is put on American grain and pork high enough to enable him to charge starvation prices to all German consumers. (What a chance for the exchange of two damaging restrictions for two benefits for two great nations!)

If a duty is put on foreign silver, and if smuggling can be prevented, the American silver-miners will have a monopoly. You understand the interest of the silver-miners in the matter, and Mr. Quay no doubt understands it and also its value in politics. The "protected" textile manufacturers who took such an interest in the election of 1888 and in the tariff of 1890 are rather sore over the fall in the prices of their goods that has been the sequence, if not the consequence, of the McKinley Bill, and they are perhaps not very ready to offer their money for the election of '92. Might not the silver-miners put up the

money needed for the Republican canvass in 1892, if they were promised a stiff tariff duty on foreign silver and the free coinage of all of *their* silver? This plan would enable the President to veto a bill for the general free coinage of silver, and at the same time lose no solid silver votes, and another full-grown American infant with an unbounded appetite might be "protected."

The monstrous tariff duties of the McKinley Bill were not really to the taste of the Republican party, but they were, under the circumstances, useful and even necessary in carrying the election of 1888. In the same way the free coinage of silver, or even of American silver only, is not according to the natural and sound principles of the Republican party, but what else has it to rely upon for its success in '92?

But the people who have been excited by the silver-miners to cry for free coinage of silver may not be pleased to have the new paper money restricted to an amount covered by the American product of silver alone, because they want the tens of thousands of millions of silver of the world to float in, and a tariff duty would keep those millions out. To be sure this deluge would be like the salt water of the ocean; and though it might drown them, it would not serve any good purpose in giving them a new supply of fresh water in the times when they were dry and thirsty, or in helping them to "move the crops." They are neglecting and rejecting the safer and more effective means for these purposes and needs.

Yours truly, ARTHUR T. LYMAN.

BOSTON, August 31, 1891.

CIRCUMLOCUTION.

TO THE EDITOR OF THE NATION:

SIR: This time it is Lieut. Foote of Washington who furnishes the argument. Because a lobby of pension agents has organized an army of followers to plunder the Treasury by manipulation of the committees, therefore Lieut. Foote proposes to organize another army of resistants to prevent the Treasury from being plundered. But what chance has his "voluntary and unpaid labor" against those who are working under the direct stimulus of enormous gain? Then, too, it must be remembered that the work has to be done by exactly the same methods. There is no chance for public and manly resistance in open Congress. Intrigue with committees, button-holing of members, log-rolling by personal and party considerations in the laborious accumulation of vote by vote—these are the only means available, whether for attack or defence. The scheme is so hopeless as to do much more credit to Lieut. Foote's loyalty and patriotism than to his sense of proportion of means to ends.

Instead of trying to raise a siege by a regular army, through bands of half-hearted and disorganized guerillas from the outside, why not organize the defence from inside the fortress? I repeat once more—*eheu! quousque tandem?*—that there is in Congress no official defender of the Treasury, nobody to lead the national resistance against the gangs of robbers. There can be but one such defender, and that is the Secretary of the Treasury. If he stood up in Congress, ready at all times, upon demand of party or individual opposition, to set forth to the whole country the situation and prospects of the Treasury, we should begin to find out whether the people or the Grand Army (of what?) is to rule this country. Every man who does not wish to see another pension bill equal to or bigger than the last, ought to throw his influence in behalf of giving to the Cabinet, or at least the Secretary of the Treasury, a seat in Congress. If this reasoning is sound, may it not fairly call for the postponement or subordination of all other political issues? If it is not, I challenge any man in the United States to show its weak point. G. B.

BOSTON, September 5, 1891.

NEWSPAPER PHILOLOGY.

TO THE EDITOR OF THE NATION:

SIR: As I not long ago showed, the term *scientist* has been unwarrantably assailed, by the London *Daily News*, as an Americanism. And likewise an Americanism, it asserts, in its issue for to-day, is *reliable*. From its leading article on the late Mr. J. R. Lowell I quote the following passage:

"The tone of mind observable in his Essay on the Condescension of Foreigners, a readiness to believe that people were inclined to patronise America—as, in his youth, perhaps they were—made him rather too fond of setting up for an authority on the English language. He defended such Americanisms as *reliable*, and the plural of *one*, with much spirit and ability. He was, doubtless, often right. Yet there were those who could not help thinking that, if he had not been an American, he would have been less positive, and cared less about such matters."

That *reliable* is not to be ranked among Americanisms the readers of the *Nation* must be well aware; it having again and again been pointed out, in its pages, that the word was used by an Englishman early in the seventeenth century, and that Coleridge used it in 1800, as he often did afterwards. Nor is there any proof of its having been, for the last fifty years, any more a favorite with Americans than with Britons. All along, during that period, few writers, even among the most eminent, have found it objectionable; and this fact is its sufficient defence. Still, if Mr. Lowell "defended" it, where did he do so? Far from approving the expression, he has written, in the course of eulogizing Mr. Emerson:

"For choice and pith of language, he belongs to a better age than ours, and might rub shoulders with Fuller and Browne, though he does use that abominable word *reliable*." *My Study Windows* (London ed. of 1871), p. 276.

With respect to "the plural of *one*," as classifiable with Americanisms, the writer in the *Daily News* leaves his meaning altogether in the air. The vagaries of the ignorant, in point of language, whether on one side of the Atlantic or on the other, are beyond all count. We may be sure, however, that nothing of the sort had a professed advocate in Mr. Lowell. According to what has been cited, in "trees, large *ones* and small *ones*," there is a departure from normal English. Yet there is not; and "trees, large and small," if, on the score of elegance and terseness, preferable, is only slightly preferable. Again, "these are the *ones* I choose" is a locution just as common in England as in America. And is not "little *ones*" good, for "children"? In what case, then, is "the plural of *one*" at variance with accepted English usage?

Your obedient servant,

F. H.

MARLESFORD, ENGLAND, August 13, 1891.

'THE BEST BOOKS' AGAIN.

TO THE EDITOR OF THE NATION:

SIR: To the somewhat extended list of typographical errors corrected in your review of Mr. Sonnenschein's 'The Best Books,' permit me to add a few of a rather more serious character, the responsibility for which can hardly be laid at the door of the printer. In several cases it seems as though notes which had been made for one author were transferred bodily to the account of another, in a fashion likely to bewilder one who does not happen to be familiar with the particular branch of literature in question. For instance, on page 750, our genial humorist Mr. Clemens, who has already received full credit in another place for his own books, is also credited with all those of Mr. Bret Harte. I noted several other errors of the same sort which I am not able to refer to at present. There is also a general lack of that accuracy in quoting titles which is all but essential in a work of this kind. On page 749 Mr. Howells's novel figures as 'The Lady of Aroostook,' which is nonsense; and, three titles below, the missing article reappears, oddly enough, in a story by Bret Harte, which is metamorphosed into 'Luck of *the* Roaring Camp.' Of blunders in names there is no end. Balzac's 'César Birotteau' is hardly recognizable as 'César Bittoreau.' Such petty distinctions as that between Matthews and Mathews are completely ignored. To dwell on typographical errors is hardly worth while, however, where there is hardly a page that is free from them. In conclusion, attention should be called to the very common mistake of calling Maarten Maartens's novel, 'The Sin of Joost Avelingh,' a translation from the Dutch, when, as a matter of fact, it was originally written in English.

F. E. REGAL.

OBERLIN COLLEGE LIBRARY, August 29, 1891.

Notes.

G. P. PUTNAM'S SONS have in press a 'Life of Thomas Paine,' by Moncure D. Conway; the 'Life and Correspondence of George Mason of Virginia,' edited by Kate Mason Rowland, in two volumes; 'The Renaissance: the Revival of Learning in the Fourteenth and Fifteenth Centuries,' by Philip Schaff, D.D.; 'Julius Cæsar, and the Organization of the Roman Empire,' by W. Warde Fowler; 'A History of Greece,' by Evelyn Abbott; 'Sir Philip Sidney, and the Chivalry of England,' by H. R. Fox-Bourne; 'The Industrial and Commercial Supremacy of England,' lectures by the late J. E. Thorold Rogers, edited by his son, Arthur Rogers; 'The English Language and the English Grammar Treated Historically,' by Samuel Ramsey; 'Economic and Industrial Delusions: A Discussion of the Case for Protection,' by Arthur B. and Henry Farquhar; 'The Evolution of Life; or, Causes of Change in Animal Forms,' by Hubbard Winslow Mitchell, M.D.; 'The Merrimack River, and Other Poems,' by Benjamin W. Ball; 'Parnassus by Rail,' poems by Marion M. Miller; and Pierre Charon's 'Treatise on Wisdom,' paraphrased by Myrtilla H. N. Daly.

Charles Scribner's Sons announce 'The Sabbath in Puritan New England,' by Alice Morse Earl; a Life of the late Prof. Austin Phelps, by his daughter, Mrs. Elizabeth S. P. Ward; 'The Literature of the Old Testament,' by Prof. S. R. Driver, the first volume in the International Theological Library, to be edited by Profs. Charles A. Briggs and S. D. F. Salmond; and a collection of 'Historical Studies,' by Henry Adams.

D. Appleton & Co. have nearly ready a 'Life of James Boswell,' by Percy Fitzgerald, and 'An Utter Failure,' by Mrs. Miriam C. Harris, the author of 'Rutledge.'

Among the September announcements of T. Y. Crowell & Co. we mention Charles Dick-

ens's Complete Works, in thirty volumes, illustrated; 'A Score of Famous Composers,' by Nathan H. Dole; 'Famous English Statesmen,' by Mrs. Sarah K. Bolton; and vol. iv. of Von Sybel's 'Founding of the German Empire.'

Duprat & Co., No. 349 Fifth Avenue, announce for early publication 'Four Private Libraries in New York: A Contribution to the History of Bibliophilism in America,' by Henri Pène du Bois, with illustrations of bindings, ex-libris, vignettes, etc., in two styles, on Japan paper (200 copies) and Holland paper (800 copies). The work is the first of a series and will be printed at the De Vinne Press.

A new story by Mrs. Molesworth, 'Red Grange,' and one by Miss Yonge, 'The Constable's Tower; or, The Times of the Magna Charta,' will be issued by Thomas Whittaker.

The 'Autobiography, History, and Personal Reminiscences' of Gen. Benjamin F. Butler is to be published by subscription by A. M. Thayer & Co., Boston.

F. W. Christern sends us the prospectus of a new Map of the German Empire, on a scale of 1:500,000, edited by Dr. C. Vogel and published by Perthes at Gotha. It will be engraved on copper in twenty-seven sheets, and will have an index.

The booklet entitled 'Itinerare auf der Insel Lesbos,' by H Kiepert and R. Koldewey (New York: Westermann), is avowedly not a complete itinerary of Lesbos. It has been republished from Koldewey's great work on the antiquities of Lesbos, in the hope that future travellers may be incited to use it on their journeys through the island, and do some service to geography by filling in the gaps and correcting the errors of the two maps which accompany it. It is little more than simple road directions from place to place, following notes made by Kiepert in 1841, 1886, and 1888, and by Koldewey in 1885–86 during his long sojourn in the island for the purpose of surveying and measuring the monuments of antiquity that remain to the present day. The map of Lesbos is the best that has appeared up to date, as the name of Kiepert guarantees, and both the map and the itinerary will prove invaluable to all whose duty or leisure calls them to Sappho's lovely isle.

Yachtsmen and all mariners will welcome the first part of the United States Coast Pilot for the Atlantic Coast, just issued by the Coast and Geodetic Survey Office at Washington. It covers the stretch from the St. Croix River to Cape Ann, and has been brought down to 1890.

'Poor's Manual of Railroads' for 1891 (H. V. & H. W. Poor) is the twenty-fourth annual issue. It maintains its preëminence and indispensableness, adds considerably to its bulk, and continues its two series of maps, viz., the colored sectional and the individual railroad system. It is needless to add any further description or comment.

Great as is the importance of the railroad, it yields, after all, to the common highway, which is, nevertheless, abominably slighted by those having the most direct interest in its perfection. Two tracts lie on our table which deserve the widest possible circulation in our agricultural and suburban communities. One, called 'Road Improvement,' is a reprint of articles from the *Engineering Magazine;* the other, 'The Gospel of Good Roads,' is a letter to the American farmer by Isaac B. Potter. Mr. Potter is Chairman of the efficient "Committee of Improvements of the Highways" of the League of American Wheelmen, to whom it seems odd that we should owe an agitation for the simplest economic "mending of our ways." Both pamphlets have this in common, that they are illustrated with telling photographic cuts of American sloughs and European firm country roads, and that they can be obtained of Mr. Potter at the Potter Building in this city. They are calculated to work a revolution even among the illiterate.

Schürer's 'History of the Jewish People in the Time of Jesus Christ' was regarded as a high authority when first published, and, in the English translation issued by T. & T. Clark, has long been favorably known to Biblical scholars. A second and revised edition of the work, just brought out in English, in five volumes, by the Scribners, is sure of a cordial reception.

The praise which we bestowed upon Prof. J. K. Hosmer's 'Short History of German Literature' has been justified by the popular favor shown it during the past twelve years. Its use as a text-book in our higher schools has been approved, and the author now puts forth a revised edition (G. P. Putnam's Sons), not attempting to recast the original lectures, but modifying by pruning, by slight insertions, corrections, etc. To repair the omissions unavoidable in a summary view, Prof. Hosmer has added a tabular appendix exhibiting the most eminent literary personages in successive epochs; majuscules and italics serving a hypsometric purpose in indicating to the eye the relative altitudes.

Mr. Griswold has already given us a 'Descriptive List' of novels of American Country Life, and again of American City Life, and of International Novels. The fourth member in this scheme is much more bulky, being a 'Descriptive List of Romantic Novels' (Cambridge, Mass.: W. M. Griswold). The compiler's aim is still to append to each title competent judgment by a critical authority, but he has usefully gone further, and admitted samples of demoralizing trash for the sake of the condemnation or ridicule which will warn off the youthful or the adult reader. A special flavor is imparted by unconventional comments on classics like 'Robinson Crusoe,' 'The Vicar of Wakefield,' or 'Uncle Tom's Cabin.' We have already expressed our appreciation of the good work which Mr. Griswold is thus doing very laboriously and disinterestedly. He is the friend of the librarian everywhere, and a coadjutor of all who seek to regulate the universal craving for fiction.

It is seldom that a critic's complaint of the want of an index is heeded, by author or publisher (for why should there not be a publisher's conscience in this matter?) Prof. A. Gerber, however, whose 'Great Russian Animal Tales' we noticed with approbation in the *Nation* for July 16, has promptly supplied "all that is wanting," to quote our own words—"an alphabetical index of incidents." It fills eight pages, and is perhaps obtainable in connection with the original, which formed part of the Publications of the American Language Association of America for the current year.

We have received the ninth and tenth yearly reports of the Bern Geographical Society (1888–1889–1890). Among the papers more or less fully reported are several relating to this continent; in fact the ninth *Bericht* opens with a discussion, by Dr. Balmer, of the physico-geographical influences that determine the distribution and movement of population in North America. This is illustrated by numerous tables and diagrams. In the tenth *Bericht* is a narrative of experiences in Canada in 1813–1819 by Lieut. Friedrich von Graffenried, as dictated to his daughter. This officer entered the English service in 1810, joining his brother's regiment of mercenaries commanded by Gen. de Meuron, and being first sent to the Mediterranean. He arrived at Halifax in July, 1813, and at Quebec in the course of another month, and first came under fire—a boy of nineteen—at Plattsburg, but he has little to tell of military operations. He made the expedition to the Red River country in connection with Lord Selkirk's military colonizing schemes, and his details in this chapter have an historic value. Prof. Dr. Tschirch treats of the primeval forest in Java, and his paper is accompanied by the most striking and beautiful photograph of a tropical forest that we remember ever to have seen.

The annual address on the progress of geography, by the President, Sir M. E Grant Duff, opens the July Proceedings of the Royal Geographical Society. It is followed by a valuable paper by Col. Tanner on the Himalayas. Though especially intended to show the progress of the Government survey, it is filled with entertaining facts in regard to the avalanches, glaciers, and passes of the higher mountain regions. The extreme jealousy with which the Tibetans guard their frontier is well illustrated by an incident in his own experience. In closing, he recommends Gilgit as the most interesting region to visit for the grandeur of its scenery as well as for the observation of glaciers and avalanches. The principal paper in the September number of this journal is a description of a voyage on the Benue, the great eastern tributary of the Niger, partly through hitherto unexplored regions. In the discussion which followed the reading of the paper before the Society, Sir George Goldie, Governor of the Royal Niger Company, referred to the common supposition that the people of the southwestern Sudan are Mohammedans. He said: "This is not so; the vast masses of the population—and I am speaking from information culled from hundreds of sources—are pagan at heart." The ruling races of the kingdoms of Sokotu and Gandu are fanatical Mohammedans, but the great masses of the people are, "in their superstitions and manners, as pagan as before the Fellatahs came."

Sun and Shade for September (N. Y. Photo-Gravure Co.) has a number of plates interesting above the average: Miss Ada Rehan as *Lady Teazle;* a likeness of the artist Gaugengigl and a sample of his work; a fine landscape from nature, etc. A photogravure of Miss Rehan, by the way, in quite another rôle, is to be found in the *Photographic Times* of this city for September 4.

Moriz Heyne's 'Deutsches Wörterbuch' (New York: Westermann) arrives in its third half-volume at the word *Licht.* It has already been overtaken and passed by the new edition of Flügel's German-English (and English-German) Dictionary (same publishers); but the two works are not otherwise properly comparable, Heyne's being intended for Germans primarily, and aiming at copious literary illustration. It is modelled in bulk and general plan upon Webster. The print is larger and clearer than that of Flügel. Each for its own end is a very desirable addition to the stock of reference-books.

In addition to the already announced features of the celebrations in memory of Columbus to be undertaken by the Spanish Government, we may mention the erection of a commemorative monument in Havana, and the construction of a sepulchre in the nave of the cathedral in the same city. Competing plans for both were invited last February, and now the award for the monument has been made to Antonio Susillo, while Arturo Mélida's designs for the sepulchre have been accepted. The two are to cost $100,000 and $50,000 respectively. Santo Domingo naturally takes this new slight to its claims in very bad part.

—Prof. S. P. Langley, Secretary of the Smithsonian Institution, has for a period of three or four years been carrying out some experimental researches intimately connected with the subject of mechanical flight. Already they have so far advanced, and the results he has reached are so significant, that he has just communicated to the French Academy a brief statement of his chief conclusions, following it with an elaborate memoir in the Smithsonian Contributions to Knowledge ('Experiments in Aerodynamics'). He has succeeded in demonstrating that, with motors weighing no more than those already actually constructed, we are at present in command of the force necessary to sustain heavy bodies in the air with very rapid motion—for example, inclined planes more than a thousand times denser than the medium in which they move. His experiments have been conducted with a "whirling-table," having revolving arms each thirty feet long, and kept in motion by a steam engine of ten-horse power. With this he has compared the movements of planes, or systems of planes, and their weights, surface, form, and variable arrangements; the whole being always in a horizontal position and so disposed that it could fall freely. Further than this, he has determined the work necessary to move such planes and systems of planes when they are inclined and have velocities suitable to sustain them by the reaction of the air in all the conditions of free horizontal flight. Also, what seems to bring the possibilities of actual flying nearer a practical realization, he has made a minute examination of the motions of aerostats provided with their own motors. Many of these experiments were very striking, and bodies, although quite free to fall, were made to descend very slowly, as if their weight were effectively diminished a great number of times. The general conclusion is deducible that, whatever may be its weight, the time of fall of a body in air may be indefinitely prolonged by lateral motion. This is a very remarkable result, and shows the account that ought to be taken of the inertia of air in aerial locomotion. Thus it appears that the "art of flying" may be a practical possibility, as it has long been known to be admissible in theory; though, for man, it should rather be called the "art of sliding through the air." Prof. Langley's conclusions have, it is understood, been independently corroborated by Mr. Maxim, the inventor of the machine gun.

—That most interesting of binary systems, Sirius—interesting because of the great brilliancy of the primary and because of the significant research of the eminent German astronomers, Auwers and Peters, on its proper motion, leading to their prediction of a satellite which was actually discovered subsequently by Alvan Clark in 1862—has been the object of repeated observation everywhere for nearly thirty years, but nowhere more faithfully than at the Lick Observatory by Burnham, who lately published a complete list of the observations in the 'Monthly Notices of the Royal Astronomical Society.' Sirius gravitates like three suns, but shines like seventy. In recent years the companion of Sirius has proved an increasingly difficult telescopic object on account of its rapid approach to peri-astron, and within the last few months it has passed entirely beyond the reach of the Lick telescope, even the keen eye of Mr. Burnham having failed to detect it last December. For several years the little star will now be invisible, being lost in the effulgence of its primary. This companion revolves about Sirius in a period probably not exceeding fifty-three years, so that after its next reappearance astronomers may accumulate nearly a half century of observation from which to determine its orbit with the utmost precision.

—About a month ago M. Pierre de Lano began in the supplement of the *Figaro* a most wilfully indiscreet series of articles upon the secret history of the Second Empire and of Napoleon III. In almost, or quite, the first of these he told a story about the late Duc de Morny which was inevitably of a nature to displease anybody who cherished the Duke's memory. His son, the present Duke, took the matter up, and M. de Lano is threatened, not with the usual bloodless duel, but with prosecution in the law courts and heavy damages. It is hard to see what a writer of history, according to modern methods, can do in a case like this. Discretion, cuttings, modifications, reserve of facts are out of date, as M. de Broglie has lately discovered to his sorrow. The world wags another way now, and is satisfied with nothing less than all the facts in every case—and rightly, too. In the case in hand, M. de Lano seems in no great danger of being cast in heavy damages, for the life and character of Morny have been for long years so notorious as to be past all danger of further injury. Nevertheless, M. de Lano announces that in the rest of his articles he shall replace the proper names—when he treats of improper persons, we suppose—by *banales initiales* and *noms d'aventure*.

—This affair of M. de Lano recalls an amusing *fantaisie* of Rochefort's, written in the worst days of the Empire. Rochefort, strange to say, just falls short of being one of the greatest of humorists. He set forth at length and with illustrations, in the 'Français de la Décadence,' a method by which historians who were forbidden to use proper names might still go on with their labors. Perhaps M. de Lano has taken a hint from Rochefort, for their methods are the same, viz., to use borrowed names and initials. But Rochefort's illustrations of the method were far more entertaining than anything that M. de Lano seems likely to give us. This, for instance, is the way in which, he says, a writer of history might inoffensively describe the events that led up to the Revolution:

"When X. . . died, Z. . . became Regent, and plunged the country once more into the most frightful disorder. It would be difficult to describe the suppers that he and the crafty Madame de P. . . gave every night. These gentlemen did not think that they were digging a pit under the feet of royalty, and (so to say) setting up the scaffold on which that unhappy sovereign, whose personality we will conceal under the pseudonym of Dambricourt, should one day mount, together with his devoted wife, whom we need only mention under the name of Euphrasie to bring back her memory to every honest heart."

If M. de Lano shall decide to continue his history after this fashion, a pseudonym for the Duc de Morny will not be far to seek. He has only to borrow "de Mora" from his neighbor, Alphonse Daudet.

—Not only the *Temps*, but most of the other Paris newspapers as well, have published the story told in the *Progrès de Nantes* about the Iron Mask without any apparent distrust of its accuracy. An anonymous correspondent of the *Figaro*, who seems to be familiar with the story of the Iron Mask, appears to be the only one to cavil at Capt. Bazeriès's discovery. He complains that the dates are erroneous, the siege and capture of Coni not taking place till 1696, when St. Mars, the keeper of the Iron Mask, had given up the command of Pignerol. According to Junca's journal, he says, the man in the mask was taken from Pignerol to the Île Ste. Marguerite in 1694, and thence to the Bastille in 1698. Junca was King's lieutenant at the Bastille. The correspondent also considers it a suspicious circumstance that Captain Bazeriès has "fait trop bon marché du seul document sérieux qui concerne le légendaire prisonnier": and he ends his letter by the avowal that he believes the famous Iron Mask to be not an adulterine brother of Louis XIV., nor the Duc de Beaufort, nor Fouquet, nor Monmouth, nor Bulonde, but a creature of pure myth, who owes his being first to a Dutch pamphleteer of the year 1745, then to Voltaire, and lastly to Alexandre Dumas.

—In 'Outamaro—Le Peintre des Maisons Vertes' (Paris: Charpentier), M. Edmond de Goncourt does not give us a Japanese novel after the manner of Pierre Loti, as the title might lead one to expect, nor even the history of the famous Eastern artist, but simply a very careful and accurate account of all the known paintings and drawings of Outamaro, the first realistic painter of Japan. This book is the first of a series of works on the general subject of Japanese art in the eighteenth century, in which each separate volume will be devoted to one of the twelve most noteworthy artists of the last century in Japan, from Outamaro, the painter of the fashionable demi-monde, to Seimin, the bronze worker. As M. de Goncourt himself has pointed out, it may seem over-confident in a writer of seventy years to undertake so formidable a task, but, on the other hand, no younger man is so well fitted to speak with authority on the art of the last century in general, and Japanese art in particular, as M. de Goncourt, the author of the well-known books on the 'Art of the XVIII. Century in France,' and the owner of the choicest collection of Japanese objects of art outside of Japan. All the greater pity that so competent a man should write in so dry and unsatisfactory a manner. The book is nothing more nor less than a descriptive catalogue of a number of prints and drawings which are wholly inaccessible to the ordinary reader. Accompanied by the proper illustrations, M. de Goncourt's appreciative and often highly enthusiastic comments would be of value to all lovers of Japanese art, but, standing alone as they do, their sweetness is wasted on the desert air, and nothing remains but the ordinary tedium of reading any guide-book or catalogue far from the inspiring presence of the place and objects on which they are meant to be a running commentary. It is to be hoped that the next volume in the series—that on the painter Harunobou—will be supplied with some illustrations of his works and a readable account of his life.

—A noteworthy addition to German autobiographical literature is a volume entitled 'Aus Meinem Leben' by the well-known Austrian historian and archivist, Alfred von Arneth. This work was written and privately printed on the occasion of the celebration of the fiftieth anniversary of the author's official connection with the Austrian State Chancery (*Staatskanzelei*), to which he was appointed by Prince Metternich in 1841; and, although intended merely for private distribution, has awakened so great interest that it will probably be issued soon in the ordinary way and thus made accessible to the general public. It is confined to the first thirty years of Arneth's life (1819–1849), and contains in the earliest chapters the reminiscences of his mother

rather than his own. This lady was Antonie Adamberger, a famous actress and admirable character, to whose memory a certain patriotic romantic sentiment still attaches as the betrothed of Karl Theodor Körner at the time when this spirited poet and warrior fell at the battle of Gadebusch. A few years before her death, which occurred in 1867, she partly wrote and partly dictated to her granddaughter some of her recollections, giving lively pictures of Viennese social life before and after her retirement from the stage. Arneth has woven these notes and sketches into his narrative, and they form, in many respects, the most charming part of it. His gratitude and attachment to Metternich personally did not prevent him from condemning the arbitrary and oppressive rule of this statesman, and wishing to see a system of government established on a broad and liberal basis of popular representation. He began his political career as a member of the Frankfort Parliament of 1848, and discharged his duties as delegate until the reaction in Austria in February and March, 1849, rendered his further services in this capacity impossible. The volume contains a judicial account of the proceedings of this national assembly, with excellent characterizations of some of the most eminent men who sat in it, and closes with the author's return to Vienna.

CHASE'S DARTMOUTH COLLEGE.

A History of Dartmouth College and the Town of Hanover, N. H. By Frederick Chase. Edited by John K. Lord. Vol I. Cambridge, Mass.: John Wilson & Son. 8vo, pp. 682.

THIS is a posthumous work. An ardent friend of the college and an enthusiastic local antiquarian, Mr. Chase had devoted many years to the collection of material, and had this first volume in a forward state of preparation for the press when death overtook him. Mr. Lord has attended to the publication of these pages, and promises the concluding volume at some indefinite future time; the materials for it had been "almost entirely collected" by Mr. Chase. The present volume brings the history down to 1815.

Planned on a generous scale, befitting the mass of matter brought together by Mr. Chase, the history naturally gives earliest attention to the person and history of Eleazar Wheelock, who, to the end of his life and in his will, consistently asserted his right to be known as the "founder and proprietor" of Dartmouth College. Born in Windham, Conn., in 1711, and graduated at Yale in 1733, he entered the ministry, and at once took a prominent place among the "Great Awakening" preachers. On November 9, 1741, he preached in Boston, giving occasion to the following entry in his diary:

> "Preached to a very thronged assembly with very great freedom and enlargement. I believe the children of God were very much refreshed. They told me afterward that Mather Byles was never so lashed in his life. This morning Mr. Cooper came to me, in the name of the Hon. Jacob Wendell, Esq., and earnestly desired a copy of my sermon for the Press. Oh that God would make and keep me humble!"

A man of uncommon energy, of a masterful disposition, and of much intellectual power, he yet displayed an amount of guile, at several important junctures, that justifies President Stiles's characterization of him: "He had much of the religious politician in his make. . . . Such a mixture of apparent piety and eminent holiness, together with the love of riches, dominion, and family aggrandizement, is seldom seen. He was certainly as singular a character as that of Ignatius Loyola." He turned to teaching, like many another clergyman of the time, to eke out a meagre salary, and appears at first to have paid little heed to the Mohegan Indians, near his Lebanon home, except as supposing them "the Ten Tribes of the House of Israel." But after his experience with the celebrated Indian, Samson Occom, whom the London Society for the Propagation of the Gospel aided, his plans and ambitions took on a wider scope, and, in 1755, we find him at the head of "More's Indian Charity School," so called after a colonel who endowed it with land having a value of £500. Wheelock next proceeded to use his friendship with Whitefield to secure considerable subscriptions for his school in England and Scotland. Finally, a regular trust was organized in England to administer the funds raised to further Wheelock's projects, at the head of which was the Earl of Dartmouth. Grave irregularities appeared in the former's handling of "Christ's money," as he called it, and his overbearing temper got him into hot water in his parish. Thereupon he began to look about for a new location for his school, which, with its endowment and English backing, was regarded as a desirable acquisition by several of the colonies. We cannot follow him in the rather sinuous course of negotiations which issued, at length, in his acceptance of Gov. Wentworth's offer and his removal to Hanover in 1770.

The charter granted by the Governor, December 13, 1769, was probably the determining motive in Wheelock's mind. He could get it from no other of the colonies. It was a cumbrous document, and, with its distribution of functions among two sets of trustees, was the *fons et origo* of the famous troubles of 1815. Wheelock displayed his customary craftiness in arranging for the terms of the charter. As if it were a casual afterthought, he adds in a postscript to his letter to Gov. Wentworth, August 22, 1769, accompanying a draft of a charter: "If proper to use the word 'College' instead of 'Academy' in the charter, I shall be well pleased with it." There speaks his secret ambition for the new institution, which he dared not broach to the Governor openly. He suggested to Wentworth that he might "Christian the House to be built after your own name," but the Governor modestly declined the offer, and the college was named Dartmouth in order to placate the English trustees of the Indian School, who were opposed to the scheme of the charter and new double organization. However, this design failed, as Lord Dartmouth never gave a penny to the college nor ceased to look upon it with dislike as a sort of self-seeking and underhanded perversion of the work to which his sympathies had been attracted. What's in a name, indeed!

A public notice, dated August 23, 1770, was inserted in the newspapers announcing the establishment of the college at Hanover. The advent of Wheelock's family and students, after the break-up at Lebanon, is thus described in his 'Narrative':

> "They had so near finished my house that by advice of principal workmen I sent for my family and students [August 27]; but when they had dug one well of sixty-three feet and another of forty, and found no prospect of water, and I had found it necessary therefore to remove the buildings, I sent to stop my family, and tryed for water in six several places, and found supply for both buildings. I took my house down and removed it about seventy rods. The message I sent to my family proved not seasonable to prevent their setting out, and they arrived with near thirty students. I housed my stuff with my wife and the females of my family in my hut. My sons and students made booths and beds of hemlock-boughs; and in this situation we continued about a month."

The hardship did not seem as great to the students of that day, mostly Indians, as it would to their degenerate successors. At any rate, the college lived and held its first commencement on August 28, 1771. It was a great affair, graced by the presence of the Governor and other dignitaries. The programme of the public exercises has been preserved, and included a "Clyosophic Oration in Latin," and an oration "upon the Virtues" which, the President assures us, drew "tears from a great number of the learned." A negro was received into the college during the first year of its existence—an augury of the liberality to his race which has always distinguished Dartmouth. On the Indians it did not long retain a hold. It was not that, as was the case at Harvard a century before, according to Mr. Lowell, "the first blue-bird of spring whistled them back to the woods"; but, owing to one cause and another, the Canadian Indians withdrew in 1777, as those from the Six Nations had done previously, and the numbers steadily dwindled until, for fifteen years after 1785, there was not one in the college. In the first year of this century, however, there was again a copper-colored freshman, and since then representatives of the class for which Dartmouth was especially founded have frequently studied within its walls, down to Dr. Eastman. This loss of the Indian clientèle was serious only in relation to the estrangement it caused among the English supporters of the college; in other respects those early years were highly prosperous. "As compared with the other colleges, Dartmouth's prosperity in numbers was greater during the decade from 1790 to 1800 than at any period of its existence, before or since. In 1791 Dartmouth graduated to the degree of A.B. 49, Yale 27, Harvard 27, and Princeton 27. The totals for the ten years give Dartmouth 363, Yale 295, Harvard 394, and Princeton 240."

Space forbids our considering the vicissitudes and services of the college during the Revolution. Nor can we enter into matters relating to the history of the town, its first settling, and attitude in the contest over the "New Hampshire Grants." All these matters and many others are treated with great fulness, and on all disputed points it would seem as if Mr. Chase's unequalled material and his evident fair-mindedness must have enabled him to speak the last word. His volume is a mine of curious and valuable information, and will necessarily be the standard work on the subject. It has been furnished with a provisional index.

RAMSAY'S GEOGRAPHY OF ASIA MINOR.

The Historical Geography of Asia Minor. By Prof. W. M. Ramsay. Royal Geographical Society's Supplementary Papers, Vol. IV. London: John Murray.

IN 1880, Exeter College, Oxford, sent Mr. Ramsay to Smyrna on a "Travelling Archæological Studentship." The same college afterwards elected him to its "Research Fellowship." He was thus enabled to reside continuously in Asia Minor for several years, his headquarters being Smyrna. He was further aided in his work by the Asia Minor Exploration Fund, but he and his wife have been much the largest contributors to the expense of his explorations in Asia Minor; and Mr. Ramsay has found it possible to travel and

study in Asia Minor throughout each summer for the past ten years. He began his work under the guidance of Col. Sir Charles Wilson, the chief of the body of "Military Consuls" sent out by Disraeli after the Berlin Congress, to spy out and make maps of Asia Minor with a view to its annexation by Great Britain. The training thus received was invaluable to him in the independent expeditions which he soon found it necessary to institute.

Ramsay's book has been awaited for a long time by the world, at least by that world of scholars whose studies or leisure leads them to take an interest in Asia Minor and its exploration. Much has been expected of him, for he has had unique advantages, advantages such as no other man, dead or living, has ever had, for giving to the world a unique book on the geography of Asia Minor. He has responded to these expectations in a manner worthy of the most exalted praise. The book before us is no rehash; it contains no matter that scholars could get from the ordinary handbooks and books of travel on Asia Minor. Everything in its nearly 500 pages is new and fresh. The material contributed by Mr. Ramsay himself exceeds by far the contributions of other travellers, but the results of the labors of all recent travellers have been incorporated into the volume, so far, at least, as Mr. Ramsay could agree with the conclusions drawn by the individual observers from the facts before them. Any disagreement with them is stated clearly, cogently, and usually with modesty. He has made himself the great master in his chosen field, and the sifting and weighing process to which he must subject the labors of his co-workers leaves as residue what the world will generally accept as the truth, or the nearest possible approximation to it. We have detected but few instances in which he claims for himself what really belongs to others. But even in his strictures on his co-workers—strictures that are sometimes severe—we believe that the attainment of truth has been his aim, and that he has no intention wantonly to wound or offend. Indeed, he makes a statement expressing his great regret that, in a work which is really an investigation, he is compelled to refer oftener to the errors of his co-workers than to their merits. He is literally exact when he says that he has to correct oftenest precisely those to whom he is most indebted, his corrections being really a tribute.

We have said that everything in the book is new. This is literally true, nor must it be confined merely to the results of field-work in Asia Minor. Mr. Ramsay has actually read the ancient authors, especially the Byzantine writers, with an eye single to the topography and geography of the country, and he avers that 95 per cent. of all the references were found in his own perusal of the original documents. Think of deliberately wading through the 'Acta Sanctorum,' the 'Acta Conciliorum,' and that long list of Byzantine scribblers whose very names are unfamiliar to most of our readers. In fact, every successive page that we read makes us admire more and more both the book and especially the patience, perseverance, and learning of its author. Our praise is not fulsome; yet we fear that many who may attempt to read the book will charge us with having misled them. In truth, the average reader will find the book dry as dust, an unreadable mass of details; but those whose work brings them daily into contact with Asia Minor—a large and growing class—will know full well "that human life is latent in every detail, and that it can be so set forth in a larger picture as to possess the deep interest of real history." The travellers who must follow Mr. Ramsay in the work of exploring Asia Minor will find, if they be but content to travel on the lines and following the principles laid down by him, that a world of labor will be spared to them. Not only so, but the progress in the exploration of Asia Minor will be more rapid in the future than in the past, and the results of travel will be known to scholars sooner than was possible heretofore.

It would be a real joy to travel with this book as guide, helper, and incentive to earnest work in filling up gaps and in exploring regions that Mr. Ramsay has never seen. For it must not be assumed that he has spoken the last word on Asia Minor. The exploration of the country is very far from complete; in point of fact, it has but just begun, and fresh laborers are sorely needed to carry on the good work. Each year that passes by, means a serious loss to the science of antiquity; for the stone monuments of the past, the monuments that are so precious for filling up the gaps of history, or, it may be, for reconstructing the local history and for solving geographical problems, are perishing every day in a variety of ways, whether by that Moslem fanaticism which cannot even bear to look upon symbols carved in stone by the hated infidels, whether through use in the construction of modern houses, or by being broken to pieces in search of the gold which every self-respecting Moslem believes them to contain.

All who are interested in any way in archæology should see to it that no summer pass without chronicling the preservation to science of some at least of these precious inscriptions. The few men who have been trained to this work should not be kept at home in professors' chairs, but should be sent out to Asia Minor every summer, and be thoroughly equipped for efficient archæological field-work of every description. The results of such work cannot but be gratifying in every way. England, France, Germany, and Austria have been busy in the field and have done noble work, each in her own way. America, too, has done something, but should do vastly more, if wealth be a criterion. Our men of wealth, if they only knew it, could bring much credit and honor to their names by sending out each year expeditions for the archæological exploration of Asia Minor, and this honor would come to them from a class that can never be brought to do them honor simply because of their wealth. In most cases, too, such honor would outlast by ages the local fame of mere wealth.

Ramsay believes that archæological evidence proves that the Phrygians emigrated from Europe to Asia, as Greek authorities agree in asserting; that they settled first in the Troad; that their defeat and downfall there served as a slight basis for the 'Iliad,' and that later emigrations forced them to the conquest of the interior, where they remained throughout historical times. His views on the Hittite question differ widely from what we believe we may now call the accepted views, as championed by Perrot, Sayce, Puchstein, and others. He does not believe that the people of Pteria (Boghaz-kieui) should be identified with the Hittites of northern Syria, but that Pteria was *itself* the capital of an empire whose origin was in no wise due to Assyrian or Persian influence. The close relationship of art and hieroglyphic writing that has been observed between the monuments of Asia Minor and northern Syria is, in his view, really no stumbling-block, for even *identity* of art does not prove identity of race, as is clearly shown by the analogy of Seldjuk art, which is purely Arabic in style. And identity of art does not exist between the monuments in question, for the Hittite monuments of Syria are much more developed in style, and, therefore, much later in time, than the monuments of Asia Minor. This Pterian empire began to decay about 900 B. C., and was divided among the more lusty peoples of the border lands. The Phrygians of the Troad fell heir to the western portion of the Pterian empire, while in the portion south of the Taurus was founded the Hittite empire; but even after these dismemberments Pteria itself continued for a long time to be the emporium of Cappadocia, until finally it had to succumb to cities on the line of international intercourse. How much of Ramsay's theory will be accepted by scholars remains to be seen. It is ingenious and interesting, and it corresponds well with the views of Puchstein ('Reisen in Kleinasien'), who claims, on purely archæological evidence, that the Hittite empire flourished between the tenth and sixth centuries B. C.

Ramsay assigns far less value to the Peutinger Table, Ptolemy, and the Itineraries as geographical authorities in comparison with Strabo and the Byzantine lists of Bishops than modern geographers usually do. His plan of work was to fix as many sites as possible from epigraphic evidence, working thereafter from the Byzantine lists and Strabo. Then the Table and Ptolemy were used as corroborative evidence and to supply gaps. The Table can never be followed without external confirmation, but Ptolemy's value is a variable quantity; sometimes he is accurate, sometimes wholly at sea, just according to the value of the authority on which he based his statements.

Mr. Ramsay has not aroused in us that vigorous criticism which he so much desired; not that we have no criticisms to make, not that we agree with him in everything, but in view of the great merit of the work, we feel that we can leave our little criticisms unspoken, our little grievances unavenged. We think, however, that he should not have published the book for a year; he began printing before he was ready for the press, and to this fact are no doubt due the numerous addenda at the beginning and the end of the book, though we are aware that it is very difficult to get ready for the press when new facts are coming in every day. To this may be due also some of the numerous inconsistencies of spelling, though we believe that the principle on which he spells Turkish names is bad. We contend that all Turkish sounds cannot be given by the English alphabet, and that one must take refuge in the German ö and ü, whose values are known to those who will use the book. For instance, both Ramsay and Perrot write *Eyuk*. Now, a spelling that is correct in French is usually not correct in English. But in this special case the spelling is wrong both in French and in English, for the correct pronunciation can only be given by Öyük. Again, Ramsay spells both *Hisar* and *Hissar*, though he prefers *Hisar*, which is utterly wrong.

In conclusion we are glad to announce that Mr. Ramsay proposes to give us an *Annual* on the progress of discovery in Asia Minor, and we hope that he may be able to present to the world before many years his Local History of Asia Minor and to follow it up with a History of the Byzantine and Turkish Campaigns.

THE HISTORY OF LANGUAGE.

Introduction to the Study of the History of Language. By H. A. Strong, W. S. Logeman, and B. I. Wheeler. Longmans. 1891.

PAUL'S 'Principien,' like other great books, has had its friends and its enemies. Its friends

in this country and in England have urged that it be translated and condensed for the use of English-speaking people. A translation by Dr. H. A. Strong, Professor of Latin in University College, Liverpool, appeared some years ago and has lately passed into a second edition; and now Prof. Strong has associated himself with others and brought out nearly as large a volume, in which Paul's work is recast. The second member of the firm of Strong, Logeman, Wheeler & Co. is a graduate of Utrecht University, and is now head-master in a Cheshire school; Prof. Wheeler of Cornell needs no introduction; the silent partner is Mr. R. H. Case, B.A., whose fitness for the task of preliminary critic of the work consisted in his "highly cultured mind, well versed in English and its literature, but new to a subject like this." It would seem that the bulk of the work of recasting Paul's ideas fell to Prof. Strong and Mr. Logeman, and upon them must rest the weight of criticism. Prof. Wheeler's share in the book (beyond some odd notes and references) is probably limited to the final chapter, "On the Standard Language," and this is one of the best pieces of work in the book. It is refreshing to find in the English editors a modest but dignified spirit and a willingness to learn from authorities. The only pity is that there is little ability shown in distinguishing the real from the supposed authority. Such a book as Sweet's 'History of English Sounds' is referred to but once, while the storehouse from which our authors have drawn their knowledge of English phonology is part first of Skeat's 'Principles of English Etymology,' a dilettante book, scientific in form, but as far behind the present state of philology as it is in advance of such books as Earle's.

The volume before us has not escaped the dangers of collaboration. The same point is treated in various places (*cf.* what is said of *of mine*, pp. 148, 153, 215), and at times differently. The North English idiom "will"="probably is" is stamped a Scotticism on page 261; but the writer of chapters 18 and 20 is fond of it (bottom p. 312, middle p. 358, etc.). The German word *Umlaut* had been used unchallenged as far along as page 190; but the writer of page 199 feels it necessary to excuse its use. In the preface, Mr. Logeman thanks Prof. Strong for correcting his un-English English, and so we may perhaps suppose Prof. Strong did not revise pages 27, 48, 54, 112, 121, 313, where we read: "Whoever hears the sounds of which the word is composed spoken cannot, etc.," "*spoke* that the, etc.," "dependent sentences may become *by us* independent"; but it will hardly be fair to hold Mr. Logeman responsible for "preventative," p. 287, or such translations as "the heads of the conspiracy were slain and their heads cut off," p. 241, "movement or position-picture" for *Bewegungsgefühl*, p. 36, or "Ur-Norse," p. 200.

In their preface the authors frankly state the nature of their book. They have followed Paul closely in the number, order, and subject of the chapters, and even in "the order in which the various points in each chapter are discussed." But as "Paul very frequently follows the German manner of exposition, first giving us the statement of abstract principles and then illustrative examples," "the order of the argument has sometimes been inverted." Paul's German illustrations have been dropped, and "everything has been illustrated from English wherever possible, and much also from French." Paul's introduction has been omitted entirely, as also "some minor points, . . . not because they were thought unimportant, but generally because they could not be so well illustrated from English, and it was felt desirable to economize space for a full discussion of everything of which English does furnish illustration."

The work has been unevenly done: some chapters (*e. g.*, 10, 16) are good samples of what the writers aimed at; others are diffuse (*cf.* 6), and chapter 17 (in which Paul's eight pages are expanded to 17) is but a string of cases with but little attempt at order or statement of causes, while many chapters show caprice in omission and addition, with illustrations now good and apt, now betraying inexcusable ignorance. A sample (not quite up to the average) of the manner in which the work has been done may be seen in the closing portion of chapter 18. In reading Paul's paragraph beginning "Zuweilen" (p. 273), a glance at the opening words of the preceding paragraph will show the relation of the two. In the English book Paul's first paragraph has been mangled, while the wording of the second presupposes what has been left out of the first. The second paragraph (p. 312) reads: "Sometimes, as in the rhetorical figure which we call aposiopesis, the psychological predicate as well is taken from the situation," etc., which is an attempt to translate: "Zuweilen ist auch das psychologische Prädikat aus der Situation zu entnehmen," etc. Paul concludes the second paragraph with: "Hierher gehören Ausdrücke der Verwunderung oder Entrüstung oder des Bedauerns, die nur den Gegenstand angeben, über den Man sich verwundert oder entrüstet oder den Man bedauert. Das Prädikat wird dabei hauptsächlich durch den Gefühlston angedeutet," and adds the examples. For this the English book gives us only examples, strung together in this wise: "Again, we find such expressions as . . . Again, take such expressions as . . . ; and again, exclamations such as . . . Under this head will come the so-called Infinitive of Exclamation in Latin. . . . This use is also very common in French; as . . ." Paul closes the chapter with a paragraph treating clearly and fully of "isolierte Sätze, die die Form des abhängigen Satzes haben," using spaced letters to indicate the subject of the paragraph. The English book leaves out an important part of the paragraph, and needlessly breaks up the remainder into two paragraphs, the first of which is, omitting examples, "Similarly, dependent sentences may become by us [*sic*] independent; as, . . . This use is similar in Anglo-Saxon"; and the second, "It is similar when conditional sentences are used as threats, as . . . or when such are set down [*sic*] and left uncompleted; as, . . . French is full of parallels: . . . [five French to two English examples]. These sentences with *that* [there are none in the preceding sixteen lines of the paragraph and but one in the paragraph before; but there were plenty in Paul's book !] are originally predicates; or, speaking from a grammatical point of view, objects. . . ."

The general suppression of examples drawn from German, together with the lavish use of French, Latin, and Greek illustrations, is not easy to understand; especially as a knowledge of German is taken for granted (p. 48). Now and then a German example (*Wo wollen Sie hin?* p. 308) is used, in evident ignorance of the fact that early English supplies plenty of such cases. The literal translation of foreign examples is carried to a ridiculous extent, for example (p. 305): "There were some of whom neither Senate boast nor the Emperor could"; "What I there dreaming cheered at and suffered must waking now experience"; (p. 334) "*der tieffühlendste Geist*, 'Deepfeelingest ghost,' *i. e.*, 'spirit'"; (p. 357) "*totum hoc philosophari*, 'all this to philosophise.'"

What has been added to the book is of little note, and is generally second-hand. There is an attempt made (p. 276) to trace the English construction "he was talked of," "an outrage confessed to," to a Celtic source! On page 94 is an excursus (from Alinkvest) on the Swedish accent, with a bibliography. At page 220 there is a long extract from the Oxford Dictionary, excused on the ground of "the unavoidably high cost of the work, which places it beyond the reach of the ordinary student." One-third of the references in the book are to Skeat, Mätzner, and Murray, who are backed by such authorities as Abbott, Hodgson, Mason, and Earle. In Latin, Roby and Zumpt are the standbys, and in general philology Byrne, Müller, Peile, Sayce, etc. As our authors betray no acquaintance with the standard German writers (other than a few that are readily available in English translations), we need not be surprised that they have not come across special treatises like Storch's 'Angls. Nominalcomposita' (Trübner, 1886), and inform us (p. 317) that the list of compounds in Morris's 'Historical Outlines' is about the best thing in that line. But we should have expected the writer of the chapter "On Mixture in Language" to have availed himself of the rich material in Prof. Elliott's and Dr. Learned's articles on speech mixture in French and German settlements of this country. Though there is a reference on page 131 to Heyne's 'Beowulf,' the writer of the chapter is not sufficiently acquainted with the book to know that the philologian does not spell his name as the poet did. *Cf.* also "Stratman" (p. 195).

But the chief aim of the writers of this book is to furnish English illustrations of the principles stated, and it is to their fitness for this task that we should direct special attention. The point of view of one of the writers may be learned from his regarding everything before Chaucer as "Anglo-Saxon" (pp. 127, 135). The examples are almost all from the three or four dictionaries and manuals mentioned above, and most of them are happy. There is much careful copying from Skeat (mistakes and all, *cf.* the impossible *scólu*, p. 233), but now and then there is a slip, as when that puzzling M. E. letter was taken for a *z* ("*saztlen*," p. 145). The writer of chapter 10 knows something about the fortunes of O. E. *g* in M. E. (p. 172); but the writer of chapter 21 knows no more than Skeat betrays in §338 P. E. E., and supposes the rule to be *g* > *w* between vowels (p. 378), and that genitive and dative singular of *day* had *w* (p. 379)! There are many illustrations of the truth of the proverb about the danger of having a little knowledge. The writer of chapter 13, speaking of the fourteenth and fifteenth centuries, informs (p. 222) his modern readers that *ti* in *tion* was pronounced *tea;* whereas words borrowed as early as O. E. times show this *t* already changed to *ts*, and Chaucer's spelling proves that it had passed on to *s* in his day. It is well to know that *n* often assimilates to following labials and gutturals, but it will not do to declare it a general law (p. 183); many still use front *n* in perfectly unstudied speech in *income, in Paris*, etc. It is tempting to apply the principle *a nadder* > *an adder*, to "*orange*, derived from the Persian *nâranj*" (p. 283); but when was English *orange* spelled *norange*? And how about the *n*-less forms of the word in Italian, French, etc.? On page 85 we are told that *more* is derived from *mo* by analogy to comparatives in *-er!* On page 193 we read of

"the misspelt word *whole*." The *w*, though not in the O. E. form or pronounced to-day, has an historical value, having once been sounded (*cf.* Sweet, H. E. S.). In *that there mountain*, *this here book*, the *there* and *here* are not "pleonastic adjectival adverbs" (p. 361), but strengthening modifiers of the preceding demonstratives, the use having begun with substantives (that, there!). *Perfectest*, *chiefest*, etc. (p. 154), are not cases of contamination; the positive has simply acquired a broader sense, which admits of comparison. So of the Scotch "better" = "well." And *lonelier* does not mean "more alone," but "more conscious of being alone." But there is (p. 148) contamination of a kind not intended in "Occasionally, a contamination results from the confusion of the active and passive constructions; *e. g.*, *I care na by how few may see*." Is it not imposing a good deal on Burns's good nature to charge him with mixing active and passive in this way in carefully prepared verse? *I care na by* is a common Scotticism for *I don't care* (*about it*); *cf.* Murray. On page 38 things get pretty well inverted, for there *bird* is regarded as the normal form, of which "the form *brid*, found in Chaucer," is derived by metathesis.

It would be wearisome to carry this further; enough has been pointed out to show that our guides are blind guides, at least as far as English is concerned. In other departments it is nearly the same, as when we are told (p. 388) that German words adopted by Romance languages have been even more violently transformed—who in the French *tape*, *taper*, would recognize the German *zapfen;* in the Italian *toppo*, the German *Zopf*, etc., etc.? the writer actually supposing that the Romance languages borrowed the words with H. G. shifting, and then "violently transformed" them into their original Germanic forms. After this it hardly seems necessary to point out misprints and the like: p. 57, *reputation* for *refutation;* p. 144, *Etymological Dict.* for *Principles of Eng. Etymology;* middle of p. 166, *when* for *what;* p. 338, *first-class;* p. 349, *Dutch* for *German;* p. 367, *front nasal* for *back nasal;* p. 391, *Frauleins.*

It had been hoped that when Paul's book was remodelled for the use of English-speaking students, it would be put into what the Germans call a more *übersichtlich* shape. The book we have received has not only disappointed the hope, but is in this respect not even as good as the original. The outlines of the chapters and the spacing of the chief words in each paragraph have been dropped, and thus it is often difficult to tell what is the bearing of a new paragraph until one has read it through. Altogether, the book is a disappointment: the scholars who undertook it did not have a clear idea of what was wanted, and were not prepared for their task. The want is still to be filled, and, in the meantime, instructors will continue to use the original book, in the German or the English edition.

Letters of John Keats to His Family and Friends. Edited by Sidney Colvin. Macmillan & Co. 1891.

In this volume Mr. Sidney Colvin has attempted to supply the want of a "separate and convenient edition" of the familiar letters of John Keats, and he claims for it that it is "the only one in which the true text . . . is given consecutively and in proper order." The matter is not new—it has all, or nearly all, been printed before—but all the available letters of Keats, with the exception of the love-letters to Fanny Brawne, are here brought together in a handy form, clearly printed, and supplied with strictly necessary notes.

Mr. Colvin, with a pardonable enthusiasm for his subject, considers these letters, at their best, as "among the most beautiful in our language," and says of Keats that he is "one of those poets whose genius makes itself felt in prose writing almost as decisively as in verse." With this dictum we must entirely disagree. If Keats were to be judged by his correspondence alone, without the scraps of verse which it contains and which, printed in full where they occur, seem the more wonderful from the contrast with their surroundings, he would appear, not as a great artist, self-controlled and conscious of power, but as a whimsical, petulant, ambitious boy, full of generous impulses and noble intentions, but ill-regulated and self-conscious in the extreme. His style, which Mr. Colvin compares to that of the prose passages of Shakspere is often as bad as a prose style could well be. Here and there a passage has a fine Elizabethan ring, but for the most part it is confused, lumbering, and full of affectations. His speculations on life, philosophy, and criticism are of that stage of the intellect when one is continually making new discoveries of wonderful and profound things which every one has always known. His views of politics and religion were taken at second hand from his friends, and he shows no evidence of any independent thinking on these subjects. The ferocity of the criticism with which his earlier poems were received was due as much to political as to literary intolerance, and it is curious to see on what slender grounds he adopted those opinions which excited such bitter opposition. He was thrown into the society of Hunt and Haydon and other disappointed men, haters of the society in which they found themselves, and convinced that "something was rotten in the state of Denmark" because they were not rated by the world at their own valuation; and, with the enthusiastic admiration of youth for the showy qualities of his inferiors, adopted their ideas and loyally championed their cause to his own hurt. He was a free-thinker and a radical by accident and association rather than from serious thought, but he suffered for his chance-held opinions as if they were the acquired convictions of a lifetime.

There is a type of artist, of which, among painters, Turner is one of the best known, which combines a wonderful special aptitude—an undoubted genius—with a mind in other ways quite ordinary. We do not mean that Keats's mind was not of a higher type, by nature, than Turner's, but it was the mind of a boy, undisciplined and chaotic. He died too young to have formed any definite character, and was but beginning to be a man when the end came; but genius had wrought its miracle—the special aptitude had done its work—and a half-dozen masterpieces remained. How instinctively and unconsciously they were produced, with how little self-knowledge or self-criticism, a hundred passages show. Composition was always "a fever" with Keats, and nearly at the last he could say of the "Ode to Psyche": "The following Poem—the last I have written—is the first and the only one with which I have taken even moderate pains. I have for the most part dash'd off my lines in a hurry." This after the "Eve of St. Agnes," and "Isabella," and the first form of "Hyperion"! Of "Lamia" he says: "I have great hopes of success, because I make use of my Judgment more deliberately than I have yet done"; yet his judgment is of so little service that he picks out as "a good sample," for his publisher, precisely the bit of most doubtful taste in the whole poem, the description of the banquet hall, with its

> "Fresh carved cedar mimicking a glade
> Of palm and plantain."

Nor do his remarks upon the poetry of others show more critical power, whether he speculates on "Wordsworth's genius and as a help, in the manner of gold being the meridian Line of worldly wealth, how he differs from Milton. . . . And whether Wordsworth has in truth epic passion, and martyrs himself to the human heart, the main region of his song," or gravely quotes from "Twelfth Night" *Maria's* "There is no Christian that means to be saved by believing rightly, can ever believe such impossible passages of grossness," as an argument for Shakspere's infidelity.

An extreme instance of Keats's affectation is the following from letter xxxi, to Benjamin Bailey:

> "One saying of yours I shall never forget—you may not recollect it—it being perhaps said when you were looking on the Surface and seeming of Humanity alone, without a thought of the past or the future—or the deeps of good and evil—you were at that moment estranged from speculation, and I think you have arguments for the Man who would utter it to you—this is a formidable preface for a simple thing—merely you said, '*Why should woman suffer?*' Aye, why should she? 'By heavens, I'd coin my very Soul, and drop my Blood for Drachmas!' These things are, and he, who feels how incompetent the most skyey Knight-errantry is to heal this bruised fairness, is like a sensitive leaf on the hot hand of thought."

And this, apropos of nothing; what goes before and what follows relating to quite other subjects!

As to his passages of philosophizing on life, they are too long to quote and too confused to be understood. In all things he is a creature of whim and mood, writing a really noble and poetical discourse in favor of idleness and passive receptivity (p. 74), and, within two months, exclaiming, "I find earlier days are gone by—I find that I can have no enjoyment in the world but continual drinking of knowledge"; exalting his friends and then suspecting them; loving and despising women; thirsting for fame and social success, yet thinking he loathed "the poisonous suffrage of the public"; a radical in politics, yet extremely aristocratic in temper; full of contempt for French literature, which he did not know, and for Americans, whom he had never met, yet hating Englishmen "because they were the only men he knew." As he says of himself in a letter to Shelley written but a few months before his death, his mind "was like a pack of scattered cards." He had begun to gather them together and sort them; his later letters show the beginning of the conscious, self-restrained artist who could work and wait. In his immature youth he had shown many fine qualities; he began to be master of them and of himself. It was too late; the "brief candle" had burned itself out.

Valuable in themselves, then, as literature, in spite of some noble and oft-quoted passages, these letters are not. Neither do they possess the interest of a picture of the times. Keats's life was too remote, his interests too personal, his friends too unimportant, for such interest. Nor do they explain to us the nature of his genius—rather they render it more inexplicable than ever. How this half-educated young medical student, who dropped his profession at twenty to take up that of letters, and died at twenty-five believing that his "name was writ in water," came to do, in that short interval, work which has made him a name and a power in literature, is a question which his correspondence leaves unsolved. Yet, as it gives us the

thoughts and the moods and the feelings, from day to day, of the man who achieved this—as it tells us what suggested this or that piece of perfect verse and in what circumstances it was composed—as it gives us the pathetic story of that short life, this edition of it will be welcome to lovers of poetry, and the editor has deserved their thanks. These thanks would, however, be warmer if he had provided an index, or at least a less meagre table of contents, to lessen the labor of consulting it. To ask this were surely not to ask too much of a man of the reputation of Mr. Colvin.

Sir John Franklin and the Northwest Passage. By Capt. Albert Hastings Markham, R.N., A.D.C. [The World's Great Explorers]. London: George Philip & Son. 1891. 8vo, pp. xii, 324, maps and ills.

Sir John Franklin, the youngest son of a family comprising four boys and six girls, the children of Willingham and Hannah Franklin, was born at Spilsby, in Lincolnshire, April 16, 1786. He first went to a preparatory school at St. Ives, and at the age of twelve was entered as a scholar at the South Grammar School. This celebrated school, founded in 1552, counts several distinguished names among its graduates, among whom, besides the subject of this notice, may be instanced Alfred Tennyson and Hobart Pasha.

Whatever the cause, it soon became evident to his parents that the boy was determined to become a sailor, and, as they had other intentions for him, in the hope of changing his resolution they allowed him to ship on a small merchantman for a trip to Lisbon and back. The effect of this voyage was quite the reverse of what his friends intended, for young Franklin returned more than ever charmed with the novelty of a sailor's life and bent on adopting the sea as a profession. Nothing would satisfy him but service on one of his Majesty's ships. Yielding to his earnest entreaties, his friends finally succeeded in obtaining for him an appointment as a first-class volunteer on the *Polyphemus*, sixty-four guns, which he joined on the 9th of March, 1800. August 1, Capt. John Lawford was appointed to command her, and she went immediately into active service, forming one of the fleet under Nelson which in April, 1801, made the celebrated attack on Copenhagen, characterized by Nelson as his "most hard-fought battle." Returning to England, Franklin was appointed as a midshipman on the *Investigator*, commanded by Matthew Flinders, a relative of his and one of the most distinguished naval surveyors of those days.

The object of the voyage upon which the *Investigator* was ordered was the completion of the surveys of the coast of Australia, on which Flinders had been already several years engaged with great energy and success. A year after their arrival at Sydney was devoted to this work under great hardships. The vessel proved to be in a very rotten condition, and, on her return to Port Jackson, was condemned as unfit for further service; while, owing to the want of fresh provisions, scurvy played havoc with the crew. Flinders, Franklin, and twenty others embarked on the armed vessel *Porpoise* to return to England, Franklin being entered on her books July 21, 1803, as master's mate. The training in surveying work and in devising practical expedients to meet unusual contingencies, which Franklin must have had under so eminent an officer as his commander, was no doubt of the greatest value to him in his subsequent career.

The unfortunate *Porpoise*, in company with the merchantmen *Cato* and *Bridgewater*, entered Torres Strait, where, six days after their departure, the two former were totally wrecked on an unknown reef, while their convoy, after waiting aimlessly for twenty-four hours in the vicinity, and making no attempt at rescue, finally abandoned them, and on her arrival at Bombay reported the total loss of the two ships with all hands! The survivors of the wreck formed an encampment on the sandbank, and Flinders, in a six-oared cutter, made the perilous voyage of 750 miles to Sydney for assistance. This was fortunately secured, and Franklin was taken aboard the ship *Rolla*, bound for Canton, where he joined the *Earl Camden*, one of a fleet of sixteen armed Indiamen bound for England under the command of Commodore Nathaniel Dance of the East India Company's service. In the Straits of Malacca the fleet was engaged by Admiral Linois of the French navy with a squadron of five naval vessels, but the Englishmen gave a good account of themselves. The French were repulsed and even chased for two hours; then the Commodore recalled his vessels and proceeded homeward without further molestation.

In August, 1804, Franklin was appointed to the *Bellerophon*, and on the 21st of October, 1805, participated as signal midshipman in the battle of Trafalgar, from which he escaped unscathed. After an interval of very ordinary service, he took part in the British operations against New Orleans, and on the eventful 8th of January, 1815, when Jackson defeated the invaders (a fact Capt. Markham forgets to mention), Franklin was officially commended for his gallant exertions.

In 1818, Franklin, now a lieutenant of ten years' standing, was appointed second in command of an expedition toward the North Pole, on the ship *Dorothea* and the brig *Trent*. The senior commanding officer was Lieut. David Buchan, who had already distinguished himself as an hydrographer on the Newfoundland coast. This was the initiation of Franklin into the Arctic service. A gallant but futile attempt was made to penetrate the Spitzbergen floes, and, with both vessels more or less damaged, the expedition was obliged to return to England, with only negative results. For Franklin, however, the voyage bore further fruit. A sonnet on the expedition, written by a poetical young lady, Miss Eleanor Anne Porden, led to her introduction to the gallant officer, to whom some years later she was united in marriage.

After the return of Buchan, the Government determined to send an expedition for Arctic discovery into the archipelago, then an unknown wilderness, north of North America. To coöperate with this expedition, commanded by Lieut. Parry, a land party, to approach the coast from the interior of the Hudson Bay region, was agreed upon. This land party was commanded by Franklin, with John Richardson as surgeon, and their sufferings and geographical discoveries are described in the well-known volume entitled 'Narrative of a Journey to the Polar Sea.' Space forbids us to dwell on details, and the reader may be referred to the well-merited eulogies assembled by Capt. Markham. In the autumn of 1822 Franklin arrived in England, was promoted to the rank of captain, and unanimously elected a Fellow of the Royal Society. On the 19th of August, in the following year, he married, and the union was blessed, June 3, 1824, by the birth of a daughter; but Mrs. Franklin's health from this time gradually declined. It was only too apparent, when Franklin started on his next expedition, that her tenure of life would be but short.

Though Parry thus far had failed to find the Northwest Passage which was the object of his search, he was fully convinced of its existence, and, in accordance with that belief, a second double expedition was planned. The command of the land party which should survey the northern border of the continent was confided to Franklin, with whom Richardson and Back were again associated. They left England in February, 1825, and six days later Mrs. Franklin breathed her last, passing away at the early age of twenty-nine. By the 18th of August, 1826, Franklin had traced the shore line nearly 400 miles westward from the mouth of the Mackenzie River, and was then obliged to return. After additional researches in other directions, he arrived in England, September 26, 1827, having been absent nearly three years. The geographical results included the discovery and delineation of over 1,000 miles of coast, and the scientific observations of all sorts were of the highest importance. Honors were showered upon the successful explorer. He was knighted on the 29th of April, 1829, and received the honorary degree of D.C.L. from the University of Oxford, while medals and congratulations abounded. On November 5, 1828, Franklin married Jane, second daughter of John Griffin, Esq., of Bedford Place.

After this, Franklin was engaged as senior naval officer in Greece, a post involving much administrative duty ashore. In 1836 he was appointed to the Lieutenant-Governorship of Van Diemen's Land (now better known as Tasmania), where the beneficent results of his rule are well remembered. His popularity aroused jealousies which finally led to his retirement from the post, to the great regret of the better element in the colony.

About the time of his return to England, an energetic effort on the part of Sir John Barrow and other geographers led to the fitting out of a last expedition in search of the Northwest Passage. Although nearly sixty years of age, Franklin eagerly sought the command, which was his for the asking. Full of hope and enthusiasm, he sailed on the 19th of May, 1845. On the 26th of July, the vessels were seen for the last time by civilized man, being sighted by a whaler from Hull, in Melville Bay. Opposed by the ice, the expedition wintered in 1845–'46, at Beechey Island. The following summer they were beset in the pack-ice in Peel Strait, west of the northern part of Boothia Felix, and there remained all winter. In the spring an exploring party was sent out, commanded by Lieut. Graham Gore, which traced the remaining waterway from the known to the previously unknown. Returning with the geographical fact of a Northwest Passage fully determined, they were barely able to announce the news to their chief, who was then seriously ill, and who died June 11, 1847, with the news of the successful result of the enterprise ringing in his ears. His grave no man has seen, nor does any one know where he was laid; though doubtless, despite the ice, he had a sailor's burial.

With this brief summary of the most remarkable life among Arctic explorers, we must rest. For the details and associated facts and the story of the search, the reader should turn to Capt. Markham's excellent volume, where all is told in straightforward, manly fashion, though with but little art. The book is well printed and has a good index.

The Origin of Property in Land. By Fustel de Coulanges. London: Swan Sonnenschein & Co. 1891.

This essay, at least under its present title, seems inappropriately published in book form.

It was originally a critical article in the *Revue des Questions Historiques*, and, in spite of the introductory chapter on the English manor by Prof. Ashley of Toronto, we cannot feel that it should have been offered to the public in another shape. It is not an examination of the origin of property in land, but a criticism of certain theories of common ownership of land; a criticism, too, that can be appreciated only by scholars, for it depends upon the construction that should be given to obscure allusions and words of doubtful meaning occurring in the earliest records of our race. For the most part, it is impossible to judge of the value of such criticism without examining these records; and, as this is impossible for general readers, it is fairer not to invite them to listen to the controversy.

Prof. Ashley's introduction is of a more popular character. He disbelieves in the existence of the free village community of Teutons in England, and seems inclined to accept Seebohm's theory as to the Roman origin of the manor. But it is quite possible, as Mr. Gomme has recently shown, to reject both views, and to recognize the existence of a servile population attached to the land, antedating the Roman, possibly even the Celtic, occupation of Britain. The theory of the mark as a tract of land held in common by the free inhabitants of a village must be abandoned unless new evidence is discovered, and, if this theory goes, it is hardly necessary to say that a most cherished grievance of the modern land-reformers goes with it. In other words, the period of degradation from which the tillers of the soil have gradually emerged, was never preceded by a golden age of freedom.

There are some parts of M. de Coulanges's article that are of a nature to be appreciated by themselves. His examination of the well-known passages from Cæsar and Tacitus, upon which such an imposing fabric of theory has been constructed, is, as to certain points, conclusive. Thus, the statement by Tacitus as to the cultivation of the land by the *familia* of the Germans is undeniably inconsistent with the theory of tillage by free owners, and it has been too hastily assumed that *ager* is to be translated by "common lands." So it is significant that the word *mark* not only is late in appearing, but seems to be used in the sense of boundary when it does occur. Altogether, the attack upon Maurer is a very brilliant piece of work; but as those who have undertaken to verify Coulanges's references in his 'Cité Antique' have found him not always accurate, it is well not to decide too hastily upon his conclusions. At all events, the article is a challenge to the followers of Maurer which they cannot afford to ignore.

It is but small game that M. de Coulanges runs down in his criticism of MM. Viollet and de Laveleye. The former of these writers endeavors to establish the existence of community of property in land by poetical quotations from Plato and Virgil and Tibullus, referring to a period when Saturn reigned and wars were yet unknown. The reference to such passages as authoritative is sufficient to discredit a writer even when he descends to historic times. As to M. de Laveleye, his method, not to say his mind, is so essentially superficial that it is almost cruel to subject his writings to any of the tests of scholarship. Yet, after all, M. de Coulanges does not show that there was not a period when land was owned in common. He draws a distinction between the ownership of the family and that of the community; but if he admits the one, he establishes a certain probability of the other. At the same time we must allow the force of his contention that "property may be a primordial fact, contemporaneous with the earliest cultivation of the soil, natural to man, produced by an instinctive recognition of his interests, and closely bound up with the primitive constitution of the family." His criticism deserves the careful examination of all who have access to the authorities to whom he refers.

B. F. Stevens's Facsimiles of Manuscripts in European Archives Relating to America. 1773–1783. Vol. IX. Nos. 850-919. London: B. F. Stevens.

To read the Stevens manuscripts is a labor of Sisyphus. In the eighth volume we seemed to have rolled this voluminous correspondence over rocks and bogs as far uphill as the year 1778; and here, with the ninth, we are down in 1775 again. But this volume is easier reading than some of its predecessors. It contains many letters of Beaumarchais, and that arch-conspirator was a far more amusing person than Wentworth, and Hynson, and Lupton, and Dr. Bancroft; and his morals were far more savory than theirs. He was not betraying anybody, and his lies were not blacker but only more picturesque than those which they sold week by week to their employers.

The most entertaining thing in this volume is Beaumarchais's answer to Dr. Barbeu-Dubourg. The letter was published so many years ago by Loménie that it may well be forgotten by this time. Dubourg was a friend of Dr. Franklin, and had taken, from an early date, a great interest in the cause of the American colonists. When he learned that the French ministers had intrusted to Beaumarchais the whole management of commercial relations with the insurgents, he was shocked and disappointed. He immediately wrote to the Count of Vergennes (July 13, 1776):

"I have seen M. de Beaumarchais this morning, and, seeing myself expressly authorized by you, I have willingly conferred with him without reserve. Everybody knows his wit, his talents, and no one does more justice than I to his honesty, his discretion, his zeal for all that is great and good; I believe him one of the best fitted men in the world for political negotiations, but perhaps at the same time one of those least fitted for mercantile transactions. He loves display, they say that he keeps women, he has the reputation of a spendthrift, and there is no merchant nor manufacturer in France that has not this idea of him, and that would not hesitate much before having any commercial business with him whatsoever" . . . (881).

This letter was shown by the Count to Beaumarchais, and brought forth the following answer:

"Tuesday, 16th July, 1776.

"Until the Count of Vergennes showed me your letter, Sir, it was impossible for me to seize the true meaning of that with which you have honored me. This gentleman *who will not and cannot undertake anything with me*, was something inexplicable. I now understand very well that you wanted to take time to write to the Minister about me; but to receive true ideas from him, was it quite necessary to present him with false ones? Indeed, what difference does it make in our business if I am a man widely known, fond of display, and who keeps women, &c.?

"The women that I have kept for the last twenty years, Sir, are your very humble servants. They were five, four sisters and a niece of my own. Within three years two of these kept women have died, to my great regret. I now keep only three, two sisters and my niece, which is yet tolerably extravagant for a private person like myself. But what would you have thought, if, better acquainted with me, you had known that I pushed my scandalous conduct so far as to keep men too?—two nephews, very young and rather good-looking, and even the too unhappy father who brought into the world so scandalous a keeper. As for my display, it's much worse yet. For three years, thinking laces and embroidered clothes too mean for my vanity, have I not affected the pride of having my wrists ever adorned with the finest plain muslin? The most splendid black cloth is not too fine for me; sometimes even I have been seen to push my dandyism so far as silk, in very hot weather. But I beg you, Sir, not to go and write these things to the Count of Vergennes; you would end by ruining me entirely in his mind.

"You had your reasons for writing him evil of me, although you do not know me; I have mine not to take offence at it, although I have the honor of knowing you.

"You are, Sir, an honest man, so enflamed with the desire to do a great good that you thought you might allow yourself a little evil to accomplish it.

"This morality is not exactly that of the Gospels, but I have known many people to make up their minds to it. It is even in this way that, to effect the conversion of the Pagans, the Fathers of the Church sometimes allowed themselves doubtful quotations, holy calumnies, which among themselves they called pious frauds.

"Let us stop jesting. I am not put out, because Monsieur de Vergennes is not a small man and I abide by his answer. Let those of whom I ask advances in business mistrust me; I consent. But let those who are animated with true zeal for the common friends who are concerned, look twice before they part company with an honorable man who offers to render all the services and to make all the advances useful to these same friends. Do you understand me now, Sir?

"I shall have the honor to see you this afternoon early enough to find you still together.

"I have that of being, with the highest consideration, Sir,

"Your very humble and very obedient servant, well known to you by the name of

"Roderigue Hortalez et Compie."(882.)

We have thus seen Beaumarchais engaged in controversy. Let us now contemplate him furnishing the Minister with news. We shall marvel at the kind of information on which governments had to act in the last century:

"Paris, 25th September, 1776.

"Monsieur le Comte:

"I am more unfortunate than Cassandra, whose prophecies no one believed; because she always announced misfortunes. As for me, I announce only good things, and they say that I realize the flights of my heated imagination. I predicted that the Americans would be conquerors, and soon delivered from the English; and people smiled at my security. I predicted that if there were an action at New York and the loss were even equal on both sides, the difference of situation would multiply it a hundred fold for the English; and they shook their heads at my calculation. I said that General Burgoigne, on bad terms with Carleton, could not pass the lakes for more than four months, and they doubted my prediction.

"Let us, then, support our conjectures by some bits of news recently arrived.

"Nantz, 22d September.

"By a ship arrived day before yesterday, and come in 26 days from Nantucket in the island of Rodes, we have received the important news:

"(1.) That the Congress is still sitting at Philadelphia and does not think of leaving there.

"(2.) That the Americans declared their independence on the 4th of July, and have not changed their minds since. . . .

"(5.) That the Americans have seized the two important fortresses of Crown Point and Ticonderoga; that they there await Gen. Burgoigne, who is master of Montreal, but who cannot yet push on his attack because he is in need of boats to cross the lakes, which will freeze while they are building.

"(6.) That on the 12th or 13th of August a very bloody engagement took place at New York between the two parties, of which the following is the detailed account: Gen. Howe being encamped on Staten Island in sight of His Excellency Gen. Washington, who was on Long Island, and having resolved to attack Gen. Washington, feigned to disembark his troops on one side of the island, and disembarked the greater part of them on another. These men seized a rising ground, and surrounded the American army. After the two contestants had thus fought for a very long time, the American generals perceived that their troops would suffer terribly in this sort of blockade, unless they made a vigorous manœu-

vre which should give them back the advantage of position. Immediately they encouraged their soldiers to throw themselves on the English, sword in hand, and to make way through their army; which they did with terrible courage, and, having broken through the troops that surrounded them, attacked them in the rear, put them to rout, and forced them to retire precipitately to their vessels. The loss is about equal on both sides, and amounts to eleven thousand men, both English and Americans. But the latter have taken prisoner three generals, fifteen officers of rank, several officers of artillery, and a great number of others, and many English soldiers." . . . (898).

We have had occasion to speak before of the carelessness sometimes shown in translating these letters. It appears more in occasional blunders of a rather serious character than in the ordinary course of translation, which is reasonably good. Thus we have in this volume (881) "M^rs de Lauraguais et Le Roy," rendered "M. de Lauraguais. and the King," when a moment's thought should have warned the translator that His Most Christian Majesty would hardly be brought into a letter to one of his ministers at the tail of a subject in that way, and a second thought might have told him that the article in front of the King's name is not usually capitalized. Monsieur Le Roy is, in fact, as common a name in France as Mr. King is with us. We should like also to know the translator's warrant for rendering "officiers majors" as "commissioned officers" (898).

Lewis Cass. By Andrew C. McLaughlin, Assistant Professor of History in the University of Michigan. Boston: Houghton, Mifflin & Co. 16mo, pp. ix, 357.

In the "American Statesmen Series" the life of Lewis Cass could not well be omitted, for he was a figure of undeniable prominence among the politicians of the generation preceding the civil war. Yet it is doubtful if the intrinsic interest of his public career makes a volume in excess of three hundred pages a memorial proportioned to the permanent place he will occupy in our history. A full article in a biographical encyclopædia would afford room for a sketch which should do justice to his character and services to the country; but in so busy a time as this, one feels a little overtaxed in reading a volume in which it does not appear that in any important juncture Cass's influence was a dominant one.

By far the most attractive and the most fruitful part of his life was the earlier period when, as Colonel in the War of 1812, and as Governor of the Territory of Michigan, he showed a manly vigor and an intelligent initiative in affairs that warranted the high reputation which he brought into national politics when he entered the Cabinet of Jackson in 1831. His explorations in the wilderness of the Northwest, and his wise and courageous dealings with the Indian tribes, had a tinge of the romantic and adventurous which will always make an attractive chapter in the history of advancing civilization on the continent. It is not improbable that, a few generations hence, he will be better known as an administrator and explorer of the frontier than as Cabinet Minister, Senator, or diplomat. A place beside Champlain and Marquette would not be an ignoble one in our annals, even if it be not that to which Cass and his closest circle of friends thought him entitled.

In spite of all ingenious efforts to magnify the importance of his national career, Cass must remain one of that unhappy class of Northern politicians who were not able to forecast the future of the country, and who were chained, by fetters which they could not break, to a cause inevitably doomed by the advancing enlightenment and awakening conscience of the age. They were at war with manifest destiny, and no matter how much learning or kind-heartedness or honesty they had, they must bear the burden of having sought to stop the moral progress of their time, and to defeat the cause of free labor and free thought when the States and communities of which they were the official representatives were the most brilliant examples of the power and value of freedom. Posterity will have deaf ears when it is argued that they were not blinded by ambition and narrow partisanship. Prof. McLaughlin's own sympathies are so strongly with the cause that triumphed that, in reading his pages, one feels his apologies and his glosses to be labored. The sympathy he feels for a man of considerable ability, of honorable and successful private life, of kindly and hospitable nature, disarms his criticism, and he glides, perhaps unconsciously, into the rôle of the advocate pleading for a favorable judgment.

The publisher's and printer's work is, as usual, excellently well done, and the introduction of a new form of spring back makes a handy volume which it is a comfort to hold and to read.

NATURE STUDY

For the Common Schools. By WILBUR S. JACKMAN of the Cook Co. Normal School, Chicago. 12mo, pp. 444. Teachers' price, $1.20; by mail, $1.30.

A series of questions for pupils and suggestions for teachers on the scientific side of every day phenomena.

LIFE OF

Jane Welsh Carlyle.

By MRS. ALEXANDER IRELAND.

8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Exhaustion.

HORSFORD'S

ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says: "A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 17, 1891.

The Week.

THE case against the *Itata* has been formally abandoned, as a matter of course, owing not only to the change in the situation in Chili, but to the better information about it now possessed by our Government. As a matter of fact, the charge on which Don Ricardo Trumbull was indicted, that of "fitting out or arming a vessel to cruise or commit hostilities against the subjects, citizens, or property of any foreign prince or State, or any colony, district, or people with whom the United States were at peace," is just as good now as it ever was. Balmaceda, at the time of the offence, either was or was not "a prince or State, colony, district, or people with whom the United States were at peace." If he was, his defeat and expulsion from Chili since that time does not affect the question of Trumbull's guilt, and the prosecution ought to go on. But the trouble with which the Administration would have had to contend on the trial, and which they now see would have knocked the prosecution into smithereens, is that Balmaceda was not, when the *Itata* was seized, either a prince, or State, colony, district, or people. He was simply a Chilian criminal in revolt against his own Government, aggravated by robbery and murder. He had no legal standing of any description in his own country. It was the duty of every Chilian, under the Constitution, to do what he could to arrest and bring him to justice. These patent facts "Pat" Egan, our Minister, ought to have reported promptly to the State Department, and so have prevented the seizure and pursuit of the *Itata*, which was the property, and was engaged in the service of, a friendly State, then occupied, under very trying circumstances, in defending its Constitution and laws against a powerful and treacherous brigand. The position of the Administration now in abandoning the prosecution is a very humiliating one; but if it teaches our rulers the need of more care and deliberation in the management of foreign relations and in the use of our new cruisers, the lesson will not be dearly bought.

The issue of $27,000,000 of irredeemable paper through Balmaceda during his short reign is one of the most serious facts in the present situation in Chili. Both banks and individuals within his jurisdiction had to accept it, on pain of being shot or locked up, so that its repudiation now would have put a very great obstacle in the way of a restoration of confidence, and it is fortunate that the new Government has determined to recognize and redeem it. According to the *Herald's* news, Egan continues to show a front of steel to the British, who are trying in vain to diminish his beneficent influence. It appears it was in order to get ahead of him that the British man-of-war undertook to carry that silver to London for Balmaceda. Doubtless other underhand attempts from the same quarter will be brought to light to depreciate him every few days. In spite of this British malignity, however, it still appears plain that Egan ought to come home promptly. It is of the utmost importance to the commercial and moral interests of the United States that, during this period of reorganization in Chili, they should be represented by some one who has no apologies to make for anything in his past career, who is really an educated American of high character and standing, and who will be recognized as such by Chilian public men. Egan can never in their eyes have any real weight. He is only an American in name; his reputation is damaged, and he is an ignorant and illiterate man in a community in which the political class are still men of culture and refinement. It is only as "a Blaine Irishman" that he is any way eminent, and this type of humanity commands but little respect outside the *Tribune* office and Bar Harbor.

The Democrats of Pennsylvania are taking as their motto for the campaign in and about Philadelphia "Thou Shalt Not Steal," and are making a perceptible impression with it. There are many Republican efforts to be humorous over the spectacle of the Democratic politicians going to the Ten Commandments for their campaign ammunition, but they are not especially successful. Surely no community was ever in greater need of being reminded of the existence of this fundamental law of public and private morality than Philadelphia is to-day. Not only has the city been robbed of several millions of dollars, but its leading newspapers have been caught sharing some of the plunder with the chief thief, and the power of its leading citizens is used to prevent all thorough examination into the matter. The position of the great body of the intelligence and virtue of the community appears to be that stealing which is done by good and pious men ought not to be either exposed or punished, if it is possible to keep it hidden, since the exposure might seriously disturb both the moral and commercial stability of the community. The Democrats, therefore, in preaching the abstract immorality of theft, are doing most important missionary work.

The reports that Secretary Foster has been holding back payments on all the regular appropriations, in order to scrape together enough money to redeem the 4½ per cent. bonds, are fully borne out by the statement of the receipts and expenditures of the Treasury for August. The receipts show a marked falling off, being $28,884,851, compared with the $36,607,449 of August, 1890, and the even higher figures for July and June of last year. Yet, by screwing down the expenses to $20,738,020, Mr. Foster gets a comfortable balance to apply to redemption of bonds. But how was this balance obtained? The figures tell their own story. Nearly $6,000,000 are knocked off the customary payments under the head of "Civil and Miscellaneous," at least a million more off the appropriations for "War," a good sum taken out of the money voted the Indians, and—tell it not to the makers of Republican platforms—from eight to ten millions from that sacred fund which pays for "Pensions." Think of a beggarly $5,094,323 paid out for pensions in August! What becomes of "Republican generosity" to the old soldier, in view of such a whittling down from the good, hearty present of $13,000,000 in July, $18,000,000 in August of last year, and $21,000,000 last November? Secretary Foster will have to do better than this, or the Republican campaigners will find their arguments running low. His monthly statements have degenerated into a mystification, but the record of the actual operations of the Treasury shows how matters really stand. It proves that the receipts have fallen behind expenses since the McKinley Bill went into force. The balance on the wrong side was about $3,000,000 up to the end of July, and would have been six or seven millions higher in August alone if the average monthly payments had not been held up. When we get the September showing, with the outlay for bond redemption added in, we shall doubtless have a new proof that time was all that was needed to show the supernatural wisdom of the McKinley Bill.

One of the most rascally clauses in the McKinley tariff is that relating to pocket cutlery, the duty upon which was increased to 74, 83, and 116 per cent., according to quality. The duty, before McKinley took it in hand, was 50 per cent. ad valorem, which was itself an unconscionable outrage upon the buyers of jack-knives. McKinley added a specific duty to the ad-valorem, which is equivalent to the foregoing percentages. Since the new tariff went into effect, the manufacturers have held meetings in this city about once a month to put up prices, and have advanced them about 40 per cent. on some kinds of goods. Although they have not organized a Trust, their concerted action has the same effect on the public. And now "An Interested Observer" writes a very misleading article in *Bradstreet's* to justify the advance in the price of jack-knives. Before the passage of the bill, he tells us, the manufacturers were selling thousands of dozens of these knives at a loss of 25 per cent. Poor things! Why did they go on year after year increasing their production and their losses? That they did increase their production is evident.

According to their own statement their production of this kind of knives in 1882 was of the value of	$1,320,000
The imports (including duty) were	1,857,297
Consumption for 1882	$3,177,297

The increase in consumption must have been as much as 2½ per cent. per annum, or an increase of 15 per cent. in six years (1882 to 1887 inclusive). Now, the importation of these goods did not increase, but slightly declined during this interval. Therefore the natural increase in consumption must have been supplied by the domestic manufacturers, and this increase could not have been less than $500,000 per annum in value, or 40 per cent. We are expected to believe that those distressed manufacturers went on increasing their product at a loss of 25 per cent. to themselves at every turn-over. A still more remarkable fact is that these sufferers, before the McKinley Bill passed, sold at $2 per dozen a knife the foreign equivalent of which cost $2.20 to land in New York, duty paid, and could not be sold, when all charges were paid, at less than $2.40 per dozen. And yet they were given a large increase of duty by McKinley which they are using, as the writer in *Bradstreet's* blandly remarks, to "educate the consumer to pay a little more for his goods." This is a euphemism for cheating him under the forms of law.

While recalling last year's tin-plate prophecies for the sake of putting them on record, some further remarks of Senator Allison should not be overlooked. "If there is any faith to be placed in the iron and steel industry of our country," he said, "if there be anything in the promises, the prospects, the projects of these men, then it will turn out that when the 1st of July, 1892, shall come, we shall be producing in our own country tin plate to a very large extent." For "iron and steel industry of our country" read Cronmeyer and a few other rash enthusiasts like him, and the representatives of the Amalgamated Association who were deluded in the way that President Weihe has lately made public. It was "these men," with their "promises and projects," that the gullible members of the Senate Committee on Finance took as their guides in framing the tin-plate duties. At the present day it is clear that "if there is any faith to be placed in the iron and steel industry of our country," as represented by its leading firms in different parts of the country, Senator Allison's prediction will be as wide of the mark as was his more unguarded prophecy which is already falsified. But the interesting question arises if he will, in that case, be prepared to fulfil the threat which he made immediately after his prediction. "If the great iron and steel industry in the United States," he went on, "will not, now that they are to be protected in the production of tin, engage in that production, and compel the people of the United States to pay large and undiminished prices to monopolies in other countries, *then this tin duty will be swept from your statute books.*" This dire fulmination will do to go alongside Senator Sherman's against the Trusts, if they took advantage of the legislation granted them and put up prices. It may be found in the *Congressional Record* for September 30, 1890, at page 10722.

A harrowing uncertainty seems to be connected with every triumph of "reciprocity" or "American diplomacy." No one appears able to tell exactly to whose benefit it is to inure. Thus we have been led along from one explanation to another in the matter of the lifting of the German prohibition of our pork, until it is impossible to know what really is the fact. We were told at first that the German consumer was to reap all the advantage, and this seemed reasonable until we were assured with equal positiveness that not he, but the American farmer, was to be blessed. This was good news; but before we could settle down to enjoy it, along came Minister Phelps to tell us that the only real benefit was to be Mr. Blaine's. No sooner were we beginning to credit this, than up rose Private Secretary Halford to inform us that it was all a mistake, and that the President himself was the chief beneficiary. As a relief from the painful dilemma presented by this conflicting testimony, a *tertium quid* then appeared in the person of Secretary Rusk, who began to get a suspicious number of congratulatory telegrams. He, however, with the modesty and generosity of conscious greatness, declined to wear all the laurels, and wrote a letter to Democratic Congressman Hatch, to aid that gentleman's Speakership canvass by declaring that a good part of the famous victory was due to him. Now we submit that this leaves the whole affair so diluted and dubious that no man's vote will be determined by it, and thus the main object of the entire negotiation will be frustrated. Moreover, even if the thing appeared to be beyond all dispute, we have no guarantee that it would remain so. Thus the McKinley reduction of duty on French works of art has all along been supposed to be solely the work of Mr. Whitelaw Reid. We had his word for it, and, except for a vague claim on the part of the American hog, there seemed to be no one to contest with him for the honor. But now we come upon a letter addressed by the French Society for the Protection of Literary and Artistic Property to the Minister for Foreign Affairs, asserting that the said reduction was voted by the "American Chambers" as "a direct consequence of the labors" of Count de Kératry. Evidently, it is going to be very hard for the American voter to know, this fall, who his real benefactors are.

A noteworthy development of the labor question in the Eastern States is the establishment in recent years of a number of shoe-manufactories in the smaller cities and towns of Massachusetts, New Hampshire, and Vermont. This is the result of the troubles with the "walking delegates" and other obnoxious accessories of the labor unions in the cities where this industry was formerly concentrated. Many a manufacturer has had the experience of one who recently closed his big factory in Haverhill, and explained his course by saying, "I am tired of being bulldozed by abor unions." The single factory in the small town escapes these troubles, its employees being as a rule men of some character, who are not ready to throw up work at the beck of any loafer who may come to the front in a union. A few years ago the agitators thought that they were going to "run" the whole industry of shoemaking, but they are slowly learning their mistake.

The "Society of Loyal Volunteers," of whose founding in Washington we recently spoke, has published its "Prospectus and Constitution," in which the aims and methods of the Society are set forth in detail. The plan contemplates the organization of branch societies in every State and county, which are to be in relations with the national society, and are to act partly as mutual benefit associations, partly as agencies for securing a revision of the pension laws in the interest of the deserving and to the discomfiture of the unworthy. Among the "facts and lessons" which the Society undertakes to "teach and maintain," the following are specimens: "The volunteer armies . . . were inspired by no hope of individual gain or glory, except such as they might share with all their countrymen. . . . The weakness of every company, regiment, battalion, and division was in the shirks, cowards, and vice-destroyed men who encumbered its muster-rolls, devoured its subsistence, and crowded honest but disabled men out of its hospitals. Such men do not hesitate to-day to live on the generous gratitude of the people through payments made on pensions obtained by fraud or at the expense of honor. . . . We demand that the pension legislation of the past and the future shall be so revised that the *honor* as well as the necessities of the soldiers and the sailors shall be fully recognized and jealously guarded." Whatever the success of the Society may be, nothing but good can result from such utterances as these, coming from the men they do—all volunteer soldiers of honorable record.

The last news we had from the Harney Peak tin mines represented that the company controlling the same was in a quandary whether to go ahead and crush the great quantities of ore taken out, with the imperfect machinery on hand, or wait till a six-hundred-stamp mill could be made and brought upon the ground. While they were cogitating on this problem, Prof. Claypool of Akron, Ohio, one of the editors of the *American Geologist*, was making a visit to the Black Hills. He writes to the trade journal *Hardware*, in answer to a special request from the editor, that "there is scarcely enough ore taken from all the mines together to keep a

stamp mill of fair size at work." Also "that the present attitude in the region is one of suspense, and it is difficult to say what the next move will be." We should think most likely the next move would be the publication of a lot of fresh lies in a London *Mining Journal*, to be followed by a speech in the United States Senate like the following:

"In that portion of the States of South Dakota and Wyoming known as the Black Hills, there have been discovered *and developed* within the last six years the most extensive and probably the richest quartz tin mines thus far found upon the globe. . . . The ore is very rich in places, and the gulches contain a large amount of stream or placer tin, which has been successfully worked for a number of years and *many tons have been put upon the market.*"

This extract from a speech of Senator Moody advocating a duty of four cents a pound on block tin was delivered August 12, 1890, and may be found, together with a deal of similar rubbish, on page 8453 of the *Congressional Record* at that date. It goes very well with the prediction of Senator Allison that within one year after the passage of the new duty on tin plate we should be making all the tin plate that we use.

Politicians and stump-speakers rack their brains to devise out-of-the-way arguments and unexpected "issues" in behalf of their party, and are blind to the powerful effect on the popular mind of obvious facts and plain inferences from them. One such set of facts relates to economy in the administration of the Government. Republicans are talking with much bravado about their billion-dollar Congress, but they are secretly aware that it is a highly dangerous thing to boast of. The thinking voters do not want extravagance in legislation, because they know it means, in the long run, heavier taxation. The plain people of the country can be made to see and approve the wisdom of economy in public affairs, just as they do in their own affairs. When they look at the record of the expenses of the Federal Government by years, they will see set down for 1890-'91 the sum of $365,773,905. Glancing up the column, they will observe that this is the greatest amount expended since 1868, when the country was just emerging from the war. Pursuing their investigation, they will notice that the average yearly expenditures under the last Democratic administration were upwards of $100,000,000 less than the outlay during the past fiscal year. When they reflect that this vast increase represents no practical increase in the benefits of good government, so far as they are concerned, they cannot but favor, other things being equal, the party which stands for economy. By a year from now, the full effects of the extravagant appropriations of the last Congress will have got into the records for the consideration of voters, and the comparison is certain to be still more heavily against the Republicans. Indeed, everything now points to a deficit at the end of the current fiscal year, and if the Republican party has to go with it into a national campaign, it will have to explain how its rule has brought about an adverse balance for the first time in thirty-six years. Then we shall not have to listen to so much praise of extravagance.

Mr. Albert Shaw reports in the *Christian Union* a suggestive incident bearing upon the attitude of the Catholic Church towards the public-school system. The town of Faribault, Minn., has a deserved reputation for its public schools, though a parochial school has also been sustained by the three Catholic churches in the place. But on the 22d of August the leading priest, Father Conry, offered to turn over this school to the Board of Education, to be included in the general system of the town. Four days later he submitted the same offer in writing, and it was unanimously accepted. He made no conditions whatever, and alleged as his motive in making the transfer his desire to secure for the children of Catholics the superior advantages of the public-school system, especially "a perfect preparation for the duties and responsibilities of American citizenship." The Board will accordingly enter upon control of the parochial school building and grounds, under no obligation to retain the Catholic teachers, and prepared to assign the Catholic children of the various sections of the town to the schools nearest them. What lends added significance to this unusual step is the fact that it must have been taken with the approval of Archbishop Ireland. That prelate's thorough-going Americanism has been too often made manifest, however, to cause surprise at this latest display of it.

A newspaper of the republic of Salvador, the *Correo Nacional*, gives an account of the late occurrences in connection with the Pacific Mail steamship *City of Panama*. It seems that a certain Gen. Letona, under indictment for crime in the city of San Miguel, had escaped to Nicaragua, whence he took passage on the steamer mentioned. Learning of this, the Judge of the court where his case was pending applied to the national authorities for the arrest of the criminal when the steamer should put in at the Salvadorian port of La Union. It was this writ of a Salvadorian court, therefore, that Capt. White refused to recognize. When that fact was reported to the Government, the authorities ordered the captain to delay the sailing of his vessel, as they had a perfect right to do under their contract with the company, quite irrespective of the affair immediately in hand. But the captain at once put to sea without the requisite permission from the authorities of the port, who thereupon applied to the courts for a decree of condemnation, in accordance with the code of navigation, and it was provisionally granted them. When the steamer arrived at its next port of call in Salvador, La Libertad, the second officer of the harbor went aboard and proposed to take charge of the ship by virtue of this decree. That was the occasion when Capt. White's anger blazed forth, as recounted in the despatches, and he threatened to throw the officer overboard. A few hours later he weighed anchor, again without the necessary license, and, what is more, against the express advice of the United States Consul in La Libertad. That official had some glimmering of knowledge of international law, and urged the captain at least to await advices from Washington. But the latter's Jingo blood was up, and he steamed away, completing his record for that trip by again violating the company's contract with Salvador in refusing to touch at Acajutla.

This case seems surprising, but it is just what we have to expect under a policy of international bluster. The way our State Department handled the Barrundia affair was directly calculated to make the commanders of our merchantmen swagger up and down the coasts of South America, turning their vessels into the refuge of criminals, and daring any court to touch one of them. And as for our diplomatic officers, who know better, the example of ex-Minister Mizner is a sufficient warning that they must not meddle with our bullies of the sea. Our Consul at La Libertad has probably endangered his position by so much as urging Capt. White to wait till word could be had from Washington. Salvador is weak and can be insulted with impunity, though she proposes to make a suitable protest. But one of these days some Blaine-inspired captain will ignore the territorial jurisdiction of a first-class Power, and then the United States will have a chance to put their interpretation of international law to a real test.

The *Mémorial Diplomatique*, which discusses all pending questions from the Franco-Austrian point of view, seeks to minimize in every way the importance of the Turkish concession to Russia in the matter of the Dardanelles, and says the Porte is shortly going to issue a circular setting forth that it does not "propose any modification of the Treaty of Paris or of Berlin, but simply an additional clause giving a wider liberty in the interpretation of the treaties," in so far as regards the passage of the Dardanelles. The *Mémorial* at the same time insinuates that the fuss in diplomatic circles over the incident has been got up by Prince Bismarck through some of his organs in the press, by way of showing what happens when the helm is taken out of old hands and put into young ones. He made a specialty of keeping the peace in the Balkan peninsula, and if a war broke out over Constantinople within two or three years of his retirement, it might be treated as a feather in his cap. But altogether apart from the attitude of Russia towards the Turks, the internal situation of the Empire is acknowledged on all hands to be very serious, and to threaten convulsions which may make a foreign war inevitable.

THE NEW YORK REPUBLICAN PLATFORM AND CANDIDATE.

THE resolutions adopted by the Republicans at Rochester endorse the two McKinley bills, the present Silver Act, and the principles of "genuine reform of the civil service." These are the principal features of the platform as regards national affairs. Before the Convention met, there had been some suggestions made in high quarters about ignoring the tariff question altogether, and making the fight this year on State issues exclusively. This, we believe, was the programme of Mr. Andrew D. White's friends, Mr. White himself being a very moderate protectionist, and not at all friendly to the McKinley Bill. But it is plain that this policy of ignoring the tariff legislation upon which the party had suffered martyrdom last year could not be followed without leading to disaster in other States, and notably in Ohio. If McKinley were ignored in New York, that would be a sign that McKinleyism was waning. A suspicion that it is waning in the Republican party is already afloat, and has been noticed by some of the more extreme protectionist journals with alarm. To give public confirmation to this unuttered belief would be a sure presage of disaster elsewhere. Therefore it was inevitable that McKinley, for better or for worse, should be endorsed by the Rochester Convention. We think that this is the weakest plank in the platform, and that it will repel a great many voters who would be otherwise inclined to support Mr. Fassett on State issues.

The silver question is treated in the following resolution :

"(6.) The act of July 14, 1890, provides for the purchase of the silver product of American mines and the issuing of the new Treasury note protected by a reserve of 100 cents worth of silver for every dollar issued. We commend this policy of maintaining gold and silver at a parity, the Treasury notes paid for silver to be kept at a par with gold. The voice of New York is emphatic against any degradation of the currency, and demands, with President Harrison, that 'every dollar issued by the Government, whether paper or coin, shall be as good as every other dollar.'"

The act of July 14, 1890, does *not* provide for the purchase of the silver product of American mines any more than of foreign mines. The use of such language by the platform-makers may imply that they did not know what the act of July 14, 1890, is, or it may mean that they are in favor of changing the law so that it shall provide for the purchase of all the silver product of American mines. That would be very bad policy indeed—bad in itself, and still worse in its teachings, since there is no more reason why the Government should buy the product of American silver mines than of American iron mines, which just now stand in more need of Government aid. It is a growing Republican notion that Government aid ought to be extended liberally to all sorts of decrepitudes. "This is a billion-dollar country," they tell us; therefore it is becoming to have a billion-dollar Congress, and to fling money around with a free hand, being careful to choose deserving objects of the national charities, such as silver-mine and sugar-plantation owners—provided that they are Americans. The latter half of the silver plank, which demands that all the dollars be kept of equal value with each other, is in keeping with President Harrison's Albany speech, and is right.

The resolution on civil-service reform is a curiosity, in view of a recent illustration which has been rendered more conspicuous than ever by the nomination of Mr. Fassett for the office of Governor. We have already commented on the brazen transaction by means of which Col. Erhardt was pushed out and Mr. Fassett thrust into the office of Collector of Customs. There was really no need of saying anything about civil-service reform in this Convention. A moderate regard for appearances would have kept out both this resolution and the one in which Gov. Hill's civil-service methods are condemned. What Hill has done in this regard, Platt and Fassett have done more conspicuously and with equal brass, their opportunities being on a larger scale—more's the pity, since Mr. Fassett is fit for better things. Had his nomination come to him unsought and been bestowed upon him in recognition of his personal merits and qualifications for the position, by a convention which was really a body reflecting the will of the party instead of registering the will of its boss, it would have contained elements of great popular strength. But there is little or no pretence that it came to him in this way. Everybody knows that he was nominated because Platt decided, long before the Convention met, that he should be. Everybody familiar with Mr. Fassett's career knows, also, that Platt selected him for the position because he has for years shaped his course in public life in willing obedience to Platt's orders.

Mr. Fassett is an able man, and has had precisely the experience in public life which is calculated to fit him for the duties of the office of Governor. He is a man of liberal education, a trained lawyer, and has served for four successive terms in the State Senate, giving close attention and careful study to all matters of State legislation, and especially to those relating to municipal government. He has always been a consistent supporter of ballot reform, and in his speech accepting the nomination he pledged himself to make that reform and municipal reform the leading issues of his campaign. Throughout his career in the Senate he has been an uncompromising and undeviating Republican, and it is noticeable that in his speech of acceptance he puts fealty to party above all else. He is now, as he always has been, a Republican "first, last, and all the time." We have watched his career in the Senate closely for eight years. If he has at any time during that period failed to obey implicitly the orders of his boss, we have never detected the fact. He has on several occasions turned squarely about under those orders, though the doing so subjected him to great public humiliation. If now he were to be elected Governor, while he would carry into that office honesty, ability, and experience of great value, he would carry into it also increased subjection to Platt. Every voter, therefore, when the time to cast his ballot arrives, must consider whether he is willing to see Plattism in power in the State Administration, as it is at present in power in the Custom-house and other branches of the Federal service in this State. Whether the possible completion of ballot-reform would be a sufficient offset for a certainty of this kind, is a question for every voter to decide for himself.

NEGRO LABOR IN SOUTHERN MANUFACTURES.

STUDENTS of social economy whose solution of the negro question is exportation to Liberia, and those who explain Southern competition in certain lines of manufacture with the facile cry of "cheap labor," should follow up a line of investigation lately opened by the *Tradesman*, an organ of Southern manufacturers, published in Chattanooga, Tenn.

Two years ago a circular was sent to various employers of colored labor throughout the South, asking for information as to the comparative wages and efficiency of skilled and unskilled white and negro labor, and whether those employers reached by the circular intended to continue the employment of negroes. Replies were received from many masters representing rolling-mills, furnaces, saw-mills, logging companies, cotton-presses, etc., and employing some 7,000 laborers, of whom about one-fourth were either skilled or semi-skilled. The general tenor of these answers indicated satisfaction with the negroes (particularly in the heavier and hotter work of Southern industries), both as common and skilled workmen ; expressed a practically unanimous determination to continue their employment, to advance them into the higher and better-paid ranks as rapidly as possible ; and clearly showed that, while the negro has greatly improved in the last fifteen years in trustworthiness, skill, and general efficiency, those who employ him have learned not to discriminate between black and white in the matter of wages, giving to both the same pay for the same work.

Again, in July of this year, the same journal, in view of the remarkable development of Southern manufactures, repeated the inquiry, adding to the later circular three queries: Are negro laborers improving in efficiency? What effect has education had on the younger generation? Does education add to or detract from the negro's efficiency as a workman? Some 200 replies from employers of 6,400 unskilled and about 1,000 skilled colored workmen were received and tabulated. For skilled laborers, the highest wages reported is $3, the lowest $1.10, and the average $1.75 per day. For unskilled, the highest reported is $1.50, the lowest 60 cents, and the average $1.10 per day. Twenty-seven employers of 1,379 negroes see no difference in capacity between white and black laborers; forty-nine employers of 3,214 negroes prefer them to white men in the same capacity, and thirty-five employers of 1,441 negroes prefer white labor. An East Birmingham manufacturer writes: "Our men are about the average; do better than white men at same wages,

are more obedient, work harder, and give better satisfaction than white labor." Two Georgia foundry-owners report respectively, "The degree of efficiency is about the same, with equal pay for the same work"; "as laborers in the machine shop and foundry, we prefer the negro." A Louisiana lumberman, employing some 400 negroes, testifies: "they are learning to do the work about as well as the whites." A South Carolina manufacturer employing 100 negroes answers: "Common negro labor is the best in the world; we are not so decided as to skilled labor." A mining superintendent replies: "The negro is the best common laborer, but he cannot acquire the skill of the white man—at least he don't." A Texas manager of a cotton-press reports that for his work "negroes are better than white." A Virginia miller finds that "common labor, colored, compares favorably with white. Skilled, not up to average." Of ten replies selected at random from various parts of Virginia, four prefer negro labor, three prefer white, and three see no difference. An experienced Tennessee employer sums up the case thus: "When muscle alone is wanted, we find good negro labor very efficient, but when some degree of judgment is to be exercised, we prefer white labor."

One hundred and nine employers of 6,700 negroes declare without qualification their intention to continue to employ them, sixteen express doubt as to what they will do, and seventy employers of 2,413 state that their colored laborers are steadily increasing in efficiency. One characteristic answer throws some side light on politics at the South: "No, as compared with ante-war times; yes, as compared with six or eight years ago, when they were under the lead of low-lived white politicians, and were thinking more about forty acres and a mule and social equality than they are now." On the other hand, forty-three employers of 2,279 negroes deny improvement, and fifteen, giving work to 1,367, express doubt.

While much time, attention, and money have been devoted to the education of the Southern negro, the answers to that part of the circular involving the subject of education and its effects represent, we believe, the first attempt to focus the practical man's point of view. Only one hundred and thirty employers replied to this portion of the circular; of these but thirty, employing 2,860 negroes, endorse the education at present available for the younger generation, and state their belief that it adds to the efficiency of the negro to educate him. The doubters number thirteen, and ninety-six employers of 3,820 negroes are of the opinion that such education as the younger generation of the colored race has received has not been of benefit to them, and "that, generally speaking, it detracts from a negro's efficiency to educate him." The broader and sounder judgment of the minority may be summarized in the words of an Alabama manufacturer: "Educating the younger men has had a good effect, and we think the shortest and best way out of our race troubles is to educate both black and white. It has added much to the efficiency of the colored men."

Some of the reasons given by the Philistine majority why sauce for the (white) goose is not sauce for the (black) gander, while illustrating the selfishness and short-sightedness of average human nature, suggest both to the educator and the legislator probable weak points in our system of free public instruction, and a possible remedy in the direction of industrial and ethical training. When we are told that the young "educated" negro does not care to work at manual labor, that he prefers either to be supported in aristocratic idleness by his illiterate, hard-working parents, or "to live by his wits," *i. e.*, turn sleeping-car porter, barber, poor preacher, or poorer teacher, we are inclined to suspect that it is not education which confuses the negro, but its imperfect application and crude assimilation, superinducing the temporary evils of idleness, insolence, and arrogance. It is evident that reading, writing, and the theoretical training which as a rule alone constitutes education for the Southern negro youth, create an aristocracy, with all the vices which ordinarily accompany an idle *nouveau-riche* class.

The colored laborer is and must be the dependence of the South, and the more his general quickness and intelligence be cultivated, and the wider the range of labor vocations assigned to him, the more rapidly will the color-line fade away. The old-fashioned and widespread belief that colored people cannot learn skilled employments, must be relegated to the tomb of many other false ideas. The province of the masters of new and growing Southern industries is to choose from the best of the colored people, and train them for special uses; in the process of artificial selection based on natural aptitude, education, even of an imperfect kind, must be an invaluable factor. This whole question of the education and efficiency of the negro workman of the South can be best answered by asking ourselves what effect our present system of education has on the growing generation of white laborers. Are we turning out more farmers and skilled mechanics, or are we filling up the overcrowded ranks of "genteel" occupations? If we consider that the negro of to-day is hardly a generation removed from serfdom, that he has had to seek light and life in the surging sea of political and race conflict, there seems no reason to doubt that the effect of education, so far as fitness for labor is concerned, is identical on the youth of both the black and the white races.

THE NEW IMMIGRATION.

THE report just published by the Treasury Department on "Arrivals of Alien Passengers and Immigrants in the United States from 1820 to 1890," exhibits the most recent statistics on the important subject of foreign immigration to this country, and a study of the figures there collected brings out some very significant facts. The report adopts the commonly accepted estimate that the number of immigrants arriving between the foundation of the government and the year 1820 did not exceed 250,000. Starting with this assumption, and following the official records which date from that year, it is then estimated that the total number of immigrants from the close of the Revolution to June 30, 1890, amounts to 15,567,000. From a statement of immigration by decades it appears that more than one-third (5,246,613) of the whole number have arrived during the last ten years of this period; and from a supplementary table it can be shown that the rate of immigration for 1891 has advanced 22 per cent. beyond that for 1890. That is to say, the flood which is already so enormous is steadily and rapidly increasing in quantity.

Passing to consider the quality of immigration, we are met by equally striking facts. The various tables which bear on the point of nationality afford the following data. Prior to 1868 the great bulk of immigration was from the British Isles and Germany, these two nations furnishing about 85 per cent., while the rest came chiefly from France, British North America, Switzerland, and, during a brief period, from Mexico and the West Indies. More than half of the whole immigration has come in since 1868, and the statistics for these twenty-two years show a marked change in its character. During this later period the most prominent nationalities have contributed the following proportions:

	Per cent.
England	14.6
Ireland	13.6
Scotland	2.9
Germany	27.5
Denmark, Norway, and Sweden	11.0
Russia and Poland	3.6
Austria Hungary	4.9
Italy	4.2
France	1.5

These average percentages show, as has been said, a marked change in the character of the immigration; but, on studying the figures year by year, the magnitude of the change becomes still more apparent. In the last decade (1860-1870) of the earlier period, England's percentage was 24.54; since that time it has fluctuated, but with a tendency to decrease. Thus, for the year 1870 it was 23.20, for 1880 it was 13, and for 1890 it was 12 5. It should be remarked that a decreasing percentage does not indicate a falling off in the actual immigration of any particular nationality; for, with the exception of China, the immigration from every country is increasing. It simply indicates that the increase of that particular nationality does not keep pace with the general increase of all immigration. The Irish percentage has also fluctuated, and also shows a tendency to decrease. It is well known that the Irish immigration during the forties was enormous, amounting during that decade to 45.57 per cent. This makes the general average (1820–1890) high; but for the year 1870 it was only 15 per cent., for 1880 it was 15.6, and for 1890 it fell to 11.6. The Scotch immigration, which has always been of minor importance, is likewise failing to maintain its percentage. So much for the British Isles.

The German element, which has always been a strong one, amounting altogether (1820-1890) to 29.20 per cent. of all immigration, reached its highest point between

1850 and 1870, and since then has declined. Thus, for the year 1870 it constituted 30.5 per cent., while for last year it was only 20.3 per cent. Norway, Sweden, and Denmark played a small part in the immigration of the early period. Since 1870, their percentage has averaged 11, but it has lately fallen, and for the year 1890 was only 10. As the influence of the Teutonic races declines, that of the Latin and Slavic increases. Russia, Austria-Hungary, and Italy are the leading representatives of the latter, and the immigration from those three countries is of recent date. That from Austria-Hungary first reached 1 per cent. in 1870, that from Italy in 1872, and that from Russia and Poland in 1873. In the year 1880 Austria-Hungary contributed 3.7 per cent., Italy 2.6 per cent., and Russia and Poland 1.5 per cent. During the next decade their rate of increase makes a sudden advance, and in 1890 Austria-Hungary furnished 12.3 per cent., Italy 11.4 per cent., and Russia and Poland 9.8 per cent. To appreciate fully the significance of these figures, it must be borne in mind that while the percentages are thus changing, the total volume of immigration is steadily increasing, so that there is a two-fold influence at work.

The relative merit of different races cannot be discussed in this summary; but it is instructive to note how the immigrants of the several nationalities compare in social condition. The character of the immigrants in general is indicated by the official records of their occupations. During the last decade 5 per cent. have been reported as belonging to the professional class, 10.3 per cent. as skilled laborers, and 39.6 per cent. as unskilled laborers. The occupation of 2.2 per cent. was not reported at all, and the remaining 47.4 per cent. were without occupation, nine-tenths of these being women and children. The percentages of skilled and unskilled laborers in the immigration of each leading nationality, during the same period, can be calculated from the yearly records; the results are exhibited and compared in the following table:

Nationality.	*Skilled. Per cent.	Unskilled. Per cent
All immigration	10.8	39.6
England	17.7	32.2
Ireland	5.6	52.8
Germany	12.0	29.2
Denmark, Norway, and Sweden	7.0	47.0
Russia and Poland	8.9	43.4
Austria-Hungary	6.4	48.5
Italy	7.8	58.5

* Includes professional.

These figures show that the change which is now taking place is a distinct deterioration. Some definition of the terms professional, skilled, and miscellaneous, as they are used in the official reports of occupations, may add to the meaning of these statistics. The professional class comprises chiefly musicians, clergymen, teachers, and physicians. The principal skilled occupations, in the order of their numerical strength, are tailors, miners, carpenters, clerks, masons, mechanics, shoemakers, and mariners. While of those whose occupation is reported as miscellaneous, 68 per cent. are laborers, 3 per cent. merchant dealers, and the rest farmers and servants, in equal proportions.

Among the points which have a less obvious meaning, it is interesting to note the proportion of the sexes and the ages of the immigrants. During the last decade the average of males was 61 per cent. of all immigration; but the several nationalities vary considerably from this figure. The Irish immigration shows the least difference in the proportion of the sexes, the percentage of males being 51. Germany follows with a percentage of 57. For England and the Scandinavian countries the figure is 61 ; while of the immigrants from Russia and Poland 65 per cent. are males, of those from Austria-Hungary 68 per cent,, and of the Italian immigrants 79 per cent. This preponderance of males in the nationalities whose immigration is increasing fastest could only be appropriate to an undeveloped frontier; but the statistics of the reported destination of immigrants show that the bulk of them intend to settle in New York, Pennsylvania, and Massachusetts.

During the last decade 21.5 per cent. of the immigrants were under fifteen years of age, 68 per cent. were between fifteen and forty, and 10.5 per cent. were over forty. Comparing the several nationalities with this average, it appears that Germany and England furnish more than their share of children. Ireland and the Scandinavian countries furnish the smallest percentages of children and old persons ; 78.6 per cent. of the Irish immigration being between fifteen and forty, and 73 per cent. of the Swedes and Norwegians. Russia and Austria also furnish more than their share of children; while Italy shows the highest percentage of persons beyond the prime of life,

To sum up the matter, the change now going on is not an increase in the earlier sort of immigration, which has played a prominent part in the development of the country, but rather the growth of a new and distinct sort of immigration, which exists along with the other, and promises to be soon the more influential of the two. What its influence will be is more than doubtful. From its quality this new immigration adds heavily to the lowest class in the economic scale. It threatens disorder by disturbing the proportion of the sexes. It consists largely of persons too old to be adopted by the community of which they become a part. Finally, it is not related to us in race or language, but has habits of thought and behavior radically foreign to those which have so far prevailed in the United States. These facts are too patent to be missed and too significant to be disregarded.

CHANGES IN SUMMER MIGRATION.

If in mid-September of each year, when the season at our large summer resorts usually closes, a census could be made of the number of visitors during the season just past, and their average stay computed, the resulting figures would probably be very instructive. It is doubtful whether statistics of the kind for, say, the last ten years would show much if any increase of patronage at those resorts. Yet not many years ago the newspapers were telling us constantly of the local "booms" at those places; of rise of real-estate values; of monster hotels going up or projected; of new pavilions, piers, and beach walks. But now, for the most part, the local story of new hotel enterprise is of failure much more than of success. The printed watering-place gossip tells us little about material growth and turns vapidly to social amusements and the "summer girl." When we do hear of local growth, it is apt to be in the direction of the small and "family" hotel or of some form of the "cottage" system. This striking change has come, too, during a time when not only our population has decidedly increased, but also wealth, the love of luxury, and the desire and opportunity for summer leisure. While our summer migration has greatly expanded, a less and less proportion of it evidently goes to the "regular" resorts, and for a rather more transitory stay when it does go.

Where then does it go, and through what new summer paths is it tending? That our ocean steamships—or, rather, the steamships of the foreigners—absorb a part of the increased migration is obvious—a fact due not less to the larger number of families who can afford the European trip than to cheaper rates, quicker time, well-nigh absolute safety, and the lower excursion prices. But this accounts, at its highest estimate, for a relatively small part of the great increment of summer migration. It must be sought for in the more sequestered farm-houses and remoter country villages; in the isolated cottage, or the isolated groups of cottages in the woods or on the shore and in summer camps. Just as we see our civic holidays becoming steadily days of rest and recreation more than of noisy celebration, so our summer migration is seeking the rural quietudes and moving away from the old centres of mere fashion, which are coming to rely on that special and somewhat limited group of patrons which craves social gayety not less in the great summer hotel than during winter on the city avenue. The great resorts are becoming the summer homes of the class, while the remoter places are sought for by the mass.

Statistics on the size and direction of the new current are unavailable, but we can find clues. Take, for example, the White Mountain region, where up to recently the "big" hotel, and usually with big prices, was so much the feature of the summer life of the region that nothing else was heard of. But now we learn constantly of the change of the farm-life of the region into a boarding-house régime. The eye of any traveller who has passed recently through the great White Mountain "horseshoe" sees everywhere, usually a little apart from the main routes of the tourists, the farm-houses where outward signs tell of the summer boarder. In a less definite but larger region, another and official evidence of the same movement recently appeared. It was a report of the

Connecticut Board of Health calling, we believe for the first time, attention to the great number of urban residents seeking summer health at the secluded farm houses and warning them of the danger incurred from defective drainage and other unsanitary things at the ordinary farm dwelling. A recent writer in the *Century*, who states that for years he has made long tours by private conveyance through out-of-the-way places of New England, speaks of his amazement at finding to what secluded nooks of the country the city sojourners are penetrating. They are not merely the classes of moderate wealth either, but often the upper middle class, sometimes the positively rich, and all exponents of the growing and wholesome desire to seek the summer rest rather than the summer whirl. But for the fact that the head of the family is apt to want a place accessible to him by railroad for his weekly or fortnightly visit, the prevailing hunt for the seclusions would no doubt be greatly intensified.

A sub-feature of the summer migration is the steady tendency to prolong the rural life at both ends—to go to the country in some cases with the April arbutus and come away with the October aster. Aside from the evidence of the later opening of some of the city schools, this fact of longer sojourns in the country must stand from observation, but its reality cannot be questioned. Its suggestion is also of a growing national love of Nature and her quietudes, and of a certain shrinking away from the exactions of "society" and of fashion. Indeed, we seem drifting pretty fast towards the English idea of a much longer country season and a much shorter one in town; and but for the city schools and the defectiveness, as yet, of rural systems of education, we should see the tendency grow faster. The English writers who used to deride the American love of what they called the hotel "caravansary" in both city and country, will find a decided change when they visit us now or hereafter.

Of the economic, social, and physical readjustments, many of them good, some bad, growing out of this state of things—of the transfer of city dollars to the country, of the results to country life itself in village and on farm, of the urban impact and contact—much could be written in a general way, but little can be accurately measured. The changes, however, from the causes named must be immense and must become more visible in their aggregates as the recasting of summer migration in its forms, forces, and lines of movement goes on.

LOWELL.

PIEVE DI CADORE, August 27.

IN the notice of the life of Lowell in the *Nation* of August 13, there is a passage which seems to me to admit, if not require, a fuller explanation than is there given. After mentioning the death of his first wife and the consequent change in his manner of existence, it says: "And although he allowed his name to stand in connection with anti-slavery societies, he was generally regarded as having cooled in sympathy. This was unjustly attributed to his becoming, in 1855, a professor in Harvard University, then rightly regarded as very conservative." The disclaimer is correct, but purely negative; and, as a fact, the imaginary cooling, which was nothing more than the natural effect of grief and a morbid melancholy, preceded any hint of his appointment to succeed Longfellow, and was broken up by it and his subsequent visit to Europe.

It happened that I made Lowell's acquaintance shortly after the death of his first wife and while he was still overwhelmingly affected by it. I went to Cambridge to secure the assistance of the literary men resident there for the carrying on of an art journal which I had then projected and afterwards edited, the *Crayon*, and the acquaintance grew into a warm friendship, of which one of the first fruits was an invitation to come and stay with him at Elmwood. He was in a state of apathy and incipient hypochondriasis, from which, as one of his later letters shows, my intrusion into his solitude partially aroused him, and he was grateful for the diversion. The grief for the death of his wife was keen, and his feeling was expressed in the "Ode to Happiness," which he read me from his note-book one day during this visit. He spoke of it as unfinished, but, so far as I recollect, it was then as it was printed later. What oppressed him, however, more than his bereavement was a profound conviction that his brain was menaced by, or actually undergoing, a process similar to ossification, and that he was doomed to die, as his mother had died, insane; and this gloomy presentiment, coupled with his sorrow, produced that apathy which was regarded as a cooling off of his human sympathies; he considered himself as already the victim of a terrible death, and all his constitutional buoyancy could not resist the obsession.

I had just gone through one of those disillusions which young men consider great griefs, and this excited a certain sympathy which took him out of himself, while the efforts I made to arouse him out of his apathy and despondency were grateful to him and, I hope, useful. I was an intense admirer of his poetry, and had most of the then published poems by heart, and I made him talk of them and read me what he had unprinted. He told me that he had written "Sir Launfal" in two evenings, and had never retouched it—an omission I gently reproved him for, but he replied in a way which made me think that he did not hold his work in such high esteem as to induce him to spend much *labor limae* on it. The fact was, I suspect, that he could not take up revision without its becoming remaking, for his versification was so spontaneous that he could write in verse faster than in prose,* and it was easier to write new than to remodel the old. This facility was curiously shown in one of our Adirondack excursions. We had halted to camp on Tupper's Lake, and the guides and myself constructed for the occasion a huge bark shanty, and when it was finished, I said to Lowell, "We have built you a house; now give us an inscription for it"; and he began what I at first took for a reply, but what was really, without casting about for a word, an impromptu:

> "Whom rain doth welter
> Or heat swelter,
> Respect this shelter,"

and went on with a history of the shanty, the part taken by each of us in the work, giving the names of the whole party, which was composed of ten visitors and nine guides, all without an instant's hesitation and as if it were a part of the conversation.

He did afterwards, however, in spite of his reluctance to retouch his work, rewrite for the *Crayon* the little poem so well known, "The First Snow-Fall," which had been for years circulating in the newspapers, gathering misprints. He sent me many contributions for the *Crayon*, for which he could never be induced to accept the slightest remuneration. He never could remember or rewrite anything that was lost, and he used to tell with a comic distress the losing of "the funniest thing he ever wrote" in a German hotel, while he was abroad rubbing up his German preparatory to his assuming his professorship at Harvard.

Prior to undertaking the publication of the *Crayon*, I had been engaged as art editor on the *Evening Post*, then edited by Bryant; and talking with him of Lowell, I thought I perceived a certain soreness at the criticism Lowell had passed on him in the 'Fable for Critics,' and I mentioned it to Lowell. When he came to New York to embark for Europe, on the occasion alluded to, I gave him a dinner, chiefly to bring him and Bryant together, as they had never met; and Lowell, remembering Bryant's feeling on the subject of the criticism, did his best to captivate the elder poet, and, as I satisfied myself later by talking with Bryant, succeeded completely, and though there were in the company several of Lowell's old friends, Bayard Taylor, Charles Sumner, E. P. Whipple, and others, the conversation between the two was hardly interrupted during the entire evening. We separated at a late hour, Bryant and I leaving Lowell and Taylor at the Turkish café of Oscanyan enjoying a nargileh.

I resided in London during a large part of the time in which Lowell represented the United States there, and can endorse what the *Nation* says of his political aspect. He was accused of servility to rank and of indifference to the social pretensions of Americans in London. He simply understood his business at the court to which he had been sent, which was, as I have since heard it formulated by one of the greatest of English diplomats, Lord Dufferin, not to introduce his countrymen to the society of the court, but to represent his Government at that court. Americans inflated by a local importance came to London wearing their Congressional-district halos, and expected to be presented to the Queen, wearing them; Lowell, measuring them by the larger standard of a court where all the world comes, declined to use his great personal influence to the disregard of that standard. His feeling, which was just and diplomatic, was that no American, because he is such, is entitled to a presentation at court or an introduction to English society, but that it is for the Queen in one case, and society in the other, to choose whom they will see, and that without some distinction which makes them of interest to the one and the other, the presentation is an intrusion. A Minister who considered it his duty to be the usher of all the Americans who come to London, would find that he had neither time nor influence for his diplomatic duties.

Lowell knew every detail of the court etiquette, and while, on the one hand, he never permitted himself to be led into a violation of it, on the other he never allowed any derogation of the ceremony which his position as the representative of a great Power entitled him to. He maintained that a sovereign demo-

*[Witness Lowell's own testimony in that inimitable "Letter from Boston" of December 27, 1846, written "in steamboat haste."—ED. NATION.]

> "Dear M., *By way of saving time*,
> I'll do this letter up in rhyme,
> Whose slim stream through four pages flows,
> Ere one is packed with tight-screwed prose,
> Threading the tube of an epistle
> Smooth as a child's breath through a whistle."

cracy had the same right to the formalities established for the court as a monarchy, and abated none of them. A lady of rank at whose house I was visiting, expressed the desire to make the acquaintance of the Minister, and I undertook to make him acquainted with her wish. He inquired her rank, and as she was a marchioness, he replied, "I cannot, as Minister Plenipotentiary, make the first call on anything less than a duke; the Marquis must make the first call." People who know nothing of the importance of precedent may consider this snobbish in the representative of a republican country, but it was just this which made Lowell the stickler for the letter of the law of precedence which he was. He would not allow, even by a careless acquiescence in a neglect of one of the rules of diplomatic etiquette, any disregard of the least of them which might seem to abate the deference due him as the representative of a republic.

Your comment on his second wife, "an accomplished and agreeable woman," does very imperfect justice to her qualities. She was one of the noblest women I have ever known, and I knew her from early in her entry into his family nearly till the day of her death. She was fully worthy of him and made his married life with her supremely happy. He told me that his attachment for her had begun before he left home for Germany, but that he waited till he had proved by protracted absence that it was solid before declaring himself. My opinion is that she influenced his life even more than his first wife, though I judge of the earlier period only from what he and others who knew him then have told me. There was an intensity of sympathy in her nature, coupled with the highest moral standard, which he felt the full value of and reposed on. For reasons which I do not recollect, I did not at the time of their marriage write to congratulate him, but, a considerable time after, I did so and apologized for the neglect, and he replied that the congratulations "hit the white," for he was very happy. I have not, I believe, seen him since her death.

W. J. Stillman.

LOMÉNIE'S MIRABEAU—II.

Paris, September 1, 1891.

We left Mirabeau after the events of the 5th and 6th of October, 1789, when the Duc d'Orléans asked of him, "When will Mirabeau serve the Crown?" These events produced a great effect on his mind; he predicted, with terrible eloquence, the dangers to which the royal family was exposed. "All is lost," he once said to M. de La Marck; "the King and the Queen will perish, and you will see it; the populace will beat their dead bodies." When M. de La Marck expressed the horror which this idea caused him, "Yes, yes," repeated Mirabeau, "they will beat their dead bodies. You do not understand the peril of their position; they ought to know it." Mirabeau was accused at the time of being in the pay of the Duc d'Orléans; he was in reality disgusted with the Duke's borrowing money from M. de La Marck and trying to enter into relations with Monsieur the Comte de Provence, the brother of the King (who afterwards became Louis XVIII.). He was convinced that if the King did not leave Paris, the dynasty and France were lost. But he did not wish him to retire to a frontier town like Metz, since, in such a case, he would seem to be under the protection of foreigners; he wished him to go to Rouen, to call round him the faithful national guards, and to convoke another legislative chamber. The Comte de Provence read the memoir in which Mirabeau developed these ideas, and said that the King was too irresolute to adopt it. "The weakness and the indecision of the King are indescribable. Do you wish to have an idea of his character? Imagine ivory balls covered with oil, and try to keep them together."

The enemies of the Duc d'Orléans held him responsible for the troubles of the 5th and 6th of October. Lafayette urged upon the King the necessity of sending him to England with an official diplomatic mission. The Duke, after much hesitation, consented. Mirabeau, who was jealous of Lafayette, had promised to support the Duke's resistance in the Chamber, and when he learned from a letter from the Duc de Biron that the Duke had accepted a passport for England, he said to his friends: "See, read! They say that I belong to the Duc d'Orléans's party; why, I would not have him for my valet!" From that day all relations between them ceased.

If Mirabeau had thought for a moment that he could form, in the Assembly and in the country, under cover of the popular name of the Duc d'Orléans, a party of which he would be the real chief, he was forced to give up that hope. He tried now to form a cabinet in the English fashion and to enter it. The Ministers were not present in the Assembly, and Mirabeau showed the inconveniences of this exclusion. They merely formed the King's Council; they were not in reality the representatives of the Chamber. All these questions, with which we are now so familiar—ministerial responsibility, the solidarity of the members of a cabinet—were then entirely new. Mirabeau had an interview with Lafayette, in which the ministerial question was discussed. He was obliged to reckon with the great popularity of Lafayette, though he considered him a man of little political foresight. (Among his friends he used to call him Gilles-César or Cromwell-Grandison.) Lafayette, on his part, says in his Memoirs that "the immorality of Mirabeau shocked me. In spite of the pleasure found in his conversation, and my admiration for his sublime talents, I could not help showing him a want of esteem which wounded Mirabeau."

Mirabeau also saw Necker, who told him frankly that he could not be in the same cabinet with him. "My strength," said Necker to him, "consists in morality; you are too clever not to understand some day the necessity of this help. Till that moment arrives, it may suit the King, in present circumstances, to have you as his Minister, but we cannot be Ministers together." Mme. de Staël gives these words, which she had directly from her father, in the book, 'The Character of M. Necker, and his Private Life.' It is easy to imagine that Mirabeau hated Necker; in a letter to Lafayette, two days after the visit, he speaks of "the brutal and delirious pride of the miserable charlatan who has brought the throne and France nigh to ruin, and who persists in consummating this ruin rather than confess his own incapacity." Meanwhile, Mirabeau took the most brilliant and active part in the work of the Assembly. He made magnificent speeches on the return to the nation of the church property; on the new administrative organization of France; on the finances; on the admission of the Ministers to the Assembly. He spoke on the necessity of martial law, somewhat on the model of the "Riot Act." He was getting to see the necessity of fortifying the executive power.

At the beginning of 1790, Mirabeau became in reality the secret adviser of the Crown. This is clearly proved by the correspondence of Mirabeau and the Comte de La Marck, published by M. de Bacourt—an inestimable document for the history of the Revolution, which appeared in 1851. The Queen Marie Antoinette had taken the initiative; she had slowly and with much difficulty acquired some influence over the King. "The King," said Mirabeau afterwards, "has only one man near him: it is his wife." Marie Antoinette was no longer the gay and frivolous hostess of Trianon; she was now the true daughter of Maria Theresa. The Comte de La Marck had repeatedly told her that Mirabeau could be managed and used by the Crown. She had long doubted it; her opinion of Mirabeau, as a man, had not changed, but, seeing the terrible situation of the King, she clung to every chance and to every hope. Mercy was the intermediary between her and M. de La Marck, and La Marck arranged the details of the first and secret meeting of Mirabeau and Mercy, which took place in a hôtel of the Faubourg St. Honoré. The negotiation, once entered upon, was conducted rapidly. Mirabeau wrote a memoir on the best means of reëstablishiug the royal authority; he wrote directly to the King, on the 10th of May, 1790, a letter which is a monument of eloquence and of political sense:

"I see so clearly that we are falling into anarchy and that we fall deeper every day; I am so indignant at the idea that I should have contributed only to a vast demolition, and the fear of seeing another chief of the State than the King is so insupportable to me, that I feel imperiously drawn to mix with public affairs at a moment when I thought I was only aspiring to rest. . . . I engage to serve with all my influence the true interests of the King, and in order that this assertion may not appear too vague, I declare that I believe a counter-revolution as dangerous and chimerical as I find chimerical, in France, the hope or the project of any sort of government without a chief invested with the amount of power necessary for the application of all the public forces to the execution of the law."

M. de La Marck made with Mirabeau a pecuniary arrangement which relieved the great orator for a moment from his monetary troubles. The sum of 208,000 francs was immediately given to him for the payment of his debts, of which he did not very exactly know the amount. He was to receive a salary of 6,000 francs a month till the end of the session of the Assembly, and, at the expiration of the session, a sum of a million represented by four bills written in the King's handwriting and deposited with M. de La Marck. It is idle to pass any judgment on these transactions. Mirabeau was always needy, he was venal, but not in the worst sense of the word; he was willing to receive money for the defence of ideas, but it was for the defence of his own ideas. When he was bribed by the Court, he was sincerely convinced of the necessity of defending the Crown.

Mirabeau did not pay his creditors; at least he paid very few of them. After his death, the oldest and most respectable of them were still unpaid; all the money from the Court was spent with his usual extravagance, and, when he died, the Assembly had to pay for his funeral. Every week he addressed two political memoirs to the Court. Fifty of them have been found and have been published by M. de Bacourt. The others have been destroyed. Once only did Mirabeau have an interview with the King and Queen. It took place on the 3d of July at Saint-Cloud. Mirabeau left Saint-Cloud charmed with the Queen, her grace, her dignity. "Nothing," said he, "will hinder me: I will die rather than fail to keep my promises." He was also touched by the calm resignation of the King and by the moderation of his political views. Madame

Campan says in her memoirs that Mirabeau left the Queen with these words: "Madame, the monarchy is saved." Marie Antoinette, in her correspondence with Mercy, says on her part (June 12): "The negotiation with Mirabeau still continues, and, if he is sincere, I have reason to be satisfied"; and then she discusses at length the propositions of Mirabeau.

The Assembly was discussing at the time the question of the right to declare war and make peace. Mirabeau did not hesitate to stand by the royal prerogative on this question, and pronounced one of his best speeches. Barnave answered him, and there appeared immediately a libellous pamphlet, with the title, 'Great Treason of Count Mirabeau.' The entire year 1790 was full of the last oratorical efforts of Mirabeau; there was hardly a great constitutional question on which he did not speak, with his usual vehemence, with a singular mixture of ardor and of good sense, with the instinctive largeness of a real statesman. He continued to be in the pay of the Court, though he affected total independence in his conduct. Camille Desmoulins said of him: "He breakfasts with the Jacobins, he dines with the Society of '89, he sups with La Marck and the Royalists." He was now surrounded with homage on all sides: his overpowering talent had forced universal admiration; his name had become popular all over France. A traveller, coming from England, notes that the post horse called the *porteur* (the horse which leads the others) was named Mirabeau. His hospitality was magnificent and boundless.

His perpetual excesses had ruined his powerful constitution, and it is not necessary to suppose that he was poisoned in order to explain how such a vigorous man died after an illness of five days. Cabanis kept a journal of his friend's illness; his account is well known. It is well known, also, how, in the words of Talleyrand, Mirabeau dramatized his death: how he spoke to his friends like an ancient philosopher, how he received with a smile on his lips his old friend Talleyrand, with whom he wished to be reconciled. "J'emporte avec moi," said he to Frochot, "le deuil de la monarchie; après ma mort, les factieux s'en disputeront les lambeaux"—a splendid sentence which makes one think of Alexander and his generals.

His dramatic death, amid flowers and to the sound of music, was followed by a dramatic funeral, a sort of apotheosis. Lafayette, who had been so long his open or secret enemy, figured at the head of the national guard. Remember under what a cloud of contempt Mirabeau had entered the States-General; yet now a whole nation mourns him, and his name will go down to the most remote posterity, for he personified all that was great, and necessary, and inevitable in the French Revolution.

Correspondence.

A STANDING COURT OF ARBITRATION.

To the Editor of The Nation:

Sir: While all Europe is, as it were, an armed camp, Commissioners from the United States of America are traversing the four corners of the earth to welcome mankind to a peaceful contest in the arts and sciences at the forthcoming Columbian Exposition at Chicago. The contrast herein involved illustrates well the unique position which the Republic occupies among nations. Self-contained and self-reliant, too strong to stand in fear of aggression, and holding itself aloof from the complications of political intrigues and political alliances, this country is distinctly a power on the side of peace. It was, therefore, entirely in keeping with the fitness of things that the United States should have been one of the first to accept the system of arbitration as a substitute for the *ultima ratio regum*, as the best way of disposing of difficulties between contending nations.

Arbitration grows year by year in favor with thoughtful men. Nevertheless, there is a palpable defect in the merely occasional nature of the courts which are from time to time instituted for the settlement of special cases. When, as in the Geneva arbitration upon the *Alabama* claims, representatives of the contending countries are members of the court, being appointed *ad hoc*, they cannot but officiate under the disadvantage of seeming to be partisans or advocates, rather than judges. Appointed for the occasion only, they would not be human if they did not identify themselves more or less with their country's cause. On the other hand, where a third party is called in to arbitrate, it is almost inevitable that the losing side should feel aggrieved by the decision. Thus, it has required the exercise of some self-control on the part of the French to restrain the expression of their mortification at the recent decision of the Czar of Russia upon the question of the boundary between French Guiana and Dutch Guiana. French disappointment with that award would have been loudly proclaimed but for the present *entente* between Russia and France. Again, as between two of the great military Powers, there might be the fear that the one to propose arbitration might risk the loss of prestige. In the place of such fitful, casual, unstable provision for arbitration for individual cases of dispute between two countries, what is wanted is a standing Court of Arbitration for all the nations of the earth.

To this Court of Peace each nation should nominate a single judge, or so many judges as might be agreed upon. The judges should hold their appointments for life. It goes without saying that each country would try to do itself honor by nominating to such an exalted office only persons illustrious for learning, intellect, and character. Holding office by a permanent tenure, the judges would make the law of nations their special study. At the same time, that tenure would inspire confidence in their decisions, as they would be placed above the fear of removal from office for joining in decisions adverse to their own countries. They would also be beyond suspicion of acting as partisans against foreign parties. The sittings of the Court of Peace might be held in the several capitals of the world in turn. These sittings and all the proceedings of the Court should be open, public, and clear as the sunlight in the eyes of all men. The parties to the various suits should submit their pleadings in writing, while the Court should have power to hear oral testimony and counsel in open court. All decisions of the Court should be given in writing, with the reasons upon which the decisions are founded. Compliance with its judgment should be required within a stated period. If after such a trial by such a court a righteous judgment were not arrived at, then might mankind despair.

"But," it will be asked, "how shall the judgments of the Court be enforced?" The answer is, "By the public opinion of the world." Any nation that refused to bow to the judgment of the Court, should be stigmatized by being called upon to withdraw its representative from the Court.

There is no intention to suggest that the establishment of the Court of Peace would do away with war. There can, at the same time, be no doubt that its existence would minimize resort to the arbitrament of the sword. It should also be well understood that because a nation had its representative in that court, that nation should not thereby oblige itself to submit for adjustment all or any of its differences with others. The fact of the existence of such a court would induce the nations to resort to it for a peaceful settlement of their differences. Thither, indeed, irritating questions which might otherwise result in the horrors of war, should be taken, and there be disposed of in a manner such as would secure peace with honor to both parties, with the consensus of all nations.

And by which country should the glorious mission be assumed of acting as the harbinger of peace? By the United States, we say emphatically. Armed to the teeth as are the great Powers of Europe, not one of them could afford to risk the imputation that a proposal to establish such a court proceeded from a desire to avoid a settlement by the sword. While, therefore, America is summoning the world to a peaceful contest at the Columbian Exposition, let the Government of the United States at the same time set on foot measures for the early establishment of a standing Court of Arbitration or the nations of the earth. The anniversary of the discovery of the New World could not be more fittingly celebrated than by the inauguration in 1892 of a Court of Peace at the instance of America.

D. A. R.

STATE GOVERNMENT.

To the Editor of The Nation:

Sir: Perhaps there is no man in the country whose words on the subject of municipal government carry more weight than those of Mr. Seth Low. My present object is not to add anything to his interesting article in the *Century*, but to use what may be called his major premise to enforce my own conclusions:

"Nothing is better settled in every State in the Union than that the Legislature of the State, unless it be limited by the State Constitution, has absolute and arbitrary control over a city's charter. The State may grant a charter or revoke it. The State may enlarge the powers granted to the city, or it may diminish them; it may assign duties under the city charter to officers elected by the people, or to officers named by the Governor, or designated by itself."

Is it not true that a great part of the difficulty of New York city government in the past has arisen from the tinkering of the charter by the Legislature at the instigation of intriguers? I will add a few words from Mr. James Bryce:

"An American may, through a long life, never be reminded of the Federal Government except when he votes at Presidential and Congressional elections, lodges a complaint against the post-office, and opens his trunks for a custom-house officer on the pier at New York when he returns from a tour in Europe. His direct taxes are paid to officials under State laws. The State, or a local authority constituted by State statutes, registers his birth, appoints his guardian, pays for his schooling, gives him a share in the estate of his father deceased, licenses him when he enters a trade (if it be one needing a license), marries him, divorces him, entertains civil actions against him, declares him a bankrupt, hangs him for murder. The police that guard his house, the local boards which look after the poor, control highways, impose water rates, manage schools—all these derive their legal powers from his State alone."

In other words, the State governments are

by far the most important in the country. Yet who thinks or talks about the State governments except as regards the men and the party who are to possess and control them? Take the State Convention which met this week at Rochester. The name of Andrew D. White, having been talked of, was almost abjectly withdrawn because it did not suit Mr. Platt, and over a thousand men went to Rochester to register the decree (like the Parliament of Louis XIV.) of the said Platt that an individual named Fassett was to be the Republican candidate for Governor, while the people of the State, having no opportunity to vote for men of the stamp of Mr. White, are absolutely limited to a choice between the said Fassett and Mr. R. P. Flower, or some equivalent nominee of a Democratic Convention. It is difficult to read the platform without a burst of laughter. Why should the Republicans of New York State feel called upon to say that

"The cruelties and persecutions practised upon the Jews in Russia are abhorrent to the sense of justice of this people"?

It would have been more practical to print the Ten Commandments with full approval. Of the twenty-five clauses, thirteen consist of abstract declarations as to Federal affairs, although, except indirectly, as securing the supremacy of one of the two great parties, this election has nothing whatever to do with Federal affairs. The other twelve clauses consist of equally general declarations as to State affairs, which might have been much more briefly and forcibly put by saying, "Everything that the Democrats have done is bad. Everything that the Republicans have done is good."

Hear Mr. Low once more:

"A commission appointed by the Legislature is responsible to nobody but the Legislature. Neither the Governor nor the Mayor nor any other authority can call it to account, and therefore a State commission for any purpose other than inquiry is one of the most dangerous of bodies, for the reason that it exercises authority unchecked by responsibility."

I cannot speak as to New York, but I know that the whole executive government of Massachusetts is in the hands of eight or ten just such commissions, and that Gov. Russell in vain called the attention of the Legislature to the fact last winter. Again:

"This is one of the great reasons why heads of departments should not be elected; because officials who receive their authority from a direct vote of the people are inclined to feel entirely independent of one another, and to look upon the popular vote as to a certain extent an authority to do what they please."

This, which is an exceedingly mild way of putting it, is just as true of the State as of the city. The Governor, having no public influence with the Legislature, is further deprived by this cause of all control over administration, and it is this dislocation of the executive power which has led to the government of the State by commissions.

The great needs of State government are two: first, that which I have occasionally pointed out with reference to the Federal Government, the presence of the chief executive officers in the Legislature; and, second, the preliminary, without which the other can be of no avail, the full power of appointment by the Governor of his official staff or Cabinet.

Why is it that men of the type of Andrew D. White cannot go forward and ask for votes independent of the party managers? Because they cannot say to the people, "I ask you to give me a place of so many thousands a year, though you know, as well as I, that I can render no honest service in return." The Platts and Fassetts and Flowers have no such hesitation, but even they cannot do it openly, and so they resort to conventions—it would not be fair to say packed, but of which they can secretly pull the strings. But if such a man as Mr. White were to take in hand the reforms I have mentioned, go straight to the people and explain the need of them, and, backed by the thousands of independent supporters who are ready and waiting for a man of honest and earnest purpose, should ask the people for assistance in carrying them into effect, it does not require a very strong effort of imagination to suppose him capable of wrestling with and flooring the self-constituted managers of party.

G. B.

Boston, September 12, 1891.

CANADA AND THE UNITED STATES.

To the Editor of The Nation:

Sir: In an old translation of the Marquis de Chastellux's 'Travels in North America' (New York, 1827) I find in a footnote, page 180, the following extract from a letter by Mr. Paine to the Abbé Raynal:

"Respecting *Canada*, one or the other of these two events will take place, viz.: if Canada should become populous it will revolt, and if it do not become so it will not be worth the expense of holding. But Canada *never will* become populous; Britain may put herself to great expense in sending out settlers to Canada, but the descendants of those settlers will be Americans as other descendants have been before them. They will look round and see the neighboring States sovereign and free, respected abroad, and trading at large with the world; and the natural love of liberty, the advantages of commerce, the blessings of independence and of a *happier climate and a richer soil* will draw them *southward*, and the effects will be Britain will sustain the expense and America reap the advantage; and the same may be said of *Halifax* and the country round it. One would think the experience Britain has had of America would entirely sicken her of all thoughts of *continental* colonization, and any part she may retain will only become to her a field of jealousy and thorns, of debate and contention, forever struggling for privileges and meditating revolt. She may form *new settlements*, but they will be for us; *they will become part of the United States of America;* and that against all her contrivances to prevent it, or without any endeavor of ours to promote it."

The italics are in the original. The great Thomas Paine seems to have foreseen the Canadian census returns so ably criticised in your issue of the 10th inst.—Yours truly, T. B. B.

Newburgh, N. Y., September 12, 1891.

"ESCAPE."

To the Editor of The Nation:

Sir: Dr. Murray and your reviewer have both overlooked an interesting use of *escape* in a collective sense, as a group or multitude of escaping creatures, after the analogy of "a flight of arrows." It occurs in 'Sordello' (p. 38, ed. 1840):

"——songs go up exulting, then dispread,
Dispart, disperse, lingering overhead
Like an escape of angels."

I am, sir, etc.,
Wm. Hand Browne.

Notes.

J. B. Lippincott Co. will publish directly 'Harmony of Ancient History, and Chronology of the Egyptians and Jews,' by Malcolm Macdonald; and 'The Natural History of Man, and The Rise and Progress of Philosophy,' lectures by Alexander Kinmont.

D. Appleton & Co. have nearly ready 'We All,' a tale of adventure in Arkansas, by Octave Thanet; and 'A History of Modern Civilization,' based on Gustav Ducoudray's.

M. L. Holbrook & Co., New York, have in press a translation from the German by Miss Jessica Gilbert Tyler, of Dr. Ewald Flügel's 'Moral and Religious Development of Thomas Carlyle,' with a new portrait.

A new and enlarged edition of Miss E. E. Brown's 'Life of James Russell Lowell' will be immediately brought out by D. Lothrop Co., Boston.

The sixth and concluding volume of the 'Century Dictionary' is now about to appear. The work has been extended by 500 pages and 2,000 illustrations beyond the original promise to subscribers.

Prof. Martin Hertz of Breslau is just entering upon an enormous task in Latin philology. It is his purpose to undertake for the Latin tongue the service which Dr. Murray and Mr. Bradley, together with their collaborators, are performing for our own. The historical method of the 'New English Dictionary' will be followed by him. Every Latin word will be traced from its origin down to Low Latin times, and each variation in its meaning will be noted. It is reckoned that the work will run to ten volumes of large quarto size and of about 1,200 pages each, and that its preparation will take eighteen or twenty years. Fifty scholars will collect notes and quotations which will be edited by ten of the best German Latinists. The cost of the undertaking is estimated at from half a million to a million marks, and will be assumed by the Prussian Government.

Prof. Weismann's 'Essays upon Heredity and Kindred Biological Problems' have made their mark, and a new edition of the authorized English translation has just been begun (Oxford: Clarendon Press; New York: Macmillan). Volume i. is before us, and contains all of the previous edition, with a few verbal alterations and corrections. A second volume will shortly appear, comprising four additional essays—one upon the Musical Sense. Having already reviewed the essays in volume i., we await the publication of its fellow for further comment.

'Die Lügen unserer Socialdemokratie, nach amtlichen Quellen enthüllt und widerlegt von Hans Blum,' is announced by Hinstorff in Wismar. The name of the author (a distinguished member of the German Diet) is a sufficient guarantee that the exposure and refutation will be vigorous and thorough, if not wholly *sine ira et studio*.

'Madame de Warens et le Pays de Vaud, par Albert de Montet' (Lausanne: Bridal) is a new contribution to the already voluminous Rousseau literature. It is a reprint from *Mémoires et Documents de la Suisse Romande*, and possesses little more than a local interest. The author states that the lady's name was Vuarens.

M. Firmin Didot has just published 'Mithridate Eupator, Roi de Pont,' by Théodore Reinach. M. Théodore Reinach is the youngest of three well-known brothers, of whom Joseph, the eldest, has made his mark in the political world as a publicist and deputy, and Salomon, the second, is the distinguished archæologist. Théodore, after winning much academic distinction, and trying his wings in various directions in literature, appears to have settled down to steady historical work, for which he has already displayed a very considerable talent.

The exact date of the birth of La Condamine, the illustrious French savant of the eighteenth century, has hitherto been unknown. The discovery of it is due to M. Mage, who has just announced to the Académie des Sciences that he has found the record of La Condamine's baptism in the register of a little church in the outskirts of Moulins. The date of his birth is therein given as January 27, 1701.

The 'Publishers' Trade-List Annual' for 1891 (New York: *Publishers' Weekly*) again marks an advance in bulk on its predecessor. Publishers' lists will grow, and more of them tend each year to be represented in this great collection. The *width* of the present volume still falls below that of the huge British 'Reference Catalogue of Current Literature' by about one-third, but its height is greater, and it would not be easy to compare the total contents of the two. In the 'Trade-List Annual,' of course, many English lists are included, by reason of branch houses in this country.

'Geometry of Position' is the title of a small octavo volume of 192 pages by Robert H. Graham (Macmillan). Strictly construed, the title denotes a branch of geometry in which the relations of forms in space are considered only in so far as they depend upon position, exclusive of all ideas of quantity or magnitude and all metrical relations. But the absolute separation of the geometry of position and the geometry of magnitude is impracticable if not impossible, and hence various other names have been proposed. Prof. Cremona of the University of Rome, for reasons which seem to us sufficient, preferred the title 'Projective Geometry,' and applied it to his work on the subject already noticed in these columns. The name 'Perspective Geometry' would also not be inappropriate, for projection and perspective are the two fundamental notions of the subject. It appears from Mr. Graham's preface that he was obliged to pursue the study originally under circumstances which made it necessary to work out large portions of it himself. This gives to his book a coloring of originality which we have no doubt will be interesting to those who are already acquainted with the subject; but for a beginner, and especially one who attempts to master the subject without a teacher, we think the book far less suitable than Cremona's treatise.

The Professor of Mathematics at Princeton, Mr. H. B. Fine, is the author of 'The Number System of Algebra' (Leach, Shewell & Sanborn), a small octavo embracing a range and variety of topics the adequate discussion of which would require a library rather than a volume which in size is little more than a pamphlet. The references in the preface, text, and notes show that the book is the result of very extensive reading; of how much thought, the writer alone can tell. It is divided into two parts, the "Theoretical" and "Historical." The first is an attempt to explain and reduce into a consistent system those fundamental concepts and processes which form the basis of the whole superstructure of mathematical science. The nature and properties of numbers, integral and fractional, positive and negative, rational and irrational, real and imaginary, or (by a broader generalization intended by the author to embrace all these classes) natural and artificial, are discussed, and the conclusions at which the author has arrived are stated and explained. Intermingled, as must necessarily be the case, with this discussion of the nature and properties of the various kinds of numbers is a discussion of the fundamental operations to which they are subjected—addition and subtraction, multiplication and division, involution and evolution, series, and many other things for which we must refer to the book itself. The work is written from both a mathematical and a philosophical point of view, but the mathematical decidedly predominates. The second part of Prof. Fine's book is an attempt to condense into 53 pages a sketch of the history of the development of mathematical ideas and processes from the first attempts at some systematic method of counting and notation up to the 'Quaternions' of Hamilton and the 'Ausdehnungslehre' of Grassmann. Perhaps all that can rightfully be demanded of such an attempt is that it should contain no erroneous statements, should be interesting, and should stimulate to further inquiry. We think Prof. Fine's sketch answers these requirements. The book is perhaps the most striking of the recent indications that American mathematicians are beginning to look at their science from a more philosophical point of view, and to feel some curiosity as to the history of the development of those processes which they have hitherto regarded merely as useful methods of arriving at certain desired results. We recommend its perusal to all mathematicians who consider their science as something more than a mere tool, and especially to all who are or intend to become teachers of mathematics.

Any one who is interested in the psychological puzzle afforded by the career of the late Laurence Oliphant, and is at the same time able to procure a copy of the *Sonoma Democrat* of August 22, published at Santa Rosa, Cal., will, on reading the first page, conclude that the puzzle is greater than ever. The editor introduces with a great flourish his distinguished townsman, Thomas Lake Harris, who has "resided in our midst for the last seventeen years." Three portraits of Harris at different periods, and a view of "Fountaingrove," his present residence, "one of the finest in structure, finish, and appurtenances in the State," with a "grand library," and with "magnificent paintings adorning the walls," are given. The article is succeeded by a long, windy, and unintelligible farrago on the "Brotherhood of the New Life," by Harris himself, who scouts the personal imputations of the Oliphant biography, and reviles a blackmailing press. He has not only got past asceticism, but has, for himself, "overcome the universal racial tendency to physical deterioration and disease." The whole production makes one marvel that a person of the smallest intellectuality could ever be subjected to such a high-priest.

In the current Proceedings of the American Antiquarian Society, Senator Hoar has a paper comparing the Governments of Canada and the United States, in which he argues against the adoption in this country of "the change in the Executive with the changing majority of the House"—a step recommended by no man or party, so far as we know. There is also a very readable biographical sketch of the late George Bancroft, by Mr. Samuel Swett Green. It abounds in interesting anecdotes and intimate side-lights.

The third of the interesting and valuable series of papers on Britannic Confederation, now being published in the *Scottish Geographical Magazine*, is on the "Commerce of the British Empire." The author, Mr. G. G. Chisholm, starts with the assertion that a natural and essential accompaniment of the idea of political confederation is a Customs Union, without, however, giving any opinion as to its practicability. He then proceeds to show in detail the commercial relations of Great Britain with each of its principal colonies and India. Canada, he finds, within the past few years has done a greater export and import trade with the United States than with the mother country, and there seems no reason why this increase should not continue indefinitely. In like manner, though the bulk of the external trade of Australia and New Zealand is still with Great Britain, yet this trade is declining and foreign trade is growing, especially that with Germany, the value of the wool directly exported to Continental ports having increased from £172,000 in 1881 to £1,557,000 in 1888. In India, four-fifths of the total imports are from Great Britain. The exports to that country are, however, declining, and those to other countries are rapidly increasing. Here again Germany shows her activity, the value of her imports of Indian products having grown from £300,000 in 1886 to about £2,000 000 in 1890. There is also an immense increase in the amount of cotton yarn sent from India to China and Japan, namely, from less than 8,000,000 pounds in 1877 to over 162,000,000 in the year ending March 31, 1891. The recent opening of new countries in South Africa makes it impossible to draw any conclusions as to the normal commercial relations of these colonies with the mother country. The general drift of the paper, which is illustrated by three diagrams, is to the effect that the commercial ties between Great Britain and her colonies are gradually loosening and weakening.

In the *Alpine Journal* for August (Longmans), there is a paper on mountaineering in Southern Colorado, by Percy W. Thomas, after the reading of which Mr. James Bryce related his personal experiences, comparing the delightful effects of the scenery in that State with those of the East, where a similar clearness of atmosphere prevails. A paper by Walter Leaf, on "Climbing with a Hand Camera," is remarkable for some very striking instantaneous views of unconscious climbers in very ticklish situations; and, indeed, the writer's purpose is to direct attention to the possibilities of this line of "snap-shots."

A new monthly medical journal makes its appearance, its scope being fairly well indicated by its name—the *Climatologist* (Philadelphia: W. B. Saunders). There would seem to be an advantage in such a clearing-house for the setting off the claims of rival localities against each other. Bethlehem, N. H., Southern California, and Colorado send in their drafts in this first number, which contains also a well-considered article by Dr. A. L. Loomis on the use of tuberculin.

On August 28 steps were taken, at a meeting held at the Columbian University, Washington, to form a National Association of Government Geologists for the determination of the proper objects of public geologic work, the improvement and unification of methods, the mutual adjustment of national and State surveys, coöperation to prevent duplication, etc. A committee of six on organization was appointed, Mr. Arthur Winslow, State Geologist of Missouri, being the Secretary.

The attempt to revive the Oriental Translation Fund has failed, but the Council of the Royal Asiatic Society will lend its support to a new series of publications, beginning with a full and complete translation of the first two parts of Mirkhond's 'Rauzat-us-Safa,' or 'Garden of Purity,' which contains the Moslem version of our Bible stories from the creation of genii before Adam to the death of Aaron. Subscribers (for a limited edition) should address F. F. Arbuthnot, 18 Park Lane, London, W.

—Any one who turns the pages of the twelfth volume of Dr. John S. Billings's 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.,' may judge for himself, by the comparative absence of long subject-titles, that author-titles are more than commonly numerous. These amount, in fact, to upwards of 20,000, or nearly 5,000 more than were recorded in the next fullest volume (v.); and it appears that so many pamphlets by about 5,000 have not heretofore been recorded. On the other hand, the journal articles entered are the fewest yet, by the same figures. Rheumatism is the ill that musters here the greatest literature, filling 46 pages. That enemy of the generation which antedates the forties, Scrofula, might have pushed Rheumatism hard; but there has been a partition which almost gives us a *Finis Scrofulæ*, and we are bidden to see Baths, Bones, Bubo, Cornea, Conjunctivis, Eye, Glands, Joints, Marriage, Neck, Phthisis, Skin, and even Venice. Still, Scrofula claims 14 pages. Scarlatina, together with a list of epidemics arranged by localities, demands 40 pages; Respiration, 19; the Retina and the Shoulder, 18 each. Sewage obtains 38 pages, Seasickness but 2, as against the 12 allotted to Serpents, to say nothing of what is given to Scorpions and Salamanders. Among the authors, the Schmidts (the Smiths are yet to come), the Schulzes, and the Schwarzes make a brave showing. A small percentage of titles have no appropriate place in this collection, like J. Rothen's 'Liederkranz' of the names of Jehovah. Others, quite appropriate, are somewhat unexpected, like Rousseau's Letters on Botany, along with writings concerning his alleged suicide and his chronic ailment, his sanity, etc. Schiller, on the other hand, enters in by virtue of his Inquiry into the Connection between Man's Brute and Spiritual Natures; and also we meet with a discussion of his skull and death-mask.

—A reading of this index for the queer, obsolete, unique, or merely technical words in the older English titles (which are very fully quoted) would be a service to Dr. Murray and his Dictionary, and the reader would find his or her reward in amusement, especially if able to enjoy the foreign titles also. Not a few are here that relate to the plague, and how to fortify one's self against it—"durch Hülffe Gottes und gute Ordnung." Other works are upon general hygiene, *e. g.*, the 'Regimen Sanitatis' of 1508, with its maxim for Nurembergers and the rest of mankind: "Vestibus indutis bene dentes osque lavabis, si vis esse sanus; tunc ablue sæpe manus," which leaves unwashed the clothed parts of the body. How far the dark ages reach down into the present is evidenced by "Sensus Communis" in his tractate, 'The Cholera, no Judgment! The efficacy, philosophy, and practical tendency of the prayer by the Archbishop of Canterbury, ordered to be used during the prevalence of cholera, examined in a letter addressed to the Right Hon. the Earl of Carlisle' (London, 1849). The anti-vaccinationists of our day may go back to William Rowley, author in 1805 of 'Cow-pox inoculation no security against small-pox infection; to which are added the modes of treating the beastly new diseases produced from cow-pox,' etc. Perhaps it would not be hard to match in current publications some of the astrological medical works here recorded in more than one language. For an example, Richard Sanders's 'The Astrological Judgment and Practice of Physick, deduced from the position of the heavens at the decumbiture of the sick person' (London: 1681) will suffice. A century later we meet with N. Robinson's 'Treatise on the virtues and efficacy of a crust of bread eat early in the morning fasting, to which are added some particular remarks concerning the great cures accomplished by the saliva or fasting spittle, etc.' One of the most curious sections, and not brief, is Sacred Embryology—in an Italian definition, "embriologia sacra," or the duty of priests, physicians, and superiors in the matter of the eternal welfare of the fœtus; in a French definition, "accouchement et embryologie selon les théologiens." Questions which troubled the theologic mind only two centuries ago in Europe were, as we gather from Boudewyns' 'Ventilabrum Medicum-Theologicum' (Antwerp, 1666), such as this: "An satyri, pigmæi, centauri, hermaphroditæ . . . baptizari debeant?"

—It would be difficult to light upon two books upon the same subject—Travels in Ireland—so widely different in their character and composition as two published this year (both about the same size and price, and bound in the national color), which lie before us, viz., Pococke's 'Tour in Ireland in 1752' (London: Simpkin, Marshall & Co.), and Mrs. Walter's translation of Mme. de Bovet's 'Three Months' Tour in Ireland [in 1890]' (Charles Scribner's Sons). Pococke was a grave churchman who tasted to the full the sweets of ecclesiastical preferment and died Bishop of Meath, but who spent more time in journeying than in the cure of souls. His volumes of travel in the East are of importance even at the present day. He discovered Chamounix. The book cited above, lately found in MS. in the Library of Trinity College, Dublin, has been ably edited by Prof. Stokes. Mme. de Bovet is a lively Frenchwoman. The one treats of Ireland lying as it were in a death trance—mainly of ruins and of the noblemen and gentry to whom the country had been given over. The institutions that claimed Pococke's chief interest were the charter schools, through which it was expected that the Irish would be rescued from Popery. The masses of the people were nowhere. It is only regarding the old Anglo-Norman colony in the Barony of Forth that we have any sympathetic writing. Mme. de Bovet treats of the Ireland of to-day seething with life; the people themselves, their hopes and fears, their shortcomings and their virtues, the chief interest, even above the glorious scenery she so well describes. Pococke is cold, dry, exact. His book will always be of value as a record of Ireland in the past. Mme. de Bovet is graphic and interesting; her narrative abounds in minor errors. Pococke gives us no real conception of what Ireland was in 1752. When the reader has forgotten Mme. de Bovet's facts, and when her exaggerations on one side and the other are toned down in his mind, he will have a very fair general idea of what Ireland is in the present. How much more valuable the one would be as a record if it had been illustrated as is the other! In both the thoughtful reader cannot but find much to repay him.

—The authorities of the British Museum, unlike not a few Continental institutions, have of late shown most commendable enterprise in giving to the world, without prolonged delays and in forms accessible to the majority of scholars, the ancient literary treasures recently acquired by the Museum. The 'Constitution of Athens,' published in January last, is now followed by 'Classical Texts from Papyri in the British Museum,' edited by Mr. Kenyon, with the aid, at different points, of Dr. Rutherford, Dr. Sandys, the Rev. E. L. Hicks, and Prof. Jebb. This thin volume contains the texts, or collations of texts, with nine autotype facsimiles, of all the papyrus manuscripts of literary works in Greek owned by the Museum, with the exception of those already published. Here are the texts of three classical works that have hitherto been unknown, and collations of seven manuscripts of works already extant. The latter include portions of the 'Iliad,' the third of the epistles ascribed to Demosthenes, and nearly the whole of the oration of Isocrates On the Peace; and the manuscripts collated are of course more ancient, in some cases by eight or ten centuries, than those hitherto available. It is gratifying to discover that in all important respects the vellum manuscripts of the Middle Ages yield a text at once purer and more original than that of these ancient Egyptian papyrus copies. But by far the most interesting parts of the volume are those containing the texts now first recovered. These texts comprise, first, seven poems of about one hundred lines each, in part complete, of the iambographer Herodas (or Herondas), a poet hitherto little more than a name; second, a fragment of a spirited speech that may safely be ascribed to Hypereides, and, third, a small fragment of a grammatical treatise bearing the name of Tryphon. The poems or mimes of Herondas—who lived probably about 200 B. C., perhaps at Cos—introduce us to a new branch of Greek literature; they are in dialogue form, and were probably intended for representation; they are not unlike some of the idyls of Theocritus, though much inferior in poetic character. Colloquial in style, bright and sprightly, but without the pungency of satire, abounding in proverbs, many of which are new, they afford rare glimpses into domestic manners and customs. The subjects of these poems are: "The Matchmaker," "The Pandar," "The Schoolmaster," "A Visit to Asclepius," "A Jealous Woman," "Friends in Council," and "The Shoemaker." The student of Greek life, the archæologist, and the grammarian alike will find the works of Herondas of great interest. Mr. Kenyon has given, in this *editio princeps*, only a faithful transcript of the readings of the papyrus; for a critical text of this new poet one must look to Dr. Rutherford, whose recension has just appeared.

—If the visitor to Bayreuth questions the artistic perfection of the Wagner performances, there can be no doubt as to their present commercial and fashionable value. The month's festival just over has been the most profitable on record. From barely paying expenses, the famous theatre, according to report, now makes a more than fair profit. In England alone, where scarcely 1,500 tickets were sold a couple of years ago, about 3,000 have been easily disposed of this summer. Those who waited to secure seats until the last moment were at times obliged to give ten, and twelve, and fifteen dollars for a single one, to speculating hotel porters and waiters. Fashion, too, has set its seal of approval upon Wagnerism. Princesses have been to the little Bavarian town on their wedding journey. Piccadilly and Fifth Avenue have emptied themselves into the long drive which leads up the hill to the Opera-house. But, on the other hand, there is disaffection in the inner Wagner camp. The Wagner societies of Europe, suddenly waking up to the fact that their Bayreuth is being fast monopolized by the world of fashion, have protested against the wholly commercial manner in which the

theatre is now being run. It was not for this, not to establish the greatest musical show on earth, that they contributed to the enterprise and carried it through despite the then indifference of the general public. Frau Wagner, however, does not seem to sympathize with them, and so far they have protested in vain. That they are not without reason from an artistic standpoint has been recognized by English and Continental papers of note, such as the London *Times*, the Vienna *Freie Presse*, and the Paris *Figaro*, which have not been slow to point out weaknesses in the Bayreuth performances to which the Wagner worshipper remains fashionably blind.

—We very much regret to record the death at Schenectady, on the 12th inst., of the Rev. Robert Traill Spence Lowell, elder brother of the late James Russell Lowell, whom he survived exactly one month. He was born in Boston October 8, 1816, and diverged from the Unitarian line of his family to become, after graduation from Harvard and after having acquired a medical education, a clergyman of the Episcopal Church. His most celebrated and important charge was in the island of Newfoundland in 1846–'47, out of which grew his novel, 'The New Priest of Conception Bay.' This work had a striking success, bearing, as it did, the mark of a highly cultivated and original mind. Issued in 1858, it was reissued, with illustrations by Darley, in 1863, and on June 12, 1889, Mr. Lowell wrote to us from Schenectady: "Just at this moment I am full of the going-over of a revision for the Publishers; having just got through, for them, with night-and-day work on 'The New Priest'; which they have determined to bring out, again, without waiting for a new novel that they have long been asking from the author." Mr. Lowell was a poet, too, as the volume, 'Fresh Hearts that Failed Three Thousand Years Ago' (1860), testifies. From 1869 to 1873 he was head-master of St. Mark's School at Southborough, Mass., and left a deep and kindly impression on his pupils. His next post of usefulness was as Professor of Latin at Union College. He became in 1883 a contributor to the *Nation*, and enriched its columns with genial, scholarly reviews, written in a style of peculiar raciness that could not fail to attract attention. Some of these related to Newfoundland. On the 30th of last July he wrote to us, for the last time, in these words:

"I have, still lying here, a half-note written to you long ago, explaining my laches. For a year and a half, I have had the grippe, which, in the course of its residence, has been visited, for longer or shorter, by friends and kindred; as, twice by sharp spurious pleurisy, and by winter cholera, with two backcomings.—I am a very sick and weak man, now; unable to sit at a desk, and unable to sit much, at any rate. On the whole, there seems an intermittent gain. For the present, therefore, best wishes only, and always, to the *Nation* and you."

—A Tartarin of real life has lately died in Paris in the person of a M. Gros, dictator *in partibus* of the Republic of Counani. This republic is situated in the disputed country that lies between French Guiana and Brazil. A French adventurer, passing through it, had some conferences with the chiefs of the native roving tribes that are its only inhabitants, and was constituted, or constituted himself, their minister plenipotentiary to the rest of the world. M. Gros, all this while, was living peacefully at Vanves, writing school geographies and acting as municipal councillor, ignorant of his high destiny. To him came one morning the adventurer, offering him the suzerainty of Counani. He appears to have accepted it in the most perfect good faith. He appointed a First Minister, a Consul-General, an official newspaper, and set up his national bureaus in the Rue du Louvre at Paris. He founded an order of knighthood and distributed its crosses—some for love and some, it is said, for money. This would, indeed, appear to be the only source of revenue that Counani afforded. At last disturbance broke out between him and his Consul-General, and they mutually deposed each other. Of course, all this has added sensibly to the gayety of ruder Paris for the last few years, and the laughers made up a fund ostensibly to send M. Gros out to Counani to settle the affairs of his realm. He was taken no further than London, however, and returned to Paris to die, still full of unabated hope and confidence in his great future as a monarch.

—'Di alcuni Misuratori del Movimento Economico in Italia' (Roma: Salviucci, 1891) is a quarto volume of one hundred and six pages, in which Signor Bodio gives an admirable condensation and tabulation of the statistics contained in the voluminous publications issued from time to time by the different departments of the Italian Government. This work has a much larger scope than its title indicates, since it is not confined to "the economical movement in Italy," but embraces all the forces and factors which enter into the moral, intellectual, social, industrial, and national life of the Italian people and constitute the essential elements of contemporary Italian civilization. The author brings out in a clear and compendious manner the causal connection between the various influences and impulses, such, for example, as the effect of the diffusion of popular education in decreasing the death-rate, in diminishing crime, in increasing the material comfort of the working-classes and fostering an intelligent spirit of enterprise and thrift, which may ultimately result in the general substitution of savings-banks for investments in lottery-tickets. Of the recruits for the army in 1866, 36 per cent., and in 1888, 57 per cent., were able to read and write, and this progress in elementary instruction may be taken as a fair measure of the general progress of the nation. In Belgium 86, in France 90, in Germany over 98, and in Scandinavia over 99 per cent. of recruits can read and write, so that in this respect Italy still lags far behind the other nations of Western Europe (except Spain), although somewhat in advance of Russia and Servia. In some parts of Southern Italy (in Cosenza, for example) only 16 per cent. of the persons who enter the bonds of matrimony are able to sign their names. A work of a similar and equally scientific character is Dr. Victor Böhmert's *Verwaltungsbericht*, or official report as director of the Royal Statistical Bureau of Saxony, printed in the *Zeitschrift des Königl. Sächsischen Statistischen Bureaus* (1890; Heft i and ii), and covering the period from 1875 to 1889. Dr. Böhmert gives an interesting description of the organization and functions of this department of the public service, the value of which to the statesman, the political economist, and the historian as well as to the agricultural, commercial, and industrial classes can hardly be overestimated.

RECENT LAW BOOKS.

Company Law: Commentaries on the Law of Private Corporations, whether with or without Capital Stock, also of Joint-Stock Companies, etc. By Charles Fisk Beach, jr. 2 vols. Chicago: T. H. Flood & Co. 1891.

Constitutional Legislation in the United States: Its Origin and Application to the Relative Powers of Congress and of State Legislatures. By John Ordronaux, LL.D. Philadelphia: T. & J. W. Johnson & Co. 1891.

A Treatise on the Law of Negotiable Instruments, including Bills of Exchange, Promissory Notes, Negotiable Bonds and Coupons, etc., etc. By John W. Daniel. 2 vols. 4th ed. Baker, Voorhis & Co. 1891.

Vested Rights: Selected Cases and Notes on Retrospective and Arbitrary Legislation Affecting Vested Rights of Property. By William G. Myer. St. Louis: The Gilbert Book Company. 1891.

The Law of Life Insurance, including Accident Insurance and Insurance by Mutual Benefit Societies. By Frederick H. Cooke. Baker, Voorhis & Co. 1891.

A Treatise on the Law relating to the Custody of Infants, including Practice and Forms. By Lewis Hochheimer. 2d ed. 1891.

Wills and Intestate Succession: A Manual of Practical Law. By James Williams. London: Adam & Charles Black. 1891.

A CORPORATION, according to Chief-Justice Marshall's well-known and often-quoted definition, is "an artificial being, invisible, intangible, and existing only in contemplation of law." Kyd's elaborate description is—

"a collection of many individuals united into one body, under a special denomination, having perpetual succession under an artificial form, and vested by the policy of the law with the capacity of acting in several respects as an individual, particularly of taking and granting property, of contracting obligations, and of suing and being sued, of enjoying privileges and immunities in common, and of exercising a variety of political rights, more or less extensive, according to the design of its institution, or the powers conferred upon it, either at the time of its creation, or any subsequent period of its existence."

Blackstone, as if foreseeing the difficulties into which any attempt at definition might lead him, resorted to similes, likening a corporation at first to a "little republic," and afterwards (having in view its continuous existence) to a river—"as the river Thames is still the same river, though the parts which compose it are changing every instant."

In our time almost every accepted legal conception comes up for reëxamination, and every definition is submitted to a new analysis. Hence it is not surprising to find that few modern judges or text writers are satisfied with the notion of a corporation as an artificial person. Mr. Morawetz, in his admirable treatise, has devoted a great deal of learning and ingenuity to showing that the existence of a corporation independently of its shareholders is a fiction, and that the rights and duties of an incorporated association are in reality the rights and duties of the persons who compose it, and not of an imaginary being. Mr. Beach, imbued with the common professional dislike of any extreme systematic view, is of opinion that "the truth would seem to lie between" the old technical view and the modern theory. If we may venture a suggestion, it would be that Mr. Beach does not very clearly apprehend the scope of the conception which he criticises. Nor is this a barren or academical question. If we turn to one of the latest and most thoroughly argued corporation cases—that relating to the Sugar Trust—we find that one of the grounds of defence to the action for the dissolution of the North River Sugar Refining Company was, that, the trustees and directors not having acted, there had been no corporate

action. The *corporation* had done nothing for which it could be punished; but the Court of Appeals, declaring that what the whole body of corporators had done (*i. e.*, in divesting themselves of their corporate powers and putting them in trust) the corporation had itself done, went so far as to say that "the abstract idea of a corporation, the legal entity, the impalpable and intangible creation of human thought, is itself a fiction, and has been appropriately described as a figure of speech." This seems to us to err on the side of extravagance of expression, for a legal fiction which has well-defined legal consequences is certainly not a figure of speech.

The whole matter has been fully explained by Mr. Morawetz, as has also the difficult subject of *ultra vires*. It is impossible to avoid comparing the two books, dealing as they do with the same subject, in the light of the most recent decisions. Mr. Beach's collection of cases is the latest, and every late collection of cases is of value to the lawyer. It is really no disparagement to him, but rather complimentary, to compare him with a writer so original and so acute as Mr. Morawetz. As we have hinted, he has not the latter's faculty of analysis, but his collection of cases seems full, and his treatise is an important addition to the half-dozen or so leading modern works which cover the same field.

Prof. Ordronaux describes his work as an "attempt to present, in a concrete form, the entire system of Federal and State legislation as practised under a written constitution in the United States." Its object is also "to expound those administrative powers which, in our dual form of representative government, are sovereign within their several spheres of action." The treatise discusses many of the subjects found in books on the Constitution and in books on hermeneutics, such as the sources, organization, and development of representative government in the United States, constitutional guarantees, impeachment, the "mechanics of legislation," and the meaning of words and phrases. It seems intended for students rather than for practising lawyers, but for use in schools or colleges it is open to the charge of a want of clearness. We cannot suppose, for instance, that Prof. Ordronaux imagines that the act of an American court in treating a law in contravention of the Constitution as null and void has anything to do with "judicial legislation." Indeed, he very justly says, "If a legislative act be made in contravention of the Constitution, it is manifestly no law," and judges cannot be said to legislate when they refuse to follow an enactment which is not law. Why, then, puzzle the student by treating the two things together, in a chapter bearing the extraordinary title, "Judicial Legislation, including Impeachment"?

The chapter on "Words of Common Use" is valuable for its references to cases, but many of the definitions given seem to us beside the mark. "Charitable uses" our author declares to mean, "popularly," gifts for the relief of the poor; *in law*, "any gifts to public uses dependent solely upon the will of a donor." What is the force of "dependent solely upon the will of a donor"? Are not all gifts so dependent? "Benefit," we are told, "means such profit or use as constitutes a *legal consideration*." This would seem to identify the word in law with "consideration." Two cases are referred to, neither of which decides that the word means anything of the kind, and one of which explicitly follows Webster in declaring that "benefit" means "simply advantage, profit," *i. e.*, the word is not used in the case in question in any technical sense whatever. "Benefit" as a technical legal term means generally in the United States the advantage derived by a land-owner from the taking of his property under the right of eminent domain, and is used as the correlative or opposite of the word "damages." "From" and "with" are certainly words in common use, but we do not know that they have any different meaning in law from that which is attached to them in common parlance. The author insists, however, that when "used singly" they are "ambiguous," and suggests that other words should be coupled with them in order to define their intent more certainly, as "from and out of," "together with," etc. We deny altogether the ambiguity imputed to these innocent prepositions, and must maintain that the author's attempt to remove ambiguity from them is not only wholly unnecessary, but confusing. "From Dan to Beersheba" is not an ambiguous phrase. "With all my worldly goods I thee endow" is perfectly clear. The fact is, that the amplified prepositions mean something different from the others. The law has not attached any technical signification to them. These matters cannot be regarded as trivial in a work dealing largely with questions of interpretation.

Mr. Daniel's treatise on negotiable instruments has become a work of such established authority that it is hardly necessary to say more than that a new edition is very welcome. The last one appeared in 1882, and some two thousand new cases are now added, which, according to the preface, "are the result of new illustrations and diversities of established principles rather than of the evolution of new ones." The very remarkable success of this book is a striking proof (to make use of the apt quotation of the author) of what an abundance of new corn can be got out of the old fields of the law by good husbandry. When 'Daniel on Negotiable Instruments' first appeared, probably few lawyers imagined that a new text-book was needed on the subject. Yet it has already distanced all its competitors, and may fairly be said to be at present the standard work on the subject.

Mr. William G. Myer is favorably known to lawyers as the compiler of 'Myer's Federal Decisions,' a voluminous and exhaustive digest, the preparation of which has peculiarly qualified him for taking up any branch of law involving constitutional questions. His work on 'Vested Rights' comprises, according to the preface, "a selection of cases, annotated, on those fundamental and constitutional principles which have for their object the protection of vested rights of property." The annotations do not consist, however, of a gloss by the author, as in most collections of leading cases: they are a digest of decisions grouped under the principal case; and the whole book is consequently at once a collection of leading decisions and a digest. It deals chiefly with Retrospective Laws, the constitutional guarantee of "due process of law," and the provision prohibiting the impairment of the obligation of contracts. There are some fifty-odd leading decisions given in full, and some two thousand other cases briefly digested. There can be no doubt of the value of the work as a digest, but it can hardly take the place of a treatise. The method of arrangement is such as to bring together matters widely diverse in principle, merely because they fall under the same constitutional clause. Thus, Munn vs. Illinois is necessarily annotated together with Eames vs. Savage, because they are both leading cases under section 1 of the 14th Amendment, declaring that no State shall "deprive any person of life, liberty, or property without due process of law." But the considerations governing the decision in the two cases were quite different. In the first, the point involved was whether a State law prescribing a maximum rate of toll for warehousing grain was or was not an arbitrary invasion of a *property* right; in the second, whether a summary process for satisfying a judgment against a town by levy and execution upon the goods of any inhabitant was "due process of law." In the first, the discussion turned on the question whether the public had an interest in the property and occupation involved which authorized it to interfere with the price fixed for the service rendered; in the second, whether a particular kind of summary process was included in the constitutional conception of "due process." One was primarily a question of power, the other of interpretation. We cannot agree with the author in thinking that his method renders the result "more useful than if it had been put into the form of a treatise."

Life Insurance is a subject of entirely modern origin, and there is no great accumulation of works devoted to it. The last edition of Bliss's work appeared in 1874. The plan adopted in Mr. Cooke's volume has been that of reserving for the text the statement and exposition of general and fundamental principles, putting all exceptions to and limitations upon these rules into the notes. In this way the book is made very compact, for with apparently a larger number of cases, it does not reach half the size of Bliss's treatise. So far as we have been able to examine it, the work is creditably done. The subject is a difficult and perplexing one, the contract of insurance being governed in many respects by principles not applied in the cases of other contracts, and the effect of warranties and representations being often confusing. We notice one or two statements which seem to need reconsideration—for example, the proposition that "all that the law recognizes as of value to a person and as capable of injury are his *life* and his *property*." Even when the author has explained that in "life" he means to include "health," the statement is incorrect, because it leaves out both liberty and reputation, which are equally under the protection of the law. Again, "In *some cases* there has been asserted a distinction between a contract for insurance against injury to life and one against injury to property; the latter being declared a *contract of indemnity*, and the former a *mere contract to pay on condition*. The only significance of this distinction seems to lie in its bearing on the amount of recovery under the contract." There is no more fundamental distinction between fire and life insurance than that the one is a contract of indemnity, the other not. At page 236 are collected the cases showing the full effect of the distinction, *e. g.*, that an assignee recovers in full, without regard to the amount paid for the assignment; that a creditor is not limited to the amount of his debt; that a tenant insuring the life of his landlord recovers the full amount without reference to the value of his interest and regardless of the expiration of his tenancy. In the well-known case of the insurance of Mr. Pitt's life (the debts having been subsequently paid), it was held that there could be no recovery; but, as Mr. Cooke's researches sufficiently show, this is not good law now. Under these circumstances the reference to the matter above given is a little misleading. Upon the whole, Mr. Cooke has performed a difficult task with more than common success.

It is seldom that a second edition of a law-book is smaller than the first, but this is the case with Mr. Hochheimer's revision of his work on the custody of infants. By condensation and excision, he has transformed a considerable octavo into a diminutive hand-book. He is fortunate in having, what is denied to many writers of law, a faculty of condensed statement, and his book in its new form will be found a convenient compendium.

Mr. Williams's hand-book is one of those attempts to state the law of a subject in a small compass which is open to two criticisms: for lawyers it does not give enough; for laymen it gives too much. As a guide to the student or instructor it has some good points, particularly its historical account of wills. For the full enjoyment of the legal feast which the subject may be made to yield—the delicacies furnished by the evolution of the distinction between latent and patent ambiguities, the succulent learning of the marshalling of assets and the wholesome nutriment of charitable uses—for these we must browse in the ampler pastures of Redfield and Jarman.

SANBORN'S LIFE OF HOWE.

Dr. S. G. Howe, the Philanthropist. By F. B. Sanborn. Funk & Wagnalls. 1891.

As a piece of biographical writing, Mr. Sanborn's life of Dr. Howe is clearly an advance upon his lives of Thoreau and John Brown. For writing it Mr. Sanborn had truly admirable preparation. He shared the vicissitudes of Dr. Howe's political career; was his companion in various attempts to defeat the Fugitive Slave Law and in the preparations for the John Brown raid; at a later period was intimately associated with him as Secretary of the State Board of Charities, of which Dr. Howe was president for many years, an office in which Mr. Sanborn succeeded him, retaining it until the Massachusetts spoilsmen cast him out after the brutal manner of their kind. All of this preparation was unconscious; a conscious part was a visit which Mr. Sanborn made to Greece in 1890, when he went over much of the ground associated with Dr. Howe's adventures in 1824 and the five following years. But with all this wealth of general and special preparation, Mr. Sanborn's work has been subject to one serious limitation which has made the net result greatly inferior to what it might otherwise have been. The family of Dr. Howe are preparing a more extended biography, with many extracts from letters and journals which have not been available for Mr. Sanborn, except as he has found them here and there in print. But the life of Dr. Howe would appear to have been one particularly needing the illumination of letters and journals for its fit apprehension, and the little of it that we have makes it evident how much we miss in what remains behind.

Born in 1801, and graduating in 1821 from Brown University, where he abused a meagre opportunity, the medical studies on which he entered were disturbed by rumors of an uprising of the Greeks against the Turks, and, though he took his medical degree in 1824, he set sail for Greece the same year to join the insurgent forces. Byron, with whom popular tradition has associated him as a fellow-soldier, died in April of this year, some months before young Howe's arrival, but his name and fame were everywhere, and he was known only as "great and good." Great misfortune fell upon the Greeks soon after Howe's arrival; the regular warfare ceased, and he joined a guerrilla band, of which another member was the young Whitcombe who shot and nearly killed Byron's friend, Trelawny, in his cavern on Parnassus. Of this episode Mr. Sanborn gives a full account, which is justified by its intrinsic interest, if not by its connection with the main affair. The guerrilla life was rough and hard: "Months without eating other flesh than mountain snails or roasted wasps; weeks without bread, and days without a morsel of food of any kind." So Howe reported his own experience to Horace Mann, but in general only with difficulty could he be induced to talk about his personal adventures, and, though he wrote 'An Historical Sketch of the Greek Revolution,' his own part, so far as it appears, is carelessly slurred over or deliberately veiled. He visited America in 1828, and returned to Greece with a good supply of money, food, and clothing for the miserable victims of oppression. Later he organized a settlement at Corinth, and, when he returned there in 1844, was recognized and made the object of a popular ovation. Mr. Sanborn's account of Howe's Greek life is less continuous and more episodical than we could wish, and the defect, though partly owing to the scantiness of his material, hints at a certain lack of skill as a narrator in his equipment for his task. Howe, the mature man, disparaged the enthusiasm of his youth, setting down his Greek outing to "thoughtless indifference, perhaps ignorance of what courses would have been profitable for him. Lacking prudence and calculation, he followed an adventurous spirit."

There was a "pre-established harmony" in his finding himself in Paris at the time of the Revolution of 1830 and joining the insurrectionists who accompanied Lafayette to the Hôtel de Ville, and also in his being made Chairman of the American-Polish Committee in 1832, and going to Prussian Poland to carry money for the Polish refugees. On his way back he was arrested and kept a secret prisoner in Berlin for several weeks, a fitting climax to his adventurous youth. Already he had entered on a path much less romantic than the one he had so far pursued, but not without greater wonders and surprises in its forward course for the discerning eye. He had come to Europe to study institutions for the blind, and, when freed from his imprisonment by Albert Brisbane's timely interposition, he returned to Boston and entered on the work which was the peculiar glory of his life. Hardly could anything have been more different from the striking circumstances of his earlier career than the slow and patient methods of that education which was practically to give sight to the blind and make the dumb to speak. Almost from the start, Dr. Howe improved upon the European methods. Mr. Sanborn tells the story mainly in Dr. Howe's own words, extracted from his annual reports. It attains its highest point of interest in what Mr. Sanborn's chapter-heading rightly calls "The Wondrous Story of Laura Bridgman." All its details are beautiful and impressive, but the child's discovery of her mother after their first separation is of a pathos not to be excelled. Dr. Howe's interest in the blind quickened his sympathies for every form of physical or mental limitation, and in 1847 his representations induced the State to appropriate $2,500 a year for three years for the alleviation of idiocy. The first ten idiot children were taken into his personal charge at the Blind Asylum in South Boston. Now 300 pupils are educated at a yearly expense of $50,000. Following his account of Dr. Howe's political and anti-slavery labors, Mr. Sanborn gives an account of his later labors for the teaching of articulation to the dumb, and the segregation or isolation of insane persons. Together with Horace Mann, he had advocated the teaching of articulation as early as 1844. There was a war of pamphlets, but victory crowned the standards of the conservative opposition. In 1866 the contest was renewed, the Clarke institution in Northampton was established, and now several thousand children are learning by the new method, which was a proved success in Europe fifty years ago.

Ninety pages of Mr. Sanborn's book (187-277) are devoted to the "Political Conflict," in which Dr. Howe took an active part from 1846 until slavery was destroyed. It must be confessed that these pages are much fuller on the general aspects of the conflict than on Dr. Howe's particular part in it. In one chapter Daniel Webster has an exclusive prominence, and the lack of pertinence is atoned for by the recovery of Webster's Address, written for the Anti-Texas Convention of January 29, 1845. Mr. Sanborn corrects Mr. Adams's statement in his Life of Dana—that the Address was Webster's only in part. He has had access to the manuscript, and says that it is partly in Webster's handwriting and all of his composition. The depth of Webster's fall in 1850 can best be measured by the difference between his 7th of March bid for the Presidency and the humane and spirit-stirring sentiments of this address. Mr. George T. Curtis's suppression of it, and the facts concerning it, in his Life of Webster, shows that he knew the teaching of the fable very well. It is a surprising circumstance that so active a philanthropist as Dr. Howe was so slow to wake up to the importance of the anti-slavery agitation. He gave it very little thought till 1846, when he went into politics as unsuccessful opposition candidate to Robert C. Winthrop in the Congressional election of that year. His engrossment in his special work may plead for arrest of judgment on his tardiness, but that a certain aristocratic temper, allying him with those who shut their doors on Sumner and Phillips, had something to do with it, Mr. Sanborn does not endeavor to conceal. A late recruit, Dr. Howe made large amends for his backwardness by his fidelity once he had joined the anti-slavery ranks. The sending back of fugitive slaves was intolerable to his ethical imagination, and he was one of the most active on the Committee to prevent that wickedness. But while Mr. Sanborn gives a somewhat elaborate account of slave-catching in Boston, he gives us no details of Dr. Howe's services to the poor creatures fearing things more terrible than death. His connection with John Brown was quite as intimate as that of Mr. Sanborn, Gerrit Smith, Theodore Parker, George L. Stearns, or T. W. Higginson; but though the account of this is fuller than of his connection with "the Underground Railroad," it is still insufficient. His action during the reign of terror that succeeded Harper's Ferry did not wholly meet with Mr. Sanborn's approval at the time, but he prints a letter which he then wrote to vindicate him, and it is a sufficient answer to a good deal of criticism that has been directed against the friends who furnished Brown with aid and comfort for his glorious foolishness.

That Dr. Howe had something of the Quixotism of his youth left in his ebbing veins is shown by his favorable regard for the San Domingo scheme which so excited the antagonism of his friend Sumner. Was it some vague suspicion of his resemblance to La Mancha's knight that made the story of his ad-

ventures Dr. Howe's favorite reading during his stay in San Domingo? In a closing chapter, "Character and Results," Mr. Sanborn tells us that Dr. Howe was by no means a faultless character, and indicates some of his limitations: "He could be as capricious and as persistent as if caprice and persistence were not antagonistic qualities. He loved power, though he seldom sought it; and was often unjust to his opponents, of whom, first and last, he had a great many." But in the foregoing chapters there is but the slightest exhibition of these personal traits or of any others, good or bad, and we are left with only the most vague impression of a personality that was extremely rich and strong. Whatever its defects, he loved so much, and did so much for the blind, the prisoner, the deaf and dumb, the feeble-minded, and the oppressed of two continents, that one could easily forgive him much, and our obligation to Mr. Sanborn is great for bringing home to us his high example.

New Light on Dark Africa. By Dr. Carl Peters. Ward, Lock & Co.

THE title of this book is misleading, as it contains nothing new about Africa in general or any part of it, nor does it make clear anything which had previously been obscure. It is simply the record of a buccaneering expedition, which, though ostensibly for the relief of Emin Pasha and the extension of German influence, had no other real end than the gratification of a young adventurer's ambition and love of excitement. Dr. Peters had already been twice in Africa before the time of the expedition of which he gives an account in this volume, and had gained some notoriety for his zeal and success in acquiring territory for Germany. On this occasion he proceeded on principles entirely different from those of most other African travellers. They have invariably taken with them cloth, wire, and beads to purchase food, water, and the right of way, so far as possible, for their whole projected journey. Dr. Peters, on the other hand, carried little else than ammunition, intending to refuse all tribute or gifts, and to take what he needed as he went along. If resistance should be offered by the owners of the property appropriated, he would unhesitatingly shoot them down. It was an eminently successful method—from his point of view. He marched from the mouth of the Tana River to the Victoria Nyanza, with a small, well-armed force, spreading terror among the tribes and often leaving in his track murdered natives, burned villages, and people despoiled of their cattle, their principal means of living. So far from desiring or attempting to excuse these ruthless proceedings, he glories in them, often referring to Stanley's and Thomson's just and conciliatory treatment of the natives as servile and unworthy of Europeans. He is just as unscrupulous towards the English, opening their despatches, and, in one instance, if we are not mistaken, robbing the stores of an expedition whose leaders at the moment chanced to be absent.

From the Victoria he passed through Uganda, whose king, Mwanga, he claims to have restored to his throne, though in what way is not apparent from his narrative. Judging from his description of this notorious African, it would be difficult to believe in the cruelties justly laid to his charge. He confirms, however, the accounts received from other sources of the condition of the country. The villages were burned and the groves of bananas destroyed. "By the roadsides lay skeletons and corpses still in process of decomposition, poisoning the air. The carrion vultures, who were gorging themselves with the flesh of the unburied corpses, seemed to be the only inhabitants of this land. Every trace of human beings had vanished." Of the English missionaries in Uganda he has little that is favorable to say, but the French were much more to his liking. This is not surprising, if we may judge from the advice which one of the latter, Père Lourdel, gave him: "Vous ferez bien de brûler la capitale de Mtamboa." From Uganda he returned to the coast, nearly all the way by the ordinary travelled route. At Mpwapwa he met Emin Pasha, who was on his way to the interior, and the two apparently spent their time agreeably in abusing Mr. Stanley. Zanzibar was reached in July, 1890, after an absence of thirteen months.

The literary ability of the author is small. His style is nearly always heavy, and the narrative, especially at the beginning, is so overburdened with petty personal details as to be excessively tedious. His descriptions are dull and lifeless and his humor is heavy. Very offensive, it should be said, are many of his pious allusions, considering the occasions which call them out. After planning by treachery to seize the herds of an unsuspecting tribe, he ordered his people "to get up a fence for the cattle that Heaven was going to send us." The description of the destruction of a native village after a sanguinary fight in which over a hundred natives had been slain, begins, "What time the Advent bells were calling to church in Germany, the flames were crackling over the great kraal on all sides, and mounting towards the heavens." The chief characteristics of this, to us, repulsive book are the strong personality of Dr. Peters, the exalted opinion he entertains of the importance of his abortive expedition, his intense hatred of the English, and the contempt which he showed for the negro's right to life and property. It is attractively got up; the pictures, with the exception of the portraits and possibly some of the landscapes, being apparently purely fanciful.

The Saga Library. Vol. I. By William Morris and Eirîkr Magnússon. London: Bernard Quaritch. 1891. 12mo, pp. 7+ 227.

Lad and Lass: A Story of Life in Iceland. Translated from the Icelandic of Jón Thordarson Thóroddsen by Arthur M. Reeves. London: S. Low, Marston, Searle & Rivington.

MR. BERNARD QUARITCH has reverted to an old-time interest of his in undertaking the publication of a "Saga Library," to consist of fifteen or more volumes, containing the leading Icelandic mythological and historical sagas. These are to be edited and translated by Mr. William Morris and Prof. Magnússon of the Cambridge University Library. Of the works selected for publication in the new form, all but the three narratives making up the first volume of the series have been put into English before, several of them by Mr. Morris himself. That there is room for a new edition cannot be doubted, and the editors, whose previous work in popularizing Icelandic literature has secured them a well-earned reputation for brilliant translation, should find a ready welcome for their new venture. Indeed, it is a matter for regret that a popular edition of these original and decidedly interesting works is limited to 1,000 copies, for thrice that number ought to find their way into private collections, while every public library in England and America should subscribe for the set. An introductory preface to the first volume of the series contains a sketch of Icelandic literature in general and considerable detailed information concerning the history of the three stories included in the book, but this cannot be recommended as especially interesting reading. The somewhat voluminous notes at the end of the volume, however, contain many interesting illustrations of Icelandic manners and customs.

The editors have done well in beginning their series with the three semi-historical sagas of "Howard the Halt," "The Banded Men," and "Hen Thorir," because they will be new to English readers, and are capital examples of a distinct type of Icelandic narrative. These stories have the robust quality of the air of the country that gave birth to their heroes. Their great dramatic power, combined with simplicity and directness of narration, has kept them fresh and virile through centuries. It must be admitted that their prevailing sentiment is an eye for an eye, a tooth for a tooth, with usury; but the spiritual light by which these primitive people were guided was almost as scanty as the daylight of their long winters; and even a superficial reading will show that the vendetta that flourished so lustily was not a mere outgrowth of private passion, but a crude expression of the instinct of justice, and made obligatory by public opinion. Boldly drawn, and characterized by keen insight into human nature, these pictures, though of a rude age, are yet free from coarseness, and the translators have happily preserved enough of the original quaint phraseology to lend a peculiar charm to this English version. "Howard the Halt" possesses the liveliest dramatic interest. A man of former prowess, but now old and maimed—hence the title—loses by treachery and violence at the hands of Thorbiorn, a man of position but very unjust, his only and promising son. Weighed down with age and benumbed by grief, the poor old man is bedridden for three years, rousing at the end of each twelvemonth to seek redress, only to be met with brutal insult. His wife, Biargey, "the most stirring of women," keeps the fires of vengeance burning, and, having engaged the aid of her kinsfolk, rouses Howard with a final adjuration and a prophecy. "So when he heard her words he leapt up from his bed and forth on to the floor and sang:

> "'Once more amid my old age
> I ask for quiet hearing,
> Although the speech of song-craft
> Scarce in my heart abideth
> Since then when first I wotted
> Of weapon-god downfallen.
> O son, how surely wert thou
> The strength of all my welfare!'

And now was Howard as brisk as might be and halt no longer." The rejuvenated man and his kinsfolk perform the most prodigious feats of valor when they meet Thorbiorn and his powerful allies. We have an amusing revelation of the workings of the human mind when Howard, coming face to face with his enemy, is minded that a new faith—the Christian—has been put forth, and he vows that "if any could show him that that faith was better and fairer, then would he trow in it if he might overcome Thorbiorn." When there are no more enemies to slay, Howard fares to Norway and embraces Christianity, but on the death of Biargey he returns to Iceland, and, having carried "church wood" there, a church was built from it after his death and his grave made therein.

"The Banded Men" is a humorous satire on the administration of courts of law. Ufeig, a man full of good counsel but "unhandy at money-getting," prodigal of meat and meal, and borrowing to keep the household going,

has a prudent son, who leaves home early on account of the lack of love between his father and himself. The son amasses much property, but the father remains as poor as before, and there is no intercourse between the two. It falls out after awhile that the son has a case in court, but, there being a flaw in the prosecution, he is obliged to withdraw. The father meets him on the way home and derisively assumes that he has won the suit. On being told the contrary, an agreement is made between them, and Ufeig assumes control. Here his native shrewdness and knowledge of human nature come into play, and the description of his manner of treating the corruptible court of justice is highly amusing. Ufeig wins not only the lawsuit, but a bride for his son, and "ever after endured the good will and kindly affection between the father and son."

A few bold strokes tell the story of "Hen Thorir," a huckster of low degree trafficking at one time in hens—whence his nickname. As a story it is not so readable as the two preceding, but as a sketch of sharply defined contrasts of character it is very effective.

In conjunction with the three Saga stories it is interesting to read a modern Icelandic novel. 'Lad and Lass,' by Jón Thóroddsen, considered the most important modern Icelandic tale, was written in 1848–'49, and published in Copenhagen a year later, a second edition being issued in 1867. It has been twice translated into Danish and once into German. An English version of one of the Danish translations appeared some years since. The present version is from the original Icelandic, by Mr. Arthur M. Reeves, in whose recent untimely death Icelandic literature lost an enthusiastic lover and intelligent interpreter. 'Lad and Lass' gives many evidences of true poetic feeling; and the figure of the heroine, Sigrid, is drawn with delicacy and faithfulness, while the other characters are clearly individualized. The plot is a familiar one to novel-readers, illustrating the old proverb on the course of true love; but, thanks to the same tenacity of purpose that so notably characterizes the heroes of the Sagas, Sigrid and her faithful lover eventually set at naught the machinations of their enemies. In point of dramatic force this story suffers by comparison with the older narratives. The dialogue is sometimes labored, and the pleasantry lacks the arrow-like lightness and swiftness of the old story-tellers. It would be unfair, however, to make too close a comparison with what was produced under far different conditions. The stirring life of the old Icelanders found dramatic narrative its most natural expression, while the comparative monotony and isolation of the present age give little scope for heroic action or expression.

Städte Pamphyliens und Pisidiens. Unter Mitwirkung von G. Niemann und E. Petersen herausgegeben von Karl Grafen Lanckoronski. I. Band. Pamphylien. Vienna: F. Tempsky.

STRANGE to say, a country that has played a most important, a unique rôle in the history of the world and in the history of our own immediate civilization, Asia Minor, was virtually *terra incognita* until about ten years ago. But during the last decade the world has been awakening to its importance as a field for archæological exploration. In view of the centuries of lethargic neglect, this sudden awakening has been remarkable for the unexpected energy displayed, and in consequence the decade can chronicle most gratifying results in every branch of archæological investigation, thanks to a band of devoted workers. Among the chiefest of these must be reckoned Count Lanckoronski. Not that he has worked especially with his own brains, time, and energy, but with the brains, time, and energy of such distinguished scholars as Petersen and Niemann. None the less honor is due him on that account, none the less be his meed of praise, none the less be the gratitude we owe him for the unselfish enthusiasm for antiquity that has led him to fit out with generous, nay, even lavish hand, and send expedition after expedition to Lycia, Caria, Pamphylia, and Pisidia, in order to survey, measure, and publish the ruins of the chiefest cities of those countries. These expeditions have necessitated a great and long-continued outlay of money, and the editing and publication of their results in such magnificent style have cost perhaps as much as the expeditions themselves. And all this expense has been met by Count Lanckoronski. Such single-hearted and unselfish devotion to the science of antiquity is rare nowadays among men of wealth, and it is worthy of grateful remembrance and mention at the hands of all classical students, who, we feel sure, will devoutly wish for many successors and imitators of Count Lanckoronski.

The magnificent volume on Pamphylia to which this notice would call attention is a worthy sequel to the two imperial volumes ('Reisen in Lykien und Karien') that were presented to the public several years ago. The printer has spared no pains on it, and, so far as paper, typography, and illustrations are concerned, the book is simply faultless. Indeed, we have but one fault to find with this as with the former volumes. It is too sumptuous and too costly to have a wide circulation, for, as a class, scholars are not in condition to present themselves with *éditions de luxe*, even in their own individual specialty. The circulation of the book must therefore be limited to public libraries and to men of means. And yet science would have been distinctly the loser had the book been made a cheap one; for books whose value lies in great measure in the illustrations cannot be made cheap, and the magnificent illustrations of this volume, both those from copper-plate at the end of the volume and those in the body of the text as well, form perhaps its most valuable feature, and certainly render more tangible by pleasing presentation to the eye the great gains to the science of antiquity that are chronicled in the volume.

The expeditions were led by E. Petersen, now First Secretary of the Imperial German Archæological Institute at Rome, as archæologist, and G. Niemann of Vienna, as architect. Associated with them from time to time were Von Hartel, professor in the University of Vienna, and Von Sokolowski, professor in the University of Cracow, as archæologists; Moriz Hartel of the *Akademie* of Vienna, and Rausch of Cracow, as architects; Von Malczewski, as artist (painter); Lieut. Hausner, as chartographer; Drs. von Luschan and Heyder, as physicians, and lastly a photographer. From such a corps of experts good work was to be expected, and in general the account given by Petersen and Niemann is exhaustive and satisfactory, although now and then we meet with a confession that this or that detail was overlooked or not investigated on the spot. But circumstances usually excuse these sins of omission. For instance, the walls of Attaleia were not surveyed accurately because of the excitement incident to the Bulgarian troubles of October, 1885, at which time a general call to arms had been sounded, and in consequence the roads were lined with men marching to the sea in order to be transported to the seat of war.

Count Lanckoronski wrote the pleasing preface to the volume, in which the ruins of five cities of Pamphylia are discussed, viz.: of Attaleia, Perge, Sillyon, Aspendos, and Side. In this discussion Petersen and Niemann took part as follows: the archæological account, including history, epigraphy, topography, geography, and the general description of the ruins, comes from the pen of Petersen, while all matters pertaining to pure architecture are treated by Niemann.

The most interesting ruin in Attaleia is a gateway of three arches erected by Hadrian, that inveterate traveller and gate-builder. The theatre, stadion, walls, and principal gateway of Perge all furnish matter worthy of being given to the world. The celebrated and beautiful theatre of Aspendos has long been known, though a detailed account of it is presented to us now for the first time. One of the most interesting monuments discussed is the Nymphæum at Side, a palatial Enneakrounos, whose magnificent proportions and chaste architecture excite our admiration. Similar Nymphæa were found at other cities of Pamphylia, but none so elaborate as that of Side. Owing to the sickness of Niemann, the architect's account of Side is reduced to a minimum, but Petersen's excellent description of the ruins makes us forget his absence.

One hundred and eight inscriptions, mostly new, were found in the five cities of Pamphylia. In republishing inscriptions that are already known in poor copies, Petersen gives the correct part of the old copy in minuscules, but his own corrections in majuscules. Future travellers should adopt the idea, for by it one can see at a glance what improvement has been made in the text, and much time will thus be spared to the reader.

But the results of these expeditions are not confined merely to the cities mentioned above. The map of the country has been a great gainer, for careful route surveys were made as the party journeyed through the land from city to city, and not only this, but geographical excursions were undertaken, especially by Dr. von Luschan, whose attention was extended to ethnographical matters also.

The book appeared simultaneously in German, French, and Polish. In conclusion, we hope that the volume on Pisidia may not be long delayed.

William Ewart Gladstone. By George W. E. Russell. [The Prime Ministers of Queen Victoria.] Harper & Brothers.

IN his preface, Mr. Russell states that as his space is limited, he has "touched lightly on those later events of Mr. Gladstone's career which are within general recollection, and has bestowed more detailed attention on the early stages which are now, to most people, either unknown or forgotten." This arrangement is open to various objections. In the first place, however brief a biography may be, it should cover all the really important events in the life of the subject, and the space given to each event should be measured by its relative importance rather than by an assumed memory or forgetfulness on the part of the reader. Again, the keynote of Mr. Gladstone's character being his extraordinary receptivity, and his willingness to modify opinions as a result of logical conviction, it follows that the later stages of his career are more interesting and

more important to the world at large than the earlier. We think, therefore, that Mr. Russell would have made a wiser distribution of his space if he had devoted more pages to Mr. Gladstone's Ministry of 1880–85 (to which very scanty reference is made), and fewer to the theological controversies of his early manhood, which possess to-day a purely antiquarian interest. Mr. Russell says that he has aimed at a clear statement of facts, chronologically arranged, and no one will gainsay the correctness of his facts or their proper arrangement. But sins of omission and lack of perspective are serious faults—especially in biographies—and it becomes a question whether the various series now in course of publication do not lose much of their value as biographies by reason of excessive brevity.

Having said this much in condemnation of the *plan* of Mr. Russell's volume, we must add that, while he gives due prominence to certain characteristics of Mr. Gladstone which have largely influenced his action at critical times, he does not seem fully to appreciate their value. In replying to Palmerston's celebrated "Don Pacifico" speech in 1850, Mr. Gladstone had the courage to rebuke the bullying and blustering tone adopted by that popular minister, and spoke of "the vain conception that we, forsooth, have a mission to be the censors of vice and folly, of abuse and imperfection, among the other countries of the world; that we are the universal schoolmasters." Mr. Russell considers that this tendency to ignore the "homely prejudice of patriotism" and this ability to see the faults of his fellow-countrymen as well as the virtues of other nations, have done much to mar Mr. Gladstone's popularity and to limit his range of influence. Now, it is at least doubtful if this be true of the English constituencies. It is certainly the reverse of the truth as regards other nations, for it will be generally admitted that what raises Mr. Gladstone above the level of his countrymen, and justifies Bunsen's remark that he "has heard higher tones than any one else in this land," is the cosmopolitan character of his mind. Hence his vehement advocacy of arbitration as a means of settling international difficulties, in preference to the threats and bluster of the Jingo party. Hence, also, the bitter hatred with which the British Tory regards him and speaks of him—a hatred which constitutes one of his strongest claims on our sympathy and our affection.

Mr. Russell holds that Mr. Gladstone's defeat on the home-rule question in 1886 was due to the fact that the electorate had not sufficient time to consider the question at issue, and certainly the result of recent bye-elections would seem to confirm the correctness of this opinion. In this respect there is a curious analogy between the British voter's fear of home rule in 1886 and the inability of the American voter to grasp Mr. Cleveland's enlightened tariff policy, in 1888. In both cases, the time allowed for education was too short, but subsequent events show that in both cases a clearer understanding is gradually but surely gaining ground.

It would be hardly possible to write an uninteresting life of Mr. Gladstone, but, apart from such inherent interest, the main merit of Mr. Russell's sketch is that it whets the appetite for that something better which is, doubtless, even now in a forward state of preparation.

Who Wrote the Bible? A Book for the People. By Washington Gladden. Boston: Houghton, Mifflin & Co. 1891.

MR. GLADDEN'S book does not make good its title so perfectly as we could wish. It is not "a book for the people." With many admirable qualities, he has not a talent for exposition. Something in the manner of his writing obscures all definite impression. We enjoy, or do not, the argument and the polemic as we go along, but at the end of the chapter or the book the amount of clear instruction we have consciously received is small for the amount of matter we have read. Moreover, the book is vitiated by its apologetic tone. This may ingratiate it with the orthodox reader, and it may be that it is well adapted to the modification of his traditional views, but it can only be repellent to the radical mind, to which a fair judgment of the Bible is quite as important as to the orthodox. It is Mr. Gladden's persuasion that the Bible, as Republicans say of the tariff, should be revised by its friends, and suggestions abound in his chapters that there are those who are not its friends, and there is great show of hustling them about and making them appear ridiculous. But it is quite sufficient to make a critic "anti-Christian," or an "enemy of the Bible," for him to be a little more radical in his conclusions than Mr. Gladden is himself, and it never seems to occur to him that only yesterday those holding his general and particular views were considered anti-Christian and enemies of the Bible by the more orthodox, and, indeed, are so considered still by the majority. There is nothing in the temper of the more radical critics as such that differentiates them from those a little more conservative, that they should be treated with suspicion or contempt. From Hengstenberg to Delitzsch is much further than from Delitzsch to Baur or Toy.

Mr. Gladden's book reflects the uncertainties that attach to many questions of Biblical criticism. When in doubt, he generally plays the traditional opinion, as in placing Joel chronologically first among the prophets, though Prof. Toy would place him last, with certain fragments of Zechariah. The composite character of the Pentateuch is insisted on, but any reader who is acquainted with the argument of Kuenen and Reuss and Wellhausen and Smith for the late origin of the priestly legislation will seriously object to their being set aside so cavalierly as they are by Mr. Gladden. They will even wonder if he has ever read them at first hand. The chapter on the prophets, which should have been one of the most valuable and suggestive, is one of the least important, much of the energy being wasted on Prof. Huxley that should have served a higher end. The Book of Esther is pounced upon with savage animosity; but suppose it came up from the deep heart of such an experience as that which the Jews are undergoing at the present time in Russia: then might not its truculence be regarded with more sympathy than blame? And this would seem to be more likely than that it was merely a literary brochure to excuse the feast of Purim. Such an important matter as that of the Deutero-Isaiah is passed over with no treatment proportionate to that given to Daniel and other more indifferent matters. The treatment of the New Testament is marked by the same difference from the treatment of the Old as we find almost universally in the criticism of the New Orthodoxy. It is much less courageous, much more apologetic. "The reason is, of course, obvious," says Principal Gore in 'Lux Mundi,' "why what can be admitted in the Old Testament could not without results disastrous to the Christian creed be admitted in the New." Though Mr. Gladden does not announce this principle, its unconscious operation is central to his treatment of the New Testament books, his easy satisfaction with traditional opinions, and his determination to surrender nothing to the radical critics except what is, like the Pauline authorship of Hebrews, incapable of any plausible defence. His average results are by so much less radical than those of Prof. Briggs as he is less a scholar and more a homilist, but they are sufficiently near to them to indicate the wide extent of that disintegration to which, for better or worse, the traditional ideas of the Bible are subject at the present time.

John Wesley. By J. H. Overton, M.A. London: Methuen & Co. 1891.

THE latest biographer of Wesley was born at Epworth, Wesley's birthplace, and is now rector of the parish over which Wesley's father ruled and in which Wesley for a time assisted him; he is also living in the rectory in which Wesley lived after the burning of the old rectory in 1709—an event which made such a deep impression on Wesley's mind that, writing his own epitaph, he described himself as "a brand plucked out of the burning." Mr. Overton can further boast himself a member of Wesley's University and a scholar on the same foundation. So much in common with Wesley has no doubt excited his interest in him, but it is no such qualification for his present task as the work that he had previously done, first, as a joint worker on Abbey and Overton's 'English Church in the Eighteenth Century,' and, second, as the author of 'The Evangelical Revival of the Eighteenth Century.' The reader of his last production would do well to read his 'Evangelical Revival' in connection with it. Wesley cannot be seen aright in any isolated view. Mr. Overton's biography has apparently obeyed some stern restriction as to its extent. He has made good use of the space at his command, but there are serious omissions. Wesley's relation to the Moravians is dismissed in the most summary manner, though Wesley derived from it the spiritual impulse of his wonderful career. Wesley's relations to Whitefield, which were of capital importance, are got over in a single page and a few incidental phrases. But the most conspicuous defect of Mr. Overton's book is not so much an omission as an excess in one particular, Wesley's relation to the English Church. What he has written is less a biography than an apology for Wesley's life, an argument to prove that he was a good Churchman from first to last, and never meant to separate himself or his people from his spiritual mother. He recurs to this with damnable iteration, and the reader must be a good Churchman who will not resent such persistent harping on a single string. Whatever the sentiments of the founder, English Methodism of the present day is so inimical to the Church that, at the centenary observance of Wesley's death, March 2, hostility to the Church was the one shrill note sounding above all others. Mr. Overton's book may have contributed a little to the manifest hostility to all praise of Wesley's churchmanship, as it is, of course, a criticism of the Methodist schism.

It is plain sailing for our author a good deal of his way. The beginnings of Methodism at Oxford in 1729 had a very singular resemblance to those of the Oxford movement just a century later, notwithstanding Newman's hatred almost or quite as much as of liberalism of that type of churchmanship which Methodism had created. In Georgia it was as a rigid sacramentarian that Wesley failed; for that his failure was most lamentable, Mr. Overton makes plain enough in spite of his de-

nial, and though he obscures the most painful aspects of the situation. So, after his return to England, his first collision with his bishop was a sacramental one, and he was the High Churchman stickling for the rebaptism of dissenters. But all of these things are burned up like wisps of straw in the flame of Wesley's "American Ordinations," in the last years of his life. Mr. Overton struggles manfully with these, but all in vain. Where he is weak as water is in his failure to perceive that Wesley was still less willing to have his societies absorbed in the Church than to have them separated from it, and that their absorption in it was as impossible as the absorption of the New England abolitionists by the New England churches. But if they were not to be absorbed, separation was inevitable. They could not go on for ever standing on one leg, neither this, that, nor the other.

Mr. Overton's chapters on "Georgia" and "The Moravian Influence" are miserably inadequate. That on "Wesley's Teaching" argues his soundness in the Anglican faith, and makes too little account of his emphasis of some things to the neglect of others as a constant means of differentiation. The chapter on his itineracy is but a meagre compend of that wondrous Odyssey, with its 225,000 miles of travel and its 40,000 sermons preached, for the most part in the open air, the man rising habitually at four in the morning and preaching at five. The chapter "Wesley as an Organizer" repeats the well-known facts which show that he originated next to nothing in the way of organization, but knew a good thing when he found it, and was wise to follow the leadings of necessity. Far too much is made of the analogues of his Societies in the Primitive Church. There are brief chapters on internal divisions, friends and opponents, and literary work, the last a testimony almost as remarkable as his itineracy to marvellous diligence. There is a minimum of emphasis on clerical opposition, agreeably to the purpose of the book. That Butler of the 'Analogy,' Bishop of Bristol, was one of Wesley's firmest opponents, suggests that the Church was not entirely in the wrong.

The chapter on his personal traits is the most painful in the book, it is so evident that the prophet spoiled the man. Humanity was Wesley's crowning lack. It declared itself in the perfect silliness of his relations with women at all times, in his cruel ignorance of children, and in his passionate weakness for those "physical manifestations," of which his brother was suspicious from the first. At the school he founded he would have children rise at four and engage an hour in private devotion, and they were to be allowed no play. An Irish Wesley wished to adopt Charles, but, failing of this, took another youth from whom came Arthur Wellesley (another form of Wesley), Duke of Wellington. The conjunction is mainly interesting as suggesting that John Wesley, for all his splendid force and high devotion, was not, like the great Duke, "rich in saving common sense." He had the temper of Calvin, though he rejected his theology. He had no grain of Luther's kindly humor, and as little of his broad humanity and loving heart.

BOOKS OF THE WEEK.

Bauman, Oscar. Usambara und seine Nachbargebiete. Berlin: Dietrich Reimer.
Chase, Frederick. History of Dartmouth College. Vol. I. Cambridge: John Wilson & Son.
Cotes, V. C. Two Girls on a Barge. D. Appleton & Co.

BROADWAY, 18th and 19th Streets, NEW YORK.

TEXT-BOOKS.

G. P. Putnam's Sons,
27 and 29 West 23d Street, New York.

G. P. Putnam's Sons supply School and College Text-Books of all kinds on the shortest notice, and at lowest prices. They carry a full assortment of *School Stationery*, including *Putnam's Perfect Ink.*

Catalogues of their own Educational Publications, and circulars of the principal schools in the city and vicinity may be had on application.

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says: "A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

MACMILLAN & Co.'s NEW BOOKS.

NOW READY. A NEW NOVEL BY F. MARION CRAWFORD.

THE WITCH OF PRAGUE.

A FANTASTIC TALE.

By F. MARION CRAWFORD, author of 'Mr. Isaacs,' 'Saracinesca,' etc., etc. With Numerous Illustrations by W. J. Hennessy. 12mo, cloth, $1.00.

By the same Author.

KHALED: A Tale of Arabia.

12mo, cloth, $1.25.

"It abounds in stirring incidents and barbaric picturesqueness; and the love struggle of the unloved Khaled is manly in its simplicity and noble in its ending. Mr. Crawford has done nothing better than, if he has done anything as good as 'Khaled.'"—*The Mail and Express.*

A CIGARETTE-MAKER'S ROMANCE.

12mo, cloth, $1.25.

"The interest is unflagging throughout. Never has Mr. Crawford done more brilliant realistic work than here."—*New York Tribune.*

New Volume of Stories by Mr. Rudyard Kipling.

LIFE'S HANDICAP.

BEING STORIES OF MINE OWN PEOPLE.

By RUDYARD KIPLING, author of 'Plain Tales from the Hills,' 'The Light that Failed,' etc. 12mo, cloth, $1.00.

*** The greater part of these stories are now published for the first time.

SAINTS AND SINNERS.

A New and Original Drama of Modern English Middle-Class Life. In Five Acts. By HENRY ARTHUR JONES, author of 'The Dancing Girl,' 'The Middleman,' 'Judah.' 16mo, cloth, gilt top, 75 cents.

A HISTORY OF CLASSICAL GREEK LITERATURE.

By the Rev. J. P. MAHAFFY, M. A.

Vol. I. (In two Parts.) Part I. *Lyric Poets.* Part II. *Dramatic Poets.* Third Edition. Revised and Enlarged. 12mo. $2.25.

Vol II. (In two Parts.) Part I. *From Herodotus to Plato.* Part II. *From Isocrates to Aristotle.* 12mo, cloth, gilt, $2.25.

*** The four parts sold separately $1.25 each, or complete in a box, $4.50.

Now ready, Vols. I. and II. Cloth, $1.25 each To be completed in six volumes, published monthly.

LANDOR'S IMAGINARY CONVERSATIONS.

With bibliographical and explanatory notes by CHARLES G. CRUMP. Vols. I. and II. Cloth, gilt, $1.25 each.

*** Also a limited larger-paper edition. 8vo, price $4.50 each.

IL PRINCIPE.

By NICCOLO MACHIAVELLI. Edited by L. ARTHUR BURD, with an Introduction by LORD ACTON. 8vo, $3.50.

Just published, 12mo, Cloth, $1.50.

LETTERS OF JOHN KEATS

TO HIS FAMILY AND FRIENDS. Edited by SIDNEY COLVIN.

"All friends of literature will thank Mr. Sidney Colvin for his new and excellent edition of 'Keats's Letters.' We may almost imagine that Shakspere might have written such letters as the best of Keats's. Never was a poet so naturally inspired, nor one who told so freely of his inspiration."—*Daily News.*

A New Volume of the "Golden Treasury Series." 18mo, $1.00.

BALLADEN UND ROMANZEN.

—Being a selection of the best German Ballads and Romances. Edited, with Introduction and Notes, by C. A. BUCHHEIM, Ph. D., etc. Golden Treasury Series. 18mo, $1.00.

Uniform with Dr. Buchheim's well-known selection of German lyrics published in the same series under the title "Deutsche Lyrik."

ENGLISH MEN OF ACTION SERIES.—NEW VOLUMES.

12mo, cloth, limp, 60 cents; cloth, uncut edges, 75 cents.

"An admirable set of brief biographies. . . . The volumes are small, attractive, and inexpensive."—*Dial.*

RODNEY. By D. G. HANNAY.

NAPIER. By Col. SIR W. BUTLER.

WARWICK. By C. W. OMAN.

DRAKE. By JULIAN CORBETT.

Dictionary of Political Economy.

Containing Articles on the Main Subjects usually dealt with by Economic Writers, with Explanations of Legal and Business Terms which may be found in their Works, and Short Notices of deceased American, English, and Foreign Economists, and their Chief Contributions to Economic Literature. Edited by R. H. INGLIS PALGRAVE, F.R.S. First Part, A—Bede. 8vo, paper cover, $1.00.

*** *The Dictionary is published in parts of 128 pages each, at intervals of about three months; the whole work will be completed in about twelve parts.*

Elements of Politics.

By HENRY SIDGWICK, M.A., LL.D., Knightsbridge Professor of Moral Philosophy in the University of Cambridge. 8vo, $4.00.

The Positive Theory of Capital.

By EUGEN V. BÖHM-BAWERK, author of "Capital and Interest," etc. Translated by WILLIAM SMART, Lecturer on Political Economy in Queen Margaret College, Glasgow. 8vo, $4.00.

Capital and Interest.

A Critical History of Economical Theory. By EUGEN V. BÖHM-BAWERK. Translated, with a Preface and Analysis, by WILLIAM SMART. 8vo, $4.00.

"We have read the volume with increasing interest from the first page to the last. Although it consists almost wholly of destructive criticism, it is very necessary work. We recall nothing of the kind equal to it. Even though he may not have said the last word on the particular subject of his inquiry, he has said enough to fix his place in the front rank of the world's economists."—*Evening Post.*

The English Constitution.

By E. BOUTMY, author of "Studies in Constitutional Law." Translated from the French by Mrs. EADEN. With Preface by Sir FREDERICK POLLOCK, Bart. 12mo, $1.75.

Studies in Constitutional Law.

France, England, United States. By EMILE BOUTMY. Translated from the second French Edition by E. M. DICEY, with an Introduction by A. V. DICEY. 12mo, $1.75.

The History of Human Marriage.

By EDWARD WESTERMARCK, Ph.D., Lecturer on Sociology at the University of Helsingfors. With a Preface by Dr. A. R. WALLACE. 8vo, $4.00.

A treatise based upon exhaustive research, in the course of which the author has been led to adopt conclusions somewhat different from those put forward by Tyler, McLennan, and other previous writers on this important subject.

New and Cheaper Edition. 12mo, $2.00.

Essays Upon Heredity and Kindred Biological Problems.

By Dr. AUGUST WEISMANN, Professor in the University of Freiburg in Breisgau. Edited by EDWARD B. POULTON, M.A., F.R.S., SELMAR SCHÖNLAND, and ARTHUR E. SHIPLEY. 12mo, $2.00.

*** *Macmillan & Co.'s New Complete Catalogue will be sent free by mail to any address on application.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

Houghton, Mifflin & Co.'s New Books.

Dr. Holmes's Works.

New Riverside Edition, the Prose Works in ten volumes, Poems in three, all carefully revised by Dr. Holmes, many of the prose volumes supplied with new prefaces and indexes, the poems annotated. With several portraits.

The Autocrat of the Breakfast-Table. With a new steel portrait.

The Professor at the Breakfast-Table. Crown 8vo, beautifully bound, each $1.50.

Abraham Lincoln.

By CARL SCHURZ. With a fine new portrait of Lincoln. 16mo, $1.00.

Mr. Schurz portrays Lincoln's career and character with remarkable fairness and wisdom, and justifies the admiring love with which his memory is cherished.

Joseph Hardy Neesima.

By ARTHUR SHERBURNE HARDY, author of 'But Yet a Woman,' 'Passe Rose,' etc. With portraits of Mr. Neesima and Hon. Alpheus Hardy. Crown 8vo, $2.00.

This account of one of the most famous Japanese of modern times is deeply interesting. His education in America, his contribution to the most wonderful transformation of Japan, and the light thrown on that unique country by his letters, render the book peculiarly valuable and engaging.

The Ride to the Lady,

And Other Poems. By HELEN GRAY CONE. 16mo, gilt top, $1.25.

A tasteful little volume containing some of the most genuine poetry which has been produced in this country for some years.

The History of Historical Writing in America.

By J. FRANKLIN JAMESON, Professor of History in Brown University. 16mo, $1.25.

In four chapters, Professor Jameson describes the chief histories and the development of historical literature in America—in the Seventeenth Century, the Eighteenth, from the Revolution to the Civil War, and from 1860 to the present.

Biographical Sketches of the Delegates from Georgia to the Continental Congress.

By CHARLES C. JONES, JR., LL.D., author of 'The History of Georgia,' 'Negro Myths from the Georgia Coast,' etc. 8vo, $2.00.

Letters of Lydia Maria Child.

With a Biographical Introduction by J. G. WHITTIER, an Appendix by WENDELL PHILLIPS, and a Portrait. $1.25.

*** For sale by all booksellers. Sent, postpaid, on receipt of price, by the Publishers.*

Houghton, Mifflin & Co., Boston.
11 East Seventeenth Street, New York.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

RECENTLY PUBLISHED:

The Young Emperor, William II.

OF GERMANY, A STUDY OF CHARACTER AND DEVELOPMENT ON A THRONE. By HAROLD FREDERIC, author of 'In the Valley,' 'The Lawton Girl,' etc. With Portraits. 16mo, $1.25.

CONTENTS: The Supremacy of the Hohenzollerns—William's Boyhood—Under Changed Influences at Bonn—The Tidings of Frederick's Doom—Through the Shadow to the Throne—Under Sway of the Bismarcks—The Beginning of a Beneficent Change—A Year of Experimental Absolutism—A Year of Helpful Lessons—The Fall of the Bismarcks—A Year without Bismarck—Personal Characteristics.

"An excellent biography, which is full of interest. . . . 'The Young Emperor' may fairly be called a good book and one that really adds to our information and clearness of impression concerning one of the most interesting characters of the present half-century."—*London Athenæum.*

Recollections and Impressions,

1822–1890. OCTAVIUS BROOKS FROTHINGHAM, author of 'Boston Unitarianism, 1820–1850.' 8vo. $1.50.

"Not only to those within the pale of that Communion, but to those without; not alone to those who lived in the days and participated in the struggle which the author recalls, will the book prove interesting. It is a manly, candid narrative of stirring times, and it is a gentle, refined nature whose life and words are here studied."—*New Haven Palladium.*

"The book, to a thoughtful reader, cannot fail to be elevating and suggestive of high ideals, high thinking, and noble living."—*Newark Advertiser.*

Church and Creed. By R. HEBER

NEWTON, Rector of All Souls' Church, New York. I. Fold or Flock? II. The Nicene Creed; III. How to Read a Creed. Cloth, 75 cents; paper, 40 cents.

To these sermons, the first of which was preached the Sunday after the remonstrance against the alleged uncanonical practices of the Rev. W. S. Rainsford and Mr. Newton, have been added supplementary explanatory notes, defining more clearly the author's views.

"Dr. Newton makes an earnest and vigorous defence of each of his positions, and his little book will be read with much interest."—*Christian at Work.*

"He does his work ably, effectively, earnestly; and even those who cannot agree with him will not deny that he is a brave man with a noble and an earnest spirit."—*St. Johns Globe.*

The Leaf-Collector's Handbook

AND HERBARIUM. An aid in the preservation and in the classification of specimen leaves of the trees of Northeastern America. By CHARLES S. NEWHALL, author of "The Trees of Northeastern America." Illustrated, $2.00.

"The volume was needed by students, and will be valued by all who would add instruction to the pleasure of walks in wood and field. With a book so clearly descriptive with only a moment's reference, and all provided with places and material for fastening specimens for preservation, there is no one who cannot profit by it."—*Boston Globe.*

"We believe this is the most complete and handsome volume of its kind, and on account of its completeness and the readiness with which it imparts information that everybody needs and few possess, it is invaluable. No lover of country scenery and rambles should be without this volume, for with it observations which have been amusing and refreshing will become entertaining and highly instructive."—*Binghamton Republican.*

Labour and Life of the People.

Edited by CHARLES BOOTH. Volume II. in Two Parts.

PART I.—London Continued. Text. 8vo, cloth $4 25

PART II.—Appendix and Large Colored Maps. 8vo, cloth $4 25

"So important in its bearings on the social problems of our time that no person interested in the solution of those problems can afford to neglect it."—*London Times.*

"A wonderful compilation. . . . Of the utmost value to all who would understand aright the volume of London poverty and the problems which cling to it."—*St. James Gazette, London.*

Charles Scribner's Sons'

NEW BOOKS.

Historical Essays.

By HENRY ADAMS. 12mo, $2.00.

The marked success of Mr. Adams's 'History of the United States,' completed last year, will ensure a wide reading for this volume, in which he treats, with originality and force, topics rich in interest for the student and general reader.

The Life and Times of Niccolo Machiavelli.

By Professor PASQUALE VILLARI, author of 'The Life and Times of Savonarola,' etc. Translated by Madame LINDA VILLARI. A new edition (augmented by the author, revised by the translator). Illustrated. 2 vols., 8vo, $10.00.

"The latest and most satisfactory work on the life and public services of this great political philosopher and writer."—*Prof. C. K. Adams.*

Sidney Lanier's Poems.

Edited by his wife, with a Memorial by W. H. WARD. With portrait. New Edition. 12mo, $2.00.

This new and cheaper edition of Mr. Lanier's poems will direct attention afresh to the work of a poet whose genius is securing wider recognition every day.

The Fourth Gospel.

Evidences, External and Internal, of its Johannean Authorship. Essays by Dr. A. P. PEABODY, Prof. EZRA ABBOTT, and Bishop LIGHTFOOT. 8vo, $1.50.

The late Prof. Abbott's paper consists of an exhaustive sifting of the historical evidence, while Dr. Peabody and Bishop Lightfoot treat of the internal evidence of the authenticity and genuineness of the Fourth Gospel.

Three New Stories by G. A. Henty.

Each illustrated. Bound uniformly with previous volumes, each $1.50.

The titles of Mr. Henty's three new books are "THE DASH FOR KHARTOUM: A Tale of the Nile Expedition"; "REDSKIN AND COWBOY: A Tale of the Western Plains"; and, "HELD FAST FOR ENGLAND: A Tale of the Siege of Gibraltar." They are tales of dashing adventure, peril, and heroic achievement, and have also an historical background of much interest.

These books are copyrighted in this country and published simultaneously with the English editions.

The Pilots of Pomona.

A Story of the Orkney Islands. By ROBERT LEIGHTON. Illustrated. 12mo, $1.50.

The young hero of the story has blood of the Norse Vikings in his veins, and carries himself with a brave spirit through many exciting adventures, all forming a narrative of breathless interest.

Marie Antoinette at the Tuileries.

A New Volume in the FAMOUS WOMEN OF THE FRENCH COURT. Translated from the French of IMBERT DE SAINT-AMAND. Each vol. 12mo, with Portrait, $1.25.

The vicissitudes of the Royal Family, and incidentally the political history of the time, from the forcible removal from Versailles in 1789 to the end of 1791, including the unfortunate attempt at flight and the arrest at Varennes, are the subject of this book.

PREVIOUS VOLUMES: Marie Antoinette and the End of the Old Régime. Citizeness Bonaparte. The Wife of the First Consul. The Court of the Empress Josephine. The Happy Days of the Empress Marie Louise. Marie Louise and the Decadence of the Empire. Marie Louise and the Invasion of 1814. Marie Louise, the Return from Elba, and the Hundred Days.

"Attractive in their arrangement, never dull, with much variety of scene and incident and admirably translated."—*The Nation.*

English Composition.

By Prof. BARRETT WENDELL of Harvard University. 12mo, $1.50.

"A masterly handling of a really important subject. The most highly cultivated user of English speech could not take it up without finding something to his advantage."—*Boston Beacon.*

LIFE OF
Jane Welsh Carlyle.
By MRS. ALEXANDER IRELAND.

8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Branch during summer season, Store No. 1, Grand Union Hotel, Saratoga Springs.

TWILIGHT PARK IN THE CATSKILLS.

Our advertising has been chiefly in papers whose readers comprise cultivated people of moderate means who appreciate the Park scheme.

The *Nation* brought one sale of $1,050, the *Standard Union* another of $1,200, the *Office* $1,500, and two readers of the *Evening Post* have invested $9,000 already.

This year both Club-houses have been packed, though the big hotels and boarding-houses all about here have been only half full. Since July 15 we have had 300 people in the Park. Sales have been active, and building brisk, yet, like Oliver Twist, we want more. Come and see the mountains in their autumnal glory.

A BOOK YOU NEED.
ROBERT'S
Rules of Order
—FOR—
Deliberative Assemblies
—IS—
The Standard Parliamentary Authority in the United States.

Pocket Size, Price, Postage Paid, 75 Cents

The One Hundred and Thirtieth Thousand Now Selling.

Of this successful manual the Boston *Courier* says: "Indispensable as was the Catechism in more ecclesiastical times, the days when CUSHING'S MANUAL was the politician's and debater's Bible have been left far behind in the increasing complexities of Congressional practice, and a volume like ROBERT'S RULES OF ORDER, which is at once compact, practical, clear, and exhaustive, is well nigh invaluable. The book is, perhaps, the best manual on any subject in existence, and CERTAINLY IS WITHOUT A RIVAL IN ITS OWN FIELD. It is carefully and completely indexed, and any publishing house in the land would have reason to be proud of the long list of distinguished authorities that have warmly indorsed it."

"ITS CROWNING EXCELLENCE IS A *'Table of Rules Relating to Motions,'* which, in a single page, contains the answers to more than 200 questions on parliamentary law." —*New York Mail and Express.*

"With this table alone before him a presiding officer can, at a glance, solve five-sixths of the questions of order that may be sprung upon him. THAT TABLE ALONE IS WORTH THE PRICE OF THE BOOK."—*Dr. Samuel Willard, author of the "Illinois Digest."*

"I regard it as the best book extant, and nine years' experience in the New York Legislature, during two of which I have been Speaker, gives me, I think, the right to hold an opinion."—*Hon. James W. Husted, ex-Speaker of the New York Legislature.*

"This capital little manual, if we mistake not, *will displace all its predecessors* as an authority on parliamentary usages."—*New York World.*

It has been adopted: In numerous Colleges and Academies as a Text-Book, by Colleges and societies as their Guide, by public Assemblies and Organizations of every name and nature as their standard authority, by Odd-Fellows of Entire States, Knights of Pythias, and other Secret Societies as their Parliamentary Manual.

For sale by booksellers everywhere, or sent postpaid, on receipt of price, 75 cents, by the publishers,

S. C. GRIGGS & CO.,
87 and 89 Wabash Ave., Chicago.

ALBERT, SCOTT & CO., Educational Publishers, 108 Wabash Avenue, CHICAGO, ILL.

PHILLIPS BROOKS'S SERMONS.

SERMONS. First Series.

25th Thousand. 12mo. 20 Sermons. 380 pages. Cloth, $1.75; paper covers, 50 cents.

"Humanity, and not sectarianism, is built up by such sermons as these. Mr. Brooks is a man preaching to men about the struggles and triumphs of men."—*N. Y. Tribune.*

SERMONS. Second Series.

(The Candle of the Lord, etc.) 18th Thousand. 21 Sermons. 378 pages. Cloth, $1.75; paper covers, 50 cents.

"Dr. Brooks is wonderfully suggestive in opening men's thoughts in directions which give to life fresh meanings."—*N. Y. Times.*

SERMONS PREACHED IN ENGLISH CHURCHES. Third Series.

9th Thousand. 14 Sermons. 320 pages. Cloth, $1.75; paper covers, 50 cents.

"He has a message to deliver; it is from God; he believes in its reality, and he delivers it earnestly and devoutly, and his hearers catch the enthusiasm of his own faith."—*Churchman.*

TWENTY SERMONS. Fourth Series.

7th Thousand. 378 pages. Cloth, $1.75.

"Mr. Brooks brings to the pulpit the mind of a poet and the devout heart of a Christian, with a very large and generous human personality."—*Independent.*

THE LIGHT OF THE WORLD, AND OTHER SERMONS. Fifth Series.

6th Thousand. 21 Sermons. 382 pages. $1.75.

"Because he reveals to men with force and beauty their true and deeper selves, meant for all good and right things, Dr. Brooks preaches a word which they ever rejoice to hear, and, having heard, can never go away unprofited. His larger parish will cordially welcome these twenty-one sermons."—*Literary World.*

☞ *See next week's Nation for list of Dr. Brooks's other books.*

Sent by mail, postage paid, on receipt of prices.

CHURCH FURNITURE.

We make a specialty of church work for the interior of the building, including all the furniture, color decoration, and stained glass. Unity of effect can be secured by our designs for such work. We will be pleased to submit these upon request, with estimates for work done or delivered in any part of the United States.

Our designing departments are at your service. Why not make use of them?

We can supply any of the details of Church Furniture, in either light or dark woods, at satisfactory prices.

Pulpit Desks, from .	$12.00	upward.
Set of three chairs, from . . .	60.00	"
Communion Tables, from . . .	35.00	"
Carved-wood Fonts, from . . .	20.00	"
Marble Fonts, from .	50.00	"
Hymn Tablets, from .	5 00	"

These are not extravagant prices, but you secure good material and correct designs.

Send for illustrated handbook of any department, or call and see work at 59 Carmine Street.

Carmine Street is a continuation of Sixth Avenue south, and the Sixth Avenue cars pass the door of No. 59.

D. Appleton & Co.'s
PUBLICATIONS.

THE HISTORY OE ANCIENT CIVILIZATION.
A Hand-book based upon M. GUSTAVE DUCOUDRAY'S 'Histoire Sommaire de la Civilisation.' Edited by the Rev. J. VERSCHOYLE, M. A. With numerous illustrations. Large 12mo, cloth, $1.75.
"With M. Ducoudray's work as a basis, many additions having been made, derived from special writers, Mr. Verschoyle has produced an excellent work, which gives a comprehensive view of early civilization. . . . As to the world of the past, the volume under notice treats of Egypt, Assyria, the Far East, of Greece and Rome, in the most comprehensive manner. It is not the arts alone which are fully illustrated, but the literature, laws, manners, and customs; the beliefs of all these countries are contrasted. If the book gave alone the history of the monuments of the past, it would be valuable, but it is its all-around character which renders it so useful. A great many volumes have been produced treating of a past civilization, but we have seen none which in the same space gives such varied information."—*New York Times.*

THE HISTORY OF MODERN CIVILIZATION.
A Handbook also based upon M. GUSTAVE DUCOUDRAY'S "Histoire Sommaire de la Civilisation." Edited by the Rev. J. VERSCHOYLE, M. A. Illustrated. Uniform with "The History of Ancient Civilization." 12mo. Cloth, $2.25.
"Contains a vast quantity of information on many subjects, generally arranged with much skill."—*Saturday Review.*
"The work of author and adapter has been admirably executed, and the result is that rarest of literary portents—a summary at once comprehensive and readable."—*London Telegraph.*

D. Appleton & Co., Publishers,
1, 3, AND 5 BOND ST., NEW YORK.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 24, 1891.

The Week.

THE necessity of having a man in the office of Secretary of State who is physically able to discharge its duties, is plainly indicated in this passage from a speech by President Harrison in reply to an invitation to attend an exposition in Georgia:

> "I have a good many very important matters demanding attention from now on to the meeting of Congress. Some are home matters of importance and some are foreign. Looking back over the past year, it would seem probable that there was a conspiracy among the Powers to see that those in responsible places should have no rest. Many of these things must now come to my personal attention."

While the nation feels much safer with Mr. Harrison acting as Secretary of State than with Mr. Blaine in charge of the Department, it is obviously unjust to require the President to carry, month after month, so heavy a load in addition to the duties of the Executive.

Balmaceda's death is a dramatic close to his career. His suicide has saved him the protracted misery of a trial and public execution, and leaves his memory in somewhat better condition than if he had been judicially shot or hanged. People always feel a little sorry for a man who kills himself in despair, though in South America suicide is unusually disreputable. He appears to have tried a *coup d'état*, after the fashion of Louis Napoleon in 1851, by corrupting the army in much the same way, and possibly persuaded himself, as his prototype probably did, that he was in some little degree acting in the interest of the people, as well as providing himself with a snug berth for life. But it is for the best interests of mankind that any man who tries to play this game should feel that his life is staked on the issue; that if he fails, he must either submit to be hanged or must blow his brains out. Balmaceda has made a contribution of immense value to the art of government in South America. It will be a relief to most people to hear that the *Herald's* story about his escape through the assistance of Admiral Brown had no foundation. The Valparaiso correspondent of that paper has done such good service that he will be easily forgiven for letting himself be imposed on in this instance. But the story, though untrue, illustrated certain rules of international law and of sound public policy which we hope will now appear plainer to the State and Navy Departments than they have of late. The god Jingo is a worthless, drunken rascal, who is constantly getting his worshippers into scrapes.

The defence of Egan put forth at Washington by Admiral McCann undoubtedly relieves him of the suspicion of being an open blunderer, but does not touch the main charges against him. The Admiral takes to himself the blame of having made public Egan's opinion that the Balmaceda Government was invincible; but how is that opinion, supposing it honest, to be accounted for? On the spot as he was, he should at least have been as well informed as people in England, yet it was months ago that Col. North, the "nitrate king," publicly declared that the Congressionalists had with them the wealth and intelligence of the country, and were certain to win in the end, while but a week or two before the Balmaceda bubble was finally pricked, the *South American Journal* said it had reason to believe that desirable operation to be imminent. The reason why public opinion in this country was so misled and so surprised at the actual outcome, was the persistent laudation of Balmaceda which was given out at Washington, and which had its origin in Egan's despatches. We see no escape from the conclusion that his judgment was temporarily clouded by the desire to become a "nitrate king" himself. Nor does Admiral McCann squarely meet Mr. Foster's charge that Egan was at first disposed to back up Balmaceda in his purpose of violating the safe-conduct guaranteed the insurgent peace-envoys. And as to the pawn-broking and other business ventures of our Minister, to which Mr. Foster referred, nothing was said by the naval officer. The real significance of the public attack on Egan by the Congressionalist agent in this country lay in the fact that it was meant to head off the attempt to make him out a much-abused man, and to make it plain that he was distinctly a *persona non grata* to the new Government. There is no doubt that he is such, or that he will have to come home, sooner or later, despite his "indefatigable efforts" to serve the *Herald* correspondent.

Wall Street has unquestionably been taken completely by surprise by the sudden awakening of the craze for stock speculation among the people at large. It has been clear, all along, that our marvellous grain crops of this year would enrich not only the farmers who raised them, but the railroads which transported them, and that, with the return of prosperity to these two great industries, activity would by degrees revive throughout the industrial community. But it is a tradition of the street that the outside public rarely "discounts" the future unless it is excited by some sudden and unexpected good news, and stimulated by the stock-market operations of professional leaders. There were, moreover, several distinctly unfavorable elements in the present financial situation. The money market is approaching closeness; two of the most extensive railway systems in the country are even now hovering on the verge of bankruptcy, and the buying public of Europe, which contributes so largely to Wall Street bull markets, is overshadowed with industrial discouragement and distress. The speculative public, however, knows no traditions. Powerful and skilful operators attempted to depress the market by means of these unfavorable elements; but they were swept aside last week, as indeed was the whole amazed and incredulous speculating fraternity. The course of the stock market has told its own story, not merely in the advance in prices, but in the enormous volume of transactions, now averaging every day six or eight times the daily average of a few months ago.

It is eminently fitting that the collapse of Gov. Hill should be attended by circumstances which forcibly illustrate the character of both himself and his system. He wished to control the recent Democratic Convention so absolutely that he could put upon its ticket only such men as he could depend upon to administer their offices in the interest of his personal ambition, and could put into its platform such views upon questions of high national importance as would show to the country that the State of New York stood with him, and not with the honest men of his party, in regard to those issues. To carry his point in regard to nominations, he broke his personal pledge to one of his most subservient followers and sought to force him from the ticket at the last moment. He also sought to put on another man who had no claim to the position except a miserable record of incompetency in office and a willingness to pledge himself to do the Governor's bidding. The Convention refused to obey the Governor's orders in both instances. To carry his point on national issues, he sent to the Committee on Resolutions a platform that contained a silver plank which, if adopted, would have committed the party in this State to free silver by making it appear unwilling to come out squarely against it. This was one of the best instances of Hillism ever afforded. In order to gain a supposed personal advantage for himself, the Governor was willing to have his party take the one step which was almost certain to bring it to defeat in the State this year and in the nation next year. Provided he could show the free-silver advocates in the South and West that he had his party behind him on that question in New York, he cared nothing for either the financial and commercial stability of the country or the welfare of his own party. The Committee on Resolutions promptly rejected this plank, and substituted a declaration in favor of honest money in its place.

It seemed for a time as if the high degree of dexterity acquired through long years of practice by the makers of the tariff plank in Republican platforms were in danger of

going to waste since the passage of the McKinley Bill. That measure put an end to the familiar displays of agility in attempting to ride two horses going opposite ways, as it is such a brutally definite affair, and leaves no room for the old vague and balanced phrases promising the millennium to laborers and the Elysian Fields to farmers. But the necessity of saying something about "reciprocity" has suddenly come in to put the talent for ambiguous utterance to new use. Thus, the New York Republicans sang their praises of that policy which let in free those articles which we "cannot produce in *adequate* quantity," and opened markets for those products of the "farm and factory which it is *profitable* to export." The Massachusetts Republicans, however, showed a distinct advance in their deliverance on the subject. They boldly approved of a policy which, by "a *wise* discrimination in the exchange of products," would secure "the *most profitable* foreign commerce," and would "*increase*, without *endangering*, the prosperity of our domestic industries." These are fine-drawn distinctions worthy of being promulgated on the spot where the theologians of a by-gone age used to bring out their triumphant reconciliations between free-will and predestination.

The independent voter in New York, disgusted at being shut up to a choice of evils in the approaching election, must envy the happy position of his brethren in Massachusetts. The contest for the Governorship in that State is between two young men each of whom is well qualified to fill the office with credit to the commonwealth, and neither of whom represents any boss or machine. The canvass is to be a friendly controversy between two rivals as to which can make the better showing of advantage to the community to accrue from his success; and, whichever wins, the State is sure to be well served. Fortunate indeed is the lot of the Massachusetts Mugwump this year.

Much stress is laid by many of Mr. Fassett's supporters upon his remark in his speech of acceptance—"One thing at a time." This has been interpreted to signify that he is running for Governor on State issues alone, and that he should be supported on those issues without regard to questions of national politics. In our opinion, this is not merely a sound position, but it is the only one upon which Mr. Fassett can hope to win. Yet he himself has made the mistake of bringing the sectional issue into the canvass; and now comes the *Press* of this city, the leading penny paper of the party, with another and far more disturbing issue, which it presents to the voters in the following form:

"DON'T FORGET THIS.

"One important fact should not be forgotten. The political engagement of '91 is the beginning of the great battle of 1892, and every vote cast for Flower will also be a vote for British free trade."

If every vote cast for Flower will be a vote for British free trade, then every vote cast for Fassett will be a vote for McKinley protection. That issue was squarely presented in this State last November, and the verdict was 75,000 majority against McKinleyism. With that and the Force Bill as Republican battle-cries, the chances for Mr. Fassett's election will be very slim.

Concerning the appointment of ex-Senator Hendricks of Syracuse as Collector of this port, it is to be said that if political considerations rather than merit and fitness are to be the deciding qualifications, there are reasons for thankfulness that a man of such excellent personal character has been chosen. It is a thoroughly political appointment, and is made in complete defiance of the President's civil-service-reform pledges. Mr. Hendricks has served several terms in the State Senate, where he has preserved an enviable record of personal integrity and an undeviating record of party loyalty. He occupies towards Senator Hiscock the same relation that Mr. Fassett occupies towards Mr. Platt. As Messrs. Hiscock and Platt are now working in harmony in New York Republican politics, the appointment of Mr. Hendricks to take charge of those politics in the Custom-house is acceptable to both of them. We trust that for the incidental interest of the customs service Mr. Hendricks will be allowed to retain the office a much longer time than his two immediate predecessors were. While he is likely to make an efficient Collector, we feel justified in predicting that any members of the unclassified service in the Custom-house who for any reason are not congenial to Messrs. Platt and Hiscock, will have to "go."

The reappearance of Custom-house collectors as active managers in Republican canvasses and attendants upon Republican conventions is a striking proof of the decline of principle in the party. There is only one sound rule for such cases, and it is found in the order to office-holders issued by a Republican President on June 22, 1877, which said:

"No officers should be required or permitted to take part in the arrangement of political organizations, caucuses, conventions, or election campaigns. Their right to vote and to express their views on public questions, either orally or through the press, is not denied, provided it does not interfere with the discharge of their official duties. No assessment for political purposes on officers or subordinates should be allowed."

Naturally enough, when the collectors of the chief custom-houses in the States of New York and Massachusetts leave their offices to run party conventions, and know that they will not even receive a rebuke for such conduct, Republican managers throughout the country take the next step, and openly demand "voluntary contributions" from Republican office-holders. Here is the "stand-and-deliver" sort of notification which has just been sent by the Chairman of the Ohio Republican State Executive Committee to the clerks in the Washington departments:

"The Republican Executive Committee of Ohio is now fully organized and actively at work. Funds are required for this work. The campaign in Ohio is now more than a State campaign. It is national in both its importance and effect. The election of Hon. William McKinley, jr., and his associates on the ticket, and a Republican General Assembly this fall in Ohio, and a Republican United States Senator from this State, assures Republican success in the campaign of 1892. You are the incumbent of place made possible by the success of the party in the past. The continued success of the Republican party is of great interest and advantage to the whole country, and you no doubt appreciate it. A liberal contribution from you as an individual will largely aid the Committee in the furtherance of its work. In the ordinary business affairs of life, promptness of payment is absolutely required. Such promptness in our business is equally important. We will be pleased to hear from you at once."

The activity of Federal office-holders in the Republican campaign in this State becomes more pronounced every week. Nor does it anywhere meet rebuke from the Republican press. On the contrary, the leading organ of the party commends it with the utmost heartiness. Says the New York *Tribune:*

"Much credit is due to Postmaster Van Cott for the fine campaign meeting in Hardman Hall on Thursday evening. Mr. Van Cott and the Seventh District were on deck early this year: they organized a Fassett and Vrooman Club on the very day the nominations were made at Rochester, and they propose to remain there until sunset on Election Day."

The *Tribune* adds that "it is going to be a lively and a winning campaign." Does it really think that the constant presence of Mr. Van Cott "on deck," instead of employed in the discharge of his duties as Postmaster, is calculated to win independent voters to the support of the Republican ticket?

As the time for the assembling of Congress approaches, the Republicans are beginning to realize what a mess of scandals the Administration has been accumulating for a Democratic House to investigate. The Washington correspondent of the St. Paul *Pioneer Press* sounds a warning note. "The Census Office will be a mine for the Democrats," he writes, "and they will show the country just how little Bob Porter knew about the business of census-taking. There are many transactions in that office which will be paraded before the country and be used against the Republican party in the next campaign. No bureau of the Government seems so rotten and where so many offences have been committed as in this Census Office. Not only is it clear that the census is utterly unreliable, but it seems that enormous sums have been spent, and how or where will only come out when some one is made to tell the truth about the inside transactions of the office." Next to the Census Office, the worst showing will probably be made by an investigation of the methods of Green B. Raum in the Pension Office. "Many good Republicans," says the correspondent, "have been earnestly hoping that Raum would get out and leave the office in the hands of some capable and efficient officer who was, moreover, known to be thoroughly honest." It

is also likely that the Naval Committee will look into the management of that Department and see if it is true, as charged by a great many, that Acting-Admiral Walker has been exercising "a pull," to the detriment of the navy. Still another scandal which this correspondent overlooks is that of Wanamaker and the Keystone Bank of Philadelphia, which should engage the early attention of the Banking and Currency Committee. Altogether, it is safe to predict that the Democrats will make the most of the great opportunities which the Republicans have given them.

The Legislative Committee in Pennsylvania which is investigating the affairs of the State Treasury and Auditor-General's Office in connection with the Bardsley robberies in Philadelphia, is having some trouble because of the absence from the State of the most desirable witnesses. It will be remembered that all the living ex-Treasurers and ex-Treasury clerks, including Quay, hastened to get out of the State as soon as the Committee came together. The Auditor-General, Mr. McCamant, did not venture to flee, however, and he took the witness-stand on Saturday. He denied all charges of guilty knowledge of Bardsley's doings, but he had some difficulty in giving plausible explanations of some letters which had passed between him and Bardsley, and which the District Attorney of Philadelphia placed in evidence. These showed that Bardsley had been in the habit of making presents of various kinds to Mr. McCamant, ranging from neckties and rare books to French clocks. In explanation of these, Mr. McCamant said that he found it difficult to obtain rare books in Harrisburg, and so he got Mr. Bardsley to buy them for him in Philadelphia. As for the neckties, he happened to want some one day when he was in Philadelphia, and, as he had not time to buy them, Bardsley offered to get them for him. "I preferred purchasing them there," he added, "as I wear an unusually long tie and it is not easy to find those in Harrisburg. I generally buy such little things when I am in Philadelphia."

That this explanation, like the neckties, is "unusually long," is shown by the citation which the Philadelphia *Public Ledger* makes from some remarks recently uttered by the District Attorney in court. It had been shown by the stubs of Bardsley's checkbooks that he had drawn checks for several large amounts, like $1,000, $500, $666, to "L. and Mc," "Mc," "W. L.," and at other times to Thomas McCamant and William Livsey. Livsey was cashier in the State Treasurer's office, and he first left the State and then resigned. Bardsley was brought from prison to court last week in order to explain these checks, but he refused to testify. This refusal forced the District Attorney to drop the cases against McCamant and Livsey for the present, and in doing so he said:

"For instance, check No. 318, April 1, 1890, for $500; for that we have a post-office receipt and registered letters from both Mr. McCamant and Mr. Livsey, dated April 2, 1890; No. 324, May 1, 1890, $666—in regard to that I find a letter of Mr. McCamant's dated May 3, in which he says: 'Please accept my thanks for favors received'; No. 426—there is a letter comes of corresponding date, 'Your favor of yesterday received; accept my thanks.' So it goes on continually, the letter and check corresponding in date, allowing merely for what would be the time in the transmission from here to there—the receipt of the money. I mention this simply to show why I have kept these letters—why I have preserved them for the purposes of prosecution."

In commenting upon this statement in connection with Mr. McCamant's testimony, the *Ledger* says:

"If it had not been for the perversity of Mr. Bardsley, we might have had a week ago the simple and satisfying explanation that the then City Treasurer was engaged in buying neckties and handkerchiefs, books, etc., for the Auditor-General, and that these were the favors of which acknowledgment was made. It was an awkward coincidence that Mr. McCamant should need a necktie or something of that sort on the very days that Mr. Bardsley was drawing these tell-tale checks!"

There is one newspaper in a very grouty state over the shortening of time between England and Japan, as exemplified by the carrying of the mail from Yokohama to London in twenty days. This is the *Manufacturer* of Philadelphia. This shortening, it says, "simply means quickening the processes of filching from the Japanese their substance." Great Britain, it thinks, is breaking down the native industries of Japan, as she did long ago those of India. The shortening of mail carriage will hasten the day when no Japanese will be able to earn a living by his labor, but will have to stand still and submit to be clothed and fed, tobaccoed and liquored, by John Bull exclusively. So serious is this prospect, and so much does it rouse the missionary zeal in the organ of the Manufacturers' Club that it thinks we ought to interfere and force Japan to adopt a tariff of some kind—we hardly know what kind, and the organ does not explain. It says that "we buy far more from Japan than England does, and sell far less to Japan. Last year our imports amounted to $21,000,000 and our exports only to $5,000,000, while in the case of England the figures are just about reversed." A dreadful state of things, indeed! Since, in the present state of our navy, we cannot spare a fleet to go to Japan and compel her to buy more from us, the only alternative is for us to buy less from her. It is quite within our power to stop buying $21,000,000 from Japan. Then if she should continue to buy $5,000,000 from us (and she might be such a fool if we didn't make much noise about it), the situation would be reversed, and we should be as happy as England is. Why will some people take such roundabout ways to attain felicity when it is immediately within their grasp?

The proposed treaty between Brazil and the Argentine Republic for the settlement of the Missiones boundary dispute was rejected by the Brazilian Chamber of Deputies, August 10, by an overwhelming majority. This result had been for some time foreseen, inasmuch as the terms of the treaty appeared to be a flat abandonment of almost the entire Brazilian contention. The negotiation was conducted hastily, and, it is now alleged, in a glaringly incompetent manner, by the Provisional Government, and its upsetting is only one of many signs of popular disapproval of the goings on in the time of the Dictatorship. The ex-Emperor was brought into the debate through a declaration by one of his friends, that he considered the treaty a surrender of national rights, and that he never would have consented to it while Emperor. This fell in so pat with the general temper that it distinctly enhanced the public regard for Dom Pedro. The exact effect of the rejection of the treaty is in dispute. There was a pre-existing agreement between the two countries to submit the matter to arbitration, but it is now held that this was superseded and nullified by the treaty. However, a peaceful settlement of the difficulty in some way or other is to be looked for, as neither country is in a condition to do any fighting.

The International Corn Market at Vienna was opened on the 30th of August, and the results of the European harvests, prepared by the best statisticians, were then exhibited. Omitting the smaller countries and subdivisions, the showing as to wheat and rye was as follows, the figure 100 representing an average crop:

	Wheat.	Rye.
Austria	93	83
Hungary	100	71
Prussia	92	76
Bavaria	78	80
Italy	86	
Belgium	26	45
France	64	90
Great Britain and Ireland	95	
Russia—Podolia	100	60
Bessarabia	70	50
Poland	82	87
Central	55	65
Kherson and Yekaterinoslav	90	60
Kurland and Lithuania	95	75
Northern	45	45
Egypt	95	

The wheat production of India was set down at 6,824,000 tons, being an increase of 700,000 tons over last year. That of the United States was given as 545,000,000 bushels, against 399,000,000 bushels last year. This great gain in the United States, the London *Economist's* correspondent says, "created quite a sensation." But later accounts than those known at Vienna, from the spring-wheat districts of the Northwest, authorize the belief that the wheat crop of the United States will be fully 50,000,000 bushels larger than that given above. The opinion was expressed that the harvest of the United States would suffice to balance the deficiencies in Russia and in western Europe.

THE NEW YORK DEMOCRATIC CONVENTION.

THE gains resulting from the action of the Democratic Convention, so far as Federal politics is concerned, are obvious. That action has thrown the State unmistakably on the side of good money, so that it will not now be possible for the Republicans to ignore the tariff in 1892, and go to the country, as they had hoped, on the issue of free coinage. It has completely overthrown Hill and destroyed his machine, thus removing him completely from the arena as a competitor with Mr. Cleveland for the vote of the New York delegation. The effect of this on Democratic politics and politicians all over the country will doubtless be very strong. It will probably give a death-blow to the silver craze long before the National Convention meets.

The platform touching the silver question is both uncompromising and aggressive. Its attack upon the present silver law (the Act of July 14, 1890) betrays both a discerning mind and a courageous spirit. We confess that we did not look for either of these qualities in the degree in which we find them set out in the platform. Neither Tilden nor Manning ever produced anything more to the point, or more worthy of the support of the business community. The act named is the Republican party's chief stumbling-block in a financial way. The difference between that and free coinage is one of degree only. Both point to the substitution of the silver standard in place of the gold standard in the progress of time. That this is the tendency and drift of the Act of July 14 is tacitly confessed in the measure itself. After providing for the purchase of 4,500,000 ounces of silver bullion each month, the act declares it to be the policy of the United States to maintain the two metals on a parity with each other. That language would never have been used if there had not been, in the minds of the framers of the law, a belief that its operation would at some time put the two metals *off* a parity with each other. There could have been no other motive for embodying this clause in the bill, as it was only a stump speech in any case. It is declaratory, or rather declamatory, and without legislative force. It puts up a finger-post for the executive branch of the Government, and in this way advertises the fact that the purchase of 54,000,000 ounces of silver per year does tend to disparity between the two metals. It is an apology for a conscious financial blunder, and the mischief of it is, that it requires the Republican party to go on apologizing for it indefinitely, and thus perpetuating the evil apologized for. Both Senator Sherman and Mr. McKinley in Ohio have taken the ground that the Act of July 14 is a good thing *per se*, and all the people whom they can persuade are parroting their words. Now Mr. Sherman knows that that act is a very bad and dangerous one. It is well known that he gave it his assent and his vote under protest and with the greatest reluctance. He knows better than any other Senator that the purchase and coinage of silver ought to be stopped altogether. If his partisan interests were not involved—if he were free to speak as he thinks—he would applaud the resolution of the New York Democratic Convention with both hands. But it has turned out, as often before in Mr. Sherman's career, that he is now giving his sanction and his support, and such educating influence as he commands, to policies which he knows to be bad, and which will lead to financial wreck unless the business community is saved by more courageous men than himself.

Now the Democratic party in the West and South has gone in for free coinage. The Democrats of the East, and particularly those of New York, have taken the opposite tack. If the latter succeed in the elections this year, they will stem the tide and remove that danger from the field. Especially will this result follow if the Democrats lose Ohio and hold New York and Massachusetts. There is now, for the first time in many years, an opportunity for the party to return to its old platform—the platform of Jackson, Benton, Marcy, and Silas Wright. The traditional policy of the Democratic party on the money question was sound. It was always in favor of the best dollar that could be had. No dollar was then too good for the wage-earner or for any American citizen. It is only since the war, and since the insidious and debasing influence of legal-tender notes came into play, that the party has been led into the mischievous and ruinous policy of favoring clipped money. Once out of this rut—and there is now a fair chance of getting out—there will be no free-coinage party left in any part of the country, and we shall have only to deal with the pestilent Act of July 14, which the Republicans are hypocritically praising. The financial firmament has been much cleared by the action taken at Saratoga, and we feel a due sense of thankfulness to the men whose persistence and courage have given the voice of the party in the Empire State against the further coinage of silver, except on the basis of its intrinsic equality with gold.

But in saying this, we must not overlook the fact that the Convention at Saratoga was, after all, a State Convention; that it influences Federal politics only indirectly and remotely. Concerning Federal legislation it can exercise only the power of advice or persuasion. Concerning State politics it speaks with the voice of a probable ruler. If its ticket should win this fall, the result will, in the Federal arena, fortify certain opinions concerning the national finances and discredit certain other opinions, but in the State arena it will put certain men in power in this city and in the State, and firmly intrench certain others in power which they already hold. Consequently, while our interest in the Convention's action in Federal politics is to a certain degree a speculative interest, our interest in its State action is an intensely practical interest. In the one sphere, the Federal arena, the politicians at Saratoga simply think; in the State arena they act. They will have power; they will handle public moneys; they will fill important public offices, both ministerial and judicial; they will shape legislation affecting fully two-thirds of the things which most concern the safety, honor, and welfare of the people of this city and State.

The nature of the ruling influence in the Convention and its attitude towards State and municipal politics, therefore, are of extreme importance to all of us. It is to be observed, in the first place, that the managers in it who carried the day, who excluded the County Democracy, deposed Hill, nominated Mr. Flower, and drafted the platform, were the chiefs of Tammany Hall—notably, Messrs. Croker, Gilroy, Bourke Cockran, and Martin. The interest of these gentlemen in Federal politics, on such questions as currency, the tariff, and the like, is well known, as we have often pointed out in these columns, to be very slight. Their interest in the distribution of State and city offices is intense. Should they win at the coming election, Mr. Flower will, as their choice, perforce both veto and sign bills under their direction. Should they carry the Legislature, their best efforts will, we are sure, be directed towards strengthening the hold which Tammany Hall now possesses on the city government, which is very strong already, and cannot be shaken as long as it has the support or control of the State Government.

The general direction of this legislation may be inferred both from the action of the Democratic minority in the last Legislature and from some of the planks in the present platform. One of these denounces the Republican attempts to regulate the liquor traffic as attempts to "pass sumptuary laws which needlessly interfere with the personal liberty of law-abiding citizens." What this means we know from the character of the present Tammany Excise Board. Another accuses the Republicans of "covertly lending their influence to the restriction of manhood suffrage." What this means we know from the attitude of Tammany and the Democrats in the Legislature last winter towards the Ballot Act. Another "denounces expensive legislative investigating committees, whose investigations degenerate into strikes for political patronage upon the official authorities of Democratic municipalities." What this means we know from the revelations made by the Fassett Committee touching the condition of the Sheriff's office under Mayor Grant, the presentment of the same by the Grand Jury, the condition of the Register's office, and the indictment of one of the leaders of the Convention, viz., "Barney" Martin, for corruption in office, and his appointment to a more important place after indictment. There would be no inconvenient or expensive investigations, we may be sure, under a Tammany régime, and yet these investigations are the salt of our local politics. They save us from absolute putridity.

These things have to be considered by every honest voter. Hillism *was* a bad thing, and Plattism *is* a bad thing. The destruction of the one ought to be rejoiced over, and the destruction of the other pursued in every way possible. But politics is a very practical matter, and every election is apt to be, in the present state of human nature, a choice of evils which we *must* make. There is no escape from it.

THE OHIO CAMPAIGN.

THE campaign in Ohio, which promised at the outset to be a square fight on the tariff question between two able men, has been deprived of its representative character by the injection into it of the silver question. The step by which this change was brought about was taken by the Democrats with deliberation. A majority of their Convention —although not a large majority—voted for the free coinage of silver, with all which that implies. Gov. Campbell now says, in his opening speech, that the Democrats "desire the subject to be discussed by the people, and believe that it will be disposed of honestly and intelligently by the next Democratic National Convention. They indignantly resent, as insolent and untrue, the charge that they desire to restore the free and unlimited coinage of silver in any manner *except that which will make every silver dollar as good in purchasing power as any other dollar, and worth 100 cents,* as it is to-day, wherever the American flag may cover it." The words in italics are a very important saving clause, but they are not found in the platform of the Ohio Democrats. They may serve to indicate what Gov. Campbell's views are, but they are imported into the canvass, and we may be sure that the glance of Senator Sherman will detect the discrepancy and make the most of it, and that McKinley will follow Sherman's lead.

Considering all the embarrassments that the silver issue put in Mr. Campbell's way, his speech at Sidney was a very able one. He showed that McKinley had been blowing both hot and cold on the silver question from the beginning, and that he had voted in Congress on the 5th of November, 1877, for the free and unlimited coinage of silver. Since that time he has probably had no opinions on the subject, one way or the other, except as they have been doled out to him. He reported with much unction the clause of the last national Republican platform which condemned the Cleveland Administration for its hostility to silver. Referring to this matter in a speech in the last Congress, on the 7th of June, 1890, Mr. Payson of Illinois justly remarked:

> "I remember as an auditor in that Convention hearing the distinguished gentleman from Ohio [Mr. McKinley], the Chairman of the Committee on Ways and Means, read the platform in the great Auditorium building in which that Convention was held. I do not forget, when the ringing words came from his lips to an audience then conscious as a matter of recent recollection of the position of the Cleveland Administration in regard to silver, the response of that audience when he read the declaration:
>
> "'We, the Republican party, believe in the use of gold and silver as money, and we denounce the present Democratic Administration for its hostility to silver.'
>
> "The words that thus fell from his lips as he read that platform to that assembled multitude met with an enthusiastic response that I shall never forget so long as I live."

That enthusiastic response was probably still ringing in McKinley's ears, as in Payson's, when at Toledo, as late as February of the present year, he again denounced President Cleveland for his hostility to silver. But he was turned around by Senator Sherman, and was induced by him, or by the stress of weather, to utter words of commendation of Mr. Cleveland within six months of his Toledo speech. If the contest in Ohio were to be decided by the showing of inconsistencies in the course of one's opponents, Gov. Campbell's chances of reëlection would be very good.

His treatment of the present silver law was very successful in proving that there is no more reason for issuing legal-tender notes against pig silver than in issuing them against pig-lead or any other kind of property. "It is mere pawnbroking," he continued. "Printed tickets or certificates might as well be issued upon the temporary deposit of watches, jewelry, or second-hand clothes. Under this new system of financiering, the Mint at Philadelphia should be abandoned, and the symbolical sign of three golden balls hung over the entrance to the Treasury at Washington." Very true, but what is your plan, Governor? He goes on to say that "the Ohio Democracy would invoke the legislative and *treaty* powers to undo the wrong they [the Republicans] have perpetrated, and to aid, so far as lies in their power, to restore silver to its proper place and use." The word treaty, or language implying a treaty, is not to be found in the platform of the Ohio Democrats. When Gov. Campbell says that there is a difference of opinion among Democrats in regard to silver, he speaks truly, and there is apparently a difference between himself as an individual and those who voted the free-coinage plank into the platform. But his interpretation of the platform itself cannot be accepted. The poison is there and it cannot be explained away. "Unsettled questions have no pity for the repose of nations"; as little have they for the internal harmony of parties.

Mr. Mills of Texas has rendered the country and his own party a very great service in puncturing the "per capita" windbag in his speech at Mansfield, Ohio, on Saturday last. Although he voted for free coinage in the House, and still believes that "the United States can open their mints to the free coinage of silver at fifteen and one-half ounces, equal to one of gold, and can keep the two metals at par," he has begun to ask the fatal question, "But what good would it do us?" There's the rub. What is the object of running even a small amount of risk by engaging in any such enterprise? Why should the United States undertake the job of keeping the two metals at par, from which all the other great nations of the world shrink? How would it profit the people of the United States? How would it relieve the existing distress, if distress does really exist?

As soon as these questions are asked, the huge gap in the argument of the silver-men, which we have often pointed out in these columns, becomes fully apparent. That gap consists in the failure to explain the difference between money "per capita" and money in the pocket. There is now, say, $23 per capita of currency afloat, but does this show that each man, woman, and child has $23 in hand? By no means. Some have millions, some have thousands, some have hundreds, but a great body have not $10 in cash. Supposing the currency were increased by free coinage or otherwise to $50 per capita, would this increase the amount in possession per pocket? Not in the least. It would be divided as before in about the same proportions. The millionaires would get the largest share, the thousand-dollar men would get the next largest, and so on down.

In other words, the free-coinage scheme, like all schemes for additions to the currency, would fail, as an instrumentality for the relief of distress, owing to the total want in it of any contrivance for transferring the coins when issued to the pockets of those who are short of money. Under the free-coinage plan, they would be given to the man who brought in the silver to the mint to be coined. In other words, the Government would buy his silver from him at a certain fixed rate. When he drew the money, would he hasten to distribute it among the suffering farmers or the poorly paid mechanics? Would he hand it over to the pensioners, or pay it into the charitable associations of the great cities? By no means. He would sordidly pay it into his own bank account and draw on it for his own purposes, in entire indifference to the generous motives of the framers of the bill.

Mr. Mills makes this clearer than any party politician has hitherto ventured to do, and it raises him far above the ordinary campaign orator. We have not now many men in public life who have the courage to combat a popular delusion on the stump, and they seem to grow fewer. The scarcity of them has been made painfully apparent by the currenc and pension agitation, but there are, nevertheless, some left, and Mr Mills towers above them all. When he told the Ohio farmers that no matter how much currency we have "per capita," none of it can get into the farmers' pockets except in exchange for labor or goods, he told the saving truth of the present crisis. He laid the axe to the root of the "per capita" delusion. He showed the road to the only relief the farmer can get from the Government in the present economical condition of the world. That relief consists not in getting more money from the Government, but in compelling the Government to stop taking so much money from the farmer. In other words, the farmer must be raised out of his present slough by reducing his taxes.

THE GOLD MOVEMENT.

THE return movement of gold to this country, which was predicted to begin about the middle of September, has set in, and it is not impossible that we may get back all that we have sent abroad this year, or even more, as a result of the remarkable crop conditions of the two continents. Whenever such a movement becomes excessive, or seems to be so, to the exporting country, we hear of steps taken to resist it, which, however, always fail of their object. Thus, when the movement became a little

alarming here a few months ago, Congress changed the law which required the Treasury Department to exchange gold bars for gold coin, and authorized the Department to charge for bars the cost of manufacturing them, or to refuse bars altogether. The latter policy was adopted, with the evident intent to check the exportation of gold. But it had no such effect. It had no other effect than to add a fraction to the cost of paying the debts which private individuals here owed to foreigners. As the Government was never under obligation to supply to its citizens anything better than gold coin of standard weight and fineness, the supplying of gold bars previously was a gratuity; but it was a gratuity to Americans, not to foreigners. The withdrawal of the privilege could not be complained of, but the expediency of it is open to question. Certainly the gold movement went on without the smallest interruption, much the largest part of it taking place after the Department had declined to furnish gold bars at all.

We now hear of steps taken on the other side, or about to be taken, to check the movement in this direction. Such steps may be taken in France, where the Bank has the option of redeeming its notes in silver, but they cannot be taken in England. In his speech at Leeds some months ago, Mr. Goschen, the Chancellor of the Exchequer, said that England was the only country in Europe which did not offer any obstacles to the exportation of gold, and that this fact (the establishment of a fixed standard of payments) had had an important influence in making London the centre of the world's commerce. He showed how very small a part of the trading done by mankind is really transacted by the actual use and handling of money, and how large a part by letters of credit. Only a small part, probably not 5 per cent., of the commerce that centres in London or in New York could be done at all if the passing of money to and fro were required to carry it on. In the first place, the money does not exist in sufficient quantity, and if it did exist, the traders could not handle and count it without a ruinous loss of time. The course of international trade is this: A banker whose credit is known and established in the principal seats of commerce, issues a letter of credit to the trader. The latter buys goods with drafts drawn against the letter of credit; that is, on the issuing banker. These drafts are paid in the money of the country or place where the banker transacts his business. If the money is gold, the draft is paid in gold; if silver, it is paid in silver; if it is one of the "limping standard" countries, the draft may be paid in gold at a small premium, the standard of payments being thus slightly variable.

A "limping standard" country is one in which bimetallism once existed but has since been discarded in favor of the single gold standard, leaving a considerable amount of old legal-tender silver on hand. France and all the countries of the Latin Monetary Union are of this type. The old silver coin drifts to the Bank of France. It is bulky and inconvenient. People do not like to be bothered with it more than is necessary. The Bank must take it on deposit because it is legal money. Thus about two hundred and fifty million dollars of the old silver has got lodged in its vaults. The Bank is a private institution. Every five-franc piece in its vaults is good to pay its own debts with. Four of them are as good for this purpose as a louis d'or. They are as good to any and every debtor in France, and, with some restrictions and qualifications, in any part of the Latin Union. But outside of those boundaries the difference in value between twenty francs of French silver and twenty francs of French gold is perhaps 30 per cent., or would be but for the fact that any foreigner having French silver can buy French goods with it, the seller of the goods depositing it in the Bank of France as the equivalent of gold.

Here we find the measure of the Bank's ability to charge a premium on gold drawn from it for export. It is troublesome to draw silver and cart it around to pay for goods. But the exporters would never go to the trouble, except in extreme cases, of buying French goods in order to realize on their silver. They would simply buy gold from the money-changers. The premium charged by the latter would be the measure of the trouble of getting the money into the form of exportable goods. This premium the Bank can charge for gold, and no more. It is easy to see that the man who pays the premium is the French debtor, not the American creditor, the French buyer and not the American seller. The Frenchman has to pay his debt anyhow, or go into bankruptcy. He must pay it in our unit of value, which is, up to this time, the gold dollar. If the Bank in which he keeps his money puts him to the trouble and expense of going to the money-changers to buy gold, that is his trouble and expense, not ours. The Bank may properly say to its customer: "You put this silver in here, and you must take it back or pay us something for taking care of it for you."

It is, undoubtedly, an injury to French credit and to French commerce that one cannot know for certain whether a draft drawn on Paris will be paid in gold at its face value, or whether a premium will be charged for the gold—the alternative being payment in silver and the selling of the silver in the street. Persons selling to France or taking French drafts will generally charge enough more to cover the possible shave. There is no way in which the loss can be put upon foreigners after they have once learned what the practice is. It is not often that the Bank charges a premium in gold, but the liability to a premium is always present, and insurance against it is one of the costs of the French trader. It is one of the expenses of doing business in that country. It does not check or delay in the smallest degree the exportation of gold when trade conditions require it.

The United States are not as yet a silver-standard or even a limping-standard country. We offer no obstacles to the exportation of gold. The withdrawal of the gold-bar privilege was the withdrawal of a gratuity, not the interposition of an obstacle. Perhaps the experience of this remarkable year—remarkable for the movement of gold to and fro — will teach us all that the exportation of the metal is not an evil to be resisted, since we get the worth of it in something that we have voluntarily sought, and that we prefer for the time being to have instead of gold. It may show us, also, that resistance, unless it takes the form of not buying the thing we want, is always and absolutely futile.

PROPERTY AND JUSTICE.

THE address delivered by Justice Brewer of the Supreme Court of the United States to the graduates of the Yale Law School, which is published in the *New Englander* for August, deserves the attention of all students of our constitutional history. It marks what we sincerely hope may be a turning-point in the course of judicial decision affecting legislative confiscation of property. The legal-tender decisions, the slaughter-house cases, the elevator cases, and the judgment affirming the constitutionality of the Kansas prohibitory law, had gone far to establish the principle, announced by Chief-Justice Waite in the opinion of the Court in Munn vs. Illinois, that "for protection against abuses by legislatures the people must resort to the polls, not to the courts." This startling doctrine, which, in its broad statement, would subvert all constitutional liberties, has, in the recent railway case from Minnesota, been substantially repudiated. In that case, Justice Brewer declares, it was decided "that, under the guise of legislative control over tariffs, it was not possible for State or nation to destroy the investments of private capital in such enterprises; that the individual had rights as well as the public, and rights which the public could not take from him." This opinion, Justice Brewer emphatically asserts, "will ever remain a strong and unconquerable fortress in the long struggle between individual rights and public greed," and he adds: "I rejoice to have been permitted to put one stone into that fortress."

These words, so highly reassuring to those who fail to discover ideal justice in the destruction by the State of rights of property which it has long recognized, represent no mere expression of personal feeling or of legal conservatism on the part of Justice Brewer. They contain the logical result of a theory of the relations of men to the State that was once almost unquestioned in this country, but has of late been so far lost sight of that its public reaffirmation by a Justice of the Supreme Court is extremely encouraging. According to this theory, "the corner-stone of the foundation upon which the Constitution was built, and upon which it rests to-day, was and is the Declaration of Independence," and that Declaration affirmed—

"that sacredness of life, of liberty, and of property, are rights—unalienable rights; anteceding human government and its only sure foundation; given not by man to man, but

granted by the Almighty to every one; something which he has by virtue of his manhood, which he may not surrender, and of which he cannot be deprived. . . . When, among the affirmations of the Declaration of Independence, it is asserted that the pursuit of happiness is one of the unalienable rights, it is meant that the acquisition, possession, and enjoyment of property are matters which human government cannot forbid and which it cannot destroy; that, except in punishment for crime, no man's property, nor any value thereof, can be taken from him without just compensation. . . . Whatever dreams may exist of an ideal human nature which cares nothing for possession and looks only to labor for the good of others, actual human experience, from the dawn of history to the present hour, declares that the love of acquirement, mingled with the joy of possession, is the real stimulus to human activity."

The right of property asserted by this theory is thus based upon a sound psychology, alike supported by the lessons of history and recognized by the Constitutions of the United States and of the several States. Our governments exist to secure the rights of the individual against the assaults of the majority. It is the individual who needs protection, for he is weak; the majority is strong and can take care of itself. Of direct destruction of property by Government we are in little danger, but its value may be diminished or destroyed by forbidding or prescribing charges for its use. In the "Granger" cases the question involved was not the extent of the right to prescribe the charges of common carriers, but the existence of this right, which was denied by the railroads. But in the "elevator" cases the extent of the right was at issue; and its limitation in such a way as not to result in practical confiscation was what was accomplished by the Minnesota case to which Justice Brewer has referred above, with such honorable pride.

As it is the use of property that gives it its value, it is obvious that to forbid the use is to destroy the value, and here, unfortunately, the record of the Supreme Court is not so good as in the matter of prescribing charges. As to the abstract question there is authority enough, and it is indeed impossible to maintain any plausible distinction between an act that deprives a man of his property and an act that prevents him from using it. But in sustaining the constitutionality of the Kansas act prohibiting the manufacture and sale of intoxicating drinks, the court practically adopted this distinction. The case came up on appeal from Justice Brewer's judgment against the constitutionality of the act, and it is entirely clear that he has not altered his original views. To do so, indeed, would be in such a case to stultify himself, for he was reversed by a weak court in an opinion of exceptional feebleness, and, as he very judiciously observes, it was unfortunate that this question came into the courts "along the line of deep feeling, and in the furtherance of a lofty and noble effort to suppress the enormous evils of intemperance." In as plain language as his position would allow, he intimates that posterity may look upon this decision as we look upon the decrees of the Massachusetts courts in the witchcraft cases. Personally, it seems, Justice Brewer believes in prohibitory legislation; but he believes even more in justice, and, as the Kansas act destroyed the property of individuals without compensation, he condemns it. He regrets that

"In the glory of success and the furtherance of a good cause, the State forgot to be just. There were four or five breweries, with machinery and appliances valuable only for one use, worth a few thousand dollars (a mere bagatelle in comparison with the wealth of the State), built up under the sanction of the law, owned by citizens whose convictions were different from those of the majority, and who believed the manufacture and sale of beer to be right and wise. As good citizens it was fitting that they should yield to the judgment of the majority. As honest men, it was fitting for the majority not to destroy without compensation, and to share with the few the burden of that change in public sentiment evidenced by the Constitutional amendment. It will be said hereafter, to the glory of the State, that she pioneered the way to temperance; to her shame, that at the same time she forgot to be honest and just, and was willing to be temperate at the expense of the individual."

It is not to be expected that the Supreme Court will directly repudiate its own precedents, but we think that these utterances by Justice Brewer may be taken to indicate that, in the immediate future at least, that court will not sustain legislative acts impairing the value of property, either by fixing charges for its use that are unremunerative, or by forbidding uses essential to its value, unless compensation to owners is provided. Justice Brewer, of course, recognizes the existence of the police power, and goes to perhaps an unnecessary length in declaring that Government may regulate or destroy any use of property in the name of public morality, health, or welfare; but he insists that this power involves as its complement "the full, absolute, and unqualified recognition and enforcement" of the right of compensation. The existence of this right restrains hasty action. "It induces a small majority to hesitate in imposing upon an unwilling and large minority its notions of what is demanded by public health or morals or welfare." Moreover, all experience shows that attempts of this kind fail of their aim, because jurors and witnesses reflect the feeling of the minority as well as of the majority. This, however, is an argument of a different order, and might be turned upon Justice Brewer's approval of prohibitory legislation with damaging effect.

The great truth emphasized by this address is, in short, that as in criminal matters *ex-post-facto* laws are unrighteous, so in civil affairs no Legislature can disturb vested rights. Rights of property created in reliance upon laws which sanction their creation are not to be ruthlessly extinguished by the withdrawal of that sanction. Popular government especially, Justice Brewer maintains, cannot endure unless this principle is upheld. He frankly declares that if our own Government is to be permanent, we must recast some of our judicial decisions, "and if that be not possible, we must rewrite into our Constitution the affirmations of the Declaration of Independence, in language so clear and peremptory that no judge can doubt or hesitate, and no man, not even a legislator, misunderstand"—a passage followed by an allusion which those familiar with the slaughter-house cases will appreciate.

We have commended this address to the attention of students of the Constitution; and as a species of Pretorian edict it is certainly noteworthy. But there is so much in it that every thoughtful citizen should consider, and the spirit breathed is so wholesome, that the societies engaged in disseminating political information would do well to republish it in a form suitable for distribution. It is very short, but, short as it is, it contains several important intimations to which we have not referred. The more conservative portion of the legal profession will experience a revival of their somewhat impaired confidence in the Supreme Court if its new members are imbued with the convictions expressed by Justice Brewer, and the business community will rejoice in the possession of judges who have sufficient courage to recognize and assert their function as the guardians of constitutional rights against the vagaries of legislators.

THE OUTLOOK FOR CHURCH UNION.

It was in 1886 that the bishops of the Episcopal Church made their Chicago Declaration, laying down the four fundamentals upon which they asked all Protestant churches to unite. When their proposals for church union, or at least church federation, were ratified by the bishops of the English Church at Lambeth, in 1888, a great deal of enthusiasm was aroused in various other denominations. Some of them—for example, the Presbyterian—took official action in consequence of these proposals, and appointed committees of correspondence and conference on the subject. More striking than this was the warm approval given to the project in the religious press, and the hearty response to the Episcopal advances made by various leaders of prominence in different churches, both by addresses and publications. Thus it seemed for a time as if the latest attempt to unify divided Protestantism might meet with a fair degree of success; but the turn of more recent discussion and action shows that it is to have no more immediate or practical effect than foregoing efforts of the sort.

The four points of this new irenic theology relate to the Scriptures, the Apostles' and the Nicene Creed, the two sacraments, and the "Historic Episcopate locally adapted." No especial difficulty has arisen with respect to the first and third, upon which, indeed, the affirmations are conveniently vague. But in reference to the creeds and the episcopate, the debate has taken an acute turn, and it is upon them that the entire project will go to wreck. This may be seen in the attitude of the two denominations which may best be taken as the Right and the Left, if the Episcopalians are to be regarded as the Centre—namely, the Presbyterian and the Unitarian. The first stands for a compact and highly organized system of church polity which rejects episcopacy. It also stands for an extremely conservative type of theology. The Unitarians, on the other hand, are among the most extreme defenders of the independence and sovereignty of the

individual church, as well as the most liberal of all in theology.

Now the curious thing is, that these two widely differing denominations attack the proposals of the Episcopalians precisely at these points of creed and organization. "The Nicene Creed?" asks the Presbyterian dubiously; "that did well enough for the fourth century, and might even now pass as a compend for the use of converts, but it is quite too vague and undeveloped to be the official creed of a church." This was the gist of the talk at the last General Assembly, when the subject was up for discussion, and the subsequent action taken was practically a breaking off of the entire negotiation. On the other hand, Dr. William Everett, in the September *Unitarian Review*, speaking for his co-religionists, declares that the Nicene Creed is altogether too much "expanded by glosses," and filled with "subtleties of the Byzantine Church," to "attract the faith of churches whose members have never repeated it as catechumens or listened to it as worshippers." He also resents, in the name of local autonomy, the invitation to submit to Episcopal church-government, just as strenuously as the Presbyterians did in the name of the divine right of Presbytery.

This cross-fire on both flanks may very well confirm the Episcopal Church in the belief that it is the true *via media* to which both extremes are bound to come; yet the vigor of the firing must convince it that the extremes are as yet by no means minded to make a start. The fact is, the movement has been too theoretic and abstract to succeed. If the question is simply one of friendly feeling and perfect toleration between the churches, it is already solved. As an Episcopal minister lately wrote, "We have more unity now than our machinery can handle." The attempt should have begun at the practical end. If the proposal had been to arrange for an equitable division of charitable and religious work in cities, for example, so that the present great waste from overlapping and conflict might be avoided, or for a similar partition of territory in new countries, like our remote West, or in foreign missionary enterprises, it could hardly have failed so to appeal to the business men in the various churches who have to foot the bills, that a beginning at least would have been made. But as soon as the proposed basis of union was made predominantly speculative, it was certain that, sooner or later, the discussion would awaken the dormant instinct and passion of denominationalism, and that, so far from leading to real unity, the proposal would result, as it has resulted, in a distinct sharpening of the sectarian spirit.

Moreover, along with this has come the breaking out of serious divisions within several of the churches. In one case at least there is grave danger that a denomination may be cleft into two, adding one more to the discordant sections of Protestant Christianity. We refer, of course, to the pending trial for heresy of Prof. Briggs, and, in his person, of the large body of his sympathizers in the Presbyterian Church. Some of the best-informed Presbyterians in this city look to see a split in their denomination, as a result of the probable issue of that trial and of the position already taken by Union Seminary. In the Baptist Church, too, there is a storm-centre gathering in the region of Boston, and even the Methodists have their theological "suspects." Most significant of all, the Episcopal Church itself, the one that invited the differing sects to find peace and unity within its ample and tolerant communion, has a trial for heresy on foot, which may bring about the cutting off of a leading rector and his followers. All these evidences of the persistence of the tendency to subdivision, even within a particular sect, certainly make the outlook for church union on a large scale sufficiently gloomy.

To many minds it will seem that not enough attention has been given to the preliminary question, Is church union, of the sort contemplated, really desirable? Doubtless the Protestant Reformers did not foresee the divisive nature of the principles to which they committed themselves; but now that we do clearly enough, we must either accept the divisions or give up the principles. It may very seriously be doubted if any church union can be formed among those who really believe in the right of private judgment. Any basis upon which they could all stand would either be so vague as to be worthless, or would speedily break down under the weight of conflicting interpretation. In short, the most obvious ground of unity among Protestants is the common conviction that private judgment is too important and too sacred to make possible any organized unity worth the having. The Catholic Church has known how to attain and preserve solidarity, but it has been at the expense of what Protestantism regards as dearer than solidarity. For better or for worse, the Protestant world is committed to inquiry and to liberty. Free inquiry has thus far meant ecclesiastical division, and bids fair to continue to do so. As a writer in the *Andover Review* says, speaking of the subject in its widest bearings, "They who look for a reconciliation of Romanism and Protestantism, of Ecclesiasticism and Criticism, are dreaming idle dreams, having no knowledge of the principles upon which these opposing parties stand, and the eternal antagonism that exists between them."

NEW HAMPSHIRE INNKEEPING.

BETHLEHEM, N. H., Sept. 10, 1891.

THE growth of this little mountain village during the past quarter of a century is one of the most significant chapters in the history of the transformation which the State of New Hampshire has been and still is undergoing. The simple statement of the Commissioner of Agriculture and Immigration, that more than five millions of dollars are annually brought into the State by summer visitors, gives us a starting-point for some very curious considerations as to the nature and the process of the present development. Driving with my landlord, a man of perhaps thirty-five, I was shown the house in which the first city boarders in Bethlehem were entertained. It was a little "story and a half" cottage, hardly visible in the midst of the great ugly barracks which have grown up around it. The city folks, so said the landlord, were stared at and followed about by himself and his contemporaries like beings from another sphere. At that time there was not a person in the region who had the faintest conception of that fine art, keeping a hotel. From such beginnings there has grown, within less than a generation, the accumulation of architectural horrors known the country over as "Bethlehem Street," maintaining and increasing from year to year its hold upon our travelling population, until it now draws thousands and thousands annually into its numerous hostelries.

It is evident that here was a most peculiar demand suddenly laid upon a community totally unprepared for it. Not only was the mountain region destitute of inns such as one would find in any rural region of Europe, but there was and is a something in the nature of the New England people distinctly opposed to innkeeping as a profession. The "tahvern" was a disreputable place, usually kept by some moral or commercial failure, and properly enough regarded by serious people as a plague-spot upon their community. The fare dispensed to the unlucky wayfarer at such a place was of the most appalling description, bad enough to counteract in a few days the good effects of the splendid mountain air. A good flat bed was unknown; drainage and water-supply had received no intelligent thought. Evidently, the evolution of the future hotel was not to take place along the native professional line, and, in fact, the old taverns have only in very rare cases become, through some accident of situation, the popular hotels and boarding-houses of the present.

Another alternative would have been that professional hotel-keepers from the cities should carry their capital and experience into the country, anticipating, as shrewd business men, the movement of population in the summer, and making use of the immense advantage of their city connections to meet it. It is a very singular fact that this was not done. Almost without one exception the mountain landlords, from old Ethan Crawford down, have been New Hampshire men, and generally natives of the region in which their work has been done. This continues true to the present day, and it finds its echo in the language of the people. While the houses themselves bear such alluring titles as the "Alpine," "Highland," "Mountain View," etc., the native never uses these words if he can help it. He greets you with, "Stoppin' over to Charley Smith's?" or "John Henry's folks done pretty well this season?" or "Kind o' thinnin' out over to Amos's now?" Indeed, the moment one gets away from the very largest centres of mountain resort, the native is likely to be found totally ignorant of hotel names, and will be quite confused if asked to direct you to the "Sylvan Glade."

In estimating the growth of the summer industries of New Hampshire this native quality must be kept steadily in view, and really the results are most surprising. Taking Bethlehem Street as typical, we find, grown up over night as it were, fairly well-built wooden buildings capable of holding from 30 to 300 persons each, and managed chiefly by men who, as my landlord frankly confessed of himself, have not, and never did have, any idea of the business of keeping a hotel. What they know they have got by the rough-and-ready process of tumbling into it as emergencies arise, and trusting to their native common sense not to make the same mistake too many times. For instance, the art of attractive and wholesome cookery has but just begun to be

studied here. Except in the most expensive hotels, the bill of fare is still essentially that of the average well-to-do New Hampshire family, and the method of cooking has varied little with the increase in its dimensions. On the other hand, the methods of service have approximated to those of city hotels and restaurants, keeping generally a decade behind the times. The usual hotel table, with its awful collection of pickle bottles, fiery sauces and other condiments in the centre, and its multitude of little dishes containing bits of cold vegetables badly cooked, is a heathenish affair developed through ignorant imitation of bad models. It does not provide what city people really like best, for it is apt to be most deficient in true country products, such as unlimited cream, eggs, and butter, while it strives ineffectually after "what city folks are used to."

There is a second element in the growth of summer industry which I have found even more curious than its native character, and which is in some ways curiously inconsistent with it. The entertainment of strangers not only ought to bring profit to the keepers of boarding-houses and hotels, but ought to stimulate all those industries which supply the wants of these houses. This has been done thus far to a surprisingly small extent: even those houses which have farms attached and whose advertisements treat so seductively of cream, butter, and eggs, raise but a small part of the products they consume. Here and there a very large house has found its profit in this work, but by far the larger part of the supply comes from the Boston market.

I have never heard either landlord or farmer deny the folly of this situation. Here are thousands of acres of land, close to an immense market which demands the best there is, and is forced to send hundreds of miles for a poor article when the best should be produced abundantly at its doors. The reasons are not far to seek. Truck-farming demands a kind of man that is rarely found in New Hampshire. It involves constant watchfulness, a wide knowledge of varieties of products, a capacity to change quickly from one crop to another, a study of soils and manures; in short, a world of things which the average wasteful New England farmer has no patience to "bother with." The same is true of the egg and poultry industry. The mountain hotels are using to-day turkeys frozen last autumn in Vermont, chickens, few and poor, gathered in from the accidental raisings of scattered farmers or sent up from Boston, and eggs as to whose antecedents the less said the better.

Small fruits, strawberries, currants, and raspberries, all of which ripen during the best season, with their immense value both for the table and for the making of preserves, are hardly grown here at all. Yet I found on inquiring that all over the smiling hills between Lisbon and Franconia flowers could be set out almost as early as in Massachusetts, and these small fruits would require no forcing to bear abundantly when prices are highest. I have seen nowhere in the State more beautiful fields, neater houses, or larger and finer barns than within a radius of five miles from Sugar Hill, where hotels and cottages are growing with great rapidity. With hay at less than $10 a ton, one would suppose that farmers would take the hint, diminish the area of their mowing-land, and try what brains and painstaking would do as against a wasteful use of muscle.

Another industry, until recently strangely neglected in New Hampshire, is the raising of cattle and horses; and here, too, the summer influx is already making itself felt. These rocky pastures of the mountain country are wonderfully rich in those short, sweet grasses which give flesh and power to growing stock of every kind. There is a demand for horses here, during the season, which is most imperfectly met. One needs only to watch the equipment of any mountain vehicle to see what a low standard of horseflesh prevails here. Vermont, with its horse-raising traditions, is close at hand, to be sure, but it can look southward for its market more hopefully than eastward. The mountain farmers are beginning to look to themselves to supply the need. As for neat cattle, I can find no indication that any serious competition with the great West is for the moment being thought of. Probably it will be necessary to wait until Western grazing has reached a lower margin of profit, a thing of not so many years yet, before this branch of industry will attain great proportions here.

Here are prospects sufficiently alluring, one would say, to change in the next generation the whole face of New Hampshire farming. It is not likely that city life will soon cease to exercise its baleful charm upon the rural population, but the more clearly the young man in the country can see before him a reasonable certainty of gain, and can be brought to understand that his farm-life has not to be led in quite the sordid conditions of his forefathers, the more successfully may this attraction be combated. The summer invasion is doing a grand work in producing new conditions under which New Hampshire farming may reassert itself. Along both the lines I have indicated, the profession of innkeeping and the supply of provisions needed by the innkeeper, there is abundant room for native tact to put itself into profitable exercise.

Let any clever son of the mountains take a run over to Switzerland, the Black Forest, and Tyrol, and he would find time and money well spent. He would discover a theory of innkeeping which regards it as a respectable profession, to be learned like any other, and he would perhaps overcome that view of the guest as an enemy which, with the best of intentions, the New Hampshire landlord has not yet got out of his creed. E. E.

NEW MOUNTAIN RAILWAYS IN SWITZERLAND.

LOCARNO, Sept. 3, 1891.

THE season of 1891 will be remembered in Switzerland as the poorest in a decade, if not in several decades. June, July, and August did not have more than half-a-dozen fine days each; consequently, crops are short or ruined, including even the wild berries. The poor guides and carriers, who rely on these three months for their whole year's support, are looking forward with their families to a winter of privation, while the tourists, a large proportion of whose time was limited, spent a comfortless week or two among the mountains without a ray of sunshine or a single glimpse of the famous snow peaks. September still remains, but comparatively few of the tourists seem to have discovered as yet that this month is, in Switzerland, almost always the finest in the year, with the largest number of clear days and the balmiest air. Those who have left this land of lakes and mountains, rain and clouds, without seeing any but the latter features, have this one consolation, that they would have been equally wet anywhere else; for, except in the extreme South, it has rained all over Europe as incessantly as in Switzerland—so incessantly that an English paper, a few days ago, had an editorial on "The Disappearance of Summer," with the semi-serious proposal that London should be roofed over and made independent of the sun and the weather by means of electric contrivances.

The general falling off in Swiss travel may be estimated from the fact that the receipts of the railway to the top of Mt. Pilatus during July were 20,000 francs less than in the same month last year, although that also had an unusually rainy season. Yet, instead of discouraging the Swiss, this climatic perversity seems only to stimulate them to renewed efforts to make their famous summer resorts easily accessible to foreign visitors. There is at present a regular "fad" for building mountain railways. The oldest of these, which lead up the Rigi from Vitznau and Arth, now seem quite simple and primitive compared with some that have been built within the last two or three years. Foremost among these is the railway which leads up the forbiddingly steep and bare sides of Pilatus; a reckless invitation, it would seem, to inevitable disaster, were it not that the car is so securely held between its granite substructure and its upper framework of steel and iron that accident is made almost impossible. In its way this road is no less remarkable than the St. Gothard Railway, with its ten-mile tunnel 3,000 feet below the summit of a mountain, and its curious loop-tunnels—strokes of engineering genius without which this railroad would have been impossible. The Pilatus road was finished only three years ago, and its success seems to have stimulated the forming of projects which will make it seem mere child's play in comparison. For Pilatus is only 6,998 feet high, while the summits of the Jungfrau, the Matterhorn, and Mont Blanc, which it is now proposed to reach by rail, are respectively 13,670, 14,705, and 15,730 feet above sea level. It has been shown, theoretically, that such roads are not impossible, and the only question now is, whether they could be made remunerative, which seems doubtful, considering that the fares would have to be very high, and that the roads would be used only on clear days, which are becoming increasingly few and far between.

I have before me a pamphlet in which an attempt is made to prove the feasibility of a road leading up through the interior of the Jungfrau to its top. The author, Major E. Löcher, modestly calls his project only a "study," but he feels confident that all engineering, hygienic, and meteorological obstacles could be overcome. The roadbed would assume the shape of a double tunnel, while the cars would be supplied with ventilators and propelled by means of compressed air. The summit could thus be safely reached in fifteen minutes, instead of the present twelve hours of hard and perilous climbing; and a tourist could leave Lauterbrunnen half an hour before sunrise, enjoy that phenomenon on the snowy summit (which embraces a view of almost all the Swiss peaks), and return to his hotel in the valley in time for an early breakfast. Inasmuch as the car would be invisible on the outside, no one could complain of its spoiling the scenery, while the Queen of the Alps would be made accessible even to invalids (provided they have no heart disease), whereas at present she offers a welcome only to thorough Alpine experts. If the Jungfrau road is built, the Matterhorn and Mont Blanc projects will be dropped, as it would, of course, not pay to build more than one road of this kind.

If this scheme, and another almost equally daring one, should ever be carried

out—and there are not a few who believe they will be—the village of Lauterbrunnen, at the foot of the famous Staubbach Fall, which, until last year, was accessible only by carriage, will be one of the most important railway centres in Switzerland, and certainly the most remarkable one in the world. The other project referred to is the building of a road across and through the mountain giants that lie between Interlaken and the Rhone Valley Railroad. At present the short distance between these points requires a two days' trip by carriage to Kandersteg, and on foot across the Gemmi Pass, delightful on a clear day, but dreadful in bad weather, and expensive to all but pedestrians; or else a simply absurd détour by rail via Bern and Lausanne, taking almost as long. The road in question would cover the distance in five or six hours.

Even without these two doubtful roads, Lauterbrunnen will soon be an important railway centre, for it was connected last year with Interlaken and Grindelwald, while a new mountain road up to Mürren was opened a few weeks ago; and next year still another mountain road, leading up from Lauterbrunnen to the Wengernalp and down on the other side to Grindelwald, is to be operated. The road from Interlaken to Lauterbrunnen is an ingenious combination of the rack-and-pinion system with the ordinary adhesive system, the former being used only where there is a considerable rise, whereby much time is saved; and the transition from one system to the other is made without stopping. Much bolder, however, and more interesting, is the branch road which leads up to Mürren, 2,735 feet above Lauterbrunnen. This consists of two sections, the first being worked by a wire rope, which raises the car to a height of about 2,000 feet, at a gradient rising from 40 per cent. to 60 per cent.; while the second is an electric railway on the trolley system, which takes the passengers on slightly rising ground to the superbly situated Hôtel des Alpes. This is, I believe, the first electric railway ever built at a height approximating the top of Mount Washington. Coal being dear in Switzerland, and water-power superabundant (especially on this slope of *Lauterbrunnen—i. e.*, "nothing but springs"), this road can be run on very economic principles, the motive power being furnished by an upper section of the same brook which, leaping into the valley 980 feet, forms the Staubbach, or "dust-brook," falls. Inasmuch as even telegraph and telephone wires are interfered with by electric storms, it will be interesting to see how this electric mountain road will be affected by them.

There was a slight accident a few days before the line was opened to the public, the car in which the projector of the road, the engineer, and a few others were seated being thrown from the track; one man, who jumped overboard, struck a rock, and was slightly injured, while the others, who remained in the car, escaped with the shock. The accident was on the electric section, and was due to some miscalculation regarding the length of the cars and the curvature of the road. The cars were therefore discarded, and the shorter baggage-cars substituted pending the completion of new passenger cars; and so great is the confidence of the public in modern engineers that the very first trains were crowded to their utmost capacity, and have remained so ever since, many, indeed, being compelled to ride or walk for want of room. Thus it seems probable that Mürren, which has been hitherto visited by about 20,000 tourists every summer, will see double that number hereafter. To those who love quiet in a summer resort, the daily arrival of hundreds of tourists, to stay only a few hours, by the new railway will prove an annoyance; and there are not a few who object to mountain railways altogether as unæsthetic intruders into the sublime Alpine solitude. It is also a sad blow to the scores of carriers who have hitherto plied their trade between Lauterbrunnen and Mürren. Yet these men will find some other employment, and thank heaven for releasing them from a trade which is little removed from slavery. Carrying huge Saratoga trunks and heavy men and women up a steep mountain side, about 3,000 feet in two hours, is an occupation the injuriousness of which is proved by the fact that almost all these carriers are pale and age prematurely. The horses, too, will be glad to be released of the burden of carrying daily up this mountain provisions for 500 guests in the two large hotels. For tourists who do not walk, the expense has been greatly lowered. The round trip on the train costs six francs, and the baggage a franc or two, while the price of a horse for yourself, and another (or two men) for the baggage, is twenty-four francs each way, or almost five times as much. It is from the point of economy (of money and time) that tourists will most value the new mountain railroads.

Mürren, which Prof. Tyndall is said to have declared the finest spot in Switzerland, and which certainly has the grandest view of all places adapted for a longish stay (with the possible exception of the Riffelberg above Zermatt), has had special attention attracted to it this summer by the new railway and by the fact that Mr. Stanley had to prolong his stay there for two months on account of the accident to his leg. He slipped and broke his ankle—some say in making way for a lady on a narrow path, others in showing his nephew how to throw a javelin; so that at the very source of history it is sometimes difficult to obtain accurate facts. Mr. Stanley still had to be carried when he left, and during the two weeks that I was at the Hôtel des Alpes he came down stairs only once, on the occasion of a concert by hotel guests on behalf of the poor in Mürren—which, by the way, netted no less than 375 francs, a sum which, as the local pastor announced, was to be expended on a Christmas dinner for the poor, a Christmas tree, and (if aught remained) on warm clothes—a list which might be more sensibly reversed, for they are evidently in need of warm clothes, these poor peasants, whose winter fare consists chiefly of bread and cheese, while their scantily warmed houses are surrounded by walls of snow three to four feet deep, and the roofs are weighed down by huge bowlders, in evidence of the savageness of winter storms. A few francs might also have been reserved for a bath, which these peasants need very much, for they are horribly malodorous and uncleanly—the very antipodes of the "uncivilized" Japanese peasants.

I have spent parts of three summers at Mürren, and have always wondered why among the guests there are so few Americans. A glance at any page of the hotel-register shows that fully two-thirds of the tourists are English, and only about a tenth Americans, which is strange considering that here is some of the finest scenery in the world, with two of the best hotels in Switzerland, and prices only one-half those in American mountain hotels of the same class, so that one can save in a summer the expense of a trip to Europe. Americans have a way of flocking to a few places like Chamounix, Geneva, and Grindelwald, which do not compare with Mürren or Zermatt, where they are scarce. At Mürren they would see from their windows a complete semicircle of snow mountains, including the Wetterhorn, Eiger, Mönch, Jungfrau, Ebnefluh, Breithorn, Gspaltenhorn, etc., with ever new illuminations, pink sunsets, and a play of clouds above and below, almost as interesting as the peaks themselves. The same may be said of the snow-water brooks, the milky-way of glacier streams, and the numerous waterfalls visible from the very hotels. Some of these falls, on the massive sides of the Jungfrau, are temporary, lasting only during the continuance of a rain-storm on the vast mountain; one of these is divided into four falls of tremendous height, suggesting the Yosemite Falls, and is so fine as almost to reconcile one to a rainy day. There are even temporary snow peaks. On August 24 we had a snow-storm during the night, and in the morning the charm of the panoramic view was doubled by what a friend somewhat boldly called "a mushroom growth of snow peaks." It is, indeed, a source of constant wonder to me how much snow adds to the beauty and grandeur of mountains. It makes them not only seem larger, but more plastic in outline. The peaks towards Interlaken, which you had hardly glanced at before, gain from their temporary snow cover a beauty that makes them surprisingly conspicuous and fascinating.

Twenty minutes below Mürren, in a meadow known as the Farnthal (a lovely site for some future hotel), one can also see the avalanches of snow and ice tumbling down the sides of the Jungfrau with a noise like that of artillery. A nearer and more imposing view of these is, however, obtained on the opposite mountain side, at the hotel on the Wengernalp, which faces the place where the avalanches fall down. It is a sublime spectacle to see these hundreds of tons of compressed snow becoming detached from the immeasurable snow fields, and tumbling down headlong over a precipice thousands of feet deep. Then the snow runs down in regular channels till it comes to another precipice, over which it tumbles again, looking very much like a large waterfall; and so on, all the way down to the very foot of the mountain.

Having got so far as this place, you will of course not return to Lauterbrunnen the same way, but go on to the top of the pass known as the Kleine Scheidegg, noting on the way how astoundingly the Jungfrau broadens and changes the aspect of its sides and the position of its peaks, the most conspicuous one being fortunately the aptly named Silberhorn, the most beautiful summit in the world, for it is round as a dome, and not a single bare rock spots the snowy continuity of its surface. Then, from the Scheidegg, you will walk down on the Grindelwald side, along the broadening side of the Eiger, a sheer black precipice of 13,000 feet. When you arrive at Grindelwald, you will wonder where that place got its extraordinary reputation. Everybody goes there, as a matter of course, and nowhere else are there so many Alpenhorn-blowers, yodlers, singing children, useless gate-openers, beggars, and other incarnate nuisances. Germans probably go there because it is in a *geschützte Lage*—that is, down in a hole, where there isn't a breath of fresh air (for the Germans are afraid of a "draught" even when they go to the Alps for an "air-cure"); but why all Americans should go there is a mystery to me, for the sole attraction of Grindelwald is a couple of dirty little glaciers which are mere pigmies compared to the Rhone Glacier on the Furka Pass — which no one can afford to miss—not to speak of the fourteen giant gla-

ciers visible from the Gorner Grat above Zermatt.

The mention of Grindelwald and Zermatt reminds me that I have not by any means enumerated all the new mountain railroads in Switzerland. Zermatt, which, until this summer, was accessible only by a bridle-path, can now be reached from Visp in less than three hours, on a road combining the two systems, like the Interlaken-Lauterbrunnen road. During my stay at Mürren I daily heard the blasting on the road which is to connect Lauterbrunnen with Grindelwald via the Wengernalp. Then there is the road up the St. Beatenberg on the Lake of Thun, opened in 1889. A thousand men are at work on another one near Interlaken, up the Schynige-Platte; and still another is to be opened next year on the Brienzer Rothhorn; while further south, by the Swiss Italian lakes, Monte Generoso has been scaled since last year by a railway which opens such a superb view that Baedeker compares it to the Rigi, and has added a special panorama of it to his new edition. This view I have not seen, but expect to enjoy it in a few days, and in the meantime I hope, for the sake of the bold projectors and tourists who cannot walk, that there is no truth in the pessimistic predictions of those who declare this wholesale building of mountain railways a sort of "boom" which will soon end in a collapse. HENRY T. FINCK.

THE THREE GERMAN LUXEMBOURGS.

MUNICH, September, 1891.

APPARENTLY modern German art at home enjoys a popularity no less great than its reputation abroad. In many German towns artists are sumptuously established in gorgeous *Künstlerhäuser;* in many more they annually hold small local or large national and international exhibitions. In State and public alike they have, it would seem, found profitable patrons.

The pictures they are exhibiting this summer may account for their popularity, but hardly for their reputation. In Berlin and Munich, in Stuttgart and Nuremberg, in shows small and great, I have been struck with the absence of interest in the subjects selected and methods employed by painters, with the dispiriting dulness of the collections as a whole, though here and there a canvas by Arnold Böcklin or Franz Stuck, by Von Uhde or Liebermann, has served as a cheerful antidote. The group of artists who some fifteen years ago came back from the German schools to infuse new life into painting and illustration in America have given Americans a very high opinion of the art of modern Germany—an opinion not to be arbitrarily reversed because one year's exhibitions fail to support it. German artists no doubt have their own substitute for the London fog to explain a year's failure. But in the three German national galleries of modern art, in the three German Luxembourgs, at Berlin, Munich, and Dresden, a fair idea should be formed of the work that has been done of late years in Germany, or at least of that which the Germans themselves think worth honoring by a place in their permanent collections. Certainly in the Paris Luxembourg are to be seen the best examples of the greatest artists in France.

To the imperial capital one naturally turns first. In art, as in politics and social life, Berlin should be to Germany as London is to England, Paris to France. And in Berlin evidently no effort has been spared to treat the modern artist with every distinction. It is but thirty years since the bequest of Herr Wagener served as foundation to the present collection, but the modern pictures have for almost as long been hung in a fine building of their own, more pretentious, perhaps, than artistic in its architecture, like so many other modern German buildings, and have been carefully catalogued by a system more elaborate than lucid, of which I hope to have something to say another time. The galleries are well lighted, and their division into comparatively small cabinets is restful and agreeable, or would be if one cared to look at the limited number of pictures which each contains. But to make the rounds of all is as dreary a function as to go through a Royal Academy.

If in recent times great pictures have been painted in Germany, only too few have found their way into the Berlin National Gallery. The royal portraits and allegories, here as elsewhere, one accepts as painful necessities, below or above criticism. But without considering these, the walls reveal a tendency on the part of the German artist to turn out innumerable battle scenes in which Frenchmen ever figure as so many demons, but which are without the action and power a De Neuville or a Detaille could give to the subject, without the decorative treatment which, with the old men, made up in a measure for want of realism; to tell anecdotes in paint and with a degree of sentiment which would put an English Burton Barber or an American J. G. Brown to the blush; to paint landscapes as devoid of light and atmosphere as if Constable and Corot and Monet had never been, and portraits as lifeless as those that annually adorn the walls of Burlington House. And the worst of it is that on many canvases are well-known names, reverenced as the most eminent in the modern German art world—Kaulbach and Lessing, Meyerheim and Achenbach, Defregger and Feuerbach.

Not on the work which is here to represent them permanently can their reputation rest. Either their fame was, or is, the mere outcome of a passing fad or fancy, or else the directors of the National Gallery have done their utmost to belittle it. A more unpardonable error of judgment, because more obviously absurd, is the covering the walls of three or four large galleries with the Cornelius and Overbeck and Alfred Rethel cartoons, which could be of no possible service to any one unless they were turned the other side out and used as wall paper. The only people who are interested in such productions are the compilers of guide-books and art-histories. To this general rule of uninteresting work, of course, there are very notable exceptions—enough, perhaps, to fill one room. Every true lover of art would travel far to see Menzel's "Modern Cyclops," the most successful picture of an artist who is really greater as a draughtsman than as a painter, though, but for his name, one would not give a second glance to his three other pictures included in the collection. The examples of Diez, Von Uhde, Liebermann, Hans Makart (the "Catherine Cornaro" exhibited in the United States), Brozik, Schuch, and above all of Arnold Böcklin, are as fine and as characteristic as they ought to be. But the treatment of the last is a curious comment upon the policy of the directors. Böcklin, though a Swiss by birth, has identified himself with the South German group of artists. Therefore, in the North German galleries his "Fields of the Blessed," a marvellously brilliant work by one of the most brilliant among contemporary painters, has been skied, while another picture by him, an entombment, is hidden away in a small cabinet, a species of art rubbish-hole, to which the public is not admitted, while the directors decide whether they can overcome their petty prejudices and jealousies and give it the conspicuous place on the walls which it deserves. But for the kindness of the head of one of the departments, who realized how much interested I was in Böcklin, I should never have seen it or, indeed, have known of its presence in the gallery. The favoritism which prevails in Berlin, since it shields itself under a national guise, leads to more serious consequences than in England, where hitherto it has been confined to a close corporation like the Royal Academy.

Even allowing for this favoritism, it is not easy to understand the commonplaceness of the sculpture, since it is in sculpture that the German artist of to-day excels. The inadequacy of the National Gallery in this respect is keenly felt just now when at the Berlin International Exhibition German sculptors are making such an unusually strong showing. It seems as if the directors, or selecting committee, must have gone out of their way to secure what was least striking in the sculptor's studio. Equally difficult of explanation would be the failure of the drawings and engravings to represent modern German illustration, were not illustration an art which in its modern development has nowhere received the official national recognition its healthy popularity demands for it. Thousands of marks have been spent upon the drawings of Adolf Menzel, and of these more than a thousand are now owned by the Gallery. That honor should be shown to one of the greatest masters of modern illustration, I would be the last to dispute. Nor would I question the value of gathering together, as has been done here, as many drawings by Max Klinger as possible, for each is a marvel of technique and style and fancy as wild as Böcklin's. But it must be admitted that one-half the Menzels would have sufficed, many being of no special importance. The money could have been more usefully devoted to examples of Diez and Leibl and the younger draughtsmen who, after Menzel, have made the illustrated books and papers of Germany what they are and have given such an impetus to the illustrators of other countries. But the names of these younger men appear to be unknown to the officials in charge.

At Dresden, matters are not much better or very differently ordered. The modern division of the Royal Gallery there dates back twenty years earlier (1843) than the Berlin collection. But from the beginning it suffered from the generosity of men with less knowledge of art than money to spend on it, or else with greater eagerness for their own self-glorification than for the benefit of the institution they endowed. Like Mr. Tait in England, they presented their pictures to the nation; with the results of private benevolence now to be seen in Dresden, the wisdom of the English Government in refusing Mr. Tait's gift for the National Gallery, and their folly in accepting it as the nucleus of an English Luxembourg, must be more than ever realized. The average in Dresden is not higher than in Berlin, nor is the number of masterpieces greater. Herr Karl Woermann, director and compiler of the Catalogue, boasts that during the last ten years pictures have been added to the modern department which now make it rival in attraction the older portion. But the disinterested visitor can scarcely reëcho his enthusiasm. It is true that the "Crucifixion" by Munkacsy is as worthy of a crowd of worshippers, though fashion has not yet made it a show picture for

the tourist, like the Sistine Madonna, before which the faithful readers of Baedeker for ever sit in awe-struck ignorance.

It is also true that Böcklin and Leibl are well represented, that Andreas Achenbach shows to far better advantage than at Berlin, that Kaulbach's artificial composition rises to the highest degree of monumental and magnificent superficiality, and that of these men, Ferdinand Keller, Carl Ludwig, and a few others, there is sufficient work to form a good, if very small, collection. But what is to be said of the rest—of the inane anecdotes, the inanimate portraits, the flat landscapes? Not even Hans Makart, though as lavish with his canvas as usual, has here the decorative quality which makes him in his most successful efforts the Veronese of his day. And if one recognizes the originals of certain popular engravings—the "Child Jesus in the Temple," by Hofmann, the "Rope Dancer's Life before and behind the Scenes," by Ludwig Knaus, for example—it is but to wonder why, as too often with English work, the reproductions in black and white are so much better. The pictures at Berlin and Dresden alike do but confirm the impression given by this year's exhibitions. The gallery of engravings and drawings is not more satisfactory. There are tons of rubbish, the sweepings, probably, of the studios at the time of the formation of the gallery; but of the original work now being done which is of real value to the draughtsman, there is but little. The student interested in contemporary illustration could pass by Dresden and lose nothing.

Berlin may be the capital of the empire, but Munich, as any art student will tell you, is its true artistic centre. There one would look for better things, and there, I must confess, one finds them. Good work is still the exception even at the New Pinakothek or Bavarian Luxembourg. In room after room the walls are hung with hopeless trash which would be rejected with contempt by an impartial hanging committee, even in London. One would not stop to look at it or to consider it if its presence in such a collection were not so glaring an impertinence. It is no exaggeration to say that fully two-thirds of the canvases could be thrown away without compunction; while it is almost impossible to believe that any one but a Barnum or the superintendent of a Sunday-school festival could have taken seriously the Greek landscapes by Karl Rottman, to which a special gallery has been devoted. But, after all, the proportion of good work is greater than in the Saxon and Prussian galleries. Care and thought have been given to the selection of examples of painters of note. If Menzel has been entirely ignored, which seems (though there may be better reasons) but the result of small squabbling between north and south, on the other hand full justice is done to Feuerbach and Piloty, Albert Keller and Gabriel Max, so that how they came by their reputation no longer remains a problem; a portrait of Bismarck leaves no doubt as to the strength of Lenbach; two panels by Makart confirm his fame as a decorative painter; and Böcklin is, if possible, more than ever to the fore.

But it is in the latest acquisitions that the directors show they are beginning to understand the duties of their office to mean something more than the buying or accepting any chance pictures that come in their way. There is a growing tendency to dispense with trash, to recognize the talent of younger men, and to include only what is fairly and creditably representative. The fine canvases by Leibl, Von Uhde, and Liebermann, Robert Haug and Karl Albrecht are all recent additions. Moreover, as in the Paris Luxembourg, space is found for distinguished foreigners; Munich in this particular proving far broader than Paris, where the Luxembourg is solely for Frenchmen and residents of Paris. Dagnan-Bouveret and Boldini, Mauve, the Belgian Courtens—painters as little appreciated at home as the Scotchmen, John Reid and John Lavery—are among those who have already been included in the New Pinakothek. Altogether, when the weeding-out process begins, as begin it must, in the three German Luxembourgs, it will be least wholesale in Munich. In the department of modern drawings, however, everything remains to be done. A few rough notes by Böcklin, probably odd leaves torn from his sketch-book and almost too trivial for State preservation, are all that could detain the art student. There is absolutely none of the black-and-white work that should by rights be there. To learn what the black-and-white men of Germany are now doing, it is not to Old or New Pinakothek you must go, but to the office of *Fliegende Blätter*.

It is, I know, inevitable in collecting modern pictures that some mistakes should be made. Passing fancy or fashion often gives prominence to a painter destined to be forgotten by after generations; the very healthiness of a reaction against old conventions may lead to extremes the value of which is purely negative and, therefore, temporary. But this alone cannot explain the aggressive defects in these three great galleries. There is no doubt that many of their shortcomings may be attributed, first of all, to the ignorance of directors, who, as a rule, are not artists, and in the selection of modern work have not tradition to guide them, or, at least, to back up their selection; and, next, to the impossibility of one country nowadays supporting three large art centres. Germany really shows the danger we should run if each of our principal States tried to set up a little Luxembourg of its own—if the good examples of American artists were scattered in rival would-be national galleries in New York and Boston, Washington and Chicago. If we are ever to have a valuable and representative collection, one town, no matter which, must be accepted as the national art centre. But the German galleries also emphasize the absurdity of limiting such a collection to the productions of native artists. The only permanent exhibition of modern pictures worth establishing is one to which the painters of the world, whether American or European, should be asked to contribute. France escapes the evil into which Germany has fallen, since, though almost all the leading French provincial towns have galleries, and very good some of them are, only the Luxembourg in Paris is accepted as the central national collection. English art likewise, even if it has only escaped this Scylla to be wrecked upon a worse Charybdis, has its national headquarters in London, and the Liverpool and Manchester permanent exhibitions, like those of Lyons and Toulouse, are looked upon as wholly provincial.

But it would be difficult to make Germans agree upon the national supremacy of Berlin, or Dresden, or Munich. Pictures which, if collected together, would make a fairly good show, though one not to be compared to the Paris Luxembourg, are now divided among three institutions. Unfortunately, directors would rather cover their walls with acres of paint and canvas that cannot by courtesy be called art than leave them decently bare. Despite the number of pictures bought every year by the State, France has shown her good sense by reserving only the best and the most typical for the Luxembourg. But in this respect England is now following the lead of Germany. Just as the National Gallery is laboring hard to get rid of its valueless purchases and gifts, the English Luxembourg, the building for which will shortly be erected in South Kensington, begins its career by accepting from Mr. Tait all the paintings he chooses to bestow upon it, good and bad—a tribute to his cleverness in carrying his point rather than to the nation's shrewdness. However, that which gives one least hope for the needed reforms in the German galleries is the wretched favoritism from which the art world is no more free than the social or political. It is the old story—the story told of the State purchase of pictures at the Salon, of the use made of the Chantry Bequest fund by the Royal Academy trustees. Northern and southern German artists are continually bickering, and their childish squabbles, their prejudices and preferences, rather than the quality of their work, open or shut the doors of the galleries against them. Indeed, private patronage at times has proved much more reliable than State recognition, and the finest examples of many painters have found their way into private collections.

That the German Luxembourgs fall so far short of fulfilling the end for which they were instituted is the more deplorable because their management is in most respects admirable. The attendants are unusually intelligent, while the heads of the various departments are ready to render every possible service to the student. Upon mere application and without restriction, drawings are shown to a stranger, who in the British Museum for a similar privilege probably would be asked for a reference, and then carefully superintended. If only the choice of paintings and drawings was as excellent as the organization of the staff in charge of them, then the German would be the ideal Luxembourg. N. N.

Correspondence.

OUR COAL SUPPLY.

To the Editor of The Nation:

Sir: Referring to the interesting paper of Prof. G. Frederick Wright in the *Nation* of September 10, 1891, entitled "England's Coal Supply," in which the quantity now remaining in that country, exclusive of the insufficiently authenticated "southeastern field," is estimated at little over fifty years' consumption, it is pertinent for Americans to remember that the excessive estimates of duration by the Royal Commission (of 1866?) erred not so much by misconception of areas and contents as by failure to foresee the astonishing rate of acceleration in consumption.

On the other hand, while we in the United States have the advantage of twenty-five years' additional observation of the ever-increasing rate of consumption—which increase has averaged not far from 10 per cent. per annum, compounding annually—we still lack precise information respecting area, thickness, and quantity. The census reports of 1890, though abounding in voluminous figures concerning production, price, cost, capital and hands employed, and other details already familiar to those interested in the subject, seem, as far as published, to afford little new light on the essential elements of the calculation for duration. In the absence of sufficiently precise knowledge on those points, one is driven to hypothetic estimates which can

at present be little better than intelligent guesses, useful rather for directing the attention of better-informed and more competent inquirers to the subject than as final calculations.

If we assume that the United States contain—including all tertiary and other deposits posterior to those of the carboniferous period—150,000 square miles, or 96,000,000 acres of coal territory on which the minable coal, ranging from one to sixty feet in thickness, averages eight feet throughout, the entire tonnage of removable coal would be about 768,000 million tons, which is probably a large over-estimate. Taking the present annual production at 130 million tons, with an annual compounding increase of 10 per cent. (the actual rate) for the next twenty-five years; of 5 per cent. for the next fifty years thereafter; and of 3 per cent. for the twenty-five years following, the aggregate consumption by the end of one hundred years, *i. e.*, by A. D. 1991, will have been 840,000 million tons, a quantity exceeding, or at least approaching, exhaustion.

Of course, the above is the merest approximation, since of the three principal elements of the calculation, all are as yet enveloped in doubt. We have not a precise knowledge of the carboniferous area, and there are even less reliable data for estimating its average thickness. Still more uncertain is the future rate of increase in consumption. We, however, know nearly what it has averaged during two generations past, and there seems little reason to doubt that the existing rate of increase will be maintained until artificial power shall have been applied to nearly all the work of a population whose necessities and luxuries tend to augment even faster than its numbers, and can have no limits but the final barriers of human knowledge, if any such exist. The exhaustion that must at some time be reached of the diminishing accumulations of mineral oil and gas, and even the growing use of electricity and water-gas—as those commodities are now produced—must tend to a still more rapid consumption of fuel, since these but change the form of application of power obtained only by its combustion, with considerable loss of power in the conversion.

It is therefore only the most tentative estimates that can now be ventured respecting the quantity and duration of American coal, but this initial attempt may at least serve to attract attention to what, in the absence of some new conquest over Nature, is likely to become a subject of universal interest before the expiration of some lives already in existence.

I. J. Wistar.

Philadelphia, September 16, 1891.

"BEEN" AND "GOTTEN."

To the Editor of The Nation:

Sir: Referring to your remarks, in a recent review, about the pronunciation of the word *been*, let me ask whether the prevailing American usage be not a survival of what was common in England two or three centuries ago. The present English pronunciation was adopted, probably, gradually. Pope makes *been* rhyme with *sin* about half the time, but I think no English poet of the nineteenth century rhymes it with anything but *seen*. Is not this a fair proof of present English use? For it is well known that the license in the matter of rhymes once allowed to English poets is much restricted, perhaps confined to certain common words with few or no perfect rhymes.

The American use of *gotten*, as the past participle of *get*, is harder to explain. In England it would be considered as much an archaism as *holpen* or *washen*, and in modern English books occurs only as representing rustic speech. In America, it does not seem to be one of the numerous survivals, for it is heard not so much among the uneducated as among certain persons who are careful in their language, and who seem to use the word with some effort.—Yours respectfully, X.

Philadelphia, September 14, 1891.

Notes.

Thomas Whittaker is soon to publish 'The Church in Nova Scotia and the Tory Clergy of the Revolution,' by Arthur Wentworth Eaton.

D. Appleton's fall announcements include *éditions de luxe* of Jules Breton's 'Life of an Artist' and 'The Story of My House,' by George H. Ellwanger; a large-paper edition, of one hundred numbered copies only, of Bancroft's 'History of the United States,' in six volumes, with a portrait; 'The Tragedy of Ida Noble,' by W. Clark Russell; three translations of examples of modern Dutch fiction ('Eline Vere,' 'Footsteps of Fate,' and 'Avenged'); illustrated juveniles by Octave Thanet, William O. Stoddard, Molly Elliot Seawell, and others; Père Didon's 'Life of Christ'; the third volume of Prof. J. B. McMaster's 'History of the People of the United States'; 'Man and the Glacial Period,' by G. Frederick Wright; 'The Courses of Study for Schools and Colleges,' by W. T. Harris; and 'The Dog in Health and Disease, by Wesley Mills.

The Scribners are to issue a series of University Extension Manuals, the volumes announced to lead off being 'The Use and Abuse of Money,' by Dr. W. Cunningham, and 'The Fine Arts,' by G. B. Brown.

A new novel by Grant Allen, 'Recalled to Life,' is soon to be published by Henry Holt & Co.

Additional fall announcements by Houghton, Mifflin & Co. promise Prof. C. E. Norton's translation of Dante's 'Divine Comedy,' in three volumes; 'Vermont' and 'New Jersey' in the American Commonwealths Series; 'Huckleberries Gathered from New England Hills,' by Rose Terry Cooke; 'Masks, Heads, and Faces,' by Ellen Russell Emerson; 'Colonial Furniture of New England,' by Irving Whitall Lyon; Edward Robinson's 'Catalogue of Casts' of the Boston Museum of Fine Arts; 'The Silva of North America,' vol. iii., by Charles S. Sargent; 'William Gilmore Simms,' by Prof. William P. Trent (vol. xii. in the American Men of Letters Series); a new edition, more attractively bound, of a charming story for children, 'The Birds' Christmas Carol,' by Kate Douglas Wiggin; and Mr. Justin Winsor's long-expected and very timely book, 'Christopher Columbus.'

Two Scottish works, 'Auld Scots Humor' and 'Auld Scots Ballads,' are soon to issue from the press of J. G. Cupples, Boston. The same publisher has in preparation a Life of Paul Revere, by E. H. Goss.

A second edition of Dr. Benjamin Rand's 'Selections Illustrating Economic History since the Seven Years' War' will soon be published. The work is used at Harvard and some other American universities as a text-book of required reading to accompany courses of lectures on economic history. The second edition will be much enlarged, containing several new chapters on such subjects as land tenure, transportation, progress in trade and industry, navigation acts, industrial development of the United States, etc. This new edition will be published early in October.

A 'Hand-book of Industrial Organic Chemistry,' by Prof. Samuel P. Sadtler, is about to issue from the press of the J. B. Lippincott Co. Full bibliographical lists are promised for each chapter, with many illustrative cuts of apparatus, etc.

The young women publishers of Chicago—the Misses Searle and Gorton—announce several booklets for children, among which we mention 'Our Dumb Friends,' 'Mother Goose's Christmas Party,' and 'How the Rose Found the King's Daughter.'

A fifth volume of Mr. William Archer's edition of Ibsen's Prose Dramas has appeared this fall; it contains "Rosmersholm," "The Lady from the Sea," and the editor's own translation of "Hedda Gabler." About the same time has been published 'The Quintessence of Ibsenism,' by Mr. G. Bernard Shaw, the author of that most unconventional of English novels, 'Cashel Byron's Profession.' Another British novelist, Mr. D. Christie Murray, has recently been writing to the London *Times*, declaring fervently that no possible temptation shall ever make him swerve from the straight path of English morality into indecent by-ways of Ibsenism.

The interesting announcement is made that Mr. Pinches is to write a series of articles for the *Expository Times* on the Old Testament and the cuneiform inscriptions. The whole field of discovery in this department is to be traversed, Schrader's work being taken as the basis; the corrections and additions made necessary by new material will be noticed in their places. Prof. Sayce, who cordially commends the undertaking, is himself to write for the same journal several papers on the higher criticism and the monuments.

Nine of the articles which Agnes Repplier has printed in the *Atlantic Monthly* and elsewhere are collected in book form under the title 'Points of View' (Houghton, Mifflin & Co.). The author's unconventional and witty handling of her topics, mostly literary and critical, strikes one afresh in this massing of scattered writings.

Mr. Theodore Graham Gribble, an English civil engineer, is the author of 'Preliminary Survey and Estimates' (Longmans, Green & Co.), containing about one-half as much matter as Johnson's or Gillespie's 'Surveying.' It is one of the most straightforward, clear, and practical works of its class ever written. Mr. Gribble received what in England is considered a first-class education in surveying and engineering, and then sought his fortune in the colonies. He found employment on the Canadian Pacific Railway, and soon came to the conclusion, which subsequent wide experience confirmed, that the English engineer was "educated as much as possible in things he *could not* use, and as little as possible in things which *would* be needed by him in a new country." The belief that an English engineer who has had no experience out of England, is "no good" in a new country, is one long entertained by American engineers, but we have never seen it or heard it expressed with such emphasis and in such various forms as by Mr. Gribble. The object of a "preliminary survey," more especially for a railway, is to determine, among other things, whether any kind of line is feasible; whether it is likely to be profitable; what type of railway would be most suitable and what style of rolling-stock; and to obtain the data for a plan, profile, and estimate of one or more routes which the surveyor considers eligible. Upon all these matters and many others mentioned by Mr. Gribble the engineer must report to his

employers. Of course work of this sort is given only to engineers of experience, and it is for such primarily that the book was written; but it will be found interesting and instructive to every one who is, or intends to become, an engineer.

John Wiley & Sons have just issued the seventh edition of 'Theory and Practice of Surveying,' by J. B. Johnson, C.E., Professor of Civil Engineering in Washington University, St. Louis, Mo. It is but a little more than four years since this large, elaborate, and consequently costly work was first issued, and in that short time six editions have been exhausted. Yet it never sacrifices one jot or tittle of theoretical completeness and accuracy, nor makes any concessions to the ignorance of those who endeavor to practise a profession for which they lack the necessary preliminary training. The author has striven after perfection, not popularity. Moreover, the work was launched upon a market already supplied and to be supplied with first-rate rivals, such as Gillespie's two admirable volumes and the excellent work on 'Plane-Surveying' by Prof. Carhart of the Western University of Pennsylvania. The appearance within less than five years of a revised and enlarged seventh edition of Johnson's work, in the face of such competition, renders all detailed criticism unnecessary.

A new quiz-book for medical students is published by P. Blakiston, Son & Co., Philaphia, comprising some 3,000 questions arranged for self-examination and with proper references to standard works. The same firm brings out a third edition, revised and enlarged, of Prof. Louis Starr's successful 'Hygiene of the Nursery.'

M. Hugues de Roux, one of the most facile of the younger Parisian journalists, has recently gathered into a volume, 'Portraits de Cire' (Paris: Lecène, Oudin & Cie.; New York: F. W. Christern), a score or more of semi-critical, semi-gossiping personal articles. The most interesting are those devoted to M. Jules Lemaitre, one of whose pupils M. Le Roux was when the author of 'Les Contemporains' was still a professor of literature, and to M. Melchior de Vogüé, to whom the younger generation of French authors is deeply indebted for the opening of new horizons. The sketches of the late Jules Garnier, the illustrator of Rabelais, and of M. Jules Cheret, the inventor of the brilliant lithographic "poster," are also noteworthy.

It is not a bad thing to be reminded now and then that no literary phenomenon, however trifling, is ever strictly local in its manifestation. No literary "movement" was ever slighter than the Young Englandism that Thackeray laughed at in 'Jeames's Diary,' and none was ever more completely forgotten. It may be doubted whether the Duke of Rutland himself remembers more than one couplet of Lord John Manners's verses. But the death of Oscar von Redwitz, which has just occurred, brings back to memory the fact that Germany had, simultaneously with England, a touch of the same stained-glass romanticism. Von Redwitz's name was at one time almost famous. He published in 1849 a mediæval poem, "Amaranth," which ran through forty or fifty editions. In smooth and agreeable verse, of pleasing rhythm, he sang of Gothic castles and chivalry and ladies and knights, quite after the fashion of Thackeray's young Lord Southdown. But the brief moment passed, and he lost at once his hold on the public. Though continuing to write for many years, he never regained it. Then he retired, and was only to be seen now and then at literary gatherings, an old man, kindly to the young, and fond of telling the story of a student duel in which he got the great scar that marked his face. He went to his grave (as the *Revue Bleue* says) "forgotten, misunderstood, old before his time." His fate seems not less but more pathetic by reason of the worthlessness of his work.

Parliamentary Paper C. 6366, 1891, 'Report by Mr. C. W. Campbell of a Journey in North Corea' in 1889, gives singular proof of that untiring energy, love of exploration, and devotion to service which so much characterizes the Foreign Civil Service of the British Empire, and which has made that Empire the success which it is. It is seldom that "Her Majesty" ever presents to "Both Houses of Parliament" a more interesting document, and ninepence would be much better spent upon it than upon most books of adventure and summer reading. It is not every civil-servant that feels inclined to spend his time in exploring an unknown country. Corea is shown to be naturally rich and fertile, but cursed with an imbecile government and inhabited by a supine population. Upon the whole, Mr. Campbell carries away a kindly feeling towards the inhabitants, although upon one occasion he was roughly handled. It is not usual to find people in the Corean stage of development so appreciative of fine scenery. "Manchester goods" have already established a firm hold on the markets of the country. Large districts are undoubtedly rich in gold. Money goes far: we are told of a perpetual shooting right over ninety square miles of land being sold for $1 50. The narrative is simple, straightforward, and unaffected.

Under the title of 'The Karankawa Indians of Texas,' the Peabody Museum of Cambridge, Mass., has published an account of this people, together with a short vocabulary of their language. It was prepared by Albert S. Gatschet of the Bureau of Ethnology, and is based upon the early records and the recollections of Mrs. Alice W. Oliver of Lynn, Mass. This lady lived, for some years subsequent to 1838, on the shores of Matagorda Bay, and it was at this time and while the Indians still frequented the spot that she learned to speak their language. As the tribe has become extinct and Mrs. Oliver herself has lately passed away, it is not probable that we shall ever know any more about the matter than is here set forth. This, unfortunately, is very little; for, aside from what Joutel tells us of their manners and customs, our knowledge may be summed up in the fact that their language was allied to that of the Tonkaway, and to the dialects spoken by some of the tribes called by Mr. Gatschet the Pakawa, who lived on the lower Rio Grande.

The first number of a new monthly, the *Charities Review*, is announced to appear on November 1. It is to be devoted to the discussion of social questions, and particularly the organization of charity. It will be published by the *Critic* Co.

An article on our new international copyright law in the *Revue Bleue* of September 5 gives a sufficiently adequate account of that measure, with its deficiencies, but rather ludicrously assigns a large share of the credit of securing its enactment to French initiative. After giving an account of the successive triumphs won by France, "le pays, par excellence, de la production littéraire et artistique," in her endeavors to lead the nations to the due recognition of the rights of authors, the author, M. de Varigny, adds, "restait à y amener les États-Unis." The thing was mostly done by M. de Kératry, we are told, though it is conceded that he was "puissamment secondé" by the Literary and Artistic Association (of Paris), the Minister for Foreign Affairs (of France), and his agent (the French Minister) at Washington, and—gracious recognition of the legislative body swayed by the Count—the "sense of fairness of the United States Congress."

The last Bulletin of the French Geographical Society contains an interesting account of the French Sudan by Lieut.-Col. Humbert. Little attention is paid to the physical features of the country, but the people, their modes of life, their religion, and relations to the French are described briefly, yet carefully and clearly. The slave-trade is prohibited, but domestic slavery is not interfered with, though free villages have been established for the reception of runaway slaves. Here, if they are not claimed by their masters within a certain time, they receive a house with a piece of land to cultivate, and after a probation of three months are declared free men. The French occupying force, consisting of 350 Europeans and 900 blacks, garrison fifteen posts about one hundred kilometres (sixty-two miles) apart, but they are regarded as far too few for the proper defence of the country and the development of its commerce. The present situation is summed up as follows: "The French Sudan is scantily populated; there are few ways of communication; peace is not absolutely established; our organization is not yet complete." The author very strenuously advocates the completion of the railway connecting Senegal with the Niger. Two lines of different gauges, 172 kilometres long, are now built, leaving 348 kilometres to be constructed. This road, he thinks, should take precedence of the now popular scheme of building a railway across the Sahara.

Mr. Alfred B. Westrup writes us that the paper of which he is the editor, the *Auditor*, is not "an Alliance newspaper," as we supposed, but "an independent journal devoted exclusively to the money question."

—The Atlas belonging to Humann-Puchstein's 'Reisen in Kleinasien und Nordsyrien' (Berlin: Dietrich Reimer) contains three maps by Kiepert and fifty-three plates, illustrating subjects widely separate in both time and locality. Nine plates illustrate the Hittito rock-sculptures of Boghazkieni and Öyük, while six are devoted to Hittite monuments of northern Syria at Sendjirli, Saktchegözü, and Marash; twenty-two plates depict the ruins around the tumulus-grave of Antiochos I., King of Kommagene, on the summit of Nemrud Dagh in the extreme northeastern corner of Syria, while seven others represent monuments at various places in Kommagene, all belonging to the reign of Antiochos; three plates show us a Roman bridge at Kiakhta in northern Syria, and, lastly, six plates refer to modern Turkey. This Antiochos I. of Kommagene, who built his tomb on the summit of the highest mountain in his kingdom, and adorned it, in truly regal fashion, with portraits of the gods and his hero-ancestors, could boast both of royal Persian and royal Hellenic descent. In the long inscriptions he gives his own family tree, in which, through Rhodogune, the Persian princess, he traces his origin back sixteen generations to Darius Hystaspis, while, through Laodike, the Syrian princess and daughter of Antiochos VIII. of Syria, he *claims* descent from Alexander the Great. Interesting to Hellenists is the fact that our Antiochos is a lineal descendant of the Orontes whom Xenophon mentions as satrap of Armenia, who, by virtue of having married into the royal house, bequeathed his satrapy to his descendants for

ever. Indeed, the Kommagenian dynasty can now be traced through a period of seven centuries.

—One of the most curious and interesting discoveries on Nemrud Dagh was that depicted on plate xl., being the horoscope of Antiochos. We see there in high relief the picture of a colossal lion, from whose neck hangs suspended a crescent moon. The body of the lion is bestrewn with eight-rayed stars, while in the background are seen three sixteen-rayed stars, bearing the names of Mars, Mercury, and Jupiter. Plainly the relief has an astrological meaning, and informs us that when Antiochos was conceived, the sign of the lion rose, and that at the same time the Moon, Mars, Mercury, and Jupiter stood in the sign of the lion. Prof. Tietjen of Berlin caused the time of the constellation to be reckoned by Paul Lehmann, who found that the day referred to by the relief was the 17th of July in the year 98 B. C. Now Antiochos states in his inscription that he was a seven months' child, and so this would throw his birth into the beginning of the year 97 B. C., a date which corresponds well with what is known of the king in history. Such a constellation was called *royal* by the astrologers, since he who fulfilled the conditions must needs become king.

—The extraordinary and varied productiveness of some of the younger French scholars of the present generation calls to mind the wonderful days of the Estiennes and Scaligers. M. Salomon Reinach, for example, is already known as the author of valuable works on philosophy, Latin grammar, Greek epigraphy, classical archæology, and also as the editor of not a few monumental publications relating to Greek and Roman antiquity. To this list he now adds 'Chroniques d'Orient' (Paris: Firmin-Didot), a bulky volume of nearly eight hundred pages, consisting mainly of reprints of reports which appeared from his hand in the *Revue Archéologique* upon excavations and discoveries in Greek lands between 1883 and 1890, together with several articles upon like topics, also written by the author for various periodicals. The value of the original reports is greatly enhanced, not only by the index of fifty pages—with hardly less than ten thousand references—but also by the addition of many foot-notes, in which the information given in the text is brought to date and attention is called to recent literature. These 'Chroniques,' at first little more than meagre reports of recent finds, gradually became a complete repertory of information not alone upon these matters, but also upon the substance of the more important articles and minor publications upon Greek archæological discoveries, as they were issued; upon bibliography in general, and upon the acquisitions of museums. Though the last seven years have not been signalized by campaigns as brilliant or as extensive as those of the former decade—which saw the excavation of Olympia, Pergamon, Delos, Dodona, Myrina—they have yet afforded much that is highly important—innumerable minor discoveries at various points, not to dwell on the light shed upon Greek art under the Peisistratidae by the excavations upon the Acropolis of Athens since 1886, nor upon the results of the work at Epidaurus, Cyprus, Icaria, and elsewhere, interesting from more than one point of view. Of all these later discoveries this volume contains a well-digested record, always presented attractively and often very fully. The author has his aversions and does not conceal them. The articles, printed here as appendices, on the so-called "Asiatic terracottas"—as a rule, forgeries made in Athens, probably by Italian artists—are interesting reading. M. Reinach's warnings are needed. For, although archæologists are in the main of one mind on the matter, they are not outspoken, and, as a result of this apathy, the forgers and the dealers in these figurines continue their corrupt practices upon a public still reluctant to be undeceived. This handsome volume—with its convenient index to an important part of the unindexed *Revue Archéologique*—will be a boon to many a library, and not least to the increasing number of persons who wish to keep themselves informed as to what has lately been done and is now doing in archæological research in Greece and in the Hellenic Orient.

—A grievous loss has befallen the native community of Calcutta in the death, on the 29th of July, at the age of seventy, of the most eminent and enlightened of its scholars and one of the foremost of its philanthropists, Pandit Iswarachandra Vidyasagara. Learned, liberal, conciliating, and modest, the Pandit was in equal measure revered by his own people and respected by all Englishmen and Americans with whom he was brought into contact. Of his sterling merits, whether as a man, as an educationist, or as a writer and editor, anything like full particulars would be out of place in our columns. Nor can more than brief reference here be made to the demonstrations of regret which followed the announcement of his decease. A single one may, however, be mentioned. As he was a Brahmin, some of the pupils of his own school evinced their sense of bereavement, inappropriately enough, though from laudable motives, by resolving to go barefoot for ten days; this being, among Hindus of sacred rank, the manner of mourning for their near kindred. Born of parents far from wealthy, the Pandit, utilizing a sound education of the old stamp and improving on it with prescient sagacity, succeeded in raising himself, by energy and perseverance, both to material prosperity and to such fame as few of his countrymen have, in later times, achieved. Alike theoretically and practically a devoted friend of female education, he established no fewer than forty schools for native girls, to the support of which he contributed with his habitual munificence. In him the remarriage of widows also had a strenuous advocate; and it was mainly owing to his exertions that the Indian Government was induced, in 1856, to pass an act by which the sons of married Hindu widows are entitled to inherit property. Of his various publications, the high value is recognized by all competent judges; and, by general acknowledgment, his mother tongue is indebted to him in no small degree for its present expansion, purity, and elegance. For independence of character, for moral excellence of every description, and especially for humanity and beneficence, one could not, by all accounts, award him praise exceeding his deserts. That, in his latter years, he withdrew himself a good deal from commerce with his educated compatriots, as distrusting their moral courage, was, let it be hoped, because of his misunderstanding them. Several meetings have, as was to be expected, been held in honor of his memory, which abundantly claims to be kept alive by some substantial endowment bearing his name.

—The death of Pandit Iswarachandra was preceded, by an interval of only three days, by that of his fellow-townsman, Rajendralal Mitra, a person who attained, outside of India, a much greater celebrity, yet one which he will eventually be found to have little deserved. His character, as drawn by those who were most intimate with him, by no means commands respect. In what he accomplished in book-making and the like, as in his literary career, traces of want of conscience are too often discoverable. As to the immense amount of work, ranging from good to exceedingly bad, for which he has the credit, by far the greater part of it was executed by others; and his assistants were seldom of the best. The traits of the jackdaw of natural history and fable are at once associated with the thought of him. In his numerous editions of Sanskrit texts, and in his translations and what not, there is little that is trustworthy, or that possesses other than slight value; his acquaintance with the ancient language of India having been that of a mere sciolist. In fact, the whole compass of his information was superficial in the extreme, while his pretentiousness knew no limits. His confusion of the Ten Commandments and the Twelve Tables will suggest what he was capable of. Prof. Max Müller has, however, seen fit to name him side by side with Niebuhr, and has also spoken of him as a Brahmin, whereas he belonged to the humblest of the Hindu castes, the Sudra, or servile. According to his own account of his origin, he was of descent no less than regal; a claim which nothing could surpass for preposterousness. In short, he was of a piece throughout, and, equally as regards scholarship and personally, was such that, the more narrowly he is scrutinized, the more unfavorable will be the estimate of him which facts will necessitate.

—Those who are versed in ecclesiastical lore tell us that, from and including St. John, who was Bishop of Ephesus, there have been but five instances of bishops whose episcopate has reached the length of fifty years. Such being the case, there is good reason to hope that the New World may add one more jubilee in the history of the Christian Church. On the 24th of August the Right Reverend William Piercy Austin, Bishop of Guiana and Primate of the West Indies, entered upon the fiftieth year of his Episcopate in Guiana, and on that day he received from the Archbishop of Canterbury the short but expressive telegram: "*Felicitates*, CANTUAR." Should Bishop Austin attain the completion of his jubilee, the event is to be heartily celebrated on the 24th of August, 1892, at Georgetown, British Guiana, where the Bishops of the West Indian Province of the Anglican Church will at that time assemble. A cathedral is now being built in Georgetown, and it is hoped that it will be completed in time to be used for the services at the jubilee. Bishop Austin proposes to invite some of the bishops of the American branch of the Anglican Communion to join in the rejoicings next year at Georgetown. To some of his American brethren the Bishop is known from his presence at the Pan-Anglican synods which have been held in England of late years, where he was conspicuous by his tall, stately form and handsome face. Although himself born in England (November 7, 1807), Dr. Austin is a member of an old West Indian family, which has for generations been settled in Barbados and Guiana.

—In a recent number of *Black and White*, the new London weekly illustrated journal, Justin McCarthy says he has lately been reading 'Sam Slick,' and has found in it the slang phrase "real jam" as genuine slang from New

England, although he had thought it was a bit of London slang. "In fact," says the genial Historian of our Own Times, "I know that in an English novel published about twelve years ago by an author who knew America, some ridicule is poured out on an Englishwoman who fancied 'real jam' was American and not Cockney slang." The original record of many a term in use on this side of the Atlantic will be found in Judge Haliburton's entertaining pages. Even Topsy's famous expression, in chapter xx. of 'Uncle Tom's Cabin,' "'*spect I grow'd*," was anticipated by the Judge, for, in chapter xii. of the 'Clockmaker,' the girl who asked the minister whether he wanted "a young lady to do chamber business and breed worms" (housework and rearing silk worms), used the same language. Asked by the minister where she was brought up, "Why," says she, "I guess I warn't brought up at all. I grow'd up." Mrs. Stowe's book appeared in 1852, Judge Haliburton's was published by Bentley in London, in 1838, but the first twenty chapters of it had appeared two or three years before in Joseph Howe's newspaper, the *Nova Scotian*. Haliburton was recognized by Artemus Ward as the pioneer of the American literary humorists. Some half-dozen of his humorous works are advertised daily by the old-established London firm of Hurst & Blackett. His political writings are frequently quoted by writers upon questions affecting the government of the British Colonies. Nevertheless, it has not been the "Old Judge's" lot to be included either in the series of English Men of Letters or in the like series of American.

—It was but in March last that we noticed Mr. G. Kruell's surpassing wood-portrait of Lincoln, and now we have before us a Webster from the same cunning hand, on an even larger scale (12x10½), and in point of technique—what we should not have thought possible—perhaps even more to be admired. The tone of this engraving is brighter than that of the Lincoln, yet there is a sober gravity in the countenance which fully expresses the weight of the lawyer and statesman. The view is a front one; the mouth firmly closed, the eyes shaded in their cavernous recesses. We cannot yet say—

"from those great eyes
The soul has fled:"

but the age depicted cannot be far from Webster's end. The modelling of the face is extraordinarily minute, divining and interpreting the features of the original daguerreotype; but the treatment is equally broad, harmonious, unified, and in no other one of the series of Kruell's portraits is the brushlike and plastic quality of his art more manifest. We said deliberately of the Lincoln that it was destined to be the historic likeness of the President, for never had that homely face been treated before with so much sympathy and poetry, and at the same time so authentically. The Webster is not less calculated to cast all previous prints in the shade. To the legal profession, apt to cherish the portraits of its great luminaries, it must commend itself at sight. Connoisseurs of engraving, on their part, will esteem it among the highest productions of the present or any other period. The Webster is published by F. Keppel, 20 East Sixteenth Street, New York.

BURGESS'S POLITICAL SCIENCE.

Political Science and Comparative Constitutional Law. By John W. Burgess. 2 vols. Ginn & Co. 1891.

It is not easy to condense the succinct although somewhat involved statement of the theory of the State which constitutes the principal feature of this treatise, but we shall attempt to give the substance of this theory. It consists in the main in the establishment and application of distinctions between the nation, the State, and the government. A population of an ethnic unity, inhabiting a territory of a geographic unity, is a nation. By geographic unity is meant a territory separated from other territories by physical barriers to communication. By ethnic unity is meant "a population having a common language and literature, a common tradition and history, a common custom, and a common consciousness of rights and wrongs," and especially a common speech. Common descent and sameness of race are not qualities necessary to national existence. Where these unities coincide, "the nation is almost sure to organize itself politically—to become a State." But not every nation becomes a State, and the author infers from history that many nations will never become States, but must always be subject to nations of greater capacity for political organization. He goes so far, indeed, as to declare that the national State has hitherto been created only by Teutonic political genius—a fact which "stamps the Teutonic nations as the political nations *par excellence*, and authorizes them, in the economy of the world, to assume the leadership in the establishment and administration of States." Before this authority all ordinary morality yields. "The Teutonic nations can never regard the exercise of political power as a right of man." It is not only their right to subdue other nations, but their duty also. They must force organization upon "unpolitical populations" by any means which they deem necessary to accomplish this result, and if the unpolitical population resists, it may be righteously swept off the face of the earth. It is "weak sentimentality" to feel any scruple about this policy, for it is the plain mandate of Providence to his "peculiar people."

To return to Prof. Burgess's distinctions: "From the standpoint of the idea, the State is mankind viewed as an organized unit. From the standpoint of the concept, it is a particular portion of mankind viewed as an organized unit," and this is the definition required for the purposes of this treatise. The State is all-comprehensive and exclusive; there can be no stateless person within its limits, nor can there be two organizations of the State for the same population and within the same territory. It is also permanent and it is sovereign—a point to which we shall presently return. Some writers have maintained that the State was founded by God, others that it was constituted by human agreement, but Prof. Burgess's view, which reconciles all others, is that it is the product of history. This means that it is the gradual and continuous development of human society towards a perfect and universal organization of mankind; the gradual realization, in legal institutions, of the universal principles of human nature, and the gradual subordination of the individual side of that nature to the universal side. The State, therefore, has a consciousness of its own, and this consciousness is the interpreter of the order of life for its subjects. "The so-called laws of God, of nature, of reason," are therefore for the subject what the State declares them to be. There may be a world-consciousness, but as it lacks organization, it must in the present stage of evolution be treated as non-existent. The ultimate end of the State is the perfection of humanity; its proximate ends are government and liberty. The State has often been confounded with the Government, but it exists separately in idea, and in the process of evolution it tends to a separate existence in reality. Properly, the organization of the State is outside of and supreme over the Government, and this is best illustrated in our own State. Back of our Government lies the Constitution, and back of the Constitution lies the original sovereign State, which ordains the constitution both of Government and of liberty.

Liberty, therefore, is derived from and created by the State alone. Individuals have it not nor ever can have it except as the gift of the State. There are no natural rights. If there were, the individual would be above the State, whereas the State is itself the highest entity, and represents in itself the highest good. The State may, and should, protect the liberties of its subjects which it has created against the Government which it creates, but its power over the liberties of its subjects is absolute, and in the exercise of this power it can do no wrong. It is true that Prof. Burgess sometimes says that the State should exercise its powers with justice, but these expressions are evidently incautious, for they would imply that the State could do wrong and that justice was a higher good than the State itself, which he explicitly denies. It follows at once from these propositions that the prerogatives assigned above to Teutonic States belong properly to all States. Provided it conformed to "geographical unity," there was nothing immoral in the partition of Poland, and there would be nothing immoral to-day in the partition of Switzerland by the neighboring States, even if every Swiss was slaughtered in the process.

It is easy to see that whatever Prof. Burgess supposes himself to be maintaining, he is really preaching a doctrine of pure force, for by his terms he has elevated the State above the sphere of morality. The State must decide for itself what constitutes its proper geographic unity, and the voice neither of Prof. Burgess nor of any other human being, nor even of any other State, shall be heard to protest. The State wills it, and the State can do no wrong. Man, "who battles for the True, the Just," is wrong, and Nature is right—Nature, who,

"——red in tooth and claw
With ravine, shrieked against his creed."

To Prof. Burgess an "unpolitical population" is as pestilent an abomination as the uncircumcised Canaanites of old were to the Hebrew prophets. Are not their lands goodly lands, lands flowing with milk and honey, and shall we not smite them hip and thigh, and occupy their great and goodly cities, which we builded not, and eat of their vineyards and olive trees, which we planted not? The warcry of the modern State is not "The sword of the Lord and of Gideon," it is true, but it conquers in the name of its "world-duty," which is practically the same thing. It makes no difference whether it is proposed to extinguish the worship of Baal, or to attain "ethnical homogeneity," the uncivilized occupants of lands which we covet have no rights, "either public or private, which a civilized State, pursuing its great world-mission, is under any obligations, legal or moral, to respect." "There can be no dominion over territory or property in land apart from State organization," and it is ridiculous for a State to go through the form of contract and sale in taking possession of the abodes of the politically unorganized.

It seems strange to find the political morality of Omar and Pizarro advocated in a book which has been extensively advertised as marking the latest and highest development of political science. This extraordinary result seems

in part due to an imperfect acquaintance with the history of philosophy. Prof. Burgess has apparently become confused by the Hegelian language employed by the German writers on political science, whom he has too exclusively studied. He has mistaken a figure of speech for a concrete reality. The word "state" is an abstract term, denoting the existence of a number of men in relations to one another, but the State is a higher entity than man only in the sense that any abstraction is higher than the concrete. It may be convenient to speak of a meeting, or a party, or a city, or a State as having a consciousness. We speak of a common consciousness wherever two or three are gathered together for any purpose; but it is clear that in such locutions we are speaking metaphorically. Prof. Burgess's metaphysic is really that of the mediæval realists who held to the existence of *universalia ante rem*, and he, like them, exalts the creations of men above their creators. Without reopening a somewhat obsolete controversy, it is enough to say that consciousness, as we know it, belongs to sentient beings of a visible and tangible nature. We know no more of a state-consciousness than we do of a state-brain or a state-stomach. We will not deny that consciousness may be a quality of atoms, or, as has been thought by some astronomers, of planets—that it may be possessed by constitutions and be an attribute of general ideas; but it is entirely clear that we can never know this, even though we be conceived as elements of such a consciousness. The molecules that constitute a man may have every one its consciousness, but between their consciousness and ours an impassable gulf is fixed, and so it must be with us if we form part of another consciousness. Common sense has never questioned the maxim, "Corporations have no souls," nor will it ever admit that any fig ment of the human imagination, any concept of the human understanding, or any idea of the human reason, can be conscious in the sense that a human being is conscious.

This view of consciousness renders Prof. Burgess's theory of the State untenable. If what we speak of as State action is the action of human beings and not that of a "higher entity," it is to be measured by the standards applicable to the action of human beings. If an act is wrong when it is done by one man, it does not follow that it will be not wrong if done by two men, or by a mob, or by a great number of men united in a State. The theory breaks down most completely in face of the difficulty felt by Rousseau, when, as Mr. A. L. Lowell says in his masterly essay on the theory of the social compact, he wished to give the majority the power of legislation while keeping up the fiction that each person obeys only himself. Prof. Burgess attempts to escape this difficulty by his fiction that the action of the majority is the action of a higher entity than the human beings of which it is composed, but, as he defines the State as human beings organized, he is compelled to explain what takes place when these human beings differ as to the purpose of their organization. The State, he says, may expel by force, or "deport," an "ethnically hostile" part of its population. But what would become of the State if this part of the population should resist successfully? Shall mortals, like Jacob, wrestle with higher entities? or can a "State" be "deported"? or does the State, as some lawyers have supposed of the fee in lands in certain cases, take refuge *in nubibus* until recalled by the proper conjuncture? Is it not on the whole better when we mean, and can only mean, that certain men struggle with others, to say so, and not confuse ourselves by speaking of conflicts between men composed of flesh and blood on one side and a metaphysical entity on the other?

But it is in his discussion of sovereignty that we find Prof. Burgess's philosophical equipment most inadequate. Strangely enough, although his view is a rather unhappy compound of those of Hobbes and Austin, he mentions neither of these writers, and we might add that he nowhere alludes to most of the great names in this department of thought, whose work, if understood, would have saved him many errors. Sovereignty, according to him, must be absolute, because limited sovereignty is a *contradictio in adjecto*. He establishes this doctrine by an unconscious application of Anselm's argument. Prof. Burgess has a necessary idea of the perfect sovereignty of the State, and, as existence is necessary to perfection, therefore the perfectly sovereign State exists. But not everything necessarily is which we think ought to be, and, as a matter of fact, unlimited sovereignty does not exist in any State. No human being can altogether control the feelings and thoughts of another, nor can any organization of human beings do so. It is only a comparatively few of the overt acts of men that the State can prohibit. It has, to a certain extent, the power to put to death those who disobey, and is so far sovereign, but it is impracticable to exercise this power beyond the limits of the customary morality of its subjects. There are many things that the most despotic sovereign cannot do and dares not attempt. Whether this involves a *contradictio in adjecto* or not seems to have made no difference with history. If, as Prof. Burgess rather pathetically observes, "really the State cannot be conceived without sovereignty, *i. e.*, without unlimited power over its subjects," we can only say that then it will have to get along without being conceived at all, for without such sovereignty it certainly does exist.

Practically, of course, Prof. Burgess abandons this absurd doctrine. "The modern national popular State is the most perfectly and undisputedly sovereign organization of the State which the world has yet attained"—"The more completely and really sovereign the State is," etc.—are statements showing that there are degrees in the absolute. And it would be erroneous to suppose that this apparent "Hobbism" involves any recommendation of despotic maxims of government. On the contrary, Prof. Burgess lays great stress on the part played by the State in defending the liberties of the subject against the encroachments of Government. The greater part of the book consists of descriptions of the governments of the United States, Great Britain, France, and Germany, and here much valuable matter is to be found. Yet, so far as the observations are original, they are of interest chiefly to those who accept the author's political philosophy. As we are unable to admit that men are absolutely without rights and liberties, except in so far as they have been granted by the State, it would not be profitable to consider at length Prof. Burgess's analysis of relations that in our view have no existence.

MORE NOVELS.

News from Nowhere, or, An Epoch of Rest. By William Morris. Boston: Roberts Brothers.

Murvale Eastman, Christian Socialist. By Albion W. Tourgée. Fords, Howard & Hulbert.

My Lady Nicotine, and *A Window in Thrums.* By J. M. Barrie. Cassell Publishing Company.

Iermola, and *The Jew.* By Joseph Ignatius Kraszewski. Translated from the Polish by Mrs. M. Carey and Linda da Kowalewska. Dodd, Mead & Co.

Fantasy. By Matilde Serao. Translated by Henry Harland (Sydney Luska). John W. Lovell Co.

Ten Tales. By François Coppée. Translated by Walter Learned. Harper & Brothers.

The Canadians of Old. By Philippe Aubert de Gaspé. Translated by C. G. D. Roberts. D. Appleton & Co.

Of all the seers who have woven visions of the future into a tale, Mr. Morris is the most original, while, from the political economist's point of view, he is doubtless the most insane. Poets, however, are free to disregard economics, and as, before the inhabitants of the British Islands shall have reached that delightful condition described in 'News from Nowhere,' all political economists will have been long dead, their theories exploded, their books dust, it makes no difference what they may think about a Utopian romance. Mr. Morris's contribution to the literature of communism is conceived in the form of contrast between England of the nineteenth century nearing its close and England of the twenty-first. The prophets of a coming Socialist's paradise always find it essential to paint the present in the darkest colors. England of to-day, according to Mr. Morris, is rotten to the core, quite gone to the dogs. An evil spirit dominates the land, destructive of all that is good and beautiful, creative of endless misery—to wit, the spirit of commercialism. The only religion is worship of a hideous abstraction called the "world's market." The favored priests of the faith are few, relentless tyrants of millions whom they force to work stupidly, mechanically, making things for the consumption of their god—things chiefly which everybody could very well do without.

This presentation of the eternal labor question is exceedingly picturesque, and there is a polished ferocity about the indictment of the rich yet vulgar, which makes it most enjoyable reading for the cultivated though poor. Life is change. When things are bad as bad can be, they must take a turn for the better. Out of exasperation and despair comes war, and, through war, annihilation of privilege and politics and machinery and commerce. Then, by processes ingeniously described, is born a new England, a free, noble, idyllic commune, in which years pile up joys and where human life is not the one hideous mistake of nature. 'Nowhere' is certainly a much more attractive commune than is Mr. Bellamy's Boston of the future, for, though matters of common interest are regulated by the common voice, each individual is permitted the luxury of having business of his own and minding it. Individuality is, moreover, cultivated and elevated by freedom to choose one's work and to do it without haste or pressure; if it be the making of things, the habit is to make one useful and beautiful thing well, not fifty useless and ugly things badly. Mr. Morris omits to mention what would happen if any one should show an irresistible propensity for making articles of smooth, clear glass or fine porcelain, but takes it for granted that such depravity of taste is impossible. His persistent advocacy of his decorative whims is somewhat puerile and ludicrous, but, on the whole, his commune is so healthy, so happy, so beautiful,

that persons of sense ought to be willing to have it come about right away, accepting the wearing of embroidered rags and the use of rough pottery and bubbly glass without a murmur, regarding them as essential to the perpetual "peace and rest, and cleanness and smiling good will."

Doctors differ. The race will never know the delights of 'Nowhere' if it progresses along the path indicated in Mr. Tourgée's 'Christian Socialist.' This very thick book is a fine specimen of what may be called the crazy-quilt novel, made up of a thousand scraps, inharmonious and very gaudy. It is, however, a very popular kind of novel, with its sensational plot and extravagant, stagey people, its jumble of ethics, politics, and economics, and its constant exhortations, direct or indirect, to observance of the Golden Rule. If any definite notion of the scheme of living devised by the Rev. Murvale Eastman and his loquacious Christian Socialists may be gathered from their fluent dulness, it is, that rest and beauty and simplicity are things to be abhorred. Fortunately, the book ends while talk is still in full flow, before any Socialist has found time really to begin the reformation. The greatest achievement (and that is only projected), is to spoil a park in order to build a family club-house, whereby the shopping of young mothers too poor to employ nurses shall be much facilitated, which building is to be made "plain, you know—just brick and iron; for service, not for ornament." The great achievement of Mr. Morris's regenerate Englishmen is the conversion into a park of the whole island, now largely, "very plain, you know; just brick and mortar." As for divorcing service and ornament, let him who thinks that desirable, look through 'News from Nowhere' for descriptions of English architecture, of the homes of the people, their markets, bridges, and meeting-houses; then, if he change not his opinion, he should be condemned to abide for ever opposite the brick and iron club-house—not opposite the side whence issue the young impecunious mothers on business or on pleasure bent.

Mr. J. M. Barrie, who has made himself known to the British public through the monthly magazines and more sober reviews, is introduced in America by two volumes, 'My Lady Nicotine' and 'A Window in Thrums.' In the former, Mr. Barrie sings tobacco, with incidental sketches of people who smoke it and people who won't permit it to be smoked. It is a book of premeditated humor, in which the premeditation is fairly well concealed. Still, no man who believes himself to be funny, or who is regarded in that light, should risk his reputation by publishing a collection of scintillations. A Book of Fun is sadder reading than a 'Book of Gems,' or a 'Book of Thoughts, by a Young Lady.' This general reflection is not meant for the particular disparagement of 'My Lady Nicotine,' in which the fun is of a quiet, incisive kind, and unusually well sustained.

'A Window in Thrums,' read close upon 'My Lady Nicotine,' shows that Mr. Barrie is a man of some versatility, which nowadays is almost as rare a quality in an author as in an actor. These reminiscences of a very old man are grouped about a lame woman who, for twenty years or more, sat at a window looking down the brae towards the town with the dismal name of Thrums. The daily life of the decent poor is pretty much the same all the world over, always commonplace, frequently dismal. It is no more interesting in fiction than in reality, unless the people who are obliged to put up with it have some inborn strength, or grace, or purity that can't be destroyed by hard conditions. Such people Mr. Barrie has chosen to tell about very simply and plainly, as befits his subject. To appreciate the story fully, one must have some acquaintance with English as it is spoken from Maidenkirk to John o' Groat's House, though enough is told in the uncorrupted tongue to give an idea of the fine spirit inhabiting Jess Hendry's poor body, and of the great love with which she inspired family and neighbors.

Similar sweetness and courage animate the Volhynian peasant Iermola, the central figure of a Polish novel to which he gives the name. The story begins when Iermola is already an old man, at the moment when he resolves to adopt a baby left at his hut in the forest. The efforts of Iermola to live up to that baby are both amusing and pathetic as well as very real; but the means employed, many years afterwards, to separate him from the baby, grown almost to manhood, savor of a very ancient kind of fiction which never was rooted in life. The author's faculty of invention is much inferior to his observation and sympathy, which leads us to suppose that the story really is what it seems to be, a study of actual life in a very queer and primitive community. The admirable characterization of the sordid, grasping Jew, Szmula, in a very funny chapter wherein is narrated the purchase of a goat to supply nourishment for the baby, excites curiosity about another novel by the same author, entitled 'The Jew.' Here are depicted, very carefully and cleverly, several Jews who may perhaps be regarded as modern types of the chosen people. The action is dramatic, carried on mostly in Warsaw, but, as in 'Iermola,' the invention is feeble and construction faulty; therefore we care much more about what the people think than about what they do. Our prejudice against the Jew is so deep and irrational as to impregnate our literature. With a very few notable exceptions, our novelists make use of him only to misrepresent or openly caricature; the translation of a novel in which he is treated not as Hebrew but as human is therefore a work worth doing. Yet, after reading it, the reflection of the good American will doubtless be that the good Polish Jews don't emigrate.

The translations of foreign fiction, which increase in number and variety every year, are generally more interesting than the average novels written originally in the English tongue. One reason of this obvious superiority is, that an author almost always has made a reputation in his own language before his work is considered worth translating, but a weightier reason is that in the literature which deals directly with life, the Anglo-Saxon, more than any other, is conventional and unimpassioned; therefore, weak, dry, ineffective. It would be impossible for the English lady novelist to write such a book as 'Fantasy,' by Matilde Serao. An English woman might know a Lucia Altimare thoroughly, might depict her perfectly up to the crisis of her career; but just at this point she would certainly succumb to tradition. She would arrange for a Lucia a tearful parting from her lover, and sanctimonious retirement to the hearth she has come so near to desecrating, or she would kill Lucia, or represent her as doing anything, everything, except what a Lucia always does when she gets the chance—bolt with the husband of a dearest friend, leaving behind wild, ejaculatory epistles for *her* husband and *his* wife. Madame Serao does not deal in half-measures. She knows her Lucia, and gives the reader the full benefit of her knowledge. The presentation of a nervous, excitable, sensual woman, whose real character is scarcely suspected by her nearest friends, and who, with occasional spasms of scathing frankness, lives in a state of blissful self-deception, is exceedingly clever and surpassingly cold. There is not a shred of Lucia's mystery left when Madame Serao is done with her; we see her perfectly in naked deformity. She is not a pleasant person to dwell upon, and since the other characters are subservient, the book, with all its cleverness, is unpleasant. There is, however, much grasp, power, knowledge in it; no weakness or irrelevant trifling, and a sort of scornful indifference to literary convention that extends even to form and style. Mr. Edmund Gosse's introduction will save the curious the trouble of looking up Madame Serao in an encyclopædia.

He who makes acquaintance with François Coppée through the volume of tales translated by Mr. Learned will be puzzled to account for the author's fame. Here again is an introduction thoughtfully provided by Mr. Brander Matthews, a competent authority on *contes en vers* and *contes en prose*. At least half of these ten specimens of Coppée's work belong neither to that kind of fiction which we describe as tales, nor to a yet lighter form, known as sketches; they are purely examples of *contes en prose*, and, with all deference to Mr. Matthews, no more bear translation than does that untranslatable phrase. In French, such work is made worthy by the language; in English, it seems trivial, insignificant, quite beneath the force and vigor of the language.

By translating the French romance, 'The Canadians of Old,' Mr. Roberts introduces the only French Canadian fiction which is worth the trouble of putting into English. Written forty years ago by Philippe Aubert de Gaspé, then an old man, it is, from every point of view, the best Canadian novel, which, after all, is not such very high praise. The story has no particular merit, though it has some dramatic situations and is fairly well put together; but the book has a distinct value, expressed by the translator when he says that it preserves in lasting form the characteristic customs of early French Canadians, and, by its faithful depiction of their sentiment, throws a strong light on the motives and aspirations of the race.

THE LAW OF STORMS.

Hand book of Cyclonic Storms in the Bay of Bengal. For the Use of Sailors. By John Eliot, M.A., Meteorological Reporter to the Government of India. Calcutta.

SOME forty years ago, the discoveries of Redfield, Reid, and others regarding the rotary movement of the wind in hurricanes gave good reason to hope that the dangers of the seas might be greatly lessened by adopting a rational system of navigation in stormy weather. In earlier years, the navigator who was overtaken by a violent storm had no rules to guide him out of it; he knew next to nothing of its probable size, its circulation, or its course. He outlived its fury if he could, but too often his vessel was dismasted, driven ashore, or lost in the open sea. But, in the thirties and forties, the confusion of the winds was reduced to order; it was then found that the hurricanes of the tropical seas truly possess a systematic rotary movement of their winds, always from right to left in this hemisphere, and the other way south of the equator; and that these whirling storms as a whole moved at tolerably regular and moderate velocities along fairly well-defined tracks—facts now familiar to every schoolboy who studies his atlas of physi-

cal geography. The immediate result of all this was the formulation of simple rules by which the central fury of the storm could generally be avoided. The landsman might be somewhat confused by the orders to heave to on the starboard tack in one case and on the port tack in another; but this was the proper nautical way of telling the sailor how to get out of the storm, and it was not necessary that he should know anything of the reason for the rules. The basis of the whole scheme was that, as the winds were thought to blow in truly circular courses around the centre of the storm, the direction of the centre must be at a right angle to, or eight points from, the course of the wind.

The simplicity of the "eight-point rule" so strongly recommended it for popular use that the practical men of the sea gave little heed to the suspicions of several theoretical meteorologists who questioned the truly circular course of the storm-winds. But in 1861, Meldrum of Mauritius, in the track of the cyclones of the southern Indian Ocean, brought attention to the insufficiency of the rule by showing that it had led several vessels into danger if not into destruction, and that the winds really followed incurving spiral paths, and not a circular whirl around the centre of low pressure. His arguments were well grounded, but navigators have been slow to accept them. For example, it was not until about four years ago that our Hydrographic Office in Washington changed the diagram on Monthly Pilot Charts of the North Atlantic from the eight-point scheme, and brought it into accordance with the facts stated by Meldrum and his followers in later years; and among the more conservative naval officers there are, perhaps, even now some who doubt the error of the old rule. There are various sources to which such sceptics might be referred for conversion, such as Toynbee's charts of the North Atlantic during a great hurricane in August, 1873; the daily charts of the same ocean issued by the English Meteorological Council for the year of the international polar expeditions, and the subsequent continuation of the same series by the German and Danish Governments; or the various memoirs on cyclones published by the Indian meteorological service. But a more practical work, bearing largely on this very subject, is the 'Hand-book' whose title we give above.

It is in every way a worthy successor to Piddington's old 'Horn-book of Storms.' Piddington was a practical sailor rather than a scientific investigator; but, in the early years of the cyclonic theory, he entered into the question with great activity and success, and, as a result, made a thoroughly practical book, the abstract of many elaborate memoirs, and one to which the student may to this day refer for a fund of information. But this 'Horn-book' was published some forty years ago. Since then meteorology has become a systematic science. Where Piddington had to advance slowly and at great pains, collecting his records from shipmasters and from volunteers on shore, there is now a well-organized meteorological service; a daily weather map of the peninsula of India and the Bay of Bengal is issued, from which the tyro may learn at a glance what must have cost the early student months of labor; and most accurate memoirs on the meteorology of India, its winds, rainfall, and storms. The general product of all this labor has been excellently summarized by Blanford in his 'Climates and Weather of India,' already reviewed in these columns, and now we have a statement of all that has been found out about the cyclones of the Bay of Bengal, reduced to a volume of moderate size, and prepared most artfully and successfully for the use of sailors. It is not for ignorant sailors—there is little hope of writing any book from which they might profit—but it is well adapted for the intelligent officers of ships and steamers who are intrusted with vessels to cross those dangerous Indian seas. It contains, first, a chapter on meteorological phrases and principles, explaining the necessity of technical terms, which the sailor, who talks in his own technical language, must at once admit. A second chapter considers the phenomena of cyclonic storms in the Bay of Bengal, particularly with reference to their use as storm indications or prognostics. Then follows an account of six typical cyclones in the Bay since 1864, *i.e.*, during the recent period of careful, systematic observation, and prompt collection, discussion, and publication of the records. A fourth chapter is a brief summary of practical hints to sailors. The author is thoroughly qualified for his task. Like his predecessor, H. F. Blanford, he is a scientific meteorologist of high ability; there is no crude or rash theorizing in his work. He is informed on the principles of physics as well as on the proper exposure of thermometers and setting of windvanes; he is evidently well read in the literature of his science. His writing is thoroughly mature. A popular book from such an author is worth a dozen compilations by omnivorous readers and facile penmen.

There is some very wholesome reading in the first chapter, under the paragraph that shows the sun to be the source of energy by which atmospheric motions are maintained. It is first explained that air, like a railway train or a man-of-war, cannot put itself in motion, but must be started and kept going by the expenditure of energy upon it. The larger the mass of air, or the faster the motion, the greater the work to be done upon it. A large engine is needed to make a 6,000-ton steam man-of-war run at the rate of fifteen miles an hour; and yet a large cyclone in the Bay of Bengal, involving a mass of air a hundred miles in diameter and a mile high, moving at a rate of forty or more miles an hour, weighs as much as half a million 6,000 ton men-of-war. It is evidently a mistake to assign an inadequate cause for so vast a result as this. Some suggest electricity; but physical experiment shows that the amount of electricity set free in a violent thunder-storm is but a trifle compared to that needed to drive a cyclone. The attraction of the moon is appealed to by some; but this is only the one-hundred-and-fortieth part of that of the sun; its tide-producing power is, to be sure, greater, but this is not available in storm-making. The heat from the moon, even if it sent out all that it gets from the sun, would warm us only 1-300,000 as much as the sun does; that is, if in a given time the sun could melt four miles of ice on the earth's surface, the moon could not melt more than an inch. It must be, indeed, a prejudiced reader who can fail to follow Eliot in ascribing winds and storms ultimately to the heat of the sun.

On a later page, there is a simple consideration of the conversion of solar energy from one application to another during the condensation of vapor in storms. After illustrating this important process, and quoting examples of the remarkable rainfalls or deluges that accompany cyclones in India, the author concludes as follows: First, the energy given up during condensation of vapor is communicated directly to the air in which the process takes place; practically, the whole of it is utilized in producing changes in the motion of the air. Second, the process is continuous day and night while the cyclone lasts, and not intermittent, like sunshine. Third, it is, in cyclones with the heavy rains usual in such storms, a much more intense process than ordinary sunshine; it may be equal to twenty or fifty or even a hundred times the energy of sunshine in the same time and place. Fourth, the latent heat that was slowly stored up over a large area during the evaporation of the vapor, is liberated in the relatively small area of the cyclone. It is for these reasons that the latent heat of vapor has come to be regarded as of primary importance in keeping cyclones at work; and for this reason cyclones may be said to depend on "stored energy"—like the man-of-war again, whose engines are driven by the stored energy of coal.

Finally, we may briefly refer to Eliot's results as to the inclination of the storm wind—that is, its departure from a circular into a spiral path. His statements are perfectly definite that the old eight-point rule cannot be trusted, unless for a small distance close to the centre of the storm, where there is little hope of using it, and it is not surely correct even there. He concludes that, as a rule, the wind turns in two or three points from the circular path, and sometimes even four points, and yet that its irregularities are such that no simple constant rule can be given. He recalls Piddington's statement that "absolute rules are all nonsense." The incurvature of the wind is the important point of the book, and we recommend it to the most careful consideration of our shipmasters. Although the 'Hand-book' is prepared chiefly for use in the Bay of Bengal, it is of value to us in the Atlantic as well, for the hurricanes of the West Indies closely resemble the storms of the East.

The Right Hand: Left-Handedness. By Sir Daniel Wilson. Macmillan & Co. 1891. 8vo, pp. 215.

FROM the preface we learn that the purpose of this book is to trace left-handedness to its true source, incidentally to expose the folly of trying to suppress an innate faculty of exceptional aptitude, and to set forth the advantages to be derived by all from a systematic cultivation of dexterity in both hands. This indicates the standpoint of the author. Discussing the subject in its archæological, philological, and physiological bearings, he traces a preferential use of one hand or the other back to the times of the stone implements. He concludes that the right hand is given the preference naturally and instinctively by some; that in a smaller number the left is favored by an equally strong impulse; but that in the great majority right-handedness is largely the result of education. After considering the psychophysical features and carefully weighing the different theories of causes, he finally advances his own decision that left-handedness is due to an exceptional development of the right hemisphere of the brain. As a whole, the work is a model of scholarly research; the style is such as will please all who are interested in the matter, and there is little to rouse the antagonism of those of diverse opinions; but it cannot be admitted that the volume precludes further discussion.

Before the question is settled we must have deeper investigation of the anthropoids and lower animals, and, still more important, extensive series of observations on young children about the time the preference is first manifested. It is with the earliest attempts at use that the left-handed habit becomes fixed, and by its exercise determines the greater de-

velopment of the right hemisphere in the individual. Greater development of this hemisphere follows from the greater use of the left hand, as surely as greater development of the muscles, vessels, nerves, and bones of the left side of the body. Exceptional development of a right hemisphere is a consequence of left-handedness, and may not be the cause of it, even in the particular case cited by Mr. Wilson in support of his conclusion. To strengthen his position he will have to change his claim to hereditary or congenital preponderance of the right hemisphere. But, however stated, it is unlikely that a single cause will account for all cases, as our author apparently would have us believe. Observations made while teaching gymnastics lead to the conclusion that, in some at least, left-handedness had its inception in pure imitation. If an instructor faces his class and works right-handedly, pupils become confused, and movements made by his right are imitated with the left. But if the teacher works left-handedly, the difficulty is obviated and the pupils readily follow working right-handedly. Similarly with the child: he faces his trainer, has his attention fixed upon movements of the right hand, and imitates or meets them with his opposed hand, his left. Very little exercise at his age serves to fix the habit of preferring the left, and greater development of the right hemisphere and of the left side of the body follows as a matter of course. Ordinarily correction is easy; its difficulty is increased by habit and by the persistence or stubbornness of particular infants.

No doubt the ambidextrous, in which the sides of brain and body are equally developed, is the happiest condition; but it is an open question whether an organ less developed than another is any more liable to disease. If adapted to the demands upon it, whatever its development, there is no reason why it should be less healthy. It is the organ which deteriorates from a needless development that is prey to the ills. Hence it is that excessive physical culture, athletics, in early life are not so conducive to longevity as development better adapted to the ordinary and continued demands on the system. In the right-handed it is the left hemisphere that tends to a greater development; in the left-handed it is the opposite side of the brain. The differences in mind and disposition attending such a difference in brain ought to be determined before deciding that it is folly to attempt suppression of left-handedness, especially in view of the widespread belief in the mental and moral crookedness of a left-handed man.

The volume is disfigured by a fifty-five-page advertising catalogue. Is it not time for an energetic protest against a practice that defaces the books and litters up the shelves with so much matter of no future value?

The Woman's Club: A Practical Guide and Hand-book. By Olive Thorne Miller. United States Book Company.

THIS little book contains some practical suggestions for the formation and management of clubs, which will prove valuable to many intelligent women who have not yet been trained to understand the exigencies of corporate action. It also gives some advice concerning the more elementary rules of conduct, such, for instance, as the observance of order and of good temper, which cannot be too carefully acted upon by all who wish to share in or contribute to the benefits of club organization. There can be no doubt in the mind of any thoughtful person of the value of the work that is, on the whole, being done by the somewhat protean associations grouped under the generic name of the "Woman's Club." The history of its growth and development here given is stimulating and encouraging in itself, as well as interesting as a study of the signs of the times.

There is, however, one objection to this otherwise acceptable little manual which cannot be overlooked. The writer lets her enthusiasm, from time to time, overleap the bounds of common sense and lead her into the pitfalls of cant. This is especially and regrettably the case in the three or four earlier chapters. The harm that is done by exaggerated pretensions cannot be too strongly urged upon the promoters of movements for educational or other advantages for the female sex. Women themselves whose position and influence would make them invaluable allies, are too often repelled by the bad taste of aggressive claims. Those who champion the cause of women ought certainly to see that they do not put even small unnecessary stumbling-blocks in the way of its success.

Phantasieen und Märchen. Von Isolde Kurz Stuttgart: Gö chen. Pp. 164.

ABOUT two years ago the hosts of commonplace poets who hover round the base and haunt the lower slopes of the German Parnassus were startled by the sudden appearance of a stately daughter of the Muses on one of the higher peaks. How she reached that eminence unobserved by their ever watchful and envious eyes was a mystery. That the much-abused reading public is quick to appreciate and eager to welcome genuine poetic talent whenever and wherever it may appear, is clearly shown by the fact that the first edition of the poems of Isolde Kurz was soon exhausted and a second edition, containing sixteen additional pieces, was presently brought out. The volume bears the stamp of originality on every page, from the dedicatory verses which serve as proem, to the aphorisms and epigrams with which it ends.

Miss Kurz has also essayed short stories—a volume of 'Florentiner Novellen,' four in number, of which the scenes are laid in Florence during the turbulent but picturesque period extending from the beginning of the fourteenth to the middle of the sixteenth century. If we were to attempt to classify these works of fiction, we should have to call them historical novels; at the same time they are truly artistic creations, and present, both in style and construction, the greatest possible contrast to the voluminous "historical romances"—the undigested contents of countless scrap-books—with which modern German literature is so heavily weighted. A second volume, called 'Phantasieen und Märchen,' opens with a vision entitled "Hashish," as vivid and realistic as anything in De Quincey's 'Confessions,' and evidently a record of personal experience with *cannabis indica.* The writer's description of her sudden release from all the conditions and limitations of human existence, and her excursion through illimitable space up to the region of pure abstraction, where metaphysical systems dwell cheek by jowl with mathematical formulas, and all earthly dissonances, pessimism, and *Weltschmerz* blend to full accord in the music of the spheres, is admirably done. The remaining five pieces are original fairy tales, and show an exceedingly happy faculty of invention. "Der geborgte Heiligenschein" is the story of an old hermit, whose sole possession was a large and luminous nimbus, but who was, unfortunately, led by his unbounded benevolence to lend this treasure to a poor devil in order to save him from the gallows. As might be expected, his property was never returned, but passed by sale from hand to hand, serving as an ornament to many a villanous head, and creating that sort of moral confusion in the public mind that would be caused by hearing a Tammany politician opening a primary with prayer, or seeing a saintly halo encircling the crown of a campaign worker while engaged in purchasing votes "in blocks of five." In the present case the general derangement of ethical values produced by having such a nimbus thrown on the market and thereby made venal was not confined to this world, but extended to the future life and disturbed the balance of accounts in the books of the recording angels. In "König Filz" we make the acquaintance of any quantity of queer people—King Screw himself, condemned to permanent tearlessness on account of the hardness of his heart; the physician in ordinary, Dr. Horseradish, whose most persistent efforts fail to bring a drop of moisture to the royal eyes; the charming Princess Maja and her lover, and above all old Mother Week and her seven sons, the well-dressed and much-revered Sunday, the lazy and dissipated Blue Monday, and their five sturdy and laboricus brothers. But of all these phantasies, the most original in conception and finest in execution is the "Sternenmärchen." The celebrated Orientalist and Biblicist Heinrich von Ewald used to expatiate on the serious detriment to Hebrew and German poetry arising from the fact that the sun in these languages is feminine. Here, however, this verbal accident is turned to good account; and in telling how the queen of the sky and her numerous sons and daughters, the planets, dwelt together in perfect harmony until the family union was broken up by the amorous advances of a brilliant but libertine comet, the authoress has caught and reproduced with remarkable skill the naïve tone of traditional folk-lore. That this is no easy task and is liable to lapse into mere extravagances and vapidities, has been demonstrated by scores of her countrymen who have made the attempt and lamentably failed. We strongly suspect that the fairy godmother who, in the fourth tale ("Die Goldenen Träume"), bestows upon the poor weaver's son the precious gift of golden dreams, stood sponsor for our poetess.

Labor and Life of the People. Vol. II. London Continued. Edited by Charles Booth. London: Williams & Norgate; New York: G. P. Putnam's Sons. 1891.

UPON the appearance of the first volume of the remarkable series projected by Mr. Booth, we gave unstinted praise both to his plan and its execution, saying that it would "mark an era in the conception and the treatment of the evil of poverty in London." This second volume confirms our conviction, and renews our admiration for the breadth and impartiality of the investigations recorded, and for the eminent fairness as well as great importance of the conclusions drawn from them. The book simply throws out of court a great deal of the current vague talk about the condition of the poor—especially of the very poor—in London, and must be consulted by all who would write or speak about the subjects touched upon without being ridiculous.

The same methods of relentless investigation which were followed in the first volume, in the case of East London, are here extended to South and Central London. The result is that Mr. Booth is now able to give us a survey of the entire city, which he does by districts, street by street, and, in several instances,

block by block and house by house. One striking conclusion is that the poverty of East London, as compared with that of the rest of the city, has been exaggerated. "In 1888," writes Mr. Booth, "I made an estimate based on the facts as to East London, and the comparative density of population in other parts, on the theory that density would probably coincide with the degree of poverty. The result was to show a probable 25 per cent. of poor for all London, or nearly 6 per cent. less than we now get." He also assures us that if his statistics err on either side, they overstate rather than underestimate the amount of poverty, especially in view of the fact that times have been better since the inquiry was made.

No adequate idea of the range and value of the inquiries made by Mr. Booth and his collaborators can be given in our limited space. The book itself must be resorted to. We must specify, however, the chapters entitled "Sketch of Life in Buildings," by "A Lady Resident," "Influence on Character" (of living in tenements), by Octavia Hill, and "Homeless Men," by Margaret A. Tillard and the editor. The most suggestive observations and reflections are scattered all the way along, as, for example, the casual remark (p. 95) that "a great quantity of bread strewn about" in the streets is "the surest sign of extreme poverty all over London." Highly enlightening, too, are the several tabulations given of the results of searching investigation into groups of men—some of them selected groups, *i. e.*, guaranteed as worthy by charitable and religious organizations—applying for public alms. The percentage that could stand the process was terribly small. The volume leaves us with one unpleasant reflection: how inevitably must the sense of personal dignity and reserve suffer in people made the subject of inquiries like these. However kindly meant and however necessary, the intrusion upon the privacy of homes, squalid though they be, and families, even if wretched, must tend to repress those qualities of independence and spirit which it is of the highest importance for the victims of poverty to develop. Something of this is indicated in the book itself where it speaks of the evil of "the struggle of different sects over these poor souls. Those who are hunted up in their homes on a Sunday morning by the emissaries of five or six religious bodies are not likely to be spiritually impressed by any" (p. 300).

An appendix and maps are bound up under a separate cover. The first gives classifications of the population by School-Board Blocks and Divisions, by Registration Districts, and by percentage of poverty; also, a table showing the birthplaces of residents of London born in other parts of the kingdom. The maps give a graphic representation of London poverty by districts and by streets, one section for each quarter of the city. Varying color shows the varying percentage of poverty. The execution is very good.

HAVE JUST PUBLISHED:

Recalled to Life.

By GRANT ALLEN.

A fresh and absorbingly interesting story.

Leisure Hour Series, cloth. $1.00; Leisure Moment Series, paper, 40 cents.

LIFE OF

Jane Welsh Carlyle.

By MRS. ALEXANDER IRELAND.

8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Postpaid on receipt of price.

Exhaustion.

HORSFORD'S

ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says: "A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

CHARLES SCRIBNER'S SONS' NEW BOOKS

INTERNATIONAL THEOLOGICAL LIBRARY.
Edited by Prof. C. A. BRIGGS, D.D., and Prof. S. D. F. SALMOND, D.D.

THE LITERATURE OF THE OLD TESTAMENT.

By Prof. S. R. DRIVER, D.D., of Oxford. 8vo, *net*, $2.50.

Dr. Driver's volume is admirably adapted to introduce the series of the *International Theological Library*, both on account of the high standard of scholarship which it maintains and the unquestioned authority and eminent reputation of the author himself.

His work is not in the sphere of history or of theology, but is a critical account of the contents and structure of the several books of the Old Testament considered as Hebrew literature, presupposing their inspiration but seeking to determine the precise import and scope of the several writings by the means of critical research and inductive evidence, and in this way to reach definite conclusions, as far as possible, with regard to the structure and relations of the different parts of the Old Testament.

THE LIFE OF AUSTIN PHELPS.

A Memoir. By ELIZABETH STUART PHELPS (Mrs. Ward). Illustrated. Crown 8vo, $2.00.

Prof. Phelps's gifted daughter has succeeded in conveying with remarkable vividness a lively sense of the singular energy, beauty, and purity of her father's character.

HISTORY OF THE JEWISH PEOPLE IN THE TIME OF CHRIST.

By Dr. EMIL SCHÜRER. Translated from the second German edition—revised and enlarged. 5 vols., 8vo, $8.00 *net*.

"Under Prof. Schürer's guidance we are enabled to a large extent to construct a social and political framework for the Gospel History, and to set it in such a light as to see new evidences of the truthfulness of that history."—*English Churchman.*

THE SABBATH IN PURITAN NEW ENGLAND.

By MRS. ALICE MORSE EARLE. 12mo, $1.25.

An entertaining and piquant contribution to Puritan sociology. The hardships and austerity, the rigor and narrowness, the devotion and piety of the Puritans are graphically portrayed.

THE FOURTH GOSPEL.

Evidences, External and Internal, of its Johannean Authorship. Essays by Dr. A. P. PEABODY, Prof. EZRA ABBOT, and Bishop LIGHTFOOT. 8vo, $1.50.

The late Prof. Abbot's paper consists of an exhaustive sifting of the historical evidence, while Dr. Peabody and Bishop Lightfoot treat of the internal evidence of the authenticity and genuineness of the Fourth Gospel.

CHARLES SCRIBNER'S SONS, 743-745 Broadway, N. Y.

TWILIGHT PARK IN THE CATSKILLS.

The Park has proved a success because the scheme is so taking; cottage life without housekeeping cares; meals and entertainment in a central clubhouse—wholesome, simple fare; inexpensive living amid picturesque surroundings and congenial company. It is Utopia with modern improvements, an American Forest of Arden.

The Park's rapid growth is due chiefly to personal recommendation. Members of one family occupy four cottages, and a lady artist has influenced no end of people to buy and build. Think of coming all the way from Milwaukee to the Catskills. Yet, if the children thrive and the sleepless mother can rest, the journey is repaid.

In three years cottages have multiplied five fold. The Club-House planned for 50 holds 150, and the new Inn was filled. Cottagers come early and stay late. All about are empty boarding-houses, but we took 180 quarts of milk yesterday, and our people will remain until October to revel in such glorious days and starry nights as we are now having.

Life is still restful and simple. Cottagers are spreading over the cliffs and glades beyond Ledge End. New colonies are being created, and a third Club-House planned "in the woods." The Park will never become crowded or unwieldy. As a famous divine says, it is always Sunday afternoon here, and our people fondly hope never to become Bar-Harborized.

Those who have summered by the sea or abroad should run up and see the Catskills "dressed in their best suit of clothes." Game is becoming abundant, grouse and woodcock, and you may find the two bears whose tracks were seen here last winter.

Log cabins costing $1,000 with lot and furniture have the preference, and professional men and women of moderate means are most sought for. It is true $5,000 has been paid for an exceptionally fine site that brought $400 three years ago; but there are still plenty of desirable lots 100x100 at $150 and upwards. Small houses are in demand, and we could rent a score of them at 20 per cent.

if purchased in connection with a year's subscription to the COSMOPOLITAN.

The Cosmopolitan will be sent by mail for one year, with any one set of the following:

Gen. Grant's Memoirs, 2 volumes, for.....$3 70
Gen. Sherman's Memoirs, 2 vols., for..... 3 70
Gen. McClellan's Memoirs, 1 vol., for..... 3 70
Gen. Robert E. Lee's Memoirs, 1 vol., for..... 3 70
Gen. Sheridan's Memoirs, 2 vols., for..... 3 70

All bound in green and gold cloth.

The magazine is sent postage prepaid, but postage or express charges on the Memoirs are payable by the receiver. Postage must accompany original order. Grant's 48c., Sherman's 46c., Sheridan's 42c., McClellan's 24c., Lee's 28c.

Cheap editions and reprints have been frequently offered by periodicals as premiums to subscribers, but never before has an original subscription edition on best paper, and in cloth binding (sold at retail for $7.00), been reduced to 70 cents—probably less than the cost of the binding alone—and presented to the readers of a magazine upon receipt of 70 cents and one year's subscription, $3.70 in all.

"*Every man and woman, every boy and girl, will profit by reading it regularly.*"—St. Joseph Herald, Mo.

The Magazine of American History

FOR OCTOBER.

Frontispiece. Portrait of NAPOLEON BONAPARTE. Fac-simile of a very beautiful French engraving.

A Group of Columbus Portraits. Mrs. Martha J. Lamb. This paper deals with well authenticated facts in relation to several of the most important portraits of Columbus, and is accompanied by fac-similes of the oldest and rarest engraved prints of the portraits of the great world discoverer.

The St. Croix of the Northeastern Boundary. W. F. Ganong, M.A. Gives four illustrative maps, and explains the misunderstandings that have arisen from there having been two rivers in Canada of the same name.

The Sultan and the Chicago Exhibition. Frederick Diodati Thompson describes the development of Chicago, her destruction by fire and magical uprising from her ashes, dwells upon her ability to conduct the first really international exposition ever held, and presents interesting sketches of the personality of the Sultan, his good deeds and liberal-minded course for the improvement of Turkey, and his expected visit to America and the World's Fair.

Cabot's Landfall. Right Reverend M. F. HOWLEY, D.D., P.A. Discusses the site, which, in the judgment of the able and scholarly author, is on the east coast of Newfoundland, and gives an elaborately drawn map to prove his theory.

OTHER ARTICLES ARE:

Philadelphia in 1778, through Foreign Eyes; Hon. Hugh McCulloch on Daniel Webster; Napoleon Bonaparte and Peace with America; Good Things from Dr. Johnson; Maternal Ancestry of James Russell Lowell; Lyman C. Draper of Wisconsin; Minor Topics; Notes; Queries; Replies; Book Notices.

Terms, $5 a year; 50 cents a number.

NEW PUBLICATIONS.

PRESS OF

J. B. Lippincott Co.

715 and 717 Market Street, Philadelphia.

Complete and authorized editions of the works of

WILLIAM H. PRESCOTT.

Edited, with notes, by JOHN FOSTER KIRK.

The Student's Edition, just issued, is intended to meet the increasing demand for such standard authors as are now required by recent courses in English in our leading schools and colleges. It is published in five volumes, printed on fine paper, and contains the maps and illustrations that have appeared in other editions. Price $1 per volume, as follows: 'The Conquest of Mexico,' 'History of Ferdinand and Isabella,' 'Conquest of Peru and Miscellanies,' 'The Reign of Charles V.,' 'The Reign of Philip II.' Price per set, cloth, $5; extra cloth, gilt top, $6.25; half calf, gilt top, $12.50.

The New Popular Edition, issued in sixteen volumes, has been *greatly reduced in price.* It contains the Life of Prescott, and is sold separately or in complete sets, bound in neat cloth, historical style, with gilt top.

The Conquest of Mexico, 3 vols., $1.50; Conquest of Peru, 2 vols., $2.00; Ferdinand and Isabella, 3 vols., $3.00; The Reign of Charles V., 3 vols., $3.75; The Reign of Philip II., 3 vols., $3.75; Miscellanies, 1 vol., $1.25; Life of Prescott, 1 vol., $1.25. Complete Set, 16 vols., cloth, gilt top, $16.50; without Life, 15 vols., $15.25; 16 vols., half calf, $32 00.

The Library Edition, complete in twelve handsome octavo volumes, is printed in large type on fine paper, and contains the steel portraits and maps. Neatly bound in cloth, $2.50 per volume.

Extra Illustrated Library Editions.

History of the Conquest of Mexico. With a Life of the Conqueror, Fernando Cortez, and a View of the Ancient Mexican Civilization. By W. H. PRESCOTT. Two volumes. 8vo. Containing all the steel plates on India paper and maps that have appeared in former editions. *With Thirty Phototype Illustrations.* Large type, on fine paper, and neatly bound in half morocco, gilt top, $10.00.

History of the Reign of Ferdinand and Isabella the Catholic. By W. H. PRESCOTT. Two volumes. 8vo. Containing all the steel plates on India paper and maps that have appeared in former editions. *With Thirty Phototype Illustrations.* Large type, on fine paper, and neatly bound. Half morocco, gilt top, $10.00.

Hand-Book of Industrial Organic Chemistry. Adapted for the use of manufacturers, chemists, and all interested in the utilization of organic materials in the Industrial Arts. By SAMUEL P. SADTLER, Ph.D., Chemical Editor of the *United States Dispensatory*, Professor of Organic and Industrial Chemistry in the University of Pennsylvania, etc. The volume contains five hundred and nineteen pages, with one hundred and twenty-seven illustrations and fourteen diagrams and tables. Large 8vo. Cloth, $5.00; half leather, $5.50.

(Send for prospectus and specimen pages.)

New Works of Fiction.

A Sketch in the Ideal. A ROMANCE. 12mo, cloth binding, $1.00.

"It is a story of singular beauty. . . . It not only passes through the various lights and shades of an ideal wooing, but on through married life. Not only are the characters nearly perfect, but so are the scenes through which the story passes."—*Times.*

At Anchor, and Honored in the Breach. By JULIA MAGRUDER. A new number in the American Novel Series. Square 12mo. Paper, 50 cents; Cloth, $1.00.

"In all the portraiture, description, dialogue, and incident of these stories there is a fresh originality, a vivid dramatic power, a keen knowledge of the mystery of life that few possess."—*N.Y. Mail and Express.*

My Land of Beulah. By Mrs. LEITH ADAMS (Mrs. R. S. de Courcy Laffan), author of 'Aunt Hepsy's Foundling,' 'Madelon Lemoine,' etc. The latest issue in Lippincott's Series of Select Novels. 12mo. Paper, 50 cents; Cloth, 75 cents.

If not obtainable at your Booksellers', send direct to the Publishers, who will forward the books, postpaid, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, OCTOBER 1, 1891.

The Week.

THE continued importation of gold, which already reaches $10,000,000, makes it interesting to inquire how our account current with Europe stands during a series of years. We append a table giving our net exports and imports of the yellow metal, as shown by our commerce and navigation reports, and our own production of it as reported by the Director of the Mint from and including 1878 to September 1, 1891:

GOLD.

	Net Exports.	Net Imports.	Production.
1878.....	.....	$4,125,760	$51,200,000
1879.....	.....	1,037,334	38,900,000
1880.....	.....	77,119,371	36,000,000
1881.....	.....	97,466,127	34,700,000
1882.....	.....	1,789,174	32,500,000
1883.....	.....	6,133,261	30,000,000
1884.....	$18,250,640	.....	30,800,000
1885.....	.....	18,213,804	31,800,000
1886.....	22,208,842	.....	35,000,000
1887.....	.....	33,209,414	33,000,000
1888.....	.....	25,558,083	33,175,000
1889.....	49,667,427	.....	32,800,000
1890.....	3,715,712	.....	32,845,000
1891*....	72,000,000		
	$165,842,621	$264,652,328	$452,720,000
Excess of imp'rts.	.....	98,809,707	
T'l imp'ts & prod'n	.....	.....	551,529,707

* To September 1.

The amount of new gold used in the industrial arts during the year 1890 was computed by the Director of the Mint at $10,717,472, and this was about $1,000,000 greater than for the previous year, showing that there is a progressive increase in such use. It is probably safe to say that the amount of gold in the Treasury and in private hands at the beginning of the year 1878, *i. e.*, before the above tabular statement begins, was at least equal to the amount that has since been used by us in the industrial arts. If we assume the equality of these two elements, there must be as much as $550,000,000 of gold coin and bullion in the country now, not reckoning what has been imported since the 1st of September, and not reckoning the production of the present year. The mint estimate of gold coin and bullion at the beginning of the present year was $704,597 128. This included, of course, the $72,000,000 exported subsequently. Subtracting this sum, the mint estimate of stock on hand would be $632,597,128.

The District Attorney of Philadelphia has given to the public the full correspondence which passed between John Bardsley and the Auditor-General and Cashier of the State Treasury, while the former was engaged in robbing the City and State Treasuries of between two and three millions of dollars. This is the correspondence which the Auditor-General, Mr. McCamant, explained on the witness-stand recently by saying it referred to the purchase of neckties, rare books, handkerchiefs, clocks, and other trifles for him by his obliging friend Bardsley. It had not then been published in full, or this explanation would, in all probability, never have been offered. It fills nearly five long columns of the *Public Ledger*, and leaves no doubt whatever that there was a corrupt understanding between Bardsley and McCamant and Livsey concerning the illegal use made by the former of public money intrusted to his care. A single letter will sufficiently establish this. It was written on January 1, 1891, and contains a postscript that will recall to our readers another correspondence which had many similar characteristics:

"Your letter received. I do not know what Jack Robinson is after, but suspect very strongly that Philadelphia parties are back of him on some action that he proposes to spring in the Legislature, in regard to the advertising of the Appraisers' lists. I should not be surprised if some of the Philadelphia Senators are behind him, and I suggest that you post Dave Martin and the Appraisers and have them be on the watch. I will tell you more when I have an opportunity of seeing you. I know Robinson very well, and will ask him what he is after, if I find I can do so without offending his dignity. He wrote me in regard to the act and authority for publishing and amounts paid. I gave him the former, but told him I did not have the latter, inasmuch as the law provided for payment by the County Treasurer, and I would not get the return of the same until after the first of the year. I do not think Robinson should ask you what he does, but, inasmuch as the *Star* published the same, you can do no harm by giving him the figures. Use your own discretion, however, in regard to the matter, first consulting the newspapers that made the publications and Dave Martin. I think Martin can control Robinson on party grounds. So can Elverson or some of the newspaper men interested in the publication. Livsey says Boyer will take to you the school warrant in person. A happy New Year to you.—Hastily,

"THOMAS MCCAMANT.

"P. S.—Burn this after reading it."

One of the most interesting revelations of the letters is that concerning the use made of the advertising of the Mercantile Appraisers' lists in the Philadelphia newspapers. It will be remembered that the newspapers which received this advertising paid Bardsley a commission of 40 per cent. in return for it. McCamant's letters show that there was much difficulty in satisfying the demands of the various papers for the advertising, and also that it was bestowed with the expectation, if not understanding, that the papers receiving it would be friendly in return for the favor. In one of his letters, McCamant says:

"I am in receipt of another letter from the *Bulletin* people, and shall in the morning write them in such a way as to give them to understand that the *Bulletin* cannot have the advertisement this year, and ought not to expect it. *I cannot take it from the Press without placing myself in a position where I can never extricate myself.*"

We observe that the *Press*, which is obliged to condense the correspondence fully one-half, is unable to find room for any reference to this statement of its own relations to McCamant and the advertising. What was the so inextricable "position" in which McCamant would have placed himself by taking away that advertising? Was the *Press* threatening to "take the lid" off some of his transactions if he dared to cut off the paper's supply of "pap," or was it merely going to "stand dumb"?

Gov. Hill's speech to the Franklin County farmers on Thursday, in favor of reducing the rate of interest from 6 to 5 per cent., furnishes one more evidence that he did not have such perfect control of the recent Democratic State Convention as he would like people to believe he had. There were rumors before the Convention met that he intended to have a 5-per-cent.-interest plank put in the platform, and efforts were made in this city to have men on the Committee on Resolutions and in the Convention who would oppose its adoption. The Governor got wind of this opposition, and, when the platform was received from him, the interest plank was missing. Now he takes occasion, in one of his first campaign speeches, to show everybody that he was really in favor of such a plank, but was overruled on the point by his party. His speech puts him more completely out of the field as an "issue" than anything else that he has yet said or done.

The one issue in the New York campaign which is defined with perfect clearness is that of ballot reform. Both parties have stated their attitude towards that question with a plainness which is not to be mistaken. The Democrats, in their platform, commit themselves unequivocally to Gov. Hill's defective and most unjust law, and in turn protest against amending that law by the adoption of a blanket ballot in place of his separate ballots and iniquitous "paster." The Republican platform declares explicitly for the substitution of the "blanket official ballot upon which the names of candidates shall be compactly grouped, rendering the voter's duty easy, treating candidates with equal justice, lessening opportunities for fraud, bribery, and corruption, and largely reducing the expenses of elections." Mr. Fassett has pledged himself personally, in nearly every speech he has made since his nomination, to carry out the demands of this platform in case of his election. Mr. Flower has made no allusion to the subject.

The managers of the Republican campaign in Massachusetts have made a bad blunder at the very start. At the Convention which nominated Mr. Allen for Governor, the

chief argument for preferring him to Mr. Crapo, his older, abler, and better-known rival, was that he would make a stronger antagonist of Gov. Russell upon the stump, and there was much talk about the willingness, not to say anxiety, of the Republicans to meet the Democratic speakers anywhere, at any time, and on any platform. Nevertheless, the chairman and secretary of the Republican State Committee have absolutely declined the courteous invitation of the Democrats for a joint discussion between Mr. Allen and Gov. Russell. The speeches Mr. Allen is making show that the Republican managers were quite right in their belief that he could not stand the test of debate. He is actually asking people to vote for him as Governor of Massachusetts for the year 1892, on the ground that, a generation ago, Southern Democrats were engaged in a "dastardly and bloody conspiracy for the disruption of this Union, causing the blood and treasure of the land to flow in unlimited measure," etc., etc. !

The *Herald* has interviewed Mr. Thomas Bailey Potter, the President of the Cobden Club—and indeed, one may say, the Cobden Club—touching the story attributed to Mr. Dudley by the Pittsburgh *Times*, that he (Dudley) was present when the Club determined to spend $1,000,000 in trying to defeat Major McKinley in Ohio. Mr. Dudley denied that he ever said anything of the kind. What he says he said was, that when last in England he was at a dinner given to a certain successful manufacturer named "Lord Munsen," and that from what he saw and heard there he came to the conclusion that many of those present would not hesitate to subscribe money to defeat Major McKinley, if they thought it would do any good. We tried to catch him in this story by asking him where the Cobden Club was, and how he, a noted American protectionist, was allowed to be present when they were voting the anti-McKinley money; but he was too sharp for us. The Pittsburgh *Times*, however, in the true Republican fashion, has taken no more notice of his denial than if it were the sighing of the idle wind. The Cobden Club now declares on his honor that he has never spent a cent in America except in the distribution of documents; and has distributed no documents in America since 1879, because he found that it produced irritation. The Club also spoke contemptuously of the McKinley Bill as an injury to British trade; said that any loss of market it caused to British manufacturers would be easily made up for in other directions; called attention to the disappearance of American shipping from the high seas; praised Mr. Cleveland; accused the high-tariff men of "insanity," and generally conducted himself like a hardened old villain—he is seventy-four; but he evidently has no bribery money for Ohio or any other State.

Mr. F. C. Beach has an article in the *American Amateur Photographer* on the recent Treasury ruling forbidding the importation of photographs by mail. From the correspondence and Treasury circulars he reproduces, it appears that the primary aim was to prevent mail importations of lottery tickets. To effect this, resort was had to that section of the regulations of the Universal Postal Union which forbids the mailing of "any packets whatever containing articles liable to customs duties." As "printed matter," lottery tickets were so liable, but so were photographs, it was held. However, a letter from the Superintendent of Foreign Mails contains the gratifying intimation that, in respect to photographs, the "annoyance, it is hoped, will soon be prevented by a restoration of the understanding previously held by the Treasury and Post-office Departments in regard to the execution of the 'Regulation governing the treatment of dutiable articles received in the mail from foreign countries,' concerning which correspondence is now in progress between the Secretary of the Treasury and the Postmaster-General." But the *American Architect* prints a letter from the Acting Secretary of the Treasury of later date than any of the correspondence cited by Mr. Beach, which expresses with some asperity the purpose of the Department to continue in its present oppressive course.

Within a few days the scheme of acquiring possession of the island of St. Thomas has been, in nautical phrase, "flung to the breeze." Various reasons for acquiring that harbor are advanced in the Washington despatches. These reasons have a very wide range. Some people think that St. Thomas would serve us admirably as a coaling-station. Others think that it would enable us to "command the Caribbean Sea," and defend the Nicaragua Canal when we have such a thing to defend. Still others see in the acquisition of St. Thomas a new political issue, acquisition of *something* being more important than the acquisition of St. Thomas in particular. We incline to the latter opinion. Acquisition of almost anything would be better than that of St. Thomas. When we were negotiating for it twenty-four years ago, or very soon after the negotiation failed, through the refusal of the Senate to ratify it, the island was nearly ruined by an earthquake. So noted has it become for earthquakes and hurricanes that the shipping which crowded its harbor a quarter of a century ago has taken refuge at other ports, and chiefly at Barbados. There is probably no Power on the globe that would accept the island as a free gift if required to fortify it and convert it into a naval station.

There is renewed talk of an investigation of Egan, which we trust is true. It would be much better that the State Department should investigate him than that he should be investigated by Congress, as he certainly will be if he should be in office in December. Admiral McCann has admitted that Egan wrote at least one letter to him asserting that Balmaceda could not be overthrown, and he was probably writing similar letters to others, and was "stuffing" the State Department with the same view, and possibly, also, Mr. C. R. Flint and Mr. Ivins, Balmaceda's counsel here. One charge against him will certainly be made good, for the proof lies in a nut-shell, namely, his refusing to sign the indignant protest made by the French and Brazilian Ministers when Balmaceda refused a safe-conduct for the return of the Congressional envoys who had come to Santiago to confer for peace. The Brazilian, French, and American Ministers were called in as mediators, but Balmaceda broke the conference up before it had gone very far, for reasons of his own, and then, thinking he had caught some of the Congressional leaders in a trap, refused to permit their departure unless they signed a pledge to refrain from all further opposition to him. The French Minister was so angry that he wrote a vehement remonstrance, which his Brazilian colleague signed, but Mr. Egan would not and did not. He was probably too "solid" with Balmaceda to be willing to gainsay him in anything.

The new Constitution in Mississippi makes the right to vote depend upon the payment of a poll tax several months before election, and ability to read or to understand the Constitution itself. Although the negroes largely outnumber the whites, so few of them cared enough about the suffrage to pay the poll tax that the operation of this clause alone gives the whites a large majority of the names on the list. This is the first time since reconstruction days that the whites have been legally in the majority, and the effect of the change is already visible. The Vicksburg *Commercial-Herald* says that there has been during the past summer, for the first time in a quarter of a century, a thorough and able discussion of leading political questions. "The all-pervading fear that the white people could not differ on leading questions, lest the ignorant negroes should wield the balance of power, kept the whites from all healthy and progressive participation in the leading economic questions. This year marks a new era in this respect. The questions of finances, tariff, and pensions have been discussed in every county in the State, and even the war records were buried in the dead past. Public officials in Congress were held to a strict accountability, and their records discussed by one party in the State and defended by another." This is the first step to the formation of a strong party in opposition to the regular Democracy, and the Vicksburg paper thinks that there will be only a short delay until two parties are formed and make their nominations for all the State and county offices. This will not happen next year, for the continued Republican threat of a Force Bill will keep the whites solid in the Presidential campaign, but it will surely occur before the next State election. The *Commercial-Herald* naturally and properly rejoices over this prospect, which "will generate healthy political competition, hold officials

to a stricter accountability, secure greater freedom of thought and discussion, and greatly inure to the prosperity of the people."

The obscure knot of women who have been trying to make themselves notorious by erecting a statue to the late Mrs. G. L. Schuyler received a severe rebuff in the issue of a permanent injunction against them on Friday by Judge O'Brien. Whether such an injunction could issue has been a matter of doubt among lawyers, as there is no precedent in the books exactly applicable to the case. But no one who sees how rapidly respect for the privacy of individuals is diminishing under the attacks of the unclean horde who detest privacy for themselves, has denied that if a wrong of this sort were not preventable, there was a serious defect in the law. Judge O'Brien has solved this difficulty by doing what judges have every now and then to do, in dealing with new sets of facts. He says:

"It is true that there is no reported decision which goes to this extent in maintaining the right of privacy, and in that respect this is a novel case. But the gradual extension of the law in the direction of affording the most complete redress for injury to individual rights makes this, from reported decisions much similar in principle, an easy step."

He lays down, too, the very valuable rule that nobody can be made a public character against his or her will. To enable anybody to criticise publicly, or honor publicly, a man or woman as a "public character," he or she must have assumed the rôle voluntarily, by accepting public office or becoming an artist, literary man, or orator. But it is not permissible to dig a man out of private life because he was conspicuous for his charities, or his domestic virtues or graces, and make him ridiculous by drumming round the country for money to erect a statue to him. This might be done for mere purposes of annoyance to an enemy, and might be defended with the pleas set up by the "Woman's Memorial Fund Association."

We see no reason for the surprise expressed at Prof. Vincent's address at the opening of Union Seminary last Thursday, in which he substantially endorsed for himself and his colleagues the views of Prof. Briggs. That was but the logical following up of the action of the Seminary last spring, when it decided to stand by the Professor whom the General Assembly had practically declared to be unfit to teach in the Presbyterian Church. That action was based upon the technical denial of the right of the Assembly to proceed as it had, but it really amounted to a defiance of that body. It would have been very easy for the Trustees to say: "We think the Assembly was going beyond the strict letter of our agreement, but still, inasmuch as it has disapproved of Prof. Briggs, we will call for his resignation so as to remain in full harmony with the highest court of the Church." But they did not say that, and virtually crossed the Rubicon at the time; so that they are now but maintaining the position which they then determined upon.

The London *Daily News* has been making some sensation in England by a series of letters on English "Village Life" in various parts of the island, which go to show that the villages in all the agricultural districts are being rapidly deserted by the young men and women, to such a point that, in spite of the aid derived from machinery, the farmers find increasing difficulty in sowing and harvesting their crops, and the parsons are left with empty churches and Sunday-schools, and the squires with few to rule over but the aged and infirm. In fact, it looks as if the economic decay which for fifteen years has been slowly going on in rural England, was receiving its final impulse from the dislike of the younger generation to country life. But what is also threatened with ruin is a social system which has come down to our day almost untouched from the Middle Ages. In this system the laborer was born, and was expected to remain, in the village, as "Hodge," or "Chawbacon," and work on the adjacent farms in absolute content. The schooling he got consisted mainly of the Church catechism, and he was expected to attend church regularly, on pain of the severe displeasure of the parson and the squire. The latter owned most of the cottages, or the whole village, which was then called a "close village," and could drive anybody he pleased out of the parish, and, besides this, he was apt to be a justice of the peace with large summary powers, an office also often held by the parson. When Hodge got old or sick, the ladies of "the great house" or the parsonage gave him and his wife fuel and blankets in the winter, and preached resignation to him; and when he got too old for any work, they both took refuge in the workhouse in which, like the great bulk of their class, they died with the consolations of religion.

All this has of late years been greatly changed. The new schools, the railroads, the ocean steamers, the cheap newspapers, and the political agitators have opened up the world to Hodge's astonished gaze, and he refuses any longer to live under the parish triumvirate—the Squire, the Parson, and the Farmer. He goes off to the great towns or emigrates, and if he remains, is so saucy and independent and so ungrateful for the coal, the blankets, and the workhouse, that he is practically unmanageable. The vote has given the final touch to his impudence, and in many parts of rural England the end of the world seems to the little circle in the manor-house and the vicarage to be very near at hand. There is something pathetic in the swarm of letters which the *Daily News* is receiving, suggesting ways of making village life attractive and of keeping the young men and maids at home, but they have all a futile air. Some consolation, in the way of a saving of pride, is found in the fact that the same sort of phenomenon is visible in France and in the United States.

It seems hardly necessary to mention the fact that silver was demonetized in France in 1877. Nevertheless it looks as though the Richmond *Dispatch* had not learned that fact as late as September 22, for it quotes and endorses Sir Moreton Frewen to the following effect:

"Mr. Frewen says that as no Administration could stand in this country which should pass a law demonetizing silver, so no Administration could stand in France which should take executive action hostile to silver. In a word, as we have monometallism in this country, and yet the people are bimetallists, so it is in France; and there is no more danger of the demonetization of silver by law in France than in this country. Silver stands there as here upon its merits."

To say that in a country where monometallism prevails there is no danger of the demonetization of silver, is a truism, like saying that in a country where all the people are white there is no danger of enslavement of the blacks. Silver does *not* "stand upon its own merits," either in France or in the United States. In France it is not coined at all except for small change. In the United States it is coined only on Government account. It is really demonetized in both countries. "An act to melt silver coins and convert them into bullion," continues Sir Moreton, "could not possibly pass the French Chambers." That is because the resulting bullion could not be sold except at a heavy loss. If it could be sold for gold in the proportion of 1 to 15½, such a bill would pass the French Chambers in a twinkling, and also the American Congress.

It took fifty sittings of the Brazilian Congress to pass its first important bill, and that related to the salary of Congressmen. The precedents brought out in the debate on that measure of pressing public importance show that the stipend of the members of the first Constituent Assembly after the separation from Portugal was $1,200 a year. That amount continued to be paid to the representatives in Parliament down to 1873, when the change was made to the rate of $37.50 per legislative day for Senators and $25 a day for Deputies. A natural indifference to the length of sessions was observable under that arrangement, and was urged as an argument against continuing it in the Republic. But a proposition to make the salary $500 for each session was voted down, and the old plan of payment by the day adopted. There was some dispute between the two houses, however, over the distinction made in estimating the value of the services of each. It was finally agreed, though, that genuine republican principles required equality of payment, and, as the Senators would not come down, the Deputies consented to go up, and so the rate for either was made $37.50 per legislative day.

QUAYISM IN PENNSYLVANIA.

THE action of Gov. Pattison in calling a special session of the Pennsylvania Senate to inquire into the grave charges made against the State Treasurer and Auditor-General, with a view to their removal from office in case the charges are sustained, causes a great commotion throughout the State. Although the Senate has a strong Republican majority, there appears to be a general expectation that its inquiry will be more thorough and fearless, and consequently more damaging, than any similar examination yet made into Republican misdoings in the State. That the Quay Republicans are afraid that this will be the case is made plain by their comments and the protests of their newspapers, all of them taking the ground that the Governor's action is merely a campaign move.

As a matter of fact, the Governor's action was first suggested, in public at least, by the Philadelphia *Ledger* on Thursday last, the day after the McCamant-Bardsley-Livsey letters were published. It called the Governor's attention to the clause of the Constitution which he cites now as compelling him to this action, and said that the expense of an extra session would not be great. In taking this position the *Ledger* was simply following the manly, self-respecting course which, under Mr. Childs's personal direction, it has been pursuing towards the Bardsley and other rascalities during the past few weeks. It alone of the Republican newspapers of the city published the McCamant letters in full, and it alone had the courage to comment upon them in terms suitable to the occasion. The *Press* and *Inquirer* were neither able to publish the letters in full nor to make any editorial comment whatever upon them. On Monday both those Republican organs denounced the Governor's action. The *Inquirer*, Quay's personal organ, says the proclamation "has a lot of political fireworks in it," and will entail a great and useless expense upon the taxpayers. The *Press*, which usually "stands dumb" about Quay until he needs some defence for especially dirty work, comes to his rescue with even more zeal than the *Inquirer*, saying that the Governor's action "has the appearance of a costly campaign trick," and that if there have been any charges preferred against the officials in question, the "public has not heard of them, and so far nothing has been developed beyond the letters recently given the public by District-Attorney Graham." These letters this same *Press* did its utmost to keep the public from seeing by cutting out all the more damaging parts of them, including such as showed that the *Press* had been mixed up with McCamant and Bardsley in a distribution of the city advertising plunder.

The best and only answer necessary for the Governor to make to the criticism of these partisan editors appeared in the *Ledger's* editorial comments of Monday. Mr. Childs shows in these that he has "enlisted for the war," and that one editor at least in the city has begun to realize that the good name of Philadelphia and of Pennsylvania can no longer be preserved by covering up Republican official rottenness, but can be saved from entire destruction only by unsparing exposure and punishment. The *Ledger* says of the Governor's action that he "was required by his obligations to his great constituency to do what he has done"; that the insinuations of partisan journals that he is inspired by political considerations, "are more likely to hurt their authors and the Republican party than the Governor, whose entire official record as Chief Magistrate of this commonwealth is so clear as to be read aright by all men of fair minds"; and that "every circumstance revealed by the Bardsley-McCamant-Livsey correspondence was a separate force which urged, or compelled, the Governor in respect to his convictions of his simple, inevitable duty to ascertain the truth of the grave charges made against the administration of the offices of Auditor-General and State Treasurer." Continuing, the *Ledger* says, and its manly utterances ought to make the Quay apologists in the *Press* and *Inquirer* offices thoroughly ashamed of themselves:

> "The extraordinary session has been properly called, and the District Attorney of Philadelphia and the Governor of Pennsylvania having done their duty in the premises, the Senate, with like high sense of public duty, with like courage, and with like regard for the ascertainment of the truth, and the whole of it, without regard to what party or what persons may be hurt by it, must do its duty. The public wants to know the top and bottom, the length and breadth, of the official maladministration which has not only plundered State and city, but which has covered both with disgrace. . . . If the Senate would serve its party best, it will by an open, fearless and exhaustive investigation of the implicated officials' conduct, establish their innocence or prove their guilt. If they are innocent, the party will be relieved from all responsibility for wrong-doing which two of its official representatives have indirectly put upon it; if they are guilty, the Senate, as the representative of the party, should proclaim their guilt and so secure their removal from office. The Democrats are not half so much interested to discover the truth with regard to these 'grave charges' as are the Republicans; and the Republicans, having the power to do it, should be eager to discover and proclaim it. The people will tolerate no partisan jugglery in this business, and at least two-thirds of the Senate should know it."

That both officials are guilty, no one who has read the McCamant correspondence can for a moment doubt, for that correspondence is so damning that the defenders of the officials dare not publish it in full. It is to be said of the Treasurer, Mr. Boyer, that he is not directly implicated by it, but his Cashier, Mr. Livsey, is, and Mr. Boyer can escape conviction only by pleading that he had no knowledge of what his cashier was doing—an astonishing neglect of his sworn duty as the head of the Treasury Department. Livsey has resigned, having first fled the State as soon as the Legislative Investigating Committee began its inquiry into the Treasury's conduct. He was said at one time to have been in Milwaukee, but thorough search for him there shows that this was a false report, as he has never been in that city, but has been in Canada since his flight. When Mr. Boyer was sought on Saturday for his views on the Governor's action, it was discovered, according to the Philadelphia *Press*, that he was "in Atlantic City conferring with Senator Quay."

The simple fact is, that it is Quayism in office for the past twenty-five years or more which is under examination in Pennsylvania now, and it is to Quay that all the implicated persons flock for counsel when they hear the alarm. By a curious and dramatic coincidence, the death of one of the first treasurers of the Quay kind which the State had, Kemble of "addition, division, and silence" fame, was announced on the morning when his successors in office were being summoned to give an accounting of their work. Quay himself fled to Atlantic City when the legislative inquiry began, and has only twice put his foot in the State since. He knows well enough what would be the result of "removing the lid from the State Treasury" of Pennsylvania for the past quarter of a century, for during all that time Quay's views of what constitute the duty of public officials towards public money have been in active operation. The fatal break came when the voters of Pennsylvania refused to elect Quay's smirched candidate, Delamater, to the Governorship last fall. That precipitated the collapse of the Keystone Bank and the exposure of Bardsley, and began the series of revelations which the Governor is now seeking to make complete and final.

ELECTING PRESIDENT EVERY YEAR.

THE theory of our Government is, that a President of the United States is to be voted for only once in four years. The attempt of our politicians is, to make men vote every year with sole reference to the next Presidential election. This policy was never before advocated so strongly and so inexcusably as it is to-day by the managers of the Republican party in Massachusetts.

The Bay State still elects its Governor every year, and it has been the custom of the dominant party to give a second term to a man who had behaved well as Executive during his first year. Last year William E. Russell, a Democrat, was elected Governor, many Republicans being so much dissatisfied with the nominee of their own party that they either voted against him or refused to vote at all. Mr. Russell has made an excellent Governor, so much so that the Republican State Convention could not find any material for the usual plank "arraigning" the Executive of the other party. The election this fall is solely for State officers and members of the Legislature. Not a single Federal office is to be filled. The main question is, of course, as to the Governorship. It is simply the question whether Mr. Russell, just renominated by the Democrats, is likely to make a better Governor next year than Mr. Charles H. Allen, whom the Republicans made their candidate a fortnight ago. It is purely a State question, for the Governor of Massachusetts next year will have nothing to do with Federal issues.

The Republican managers, however, fear the result if they allow the election to turn, as it ought, on this State issue. They are afraid that many men who expect to vote the Republican ticket next year, will vote for Russell's reëlection this year, if the question

is whether they do not think that his good service this year merits the reward of another term. Consequently, they are preaching the doctrine that it is not really a State election which is to be held in Massachusetts this year, but a national one; that the voter is not to cast his ballot for Russell or Allen according as he thinks one or the other better qualified for the Governorship, but for the Republican or the Democratic ticket according as he desires to see a Republican or a Democrat elected President of the United States in November, 1892. The argument was put in the bluntest form by ex-Gov. Brackett, in his speech as presiding officer at the opening meeting of the campaign in Boston when he said:

"The Governorship of Massachusetts, and of every other State, is a political office. We are engaged in a prolonged political warfare in this country. Two great political armies are arrayed against each other. Once in four years a general engagement takes place between them. On other years battles are fought between the various divisions located in the different States. In these the numbers engaged upon each side are smaller, the results less decisive and important to the nation, but no one is thereby justified in deserting his colors and going over to the enemy in the lesser any more than in the larger combat. And the claim that the commander of the opposing force in one of these contests is an estimable gentleman, and that his actions have been creditable, is as immaterial in the battle of ballots as it would be in the battle of bullets; but each man's duty is to stand by the flag that symbolizes his political faith, and yield a loyal support to the man who has been selected to bear that standard."

This is nothing more nor less than the doctrine that we must elect a President every year; that the question in a State election is not which of two men will make the better Governor of the State, but which of two parties ought to rule the nation; that the question in a city election is not whether a certain man will make the best Mayor of all the candidates, but whether his election will help or hurt the chances throughout the country of the national party to which the voter belongs. It follows, of course, that neither Republican nor Democrat must consider the character, or want of character, of his party's candidate for Governor or Mayor; the matter of his comparative fitness for executive responsibility; the question whether the State or city, as the case may be, will gain or lose by his election. All such considerations are "immaterial"; his one duty, under all circumstances, is to "stand by the flag that symbolizes his political faith," and "yield a loyal support to the man who has been selected to bear that standard," whether that man be saint or sinner.

The traditional declaration of the Bourbon Democrat, that he "would vote for the Devil if he got the regular nomination," is thus accepted as the true gospel by a representative Massachusetts Republican. If ex-Gov. Brackett's position be sound, every man in New York who wants to see the Democrats carry the Presidential election next year ought to vote for Flower this year without any questioning. The voter may believe that Fassett would make a far better Governor of the State; he may consider the chances of getting a good ballot law far better under Fassett than under Flower; he may think that Flower's election would put Tammany Hall virtually in control of the State; he may feel sure that the varied interests of this great commonwealth would fare far better with Fassett as Governor than with Flower. But all such considerations are "immaterial." The only question is which army he is going to train with when national issues come up next year. He must vote for President this year, as well as next—every year, in fact.

We saw this doctrine put into practice by the Republicans of this city last fall. There were two candidates for Mayor—one a perfect representative of Tammany Hall, the other an honest Democrat who would give the city good government. The issue of the contest rested with the Republicans. Many of them supported the honest Democrat, but many others—more than enough to turn the scales—either refused to vote for him, or in some cases even voted for the Tammany candidate, because they wanted Tammany kept in power in New York city as a "horrible example" of Democratic government for Republican stump speakers to harp upon in a Presidential campaign. They considered such questions as clean streets, decent city officials, and honest municipal government "immaterial," compared with a supposed advantage for their "political army" in the "general engagement" throughout the country which was to take place two years later.

Against the corrupt and demoralizing doctrine which is preached by the Massachusetts Republicans is the clear and convincing statement of the truth which is made by Mr. Matthew Hale of Albany in an excellent letter published by the *Times* of Friday last. Mr. Hale is an independent voter who supported Cleveland against Blaine in 1884, and who stands with the Democrats on the tariff issue in national politics, but he purposes voting for Fassett for Governor this year because this year's election is for State officers, and he thinks Mr. Fassett's election will best subserve the interests of the State, and he is not to be deterred from doing so by any claim that he ought to cast his ballot with reference to the McKinley tariff, the Force Bill, or any other issue in Federal affairs. Mr. Hale's argument applies equally well to every other State, and we invite ex-Gov. Brackett, the editor of the Boston *Journal*, or any other representative of Massachusetts Republicanism, to see if he can pick any flaw in it.

Once in four years is certainly often enough to vote for President. Good citizens ought to make short work of those politicians, whatever their party, who would have us take to electing a President every year, and who advise us to sacrifice the highest interests of municipality or State for the sake of some problematical gain to the party we expect to support in a future national campaign.

ANOTHER DIPLOMATIC "TRIUMPH."

MR FREDERICK DOUGLASS, ex-Minister to Hayti, concludes his exposition of our recent diplomacy in that country in the *North American Review* for October. In his former paper he brought affairs down to the request presented by Admiral Gherardi as special commissioner of the United States, backed by seven ships of war, to Mr. Firmin, the Haytian Minister of Foreign Affairs, that the Government of Hayti should grant us a lease of the Môle St. Nicolas, and agree at the same time not to grant any other lease, concession, or sale of Haytian territory to any other Power. This request was based, Mr. Douglass told us in his first paper, upon an alleged understanding with President Hyppolite, being a sort of *quid pro quo* for assistance rendered to him secretly by our Government during the last civil war in Hayti. This request was, at Mr. Firmin's instance, reduced to writing by Admiral Gherardi and signed by him. Mr. Douglass, although he was then our accredited Minister to Hayti, was not asked to sign it and did not. Then the Haytian Minister asked to see Admiral Gherardi's credentials, and, when these were presented to him, pronounced them insufficient to bind the United States to any contract. Admiral Gherardi insisted that they were ample, and intimated that the Haytian Minister had raised this objection merely for purposes of delay. This did not tend to smooth matters. Mr. Firmin would not take another step without better credentials. So a telegram was sent to Washington, and an answer was received that the new credentials would be sent immediately by the Clyde Line steamer to Gonaives. But they did not come by that steamer, nor till two months later.

In the meantime, rumors had got abroad among the populace that the Government was selling a portion of the country to foreigners, that the lease of the Môle St. Nicolas would be only the first step towards the surrender of the whole island, etc., etc. The result was a very inflammatory state of the public mind, rendering any negotiation difficult. When the new letter of credentials arrrived, it was found to include Mr. Douglass as a joint envoy or commissioner with Admiral Gherardi to negotiate the treaty of cession, the former one mentioning the Admiral alone. It was signed by President Harrison and Secretary Blaine, and it was confined by its terms to the lease of the Môle St. Nicolas as a United States naval station, no mention being made of the limitations and conditions prescribed in the earlier letter. A disagreement immediately arose between the two Commissioners, Mr. Douglass contending that the new letter of instructions superseded the old one entirely, while the Admiral held that it was merely supplementary and additional to the old one. The point was of importance, since in the one case the exclusion of other Powers from Haytian territory was a condition, while in the other it was not. The exclusion clause was held by Mr. Douglass to be tantamount to a surrender by Hayti of her sovereignty, *i. e.*, of her right to dispose of her own territory, and therefore likely to prove an obstacle to the negotiation. Mr. Douglass yielded to the Ad-

miral's views on this point, and then he says: "The result is known. Hayti refused to grant the lease, and alleged that to do so was impossible under the hard terms imposed in the previous letter of instructions."

But the real reason for the failure of the negotiation, he thinks, was the popular opposition to any alienation of the national territory. The Government did not dare to face this opposition. "Nothing," says Mr. Douglass, "is more repugnant to the thoughts and feelings of the masses of that country than the alienation of a single rood of their territory to a foreign Power," and this may well be believed. Another contributing cause of the non-success of the negotiation, he tells us, was the presence of a squadron of war ships carrying a hundred cannon and 2,000 men. If this squadron was sent to Hayti as a threat, it had an effect contrary to the intention of the senders. "We should have known," says Mr. Douglass, "that, whatever else the Haytian people may be, they are not cowards." This is another true saying. Since the days of Toussaint, the Haytians have fought against foreigners and fought among themselves with real barbaric freedom.

But this negotiation and its failure are not the most singular part of Mr. Douglass's story. Simultaneously there was going on a negotiation between an agent of the Clyde Line of steamers and the Haytian Government for a subsidy of a half-million dollars from the Government of Hayti to enable this firm to run a line of steamers from New York to Hayti. "This agent," Mr. Douglass says, "assumed towards me a dictatorial attitude." Among other proposals, he wanted Mr. Douglass to go to Mr. Firmin and assure him that if he would grant the Clyde concession, he (Minister Douglass) would refrain from pressing the claims of other American citizens against Hayti. This Mr. Douglass refused to do, whereupon the agent reported him to the Government at Washington as inefficient and unfriendly to the subsidy. The Government of Hayti objected to the subsidy on the plea of poverty. When the agent found that he could not carry his point, he set up a claim to be paid by Hayti for his own costs in working for the subsidy. Mr. Douglass refused to present this claim, but the agent pushed it on his own account, and actually got $5,000 gold out of the Haytian Treasury. The money was paid to get rid of the man and of his importunities, but the payment was a woful mistake, for he used it to renew his demand for the subsidy. Mr. Douglass does not say that this subsidy claim was backed by the United States Government, but it is impossible to understand his paper in any other way, for he says that the subsidy negotiation made the other negotiation more difficult. Moreover, he gives us to understand that the subsidy to the Clyde Line had the preference over the coaling station. "To them" [the Haytians], he says, "the preference given to an individual firm over those of the United States seemed to wear a sinister aspect." We should think very likely it would, especially if they had any knowledge of our preference for nitrate beds in South America over the ordinary achievements of diplomacy.

Here, we submit, is one of Mr. Blaine's most notable diplomatic triumphs. It has all the characteristic features. Although representing the Republican party, which stands up for the colored man on every occasion, he puts a gross indignity on his own chosen Minister to Hayti because he is black. That must have been the reason, because Mr. Douglass is a man of ability. It is no disparagement to Admiral Gherardi to say that Mr. Douglass is intellectually his equal. This initial blunder was afterwards corrected by associating Mr. Douglass with the Admiral. It was characteristic, too, that the demand for the Môle St. Nicolas should have been based upon secret help given by us to one belligerent against another in a neighboring country with which we were at peace. To send seven war ships to the country with which we were negotiating—this being a republic and the only black republic on the American hemisphere—was distinctly a threat and calculated to defeat the object in view. To have or to allow a private job to be mixed up with important public business was the most characteristic feature of all. This alone would stamp it as a Blaine performance. Anybody familiar with Mr. Blaine's career would recognize it at once.

Altogether this Haytian business, as narrated by Mr. Douglass, is one of the most discreditable chapters in our diplomatic history. It is impossible that it should be passed over or ignored. If what Mr. Douglass says is not true, it must be answered and shown to be false. It cannot be answered as Collector Erhardt was answered by the chief organ of the party, by saying that he is "trying to pose as a martyr."

MR. DEPEW'S LONDON "VOLCANO."

It is the privilege of the American public to receive from Mr. Depew every fall, on his return from his annual European tour, much needed information on the economic and social condition of the Old World. We all recall his remarkable discovery, three years ago, that Holland had made a mistake in abandoning the protective system, although the fact that she had ever followed that system was a profound secret to everybody but Mr. Depew, and he himself has consistently refused to tell us how he found it out. This year he has chosen to enlighten us about London poverty, and we must say that we find some of his revelations as startling as he could have expected.

His qualifications for giving us the exact truth as to the "dark side" of London consist, he tells us, in his having gone "one Sunday morning, in a garb which was a cross between that of a costermonger and a pickpocket," to traverse the Whitechapel district. For a man of his lightning-like qualities of mind, this was, of course, enough. One like Mr. Arnold White, now Baron Hirsch's agent, could spend years in inquiry, could personally investigate the cases of 6,000 unemployed men, and then report his results "with a humble sense of their inherent deficiencies"; but it would be absurd to compare such a plodding order of talent with Mr. Depew's intuitive methods. However, it is with the conclusions he drew that we are mainly concerned, and he informs us: "I felt that this great city, with its magnificent palaces, with every evidence in part of it of the largest wealth, the greatest luxury, the most liberal expenditure, rested upon a volcano which only needed the force of civilization to bring upon it a catastrophe which would shock the world." This was the impression made upon him by the "misery, the wretchedness, the seething furnace of ignorance," which he saw in Whitechapel.

Now, there are other people who have taken walks in Whitechapel, and have been there oftener than Mr. Depew. By going very often and for several years, they have probably, taken together, seen fully as much as he did on that Sunday morning's stroll. At any rate, they took notes on what they saw, and made out a classification of the entire population of the district. It was published in the first volume of 'Labor and Life of the People,' and would have saved Mr. Depew a good deal of trouble if he had seen it. From that table it appears that the district contained 2,439 persons of the lowest class, criminals, loafers, etc. But they amounted to but 3.32 per cent. of the entire population. Next to them came 6,566, or 8.92 per cent., who were classed among the "very poor," having only irregular employment. But the class of "poor," with living wages, numbered upwards of 19,000, while the "comfortable" included 40,000 and more, among them being 8,277, or 11.27 of the entire population, who did "highly paid work"; and 4,589 belonged to the "well-to-do" or "lower-middle and upper-middle" classes. Thus Mr. Depew's "volcano" class numbers less than 4 per cent. of the total, is only about half as large as the "well-to-do," even in Whitechapel, one-third as great as the "highly paid," and about one-fifteenth as great as the "comfortable." So that, in point of numbers, it does not look like a slumbering Mt. Etna, even considering Whitechapel alone.

But it is when this class is itself analyzed, and its quality shown, that talk about its liability to rise any day and lay hold upon London becomes peculiarly ridiculous. Arnold White, as we have said, examined thousands of these homeless, unemployed people, of irregular or criminal habits—the men who roam the streets at night, and to whom is attributed "the bitter cry of outcast London"—the men whom "Gen." Booth proposes to reclaim by deporting them, and putting them to work on the land somewhere. He reports that 40 per cent. of them were "hopelessly submerged," "physically incapable of doing an honest day's work." Then came 40 per cent. more who, though not "fallen to so low a level," were able to do no more than "two or three hours' work of descriptions not demanding the exercise of skill." Of the remaining 20 per cent., a large proportion were broken-down soldiers, with

no trade or industrial aptitude, while others were artisans whose work had been supplanted by machinery, and agricultural laborers drawn in from a lot that was hard to one that was hopeless. "The whisper of a Mansion House fund blackens the North Road with swarms of these poor fellows, who, aimlessly and unprevented, swell the ranks of the competitive army of the soldiers of unskilled labor." Of the whole floating-population of London, says Mr. White, not more than 4½ per cent. would be able to support themselves in a colony, if given land, tools, and everything necessary to begin farming.

To say that this body of incapables is a menace to civilization, in Mr. Depew's sense, is to utter wild and whirling words. There is no more possibility of an explosion caused by them that will "shock the world" than there is of one taking place in a mass of decaying refuse. That they are a great social evil and danger cannot be doubted. Nor need it be denied that they are capable of isolated and underground crimes, like throwing dynamite bombs, directed against society at large. But to suppose them either mentally able to form a plan of concerted attack upon the social order, or physically able to carry it out if formed, is hopelessly to misconceive the whole matter. One hundred intelligent and vigorous men could handle the whole lot. The volcano is only a mud one.

But Mr. Depew also tells us how it has all come about. "Miserable as these people have been always, their misery is a thousand-fold intensified by pauper immigration. Great Britain has erected no barrier as we have. . . . It is the dumping-ground for all Europe for misery which must starve or go somewhere." Now, according to the census of 1881, the foreign-born population of London was 2¾ per cent. of the whole. That proportion must have been phenomenally active to have "a thousand-fold intensified" the misery of the rest of the people; and the way the "dumping" process goes on, that Mr. Depew alludes to, may be seen from the statistics of emigration and immigration for 1889. In that year 44 328 foreigners emigrated to England; but in the same year 83,466 foreigners emigrated from England, and we fear they found their "dumping-ground" in the land that has "erected a barrier." It is true, that in 1881 and 1882, when there was an outburst of persecution against the Jews in Russia, there was an influx of refugees in London, as there was also after Bismarck's edict of 1884, expelling the Poles from Prussia. But a report on the subject was printed in 1889, from the pen of H Llewellyn Smith, which concluded: "Whatever may have been the cause for alarm presented by the immigration of the Jew, it is all over now."

Mr. Depew concludes his observations by saying that they yield "a lesson for us to take to ourselves." So we think. The lesson would appear to be that we should never judge the phenomena of foreign countries hastily.

RAIN-MAKERS AND SCIENCE.

We doubt if there has appeared within the present century a more amusing discussion than that in the current number of the *North American Review* between Gen. Dyrenforth and Prof. Simon Newcomb about the possibility of producing rain by making a great noise. The humor of the controversy, too, is greatly increased by the fact that Gen. Dyrenforth professes to represent science just as much as Prof. Newcomb does.

Gen. Dyrenforth, who speaks for the rain-making interest, has been making experiments on the Staked Plains in Texas, with money voted by the last Congress, and maintains that he actually produced rain in an arid region and in a dry time by his noise. Prof. Newcomb, on the other hand, maintains that the production of rain by earthly noises is, not a scientific impossibility, but one of those scientific improbabilities which pass as impossibilities in the present state of human knowledge, among all sensible and instructed men, and he intimates, politely of course, that Gen. Dyrenforth is a simpleton.

The General's case, stated briefly, is as follows: Plutarch has observed (no reference) that "unusually heavy rains fall after great battles." This dictum of Plutarch suggests to the General the following observations, which it would be wicked not to reproduce *verbatim:*

> "It is not impossible, according to the theory of the commingling of air currents, that such rains might have been produced by the great battles of ancient times. Let ten thousand Greeks march into battle chanting their 'pæans' and shouting their 'allallas,' beating time meanwhile on their shields, while a hundred thousand Persians are advancing against them, continually shouting their terrible battle-cries; then let the great armies rush together with the tumult of clashing swords and shields, the fierce shouting of the multitudes, the hoarse death-cries and shouts of victory, and surely the sound waves rising from such a din will literally shake the heavens, and are capable of producing no insignificant effect among the volatile currents of the upper air. Moreover, the heat generated from the struggling masses, and the moisture evaporated from their perspiration, would exercise a decided influence in disturbing the equilibrium of the atmospheric conditions."

These eloquent remarks will suggest to most readers the inquiry why, if human perspiration can "exercise a decided influence in disturbing the equilibrium of atmospheric conditions," hot, dry weather lasts so long—why, for instance, it has not rained more in New York for the last fortnight. During the whole of this period not only 110,000, but over 1,000,000 persons have been perspiring profusely on an area proportionately no larger than that occupied by the Greeks and Persians at the battle of Marathon; and although they may not have emitted either "pæans" or "allallas," they have given utterance to curses and other exclamations calculated to exert an equally disturbing effect on "the volatile currents of the upper air."

But Gen. Dyrenforth does not rely on Plutarch alone. He produces "a well-known scientist" named Espy, who flourished about 1837 and "proposed a method of compelling Nature to loose the moisture which she holds aloft." This method was the kindling of a great fire, which would send a current of hot air "to a great height," where it would tackle Nature, and compel her to loose her moisture. The Australian Government was on the point of testing the theory in 1884, when it consulted the local astronomer, Mr. H. C. Russell, who was cruel enough to "demonstrate" that a fire capable of exerting compulsion on Nature in those regions, so as to increase the rainfall at Sydney, would need the consumption of 9,000,000 tons of coal per day. The experiment, therefore, was not tried, but the principle remained. Given a fire of 9,000,000 tons of coal a day, and Nature would in all probability loose her moisture.

Gen. Dyrenforth next turns to the noise of great modern battles, in which the sound of artillery is substituted for "pæans" and "allallas," the perspiration of the contending forces being probably about the same. He finds that the rain which fell after the battles of 1870 was "widely discussed by European scientists." He does not give the names of these scientists, but he does cite an anonymous letter in the *Evening Post* of September in that year which shows that the "German press" had commented on the rainy weather which had accompanied the battles, and in which the writer declared that "there appeared to be little doubt, judging from the data on hand, that many storms and rains which we have had in Germany for the past six weeks—a most unusual thing at this season here—have been brought on by the cannonading and firing of small arms in Alsace and Lorraine." It will be observed that the letter is dated at Frankfort-on-the-Main, and that the rainy weather the writer speaks of was weather "in that [this] part of Germany," and that the battles in Alsace and Lorraine occurred only once a fortnight or so. That the occasional cannonading in France should have given Germany a rainy summer must, therefore, be looked on as a scientific fact of the first order of importance, and yet Prof. Newcomb passes it over without notice. No wonder our plain people distrust the professors.

Gen. Dyrenforth next takes up the battles of our Mexican war and civil war. He shows that "heavy rain followed almost every engagement of importance during the civil, and, so far as can be ascertained, the same was common during the Mexican, war," which, he says, "constitutes almost unquestionable proof that rain can be and is produced by the concussion of cannonading." Fortified with these "proofs," he got an appropriation from the last Congress to enable him to make experiments on the Staked Plains, and started for the scene of action with the following outfit:

> "Sixty-eight explosive balloons 10 and 12 feet in diameter, having a capacity of 525 and 940 cubic feet each, respectively; three large balloons for making ascensions; 20,000 pounds of iron borings and 16,000 pounds of sulphuric acid, together with generators and fittings for manufacturing 50,000 cubic feet of hydrogen gas; 2,500 pounds of powdered chlorate of potash; 600 pounds of binoxide of manganese, with fifty retorts and suitable furnaces and fittings for generating 12,000 cubic feet of oxygen gas.
>
> "Material for making 100 strong cloth-covered kites was also brought from the East, as well as the ingredients for manufacturing several thousand pounds of rackarock powder and other high explosives. The party was also well supplied with electrical and meteorological instruments and apparatus."

With this apparatus he made awful noises —or "terrific air-quakes," as he calls them—over a considerable area, spreading his explosives so as to make the uproar resemble, as far as possible, that of hostile batteries of artillery in action. He began August 9 at from 5 P. M. to 6 P. M., and opened again for "a shorter time" at 9 P. M. in clear weather. *At noon on the 10th* the clouds began to gather, and torrents of rain fell that afternoon. On the 17th he worked his batteries for twelve hours in clear weather. Late *on the following afternoon* the clouds gathered, and down came the rain in torrents. On the 25th of August he began again at eleven A. M., and exploded till eleven P. M. *At three* A. M. *on the 26th* there came a thunderstorm and floods of rain.

Now, how does Prof. Newcomb meet these "unquestionable proofs"? Alas, by what lawyers call "a general denial." He asserts positively that "sound cannot make rain"; the war of 1870, the Mexican war, and our civil war to the contrary notwithstanding. He lays down two or three propositions which are most disrespectful to Plutarch, the German press, Gen. McNulta, Gen. Garfield, and Gen. Dyrenforth, and, we believe, also to "Uncle Jerry" Rusk of the Agricultural Department. They are these:

(1.) Two steps are necessary to the formation of rain: the transparent aqueous vapor in the air must be condensed into clouds, and the material of the clouds must agglomerate into raindrops.

(2.) The aqueous vapor of the air cannot be condensed into clouds except by *cooling*.

(3.) The cooling may come in two ways —by the meeting of two currents of air of different temperatures, or the rising from the earth of a mass of air warmed by the sun and moistened by evaporation, to cool up above by expansion.

The Professor then goes on to point out that an explosion of a bomb or of dynamite simply pushes aside or compresses the air in all directions for a very short distance. The air, being elastic, when the explosion is over, resumes rapidly its original condition. "A thousand detonations," says the wretched man, "can produce no more effect upon air or upon the watery vapor in it than a thousand rebounds of a small boy's rubber ball would produce upon a stone wall." The stories of rain following battles he dismisses with a smile. Even if true, he declares they are of no consequence. Nature, he intimates, does not care a cent for artillery, and will not alter her processes for all the great guns on earth. Such is "so-called science," as taught in colleges by professors who owe their bread and butter to the Republican party!

Prof. Newcomb asks one cruel question, which Gen. Dyrenforth might well answer by saying it was "none of his business" —that is, what were the clouds doing during the many hours which elapsed between the General's explosions and the appearance of the rain? They were nowhere in sight when the explosions took place. Therefore they must either have been formed right over the General's head, in defiance of physical laws, or else have heard the noise some hundreds of miles away, and come hurrying to the scene.

The whole episode, to be serious, illustrates the way in which politicians among us have separated themselves from the world of science and literature, and of their cool indifference towards the great triumphs of the human mind. Men of Gen. Dyrenforth's standing in Germany or France would never survive the shame of these ridiculous experiments. On this subject Prof. Newcomb closes with the following weighty remarks:

"How much the indisposition of our Government to secure expert scientific evidence may cost it, is strikingly shown by a recent example. It expended several million dollars on a tunnel and water-works for the city of Washington, and then abandoned the whole work. Had the project been submitted to a commission of geologists, the fact that the rock-bed under the District of Columbia would not stand the continued action of water would have been immediately reported, and all the money expended would have been saved. The fact is, that there is very little to excite popular interest in the advance of exact science. Investigators are generally quiet, unimpressive men, rather diffident, and wholly wanting in the art of interesting the public in their work. It is safe to say that neither Lavoisier, Galvani, Ohm, Regnault, nor Maxwell could have gotten the smallest appropriation through Congress to help make discoveries which are now the pride of our century. They all dealt in facts and conclusions quite devoid of that grandeur which renders so captivating the project of attacking the rains in their aerial stronghold with dynamite bombs."

THE ENGLISH LIBERALS AND HOME RULE.

LONDON, September, 1891.

Now that the end of the present Parliament is coming into view, English politicians are beginning to take stock, if I may use the expression, of the contents of their respective party programmes, and in particular of the various branches of what we call the Irish Question and the influence it is likely to have on the general election. As regards that question the process of stock-taking is no easy one, for its position is peculiar and perplexing, and upon it experienced men may be heard to express very different opinions. Comparatively little has been said about Ireland lately in Parliament, for though the Irish Land Bill occupied a great part of last session, the discussions were extremely technical, were listened to by very few members, and excited scarcely any interest in the country. The debates on the Irish estimates were perfunctory, and the attendance of Irish members, through nearly the whole of the session, seldom exceeded one-third of their full strength. Nor have platform speakers on either side of politics made Ireland a prominent item in their harangues. Everybody seems tired of the subject. For two years or more there have been few collisions between the police and the people in Ireland, few evictions, comparatively few imprisonments of leading Nationalists. The Report of the Parnell Commission, unsatisfactory as it was, has been generally felt to have wound up and put into the background the old controversies about the stirring events of the years 1879–'85; and the visible change for the better in Mr. Balfour's attitude and methods, due to the knowledge he has at last begun to acquire of the country he undertook to govern, has relaxed the tension between the Irish and their English rulers. Even before the O'Shea divorce suit of last November, our politicians felt that all their arguments on both sides had been exhausted, and were beginning to turn to fresher topics.

The schism in the Nationalist party which followed Mr. Parnell's deposition threw a deep and ominous gloom over the cause of Home Rule. Even those Liberals who did not give up the cause as for the moment hopeless, thought that the less they said about it for some time to come, the better. The depression of that time has now passed away. Mr. Parnell is evidently beaten. The reappearance of Mr. Dillon and Mr. O'Brien and their declarations against him have given the *coup de grâce* to his pretensions to lead, though they have by no means destroyed the power he may exert to embarrass a Liberal Ministry. There is now no reason why the English advocates of Home Rule should not talk about it as freely as formerly on platforms and put it in the front of their programme. Formally they do recognize and adopt it, and all of the new members elected on the Liberal side are pledged to follow Mr. Gladstone on the question. Nevertheless, comparatively little is heard of it at bye-elections or on Liberal platforms anywhere—so little, indeed, that the friends of the present Government declare that it has been practically dropped. A few weeks ago Mr. Chamberlain pounced eagerly upon a leaflet issued by the Liberal central office, and wrote to the *Times* to insist that, since Home Rule was not mentioned in this leaflet, it must be considered to have been stricken out of the Gladstonian programme. It was at once answered that the omission was accidental, and, indeed, further answered that the leaflet did not profess to supply a complete programme for the Liberal party. However, the opponents of Home Rule, gladly believing that the Liberals have become cold towards it, are bestirring themselves both to insist that it has been dropped because it has been thought unattractive, and also to fasten it as a millstone round the neck of their adversaries.

What amount of truth is there in this contention of the Ministerialists? This much: most of the recent elections have been fought and won upon other issues than those relating to Ireland. Although the Liberal candidate has always declared himself a Home-Ruler, the interest of the voters has obviously lain in quite other matters, and Irish affairs have played a small part in determining their decision. The horizon of an English agricultural laborer is still a narrow one. He has never known much or cared much about Ireland, and he cares as little now as he did in 1886. In urban or semi-urban districts, such as Hartlepool and Eccles (to take two constituencies lately reconquered for Mr. Gladstone), the electors are much more intelligent, and capable of having opinions about the relative merits of Mr. Balfour and Home Rule. But it may be doubted whether, even among the city artisans or the miners, the question excites much feeling in the absence of those striking incidents which, like evictions or the imprisonment of popular men, appeal directly to the emotions. The fact is that the English masses have never been deeply stirred by the Irish question either way, though, in districts where cheap Irish labor came into the market, there used to be a certain amount of race feeling against the Irish workman. As this feeling gave such strength as it had to the Anti-Home-Rule party among workingmen, so the strength of the Home Rule cry lay in the belief that English reforms were being delayed by Irish discontent, and that it might be better to leave the Irish alone to settle their own affairs. Neither of these feelings is at present strong.

There is, as has been said, a lassitude among the leading politicians on the subject, and a corresponding absence of interest on the part of the followers. Ireland is not filling men's minds and mouths as it did in 1881–'82, and again in 1885–'86. Both sides have delivered all the artillery of their arguments; and the Liberals in particular, feeling that nothing they can say will make much difference till a general election arrives, have been glad to leave the subject alone.

But it would be a fatal error to suppose that this lassitude or indifference means the disappearance of the question, or even its relegation to a subordinate place. The next general election must, after all, be mainly fought upon the issue of Home Rule, and the decision of the country between Lord Salisbury and Mr. Gladstone will be a decision between the policies of repression and self-government. There is no other political issue which so sharply divides the two parties. The present Tory Government may justly claim that it has passed not a few measures hitherto associated with Liberalism, and that it is prepared to pass many others, since Home Rule is the only proposal (except, of course, proposals looking to Church Disestablishment) against which the Government is decisively pledged, and it is the only proposal which draws a dividing line that the electors can understand. The Liberal leaders are, moreover, far too deeply pledged to their programme of 1886 to recede from it now. No one suspects Mr. Gladstone of any wish to do so. He said in 1886 that he had given the rest of his life to the solution of this one problem, and he has consistently refrained from grappling with any other. He is sometimes blamed for caring too little about new questions. Every one knows that his whole enthusiasm is still given to this one enterprise, and that he would account it no less a defeat to drop it before the election than to be beaten upon it. Among the other men prominent in the Liberal party there are understood to be some less interested in the Home Rule schemes than he is, and less sanguine of successfully working them out. But the wish, should any such wish exist, to throw Ireland aside, would be at once checked by two considerations.

The first is that the Nationalist party will probably hold, in the next House of Commons, the balance of power. According to present calculations, Mr. Gladstone will have a majority over the Tories and Liberal-Unionists of from 40 to 80. As the Irish Nationalists (reckoning in both Mr. Parnell's little band and the larger section) will reach 80, and as they would of course oppose any English Ministry which did not offer Home Rule, a Liberal Ministry could not take or retain office except upon those terms. The other consideration is not less material. Although, as has been said, the rank and file of the English Liberal party are not deeply interested in Ireland, there are many among the local leaders as well as some active men in the House of Commons who care heartily for Mr. Gladstone's programme of 1886, and would refuse to follow any Liberal Minister who should recede from, or seem to be trifling with, the policy of self-government for Ireland. These are the men by whom the alliance between the Nationalists and English Liberalism will be maintained. Their energy and their conviction make them an important force. It is, therefore, safe to conclude that although there is an obvious contrast between the warmth and profusion of the speeches made about Home Rule in 1886–'87, and the references to the same subject now, the topic will spring into life when the dissolution of Parliament takes place, and will be the main issue which the voice of the electorate will decide.

Quite lately an announcement has been made by the present Government which may bring the subject into prominence even before the dissolution. Mr. Balfour is going to redeem a promise made five years ago, but latterly thought to have been dismissed as imprudent, by introducing next session a bill for creating in Ireland a system of representative local government similar to that given to England in 1888. Many of his followers, and of course among them most of his Irish followers, are displeased and alarmed at the prospect, foreseeing that whatever local bodies may be created will fall under the control of the Nationalist party. Mr. Balfour is endeavoring to explain how he proposes to avert, by various devices restricting the powers of the new bodies, the mischief to be feared from this cause; and he also consoles the "loyal minority" taxpayers by arguing that if Nationalist local councils misspend their local revenues, Nationalists will themselves suffer with the rest. This is cold comfort; and it is not surprising that some Ministerialist organs should blame the Government for preferring the appearance of logical consistency to the real interests of the Irish Protestant landlords and merchants. When this local-government scheme comes to be discussed next session, it will virtually raise the whole question of Irish self-government. The Home-Rulers will obtain an opportunity of reiterating their favorite argument that it is absurd to think people will be satisfied by the creation of local bodies whose first impulse will be to quarrel with the bureaucracy of Dublin Castle, and will insist that if local government is to work well, the edifice must be crowned by a central representative body in accord with the popular will. The Government, if they care to persevere with their measure, will be able to push it through, for they have a highly cohesive majority; but the scheme (so far as its outlines are now known) will rather whet than allay the appetite of the Nationalists, and may contribute to bring into further prominence the project of an Irish Legislature. O. D.

THE FINANCIAL CONDITION OF ITALY.

ITALY, September 9, 1891.

THE remote causes of Italy's financial difficulties must be traced to her political and social revolution: to the fact of the sudden violent fusion of seven distinct provinces into one State under a central government endowed with absolute authority, and corresponding responsibility for every department of the political and economical life of the entire new nation. Some of the provinces were fairly flourishing—they at least vegetated like Tuscany, making ends meet; others were deplorably behind the age for several centuries in all the ordinary conditions of modern life, as were Sicily and the Neapolitan Continent, portions of the Romagna, and the Island of Sardinia. Piedmont, the prime mover in the work of unification, was heavily burdened with debt, owing to the costly and unsuccessful wars of 1848, the war of the Crimea, the wars of 1859. The state of the entire country as compared with to-day was similar to the state of England a couple of centuries ago. Bad roads, few railroads or telegraphs or ports and harbors of safety; next to no schools, as the first educational census, giving 17,000,000 of illiterate inhabitants in a population of 22,000,000, proved; charnel pits instead of cemeteries; no fleet, next to no army, etc., etc. The post-offices of Italy were an abomination: Sir Anthony Panizzi several times wrote from Turin that even there life was a burden, owing to the disorderly condition of the post-office; and so on to the end of the chapter.

Well, all this has changed during the last twenty years. Life in Italy, as the veriest grumbler English born and bred must confess, is orderly, comfortable, and regulated on modern principles. Naturally all this has cost treasures of money which the nation did not possess, and which at various times it borrowed. The bill has come in; the present generation and several future ones have to pay it, capital and interest, in sound cash. This is the general history, and now to particulars.

It is asserted that Cavour was a master of finance. This may be. Events compelled him to spend and borrow; death passed on the legacy of debt to his successors, who, whatever other talents they may have possessed, can none of them be styled masters of finance. All "lived by the day," "from hand to mouth," by the emission of treasury bonds, by the sale or mortgage of State property; later, by the sale or mortgage of the confiscated ecclesiastical property; by loans at high interest. From 1861 to 1865 the budget, never presented in time, was always voted "provisionally"; a bill of indemnity was granted for the ever-succeeding deficits, which during these years amounted to $400,000,000, and to meet which the Governments had contracted loans to the amount of $500,000,000, besides selling the State railways, mortgaging vast lands belonging to the nation, and greatly increasing general taxation. Public expenditure had increased from $162,000,000 to $214,000,000 per annum (public works figuring for a large amount in the sum total), and the announcement of the transfer of the capital from Turin to Florence enormously increased that expenditure. At the commencement of 1866, the consolidated 5 per cents had fallen from 65 to 43; hence no new loan was possible and the coffers were empty. The interest on the foreign debt stood at $18,000,000 in 1866. In that year the state of credit throughout Europe was bad, and especially so for the poorest country. Her public securities, largely held in France, returned to her already overburdened market. The banks were heavily drawn upon, and, in spite of great precaution, they saw their gold and silver drained away. The Sardinian and Tuscan banks imported specie and were assisted by the Rothschilds, while the smaller banks quaked for their very existence. In this state of things the Prussian alliance had been concluded and war against Austria was declared. In the enthusiasm of the moment the entire nation forgot every other consideration save that of freeing Venice and uniting her to Italy. The Chamber of Deputies gave the Government plenipotentiary powers, and the Minister of Finance, the Neapolitan Scialoja, presented to the King for signature a decree for the suspension of specie payment.

The measure has been severely criticised as precipitate and unnecessary. We have only to deal with the consequences shown at once by the rate of foreign exchange, the price of consols, the premium on gold in Italy. The variation in all these items was singularly large. The paper circulation, beginning with $50,000,000, increased to $310,000,000 between 1866 and 1876. When it was shown how vastly the paper currency exceeded the metallic circulation in 1872, when it stood as three to two, a hue and cry was raised for the immediate passage of a law prohibiting its increase,

and for the study of the best method for the return to specie payment. The law limiting the increase of paper was passed in 1874, and the public, from that time until the return to specie payment became an accomplished fact, clamored for the abolition of the forced paper currency.

The business relations between the State and the banks of issue complicated the question. Before the Union, each province had its own bank, whose circulation was almost exclusively local. An attempt was made to form a National Bank of the Sardinian and Tuscan, but the others, declining to be suppressed, lived on, overpowered by the Italian National Bank, as the Sardinian was now named. Up to 1866 no bank could issue notes save in the proportion of two to three uncovered by a coin reserve. When the specie payment was suspended, the Government borrowed from the Italian National $100,000,000, authorizing this bank to issue notes at will. The shares went up enormously; shareholders became millionaires. The circulation of the bank's own legal-tender notes reached, at the end of 1868, $99,000,000. Between 1866 and 1873 the State had borrowed $176,000,000, and the bank's legal tender and the State inconvertible notes passed as current coin throughout the land. Hence the hue and cry against the banking monopoly. In the Chambers the list of the shareholders was demanded but refused by the Government. The inquiry proving that the system ruined the other banks, it was decided that the National Italian, the National Tuscan, the Neapolitan, the Sicilian, and the Tuscan Bank of Credit should form a Confederation (*Consorzio*). The old notes issued by the National Bank were cancelled, and new ones to the amount of $450,000,000 issued, bearing the inscription "Biglietto Consorziale a corso forzoso ed incontrovertibile, Aprile 30, 1874," signed by a delegate of the Government and by the delegate of the Confederation. Each of the six banks was authorized to issue legal-tender notes on its own account to the amount of two-thirds of its paid-up capital or funds proper, with the obligation, of course, to exchange them at sight for the inconvertible notes of the Confederation. To provide for the extraordinary demands of commerce which occur at certain seasons of the year, and for cases of exceptional stringency, the Government was empowered to authorize one or all the banks to enlarge their circulation for a period of three months—or longer for good reasons—to an amount equal to four times their capital, on condition of using the increase in the discount of bills.

Great was the public joy when in 1883 the final return to specie payment was proclaimed. So high was the credit of the country that there was no pressing demand for gold. For a time it seemed that a golden age had opened for Italy, but the country and even the Minister of Finance seemed to forget that the loans contracted abroad in gold, in gold must be repaid. The building mania set in, and the banks exceeded their limits and lent on mortgage *ad libitum*, but the crisis soon arrived, and the banks found that, even if they foreclosed, the unfinished houses would not cover the loans. On examination it was discovered that all the banks of issue had largely exceeded their legal allowance, which is a little over a billion, secured by one-third of the amount in specie. The half-billion to which the excess amounts is not so secured. The late Ministry prohibited all increase, but did not summarily order the poorer banks to provide specie or to liquidate. The present Ministry has suggested a trial of an association between the six banks. The *riscontrato*, as it is called, binds each bank to exchange the notes of the others according to the amount which each holds, answering for the excess. The attempt so far succeeds perfectly for all home transactions. The Government offices, the post-office, the tax-gatherers receive with equal indifference the notes of the National Italian, the Tuscan, Roman, Sicilian, Neapolitan; nor in paying out do we perceive any difference. As to the blame cast on the present Government for the trial of the *riscontrato*, seeing that the prosperous banks were willing to give a helping hand to their weaker brethren, I cannot see the justice of the criticisms. It is all very well to say, Let the weaker banks go to the wall, but no responsible Government will do this until every effort to save them has been exhausted. The conduct of the Bank of England in saving the Baring Brothers was everywhere applauded, not because the Government or the country had any special tenderness for the Barings, but because the step saved numbers of commercial houses and innocent investors, whose calamities would have brought about a general catastrophe.

The steps taken towards decentralization, very gradual and cautious ones, are in the right direction. It is a mistake to believe that local government and administrative freedom will lead to reckless outlay on the part of the emancipated provinces. Hitherto, either from sheer necessity or from a desire to keep pace with their neighbors, they have spent their all and run deeply into debt. The spendthrift son who in his minority borrows, saying, "Babbo paga" (The Governor will pay), alters his course when cut adrift, or when the "Governor's" death makes him alone responsible. So the several parts of Italy, hitherto authorized by the central Government to run into debt, have seen, when worst comes to worst, that the Parliament votes a sum to clear them off. But once the provincial and communal debts consolidated, and each province and commune made aware that henceforward they alone are responsible for their respective liabilities, now that the municipal and provincial councils are elected by all male citizens of twenty-one years of age, there will be a reaction against spendthrift administrators such as Italy has not yet seen. Of course no specific can be found for restoring Italian finance to an immediately prosperous state, but several hopeful items are overlooked by outsiders. Signor Bodio has shown that the income tax is unequally distributed, that 25 per cent. of the wealth of the country escapes taxation. This is being carefully verified. Again, heavily taxed as are the landed proprietors, the taxation is unequal, and, equalized, the tax on land would produce more than it does at present. In short, there is nothing desperate in the situation, though evil prophesies may bring themselves to fulfilment. Italian rentes to-day stand at 92.80; hence we say, remembering how they fell after the suspension of specie payments, if things are bad, they have been much worse, and the present generation *must* bear the pecuniary burdens which the possession of a free country entails.

The millions spent by Italy during the last twenty years have not been wasted on luxury, or on embellishments unproductive and useless. Naples may be to a certain extent reproached in this sense, but even there the largest outlays have been made in substituting the pure, abundant waters of the Serino for the insufficient supply of fetid, filthy, fever and cholera-breeding waters. The communes have spent largely on schools; cemeteries are all obliged by law to be built a certain distance from the city; other sanitary arrangements have made great and steady progress. High roads and railroads, in which Italy thirty years ago was strikingly deficient, have multiplied beyond all credence. Since 1881, the country has spent $300,000,000 which, as they are covered by the issue of railway obligations, form a constant accession of debt. At first the post-offices cost the country enormously. From 2,666 they have risen to 4,358, to say nothing of the collecting boxes, and last year the excess of receipts over expenditure amounted to $973,268. The post-office service is, in my opinion, far more perfect than the English; the postage on newspapers is less than a farthing, and so on all circulars sent open; the parcel post is delightful. Money post cards are equally convenient; you buy a post card for 1 penny, and pay the sum you wish to send up to six francs. Post-office orders for any amount are paid on the instant. The postal savings banks are far better managed than in England, as even in small towns you rarely wait more than a day for the money you require to be paid down. City traffic, as far as omnibuses and trains are concerned, is easy, cheap, and comfortable. In short, Italy in thirty years has done as much for the order, comfort, and decorum of her citizens, and for visitors, as other European nations have done in a hundred. Her poorer classes are miserable enough, but they are better paid, better clothed, and better fed than they were thirty years ago; and if they emigrate in ever-increasing numbers, it is because, in the good old days, they were resigned to their misery, and now they are determined to better their own condition if they can, and at any rate to put their children in a condition to do so.

The present Minister of the Treasury, when he had no hope of taking office, stated that the debts of Italy stood thus:

Public debt	$2,600,000,000
Provincial debt	34,400,000
Communal debt	176,600,000
On mortgage private debt	1,551,800,000

Calculating at 5 per cent., and deducting the 18 per cent. levied upon income, the above total seems to involve a yearly payment of some $200,000,000. Another statement: Out of every hundred dollars spent by Italy, thirty-three go to pay the interest on her several debts, thirty-three for the maintenance of her army and navy; the remaining thirty-four are divided among her other needs. Clearly she must pay her interest and cannot get further into debt. And note that this was what Magliani, her Financial Minister for ten "halcyon" years, told the Chambers in his last financial speech. Showing the deficit in 1887 to stand at $15,000,000, he proposed various methods of covering it; declining to meet the demands for special credits for army, navy, and railways, unless allowed to impose fresh taxes. The proposal was rejected, and Magliani resigned. His duties were then divided between a Minister of Finance and a Minister of the Treasury. The ministers who entered on these duties also proposed taxes, which being refused, they also resigned. The Crispi Ministry came nominally to an end on the proposal to increase the tax on alcohol. The Rudini-Nicotera-Luzzatti Ministry still cling to their programme of economy to the bone and no extra taxation. Let us suppose that they resign in despair; what then? General elections, and a Cabinet which will assuredly *not* bind itself to make bricks without straw and mortar into the bargain—to secure equilibrium in expenditure and income without increasing the latter. One thing is certain: if fresh taxes are laid on, they will be paid up, as all taxes are paid.

J. W. M.

THE FAMILY OF CHALLANT.

ITALY, September 10, 1891.

AGAIN that play of Giacosa, "La Dame de Challant," is mentioned in the Italian newspapers. This time it is definitely announced that the first representation will be given in New York early in November, with Madame Sara Bernhardt in the title rôle. A previous representation at Cincinnati is to count only as a general rehearsal. For a year now the public in Italy has been from time to time reminded of this coming play. We first heard that such a work had been written, but that Italy was to know nothing of it until it had first been produced in America; then that scenes, or the whole play, had been read by the author before select audiences in Turin and elsewhere, crowned, of course, with the enthusiasm which an unpaying public never refuses in return for its invitation. It looked as if a reputation were being carefully "manipulated"; but if the play is really to be brought out so soon in New York, we can wait to know its value.

Up to the present I have been unable to learn anything of the subject, but the Lady of Challant is a title that piques curiosity. No doubt that many a traveller who has stopped at Châtillon before making the ascent of Mont Cervin—or of the Matterhorn, if he prefers to call it by that name—has, in gazing eastward across the extremely lovely landscape commanded by that village, noticed twin peaks rising above St. Vincent. These are called on the maps, one, Bec Torché, and the other variously, if I mistake not, Bec de Frudière, Mont Neri, and Marienhorn; but among the country people thereabout they are known as *les Dames de Challant*. They look down upon a high mountain valley, stretching along behind the range of which they form a part, where may be seen the ruins of a castle, the cradle (or the *Stammschloss*, as the better German expression has it) of the Counts of Challant, the great family that for hundreds of years overshadowed every other in the Valley of Aosta, from the old Roman city itself down to the imposing fortress of Bard. In another part of the valley there is a second château of this family, that of Graines, to which is attached the tradition that a Count of Challant in those early days laid upon his vassals as a *corvée* to cover with earth the snowy slopes of the Bec Torché, lest the glare therefrom should injure the complexion of the ladies of the castle.

Both ruins show that the buildings were never anything more than the fastnesses of a rude age. As the Counts of Challant increased in wealth and power, they found these habitations too bleak for any but a brief summer residence, as well as too far removed from the centre of their interests. They built one castle after another in the main valley of Aosta, until the chain of them became so complete that signals could be exchanged between them all the way down from the slopes of Mont Blanc to Pont St. Martin. Among these there are some noble examples of mediæval architecture. Verrès is a model of beauty as a fortress castle, while, in the valley beneath it, is that gem of fifteenth-century domestic architecture, half château, half manoir, Issogne, still habitable, refurnished from the spoils of other castles and the shops of dealers in antiquities, and where Giacosa is said to have written his really charming volume, 'Paesi e Novelle Valdostani.'

Here, too, he might have found, whether he did or not, a motive for his "Dame de Challant." In 1520, Count René of that family went on an embassy for the Duke Charles III. of Savoy to the Marquis of Monferrato, and at Casale married the widow of Messer Ermes Visconti of Milan. The lady soon found the solitude of Issogne intolerable, especially as cares of state frequently called her husband away from her. She took advantage of his absences to escape to Pavia, where she had a palace, and where she led a life that was, to say the least, dissolute. She had two lovers to whom she gave herself alternately; only when she went from one to the other she was always taken with so vehement a hatred of his predecessor that she was ever urging his assassination upon the favorite of the moment. Both, turn and turn about, were deaf to her entreaties, but at last she found a third lover who murdered for her one of the former two. The lady was, however, arrested, proved guilty of having instigated the deed, and was beheaded in the demi-lune of the castle of Milan. These events form the subject of one of the *novelle* of Bandello.

René afterwards married a lady of the house of Braganza, by whom he had two daughters. The elder, Filiberta, was betrothed to a nephew of Cardinal Madruzzo, Prince of Trent and Governor of Milan. On the eve of the wedding, however, the young lady eloped with a groom. Her mother is said to have died of grief, but the young Madruzzo was finally married to the second sister, Isabella, and inherited the name and titles as well as the goods of Count René de Challant.

It was with René as with the heroine of the fairy tale: at his christening he received every gift of fortune, but the spiteful unbidden fairy came and willed that a strong dose of sorrow should be mingled with every cup of joy. The curse worked after his death as powerfully as before. He died in 1565. His magnificent fortress-castle of Verrès then lapsed to the house of Savoy, while the fiefs bequeathed by him to his son-in-law, Gianfederico Madruzzo, were disputed by other members of the family during more than a century and a quarter. In 1696 they all—including even the castle and barony of Aymavilles, given to Gianfederico during the lifetime of René—returned to the real family of Challant, in the person of Antoine Gaspard, baron of Fénis. The expenses of litigation had, however, so impoverished Antoine Gaspard that his son was obliged in 1716 to sell the castle of Fénis, a richer and more beautiful example of mediæval architecture than even Issogne. It was still of great beauty when I saw it, though fast going to utter ruin under the hands of the peasant inhabiting it. It has since been bought by a member of the Milanese family of Visconti. Aymavilles, a little way off from the road between Aosta and Courmayeur, remained in the family until its final extinction in 1804, but was meanwhile the occasion of a miserable quarrel between brothers, as a result of which it changed ownership after having been despoiled of its treasures of art and antique furniture.

In 1802 another branch of the family came to an end in the castle of Châtillon. Thus at an interval of two years disappeared the last representatives of a race that for 800 years had been foremost in the valley, and that, next to the house of Savoy, had contributed most to its glory. In the eleventh and twelfth centuries they ruled here as viscounts for the Counts of Savoy, who had enough to do in looking after their possessions on the other side of the Alps. They received the title of Counts of Challant in 1416, at the same time that the title of Duke was bestowed upon their suzerain. During their long eminence, or, let us say, until the death of René in 1565, the family furnished a goodly number of men distinguished in the history of their country as generals, as statesmen, and prelates. They had the gift not only of gaining but of extending and strengthening their position. They understood the advantage to this end of alliances by marriage. We have seen that those of René, in spite of their lustre, could not have added to his consideration any more than to his happiness. Other and earlier alliances were more fortunate. In the thirteenth century, one Godefroy de Challant married a Fieschi, by whom he became nephew both to the Doge of Genoa and to Pope Innocent IV., and was "gratified" by the one with the governorship of Genoa, by the other with the title of Roman Senator. (His arms may be seen in the château of Issogne, accompanied by the initials S. P. Q. R.) By another alliance, fortunately not concluded, Châtillon was near becoming a province of England. Humbert III. of Savoy, seeking to increase his strength against Barbarossa, thought to marry his daughter Agnes to the son of Henry II., John Lackland, and to give her in dowry certain lands in Savoy and Piedmont, and with them Châtillon, with the rights inherent in the viscounty of the valley. The negotiations did not succeed, and Agnes was married to a Count of the Genevaise, a district of Savoy, but the attempt was to the advantage of the family of Challant, which was soon after invested with the fief of Châtillon.

I dare not vouch for this story, for I have it from the same authority who assures me that Ébal, surnamed the Great, of Challant, was the mainstay of Amédée V. of Savoy in a successful defence of Rhodes for the Knights of St. John, from which expedition, it is said, date the present arms of Savoy, the silver cross upon a red shield. Other authorities pronounce the story a fable, which is of less consequence to the story of Amédée, which is well enough known, than to that of Ébal, who was one of the greatest figures in the line of Challant, but of whose greatness the records are of the scantiest.

The most authentic, the most obvious testimony to the grandeur of this family is the series of at least a dozen châteaux scattered along the valley of Aosta, so that the traveller is scarcely ever out of sight of one or two of them. (From a point near Châtillon, indeed, three can be seen at once.) They range from the savage fastness of Villa Challant to the palatial splendor of Issogne, giving an admirable picture of the progress of civilization in the Middle Ages, from its beginnings to its culmination. As to what it was at the latter point, two frescoes at Issogne give piquant evidence. One represents sixteen coats of arms of the family of Challant, with the titles, dignities, etc., of the persons to whom they belonged. Underneath is the proud and noble inscription: "Miroir pour les Enfants de Challant." The other is over the throne in the great hall of justice, and depicts—the Judgment of Paris!

The inscriptions here are all in French. In fact, the valley of Aosta—the first acquisition south of the Alps of the house of Savoy, when that house was still French and ruler of Burgundy—is now the sole parcel remaining to them of their possessions of that time, but it did not become Italian with its masters. The names of places, the language of the people, and, in spite of the energetic work of Italianization carried on in these last years, that of the pulpit and of public documents, are all French. Mr. Freeman finds that the mediæval architecture of Aosta is Burgundian and not at all Italian; so it is, though the general

architecture of the valley is of that frontier kind that seems French if you approach it from Italy, and Italian if you come from France. A few years later, and these records in stone will be the only visible testimony of a time when this was as a corner of France that had somehow found its way over the Alps.

"Chercher midi à quatorze heures" is not ordinarily thought a mark of intelligence, and yet it should be no reproach in the Valley of Aosta, where the church bells ring for noon at eleven o'clock. You are told in explanation that, in the beginning of February, 1536, Calvin came to spread his reform in the valley, and that he did not scruple to incite the people to revolution in order to ally themselves with the Protestant cantons of Switzerland. Thereupon the Bishop of Aosta and Count René de Challant, Marshal of Savoy, Governor and Grand Bailli of the Duchy, convened the States-General to take means to ward off the peril. The measures taken were so menacing to Calvin, kept informed of what went on in the council chamber, that the preacher of predestination showed a clean pair of heels to the enemy—*i. e.*, fled precipitately on the morning of the 8th of March; and when the bells rang at eleven for the assembly, and it was found that there was no longer a schismatic to combat, it was decreed that henceforth they should ever ring at that hour instead of at noon. I do not know whether this counsel should or should not be counted among the fortunate doings of René de Challant. S. K.

Correspondence.

ETIQUETTE AT THE WHITE HOUSE.

To the Editor of The Nation:

Sir: "Republican simplicity" is doubtless a good thing in its way; but are there not limits beyond which even so unobjectionable a thing may not be carried without a breach of good taste? In view of my experience at a reception given by the President of the United States at the White House, on Thursday afternoon last, to the members of the Medical Congress lately in session in Washington, I am disposed to give a decidedly affirmative answer to this question.

Entering the north door of the White House in company with a well-known New York physician, I was somewhat surprised to find that the official who opened the door for us was dressed not in livery, but in ordinary every-day costume. He admitted us, however, with some show of ceremony, and we entered the historic White House—only to observe standing in the hallway, and evidently on duty, two of as slouchily dressed policemen as one could meet in a day's walk through any of the worst-governed of our large cities.

Recovering presently from the slight shock which these first experiences of White House ways had caused us, we were duly presented to the President, and, after a short time spent in inspecting the portraits and other objects of interest in the several reception rooms and parlors, we turned our steps to the door through which we had entered. This time there were several ununiformed officials about it, and, as we approached, one of them deliberately (or perhaps without deliberation) raised his foot and *kicked the door open* so that we might pass out. Comment seems unnecessary. I regret to say that there were in attendance upon the Medical Congress and at the President's reception a number of distinguished physicians from Europe. Let us hope that they are too charitable to remark our shortcomings. Probably they have been educated to expect nothing better of us. S. T.

Baltimore, September 27, 1891.

GOOD ROADS, NOT HARD ROADS.

To the Editor of The Nation:

Sir: You have given us the benefit of some valuable suggestions on the subject of good roads. Permit a suggestion on the other side, assuming that you mean a hard road like the Telford pavement to be a standard. Riding is simply impossible even on a macadamized road—that is, the horse is ruined and the rider tortured. As to Belgian blocks, one might as well attempt riding on newly frozen ice. Driving is little better if for pleasure. The perfection of a pleasure road is a dirt road, without a stone, and this reasonably dry; turf for riding, of course, but with us this is unknown, saving in the few places where hunting is practised and farmers do not object to strangers galloping over their fields.

One word may be deemed of value. An omnibus driver in London told me that the only pavement on which a horse could stand up was the macadam. On all the others the horses were down every few minutes in rainy weather. The strapping of the driver to the coach bore witness to this peril. R. C. M.

Philadelphia.

ESPRIT D'ESCALIER ONCE MORE.

To the Editor of The Nation:

Sir: If your discussion of *l'esprit d'escalier* be not wholly at an end, here is something that bears upon it, and indeed I should think might settle it. I have just been reading Emmanuel Arène's account of President Carnot's late visit to Corsica. When the President arrived at Bocognano, two of the daughters of Bellacoscia, one of the famous bandit brothers who have been in revolt against the authorities for forty years, sought an interview with him to ask their father's pardon. Emmanuel Arène was the intermediary. Julie, the younger, who, it seems, is young and good-looking and not unconscious of her attractions, was to do the talking. But at the critical moment she became confused, had hardly anything to say, and was led away. "On the staircase only," the writer continues—"for even in the *maquis* is found *l'esprit d'escalier*—she said to me in a tone of reproach: 'You took me away just at the instant when I was going to speak up'" (*Dans l'escalier seulement—même au maquis on trouve l'esprit de l'escalier—elle me dit d'un ton de reproche: Vous m'avez fait partir au moment où j'allais parler*).

Emmanuel Arène is deputy from Corsica, one of the best known of French literary men and journalists; and this account appeared originally in the *Figaro*. I don't see how anything could well be more French.

Very truly yours,
William Henry Bishop.

Nice, September 14, 1891.

ESCAPE.

To the Editor of The Nation:

Sir: As to *escape* in the sense of escaped person or thing, it may be added that Stedman ('Poets of America,' p. 316) attributes to Lowell the following:

> "All of thee but thyself I grasp;
> I seem to fold thy luring shape,
> And vague air to my bosom clasp,
> Thou lithe, perpetual *Escape!*"

My edition of Lowell does not seem to contain this. Where is it?—Yours,

H. M. Whitney.

Beloit College, September 19, 1891.

Notes.

Estes & Lauriat's fall list includes three works elaborately illustrated with photogravures, namely, Bulwer Lytton's 'Last Days of Pompeii' and 'Rienzi,' and 'The Lily of the Arno,' a book about Florence, by Virginia W. Johnson.

Ginn & Co. begin directly the publication of an International Modern Language Series, edited by Profs. F. Bôcher of Harvard and Alphonse N. Van Dell of the Massachusetts Institute of Technology. It will be in three divisions—university, intermediate, and elementary; the first, in charge of Prof. Bôcher, embracing Montaigne's 'De l'Institution des Enfans,' from the text of 1580; Molière's 'Le Misanthrope'; and Racine's 'Andromaque,' text of 1697. As yet there is but a single announcement in German.

Mr. Edward Eggleston's story 'The Faith Doctor,' which has been running in the *Century*, is now ready to appear in book form with the imprint of the Messrs. Appleton.

Rufus C. Hartranft has in press 'Was Abraham Lincoln a Spiritualist?' by Mrs. Nettie Colburn Maynard.

Longmans, Green & Co. will issue a volume of poems by the historian Lecky.

A 'History of Printing,' left unfinished by the late William Blades, and intended for the "Book Lovers' Library," has been edited by Talbot B. Reed and will be published by Elliot Stock with illustrations.

The third and concluding part of the 'American Catalogue, 1884-1890,' which consists of the subject-alphabet, has made its appearance from the office of the *Publishers' Weekly*, No. 330 Pearl Street. Like its two predecessors, this periodic record has been achieved by much disinterested and ill-requited labor. It is an inestimable boon to the sellers and buyers of books.

The sixth annual issue of 'Poor's Directory of Railway Officials, etc.' (H. V. & H. W. Poor), is a fresh surprise in respect to the amount of information compactly conveyed. For the personnel of our railway system it is simply invaluable, and it comprehends street railways as well as steam, has a chapter on the roads of Mexico, Central and South America, an index to all the officials named in the steam division of the United States, and more than thirty pages of news concerning lines projected and under construction—a novel feature of no little importance.

It is some thirteen years since we reviewed the first volume, in English, of Prof. Pasquale Villari's 'Life and Times of Machiavelli.' In the meantime, as we have duly noticed, the great work has been completed and become classic. The English translation, by the author's wife, was, however, imperfect for the latter half of the Italian publication, omitting two chapters and all the justificatory documents. One of these chapters, bearing on the times rather than on the life of a statesman apparently insensible to æsthetic considerations, dealt with the state of the fine arts; another, and the more important, exhibited the critics of Machiavelli, both contemporary and posthumous, both monarchs and historians. These chapters are numbered ix. of Book I., and v. of Book II., in the two handsome volumes just issued by Charles Scribner's Sons. The hitherto omitted documents are found

here, and all the illustrations, and the text has been revised by the author and translator. The new edition is, therefore, emphatically the one to procure, especially for public libraries.

The third edition of Prof. Mahaffy's 'History of Classical Greek Literature,' revised and enlarged (Macmillan & Co.), follows the first by an interval of eleven years. The work has lost nothing of its readableness and interest, and, as may be inferred, has been superseded by no rival. The two volumes are handy and very comely.

The second volume of the new six-volume edition of Landor's 'Imaginary Conversations' (London: J. M. Dent & Co.; New York: Macmillan) concludes the Classical Dialogues, and adds the Dialogues of Sovereigns and Statesmen, the last of which is between Bishop Shipley and Benjamin Franklin over the American war. The editor, Mr. C. G. Crump, makes a slight error in assigning the probable date of this conversation to "the year 1775, *soon after the Declaration of Independence.*" The year cited is the only possible one, since it was that of Franklin's return to this country, and the dialogue implies a leave-taking at the ship's side; but the Declaration was yet afar off. This edition is as beautiful as it is inexpensive.

The recent revival of interest in South America may be partly responsible for the reprint of Charles Waterton's classical 'Wanderings in South America' (T. Nelson & Sons). The author's three journeys, in 1812 and later, to the Guianas and Brazil, and his travels to Buffalo, in 1824, in the hope of hunting the bison which he expected to find disporting on the shores of Lake Erie, certainly have an interest of their own, even when this is almost purely antiquarian.

'I Migliori Libri Italiani' is the title of a catalogue of the best Italian books, which has just been issued by Hoepli in Milan. As the choice is based upon the opinions of a hundred of the most eminent Italian scholars, the list may doubtless be accepted as a good guide to Italian literature.

'Joseph Mazzini und die Italienische Einheit,' by Adolf Friedrich Graf von Schack (Stuttgart: Cotta), is a volume consisting chiefly of personal reminiscences and impressions, and forms an interesting supplement to the author's recently published 'Memoirs.' The work shows what an immense power Mazzini possessed of exciting enthusiasm in all persons with whom he came in contact, even when they had no part or lot in his political aspirations and achievements. It is an eloquent and just vindication of the character and career of the great organizer of revolutions, and of the means employed for the accomplishment of his patriotic purposes. The work is also of additional interest as a proof of the enduring intellectual vigor and unconquerable energy of Count von Schack, who, in the seventy-seventh year of his age and totally blind, exhibits a freshness and versatility of literary activity worthy of his manhood's prime.

When Michael Servetus was burned at the stake in Geneva, on October 22, 1553, his principal theological work, and the immediate cause of his martyrdom, 'Christianismi Restitutio,' suffered the same fate; and with such fiery zeal did the hangman perform his office that the book became so exceedingly rare as to acquire great value in the eyes of bibliophiles. This treatise, which, like Calvin's 'Institutio Christianæ Religionis,' was published anonymously, and doubtless intended as a refutation of the stern Genevan's system of divinity, has now been translated for the first time into German by Dr. Bernhard Spiers, under the title 'Michael Servet's Wiederherstellung des Christenthums.' The first volume is already in press (Wiesbaden: Limbarth), and will contain Servetus's views of the doctrine of the Trinity, which were those of a rather conservative Unitarian of the present day, and would now be regarded as sufficiently orthodox. We may add that 'Christianismi Restitutio' contains a remarkable passage referring to the movement of the blood through the arteries and veins, showing that this learned and keenly observant physician knew something of the circulation of the blood nearly a century before William Harvey's 'De Motu Cordis et Sanguinis' was printed.

The historic "Hasty Pudding Club" of Harvard College, which will complete its centennial in 1895, has just issued its Eleventh Catalogue of Officers and Members (Cambridge, Mass.: Charles H. Thurston), the first one having appeared in 1829. This catalogue also contains a slight historical sketch of the Club, and much interesting information about it. Nearly 3,700 names, of whom some 2,400 survive, are on the membership rolls; and it speaks well for their quality that four presidents of the University, ten of other colleges, eighty overseers, fifteen fellows, eleven deans, two treasurers, seven librarians, and eighty-two professors of the University, seven United States Cabinet officers, eight Senators, eighteen foreign ministers, five governors of States, ten Federal and twenty-five State judges, and forty-one members of Congress were undergraduate participants in the "Pudding's" forensic or histrionic gatherings. This list of notables is increased by a distinguished body of honorary members, many of whom had attained dignity before election. George Bancroft, Edward Everett, John G. Palfrey, Oliver Wendell Holmes, James Freeman Clarke, Benjamin R. Curtis, William H. Furness, and James Russell Lowell were among the Club's secretaries whose recorded writings remain in its archives. The Club's histrionic renascence dates from the year 1845.

Advocates of the higher education of women who have doubted the friendliness of the Johns Hopkins University towards female candidates for its post-graduate privileges, should take heart of grace from the fact that Miss Florence Bascom (a daughter of the ex President of Wisconsin University) will enter the University at the beginning of the current year as a student in the department of geology, giving special attention to petrography. While enjoying "all the privileges of the University," she will "not be a candidate for a degree." In this respect the attitude of the great institution which thus graciously opens its side-door to a woman is reassuring to the noble army of the cautious.

In the *Revue Bleue* for September 12, M. Michel Bréal has a brief note recording the excellent effect of a recent reform in the Paris "collèges de jeunes filles," by which single forenoon sessions are substituted for morning and afternoon, with a Thursday holiday. Teachers and pupils have alike been stimulated, and parents are pleased to have more of their daughters' society, while more leisure is obtained for household duties, for drawing and music. The Collège Sévigné has set the example, which the Government is likely to imitate in the case of the Lycée Racine. We may add that at one of our women's colleges at least (Smith) there are no afternoon recitations.

In *Das Magazin für Litteratur* of September 5, an account is given by Karl Theodor Gaedertz of what he calls "Ein kleiner Goethefund." He was the discoverer, some years ago, of Goethe's unpublished verses to Rosine Städel, and that successful result of rummaging among the manuscripts in the Royal Library at Berlin led him to further researches in the same archives. Among the literary remains of the collector, Von Meusebach, he found eight letters and notes by Goethe. Two of these—to Von Kleist and Schopenhauer—were known and printed by Hoffmann thirty years since, though the former does not figure in the catalogue of the Goethe-Ausstellung of 1861. Six are entirely new, though they have but slight interest beyond that which attaches to anything connected with the poet's personality. The first, dated November 26, 1801, and also the second, undated, are friendly notes to Von Voigt, Minister of State, referring to various educational and literary projects the two were working together to further. The third is to the Orientalist and bibliophile Friedrich von Diez, questioning about authors and persons who could be of use to Goethe in writing the poems afterwards collected in the 'Westöstlicher Divan'; it bears date, February 22, 1815. The next letter is a mere note to go with a presentation copy of the second volume of his 'Italienische Reise,' and is addressed, October 22, 1816, to a certain Herr von Witzleben. The fifth is to an unknown correspondent, and relates to Goethe's interest in meteorology, and the last is similarly connected with his scientific enthusiasms, being a note to the mineralogist Eichhorn, under date January 19, 1818.

The executive council of the Burns Federation will publish a yearly chronicle, of which the first number is promised for the beginning of next year. It is to contain an account of the measures taken after the poet's death to make provision for his family, a description and list of the monuments erected to his memory, and other matter; so that, altogether, it will be a valuable addition to Burns literature.

The author of 'Forty Years in a Moorland Parish,' Dr. Atkinson, owes to that delightful work perhaps more than to others of permanent historical and linguistic value the conference on him of a York canonry by the Archbishop of York, which is now made public.

The Philadelphia *American Notes and Queries* has just been taking the suffrages of the press of this country as to the prevailing pronunciation of "advertisement." The result is given in detail in its issues of September 12 and 19. It is a very mixed vote, geographically, and the editors abandoned the attempt to indicate sectional usage, nor did they (what was easier) try to check the numerical majority by weight of authority. The usage is almost evenly divided between accenting the antepenult and the penult—230 for the former, 250 for the latter.

The ninth edition of 'Stieler's Hand-Atlas' is concluded with Parts 31, 32 (Gotha: Justus Perthes; New York: Westermann). As usual, have been kept to the last those portions of the earth's surface still under exploration or liable to political changes, as Africa, Asia Minor, the Balkan Peninsula. There is yet a small chance for European "influence" to be established in Africa, but only in an enclave, for the coast has been occupied without a break. The new German and the adjoining British East Africa is depicted in a side-map on an enlarged scale. Mt. Kilimandjaro is on the line, but is wholly given up to Germany. For the first time this standard work, whose authority and beauty of execution need not be insisted on, is provided with an alphabetic index of names, certainly the most extensive ever made for a work of this kind. It fills all but 200 pages of fine print in seven columns. This

enormous addition to the usefulness of the Atlas will, of course, never hereafter be abandoned. The English explanations at the head of the "Namensverzeichnis" leave something to be desired in point of idiom.

The "hereafter" of atlases and encyclopædias in Germany begins directly upon the close of an edition. Hence we receive from Westermann & Co. a sample of the forthcoming fourteenth issue of 'Brockhaus's Konversations-Lexikon,' in sixteen volumes. The importance of this announcement lies in the fact that, by the time of completion, this famous work, begun in 1796, will have attained its hundredth year, and celebrated a jubilee hitherto vouchsafed only to the 'Britannica' among voluminous cyclopædias. Its features are too well known to need recapitulation.

The September Proceedings of the Royal Geographical Society is wholly devoted to a paper upon "Ptolemy's Topography of Eastern Equatorial Africa," by Henry Schlichter, and the discussion which followed the reading of the paper before the Society. The chief point of general interest made was that Ruwenzori, the snow-covered range discovered by Stanley in his last expedition, is the Mountains of the Moon. The discussion was participated in by Lieut. Stairs, one of Stanley's officers, Mr. Clements Markham, and the well-known cartographer, Mr. Ravenstein. The last strongly opposed the methods by which the author reached some of his conclusions.

"F." writes to us from Amherst: "Your correspondent 'X.' says: 'The American use of gotten . . . is harder to explain.' But he goes far to explain it when he says 'it is heard among persons who are careful in their language.' These 'careful' people are unwilling to use the shorter form, because as usually spoken it has a vulgar sound from associations suggested by the famous etymology of the family name Guthrie. I think that is all there is to it."

—The five serials of one sort and another now running in *Harper's* demand the greater part of the magazine's space, and there is little in the October number, outside of them, to call for comment. Miss Woolson's paper on "Cairo in 1890" dwells upon the changes wrought of late in the city, and is pleasantly discursive about many things Egyptian. The rise of interest in art studies in this city is clearly shown in the account of "The Art Students' League." Mr. Davis's short story has a good deal of melodrama about it, but is original and vigorous. The instalment of letters from Dickens to Collins goes far towards bearing out the assertion of the London *Truth*, that Collins, in his life-time, turned over to Forster all that he had of Dickens's worth printing.

—Mr. Kennan makes a good point, in his Russian paper in the October *Century*, by showing that the cataloguing and description of the archæological treasures of the museum at Minusinsk came from the hands of political exiles, thus refuting the assertion of the Government that it banished only "half-educated schoolboys," etc. Mr. H. S. Maxim writes of aerial navigation (or "aviation"), and his solution of the problem coincides with Prof. Langley's. The machine on which this eminent inventor is at work will ere long put his views to the test. The title of Lieut. H. R. Lemly's article, "Who Was El Dorado?" will itself be a revelation to many who have always associated the name with a region, not a man. The origin of the myth is discussed in an interesting way, with many curious illustrations taken from the archæological collections of a Colombian, Señor Ruiz. The article comes in very well with the general attention now given to American origins. In the Italian Old Masters series, Mr. Cole gives us a wonderfully good reproduction of a portrait by Lorenzo di Credi. The story of the Ute massacre of 1879 is told by Lieut.-Col. Sumner, and characteristically illustrated by Frederic Remington. Mr. Gosse writes of Rudyard Kipling, and Mrs. Pennell of a curious form of jousting in Provence, the "Water Tournament."

—The right of the Corso in Rome to be numbered among the "Great Streets of the World" is admitted by Mr. W. W. Story, who writes of it in the October *Scribner*, to rest almost entirely upon associations with the past. Impressive neither in its proportions nor in its architectural features, possessing but few of the treasure-houses of art which constitute so large a part of the city's modern distinction, it still remains the most famous street of Rome, on account of its pedigree, dating back, as it does, to the Flaminian Way of which it once formed a part, and of the countless spectacles of historic significance which it has seen, from the Roman triumphs to the modern processions of Popes and sovereigns. The article on "Hunting American Big Game" reminds us how the possibility of such writing is rapidly disappearing, as the account dates itself ten years ago. Major Powell gives the geological explanation of the "New Lake in the Desert," and natural science is further exemplified in "The Biography of the Oyster." Edwin C. Martin writes of "Carlyle's Politics" in the larger sense of that word, and maintains the thesis that "Carlyle had no hope of getting trade and industry conducted on other general rules than those of supply and demand, and purchase in the cheapest and sale in the dearest market; and he had no desire to employ the hand of Government in all the small affairs of individual life." Confessing that "this, indeed, he nowhere gave himself the pains of explicitly saying," Mr. Martin goes on to "gather it, as one runs, by implication," though he does not meet with much success in subduing the refractory material to the desired interpretation.

—The literary problem which Emily Dickinson presents is partly solved and partly made more complex by the letters of hers printed by Mr. T. W. Higginson in the October *Atlantic*, and by the slight information about her which he gives along with them. They show that her prose expression was of a piece with her poetical, and so that her literary personality was single and sincere, but they leave us almost as much in the dark as ever in regard to the sources of her strange endowment. But they are of remarkable interest in any case, and reveal her as an Emersonian several shades more concise and oracular than Emerson. The note they give to the number is sustained by "The Ascetic Ideal," another of those papers, by Harriet W. Preston and Louise Dodge, in which ancient times are made to live again—the personalities and the age chosen this time being Jerome and some of the elect Roman ladies with whom he was intimate, in the days of oncoming celibate and cenobitic life—and by Henry F. Randolph's "In London with Doctor Swift," an article which dwells on the softer side of the cynic's nature. The writer on Gen. Thomas thinks that soldier did not have the recognition he deserved, either during the war or after it, and rather fancifully appeals to Virginia to rank him with her other sons, Lee and Jackson. Biography is further represented by articles on Sir John Macdonald and Ignatius von Döllinger. Other papers which we must leave unmentioned help to make a number that, more than ever this month, by force of contrast, shows how faithful the magazine is to its old and worthy traditions.

—In the *Nation* of November 13, 1890, we reviewed with the highest praise Miss Garnett's 'The Women of Turkey and their Folk-Lore: The Christian Women,' and have now to mention briefly with equal approval the concluding volume on the 'Jewish and Moslem Women' (London: David Nutt). In the former notice we said that Miss Garnett gave a very encouraging account of the Christian women of Turkey and the advance they had recently made in education, and added, "If the next volume shows any similar advance on the part of the Semitic and Moslem women, we need not despair of the future of the country." Such a corresponding advance does not seem to have been made, nor does it appear so necessary if what Miss Garnett tells us of the Osmanli women is true. The traditional notion of the Turk in his family relations receives a severe blow in the present work, and a multitude of gross errors constantly cropping out in the books of superficial travellers are here corrected. The work inspires a hopeful view of the various races of the empire, and shows that the Turk himself possesses many qualities which should entitle him to the respect and sympathy of his Christian neighbor. The present volume does not contain quite so much folk-lore as the previous one, but otherwise it is more important and interesting. Mr. Stuart-Glennie contributes a note on "Moslem and Christian Marriage Laws," and three concluding chapters on the "Origins of Matriarchy," in which he makes use of the marriage folk-lore of the two volumes to support his view that human sexual intercourse was not originally promiscuous—a theory usually deduced from the prevalence of Maternal Filiation. This is not the place to discuss Mr. Stuart-Glennie's views on this topic or on the origin of folk-lore in general; they do not add much to the value of Miss Garnett's work, which, we repeat, is worthy of the highest praise.

—The bronze lion of the Piazzetta of Venice was the subject of an interesting communication made by M. Casati to the Académie des Inscriptions et Belles-Lettres at its session of July 24. The lion has been recently taken down in order to make some indispensable repairs, and the antiquaries and the photographers have had a fair chance at it. No one knows with absolute certainty either its age or its origin. Some have thought it Assyrian, some Etruscan, some mediæval, but there is a complete lack of documentary evidence, printed or in manuscript, to throw any sure light upon its history. M. Casati believes it to be Etruscan, and he laid before the Academy its photograph, together with those of two well-known Etruscan monuments—the chimæra which is in the Florence Museum, and the winged griffin which is now at Leyden. These last statues bear, one on its flank and the other on its paw, the difficult and doubtful word *Tins-cvil*, which has been interpreted by Hebraists as *draco*, *capra*, *leo*. Gori, the Italian scholar, renders it by *pronus ad vindictam;* while M. Casati thinks that it means "*ex voto* to Jupiter." Whatever its meaning, the two statues on which it is found are beyond any doubt Etruscan, and they have the same artistic character as the lion of Venice. M. Casati has before this

pointed out that it is the Etruscans who have left us the finest early works in bronze, and notably statues of animals of colossal size.

—In a recent number of the *Revue Bleue*, M. Raoul Rosières asks and answers the question, "Why is Lamartine no longer read?" with something almost like ferocity. To begin with, he says, Lamartine's early (and only) success was an accident: his poems, appearing just at the beginning of the Romantic revolt, not only kept to the classic model and even improved upon it, but breathed forth such decorous conservatism and devoutness that the clerical party and Louis XVIII., "who yearned for a Racine to adorn his reign," welcomed his advent with enthusiasm. But his patrons were soon swept away, and with them a market for his wares, and the rest of his life became a desperate struggle for popular approval, which he for ever posed as disdaining. Till his death "un homme d'avant 1820," he was not only a man of superficial education, but of such perverted literary taste as to prefer Ossian to Dante, and a stanza of Byron to the whole of Molière, La Fontaine, and Béranger. Devoid of originality, he borrowed prodigally —from Chateaubriand, from J. J. Rousseau, from Pope, from Bernardin de St. Pierre, and from a half-dozen others, from each of whom he would snap up a maxim or an epigram

"and make it his own
By repeating it o'er in a Sibylline tone."

His life was unreal in its fantastic austerity and self-delusion, and hence his depiction of life was unsubstantial. His future power to please rests alone in his smooth and sonorous verse, which, always over-written, is at times even faulty in rhyme and grammar; for, left behind by accident in "the century of ideas," as he seemed to be, he was able to do nothing better there than "change into gold pieces the sum that his predecessors had scattered about in big coppers, without adding a centime to its total." But was this alchemy despicable?

—The many friends and former pupils of Dr. Franz Friedrich Ernst Brünnow will learn with regret of this distinguished astronomer's death, which occurred at Heidelberg, Germany, on August 20. Dr. Brünnow was born at Berlin on November 18, 1821, and entered the University of that city in 1839, devoting himself to mathematics, physics, astronomy, and kindred branches of study, and taking the degree of doctor of philosophy in 1843. In the spring of 1847 he was appointed director of the observatory at Bilk, near Düsseldorf, where his observations won for him in the following year the gold medal of the Royal Academy of Brussels. In 1851 he was made first assistant at the Berlin Observatory under Encke, where he remained till 1854, when he was called to Ann Arbor as director of the newly established observatory and as Professor of Astronomy in the University of Michigan. In 1866 he removed to Dublin as Professor of Astronomy in Trinity College, director of the observatory at Dunsink, and Astronomer Royal of Ireland. Ill-health, resulting in weakened eyesight, compelled him to resign these positions in 1873; since then he has resided in Basle (1874–'80), Vevey (1880–'88), Oxford (1888–'89), and lastly in Heidelberg until the time of his decease. Besides his doctoral dissertation, 'De Attractione Moleculari' (1843), and the treatise on Vico's comet, for which the gold medal of the Belgian Academy was awarded him in 1848, Dr. Brünnow has published an elaborate work on 'Spherical Astronomy,' 'Tables of Victoria' (1859), 'Tables of Iris' (1869), and 'Dunsink Observations' (1870 and 1873). His 'Spherical Astronomy' appeared originally in German, while he was professor at Ann Arbor, but he himself immediately prepared an English edition of it, and Russian, French, Italian, and two Spanish translations were also published. Dr. Brünnow was a quiet, modest scholar and a charmingly sincere and simple-hearted man. He married Rebecca Lloyd Tappan, only daughter of the well-known Chancellor of the University of Michigan. Their only son, Dr. Rudolph Brünnow, is now Professor Ordinarius of Oriental Languages at the University of Heidelberg. He has edited several Arabic and Assyrian texts, and is the author of an excellent classified list of all simple and compound cuneiform ideographs occurring in the texts hitherto published, with their Assyro-Babylonian equivalents and phonetic values (Leyden: Brill, 1888–'89).

SLANG DICTIONARIES.

Slang and Its Analogues Past and Present. Compiled and edited by John S. Farmer. Vol. II. C–Fizzle. London. Printed for subscribers only. 1891.

A Dictionary of Slang, Jargon, and Cant. Compiled and edited by Albert Barrère and Charles G. Leland. Two volumes. Printed for subscribers only at the Ballantyne Press.

THE increasing interest that continues to be paid to language, not for what it conveys but for what it is in itself, finds no more marked manifestation than in the rapid multiplication of special dictionaries. There is scarcely any art, any science, any department of human endeavor that does not have its lexicon, in which is carefully explained everything that is distinctive in its own terminology or peculiar in the significations of the common words it employs. The speech that is not known at all to literature, and lives only in the mouths of uneducated men, is coming more and more to be carefully and fully recorded. But dictionaries of the various kinds just indicated are after all of limited interest. They appeal at best to a class comparatively small. A subject of much more general concern is denoted by the title at the head of this article.

In a previous number of this journal we have spoken at some length of the first volume of a projected work, the second volume of which is now before us. It includes the letters of the alphabet from C to nearly the middle of F. This second volume can be fairly said to be superior to its predecessor. It labors, it is true, under many of the defects that characterized the plan of that attempt as well as the method of carrying it out. Still, labor and earnestness and zeal will always produce results of value, even if other and more important qualities are lacking; and the compiler can feel confident that his work will always need to be consulted by the student of the subject, even if it cannot be deemed in any sense a final authority.

The other work before us, entitled 'A Dictionary of Slang, Jargon, and Cant,' is already completed. Everything has been done to make its two volumes attractive to the eye. The paper is beautiful, the print is beautiful, the binding is beautiful. If the external appearance of a book could only be regarded as sufficient evidence of the goodness of its contents, or as a satisfactory substitute for their unsatisfactoriness, the present work would leave little to be desired. Unfortunately for it, a prejudice exists in favor of completeness and accuracy of information in any production that assumes the title of a dictionary. Otherwise, indeed, there is no sufficient reason for its having been brought into existence at all. With every disposition to judge the present work with the fullest charity, it must be said that it is very poorly done. It is not so much a dictionary as a heterogeneous collection of notes on words and phrases. These have been thrown together without order and examination, and in many cases evidently with no attempt whatever at a verification of the statements that are made.

A dictionary of French 'Argot and Slang,' compiled some time ago by Barrère, who is really responsible for the present work, did not arouse any glowing anticipations as to what would be accomplished in any production of the sort in which he was the one principally concerned. But the results of his labors as here exemplified are far worse than any previous efforts could have led the least sanguine to expect. Not that it is necessary to deny that there is much that is interesting in these two volumes, much that is valuable. But they are marked throughout by defects of the gravest character. These exist in the statement of the matter contained in them as well as in the matter itself. The work comprises a great deal of which our own ignorance does not permit us to express either a favorable or unfavorable opinion. But it also contains a great deal upon which a very definite opinion can easily be pronounced; nor does it require an excessive amount of knowledge on the part of any one to discover the ignorance displayed in its compilation.

This may seem harsh criticism, but the evidence to be presented will show that it partakes rather of the nature of understatement than of overstatement. Even when the compiler apparently comprehends the subject upon which he sets out to enlighten us, he manages to convey his information in a way to mislead the reader. This is done partly by the failure to make the slightest use of typographical aids. Different meanings of the same word are often joined together in the same sentence as if they expressed the same sense. Sometimes they are separated from each other only by a comma. Not unfrequently, again, there is no distinction made between two words which happen to have precisely the same form though they may be absolutely distinct in signification and origin. For illustration, *gad* appears first as a gypsy word with the meaning of "shirt." Without the slightest break there follows at once in the same paragraph "upon the gad," with the definition of "upon the sudden," and marked as "popular." There is everything in the way these meanings appear, to give the reader the impression that they are in some way connected, and that *gad* is the same term in both. He who should accept this natural view would find, however, the transition of meaning a peculiarly difficult problem to solve.

Even a more significant illustration of the reckless way in which the information contained in the work has been pitchforked together is afforded by the treatment given to the word *mess*. Most dictionaries of any size contain an expression in which a peculiar usage of that term appears. "To lose the number of one's mess" is defined in them as a nautical phrase meaning "to die." It is in the following way that this dictionary records the usage: "*Mess* (army and navy), to lose the number of one's mess, to die." It seems clear enough that the compiler knew after a fashion what he wanted to say. It is absolutely certain that he did not know how

to say it. Dictionaries, it is not to be forgotten, are not made for the people who are already informed, but for those who are seeking information. The only reasonable interpretation that could possibly suggest itself to one who was entirely ignorant of this particular phrase is, that *mess* is a verb which in the army and navy bears the meanings here ascribed to it, and that in consequence it means "to die."

As if this were not enough, the dictionary sometimes enters one word and proceeds to give a definition of its various meanings, but in the process of doing this another word, related to it, is defined instead. Thus *white-boy* is put down as a term of endearment, in use in the seventeenth century, for a favorite child. Then, without any notification of a difference of meaning, it is declared to have been assumed by Irishmen during the agrarian outburst early in the present century. A mistake of about fifty years in the statement of this fact is not perhaps a matter of much consequence. But the next sentence of the paragraph passes at once to the further definition of the term as an Americanism with the sense of "disinterested," "white-souled." An illustrative quotation follows, taken from one of Besant's novels, though without mentioning the name of that author. From it we discover that the last signification belongs not to the noun *white boy*, but to the adjective *white*, which has received no mention at all.

This confused jumble is in no way peculiar to the information contained in the examples just cited. Column after column could be filled with similar illustrations, in which there seems no reason to doubt that the compiler knows himself the facts which he finds it impossible to communicate to others in an intelligent manner. These are things, however, that concern only the way in which the matter has been worked up. Far greater fault can be found with the matter itself. Errors both of omission and of commission exist. Of the former of these, the lack of illustrative quotations is one of the most signal. They are often badly needed in this work, where the explanations given are often of the kind that do not explain. Their comparative infrequency might under ordinary circumstances be defended on the ground of want of room. The manifestation, however, of an insatiable desire to occupy a great amount of space with discussing everything else than the real subject has forestalled any apology of that sort. Entries connected with the stage are the ones in which this disposition manifests itself most conspicuously. Under *super* there are two columns given up to a glowing panegyric upon the merits of "these humble but valuable auxiliaries of the theatre," as they are styled. Under *pross*, "to sponge," there is a good deal of miscellaneous information imparted as to the extent to which the practice is carried on. Under *gag* there are more than two columns of anecdotes in which happy instances of the successful way in which gagging has been done are held up to admiration. Under *orders* two columns also are taken up with a denunciation of the system of seeking and obtaining free admission to places of entertainment. But while this method of filling the pages of this dictionary is most protracted in the case of theatrical terms, it is by no means confined to them. We learn from the present work that *clod-crushers* is an epithet used by Americans "to describe the large feet which they believe to be the characteristic of English women as compared with those of their own country." The term is new to us, but M. Barrère cruelly adds of his own accord that it is "an opinion shared by other foreign critics as well." It is clear that observations of the same general character must also have been made in France, but the compiler comes gallantly to the defence of the women of his adopted country. He gives up, indeed, the feet of those of the poorer classes: the enormity of their size seems to be something which he feels it is hopeless to defend. But English ladies of fashion, he tells us, can compare favorably in this respect "with any of the dainty, neat-ankled, light-tripping ones of New York or Paris." At any rate, he assures us, they can walk greater distances. Who, after this, will say that a dictionary is not entertaining?

It is the Americanisms, real or imputed, that will furnish to Americans the most convincing as well as the most amusing tests of the accuracy displayed in this compilation. We are all more or less familiar with the extraordinary words and phrases going under that name which are to be found in English books and periodicals. But in this dictionary there are many peculiar pieces of information, some of which deserve a far wider circulation than can be given by a work which has been printed for subscribers only. We find under *hogs* that it is "a term sometimes applied in jest to the inhabitants of Chicago." There is a possibility that something may have been met with somewhere to suggest such a limitation of this general term of abuse; but in the instance now to be given nothing but an innate capacity for misunderstanding and misapplying the sense of what has been read can be held responsible for the meaning that is put down. The slang theatrical word *hamfatter* is fairly familiar to the readers of the New York journals. It is a contemptuous designation for actors of the grade of negro minstrels. The simple word itself does not appear in this dictionary; but the phrase *dude hamfatters* is given. To make a special entry of such a combination is of course ridiculous, but it deserves full pardon for the sake of the explanation furnished of its use and origin. It is defined as "a sarcastic allusion to the swell and masher pork-raisers." To make the reference still more precise and pointed, it is significantly added that "a large number are located not a hundred miles from Chicago." The authority for all this is a newspaper paragraph containing the two words. It is probably the only instance where they ever appeared together in print. There needs but a single glance at the sentence in which they occur, to see that there is in it the plainest sort of a reference not to Western pork-raisers, but to New York actors.

Chicago is not alone, however, in the distinction of furnishing striking illustrations of Americanisms of this sort. Boston comes in for her share. No one who was familiar with an event comparatively so recent as the Beecher trial is likely to forget the circulation given by it to the phrase "to step down and out," or to be unaware of the origin of "true inwardness." The former appears in this work somewhat enlarged as "step down and step out," and with the curiously inadequate meaning of "an intimation to cease, or a hint that a man has the worst of it." On the other hand, the phrase "true inwardness" is not defined at all—a not unfrequent occurrence in this collection—but instead a philosophical explanation is given of its origin. "It has always been the fashion in Boston," so runs the statement, "to affect a kind of transcendental metaphysical language, and 'the *true inwardness*' of anything is a term probably derived by some Carlyleist from the German *innerlichkeit*."

These things will hurt only local pride; but patriotism generally will suffer a shock at the statement made under *two-eighteener*. It is irritating in the home of the trotting-horse, in the land where it has received its development and attained its glory, to find this term appearing as the designation of "a man or woman of the fastest kind, the allusion being to the highest record in trotting matches, about two minutes eighteen seconds being the fastest time for a mile." *Two-forty* could have been endured, for that actually did long remain as the limit of highest achievement on the part of the trotter. But at two-eighteen it never stayed long enough to make the expression popular. Now that hundreds of trotters have gone over the mile in less than that time, now that for four or five years the record has been under two-nine, such a definition as has just been quoted rises almost to the dignity of an international insult. It may not be sufficiently aggravated to make the eagle scream defiance, but it is at least enough to justify the horse in snorting it.

It is, however, in the political terms that the most misleading explanations occur. In these terms America has been fertile. Many of them are exceedingly expressive, and some of them are in addition highly picturesque and likely never to die out. The inadequacy of most of the definitions found here is more marked than their occasional incorrectness. Take, for instance, the term *slate-smasher*. Every American knows that the slate is an expression that belongs strictly to the proceedings of the nominating conventions of a party, though its usage has now been widely extended. "To smash the slate" is primarily to nominate some other persons than those fixed upon by the party-managers, or by those who have supposed themselves in control. But, in this dictionary, *slate-smasher* is defined as "a President or leading statesman who will not attend to the nominations or recommendations of a party." There is the same sort of misleading explanation of several other words, as, for instance, *ward-heelers*. In other instances, the statements are so extraordinary that it is almost impossible not to believe that there must be some evidence upon which they are founded. Accordingly there are times when we are uncertain whether it is our own ignorance or that of the compiler which is at fault. We find here, for illustration, an expression entirely new to us. "Playing the sovereign" is put down as an Americanism, with this commentary: "Office-seekers," it is asserted, "who, shortly before an election, put on shabby clothes, drink whiskey, and shake hands with everybody and make themselves generally agreeable to all of inferior social position, whom it is to their interest to conciliate, are said to be *playing the sovereign*, the object being to secure their good graces and obtain their votes." There may be places in the United States where this phrase is used. There may be places where the practice here described prevails. But certainly no surer method could ordinarily be taken by any man in any American community to deprive himself of the chance of being elected to any office he was seeking.

With one illustration of the carelessness displayed in dealing with the facts contained in the work, we leave the far from exhausted field of errors in Americanisms. *Short-hairs* and *silk stockings* are said to be "the names of two branches of the Democratic party in the Western States." We need not discuss the limitation of the terms to one party or to one region of the country, or bother ourselves with the asserted date of its origin. It is sufficient to observe that the expressions are

declared here to characterize the members of two Democratic factions, and that the work in which these statements occur was published in the second year of the term of office of a Republican President. We are then in a position to appreciate the value of the further information vouchsafed that "the *short-hairs* appear to be discontented with the Administration, while the *silk stockings* approve of it."

Let it not be supposed that there is anything peculiar in the way Americanisms are treated. Other subjects fare full as badly. We are told, for instance, that "Shakspere uses *lush* with the meaning of 'luxury.'" This signification has hitherto failed to be recorded in any dictionary whatever. There is justification for the statement to the extent of the fact that the word does occur once in the poet's works. On that occasion it is an epithet applied to grass, and there is so much of the sense of luxury in its signification that it can properly be rendered "luxuriant." Still, one would hardly expect a lexicographer capable of making the assertion quoted to devote himself with success to Shaksperian exegesis. The experiment, however, has been tried, and can be found fully displayed under the noun *marrow* in the sense of "mate," "fellow-workman." "The word," we are told, "is used by Shakspere in a phrase hitherto unexplained by his numerous critics and commentators. Mark Antony, speaking of the assassination of Cæsar, says that he was 'marr'd' with traitors—*i. e.*, likened with traitors—as if he himself had been a traitor." This choice specimen of interpretation apparently owes its existence to the lack of any acquaintance with the use of *with* in the sense of "by." It need not, however, occasion surprise to find ignorance exhibited of common literary usage when so much ignorance is displayed of cant phrases which the work sets out specifically to explain. No reader of the lighter literature of the reign of Queen Anne can have failed to notice the frequent mention of "laced coffee"—that is, coffee to which spirits have been added. Here it is defined as "sugared."

It is useless in our limited space to attempt to furnish more examples of errors of definition. Yet mistaken as they often, and ridiculous as they sometimes are, they are entitled to high praise in comparison with the etymologies. In the latter, conjecture fairly runs rampant, and, so far from paying heed to truth, usually pays none to probability, and we are almost inclined to add possibility. The difficulties in the way need not be denied. To ascertain the etymology of slang words and phrases is undoubtedly much the hardest feat of the kind that can be attempted in linguistic investigation. The expressions seem frequently to spring out of the earth, and in such a way as to give no hint from what portion of it they proceed. In the case of those which come down from the past it is very rare that the historic conditions are known under which any particular word or phrase first came into being. Without such knowledge, guesses as to origin partake of even much more than the usual untrustworthiness that belongs to most linguistic guesses. As an illustration of the difficulties attending the derivation of words of this class, let us take the case of *mob*. In this instance, both the time and place when the term came into existence are familiar to all students of language. It is strictly a specimen of pedantic slang. We can trace it in its original full form of *mobile vulgus*, "the fickle common people," through *mobile*, showing the noun dropped, to *mob* with the final syllables of the first word discarded. We can discover the disgust inspired by this abbreviation in the comments of Addison and Swift, who take care to let us know that it is the introduction of such terms as these that corrupts and ruins a language. But suppose we had not this knowledge of the history of the word, how vainly would human ingenuity be tasked to find an explanation of its origin that would have the least semblance of probability. Yet such a state of ignorance is the position we occupy towards the vast majority of slang words and phrases.

Lack of knowledge has not, however, acted here as a restraint upon conjecture, but rather as a spur to it. The etymologies in this work are in truth the most pretentious part of it as well as the most absurd. Crude methods long ago discarded by any one who had the slightest acquaintance with linguistic science are the only ones here followed. Stories are recounted to explain the origin of popular phrases, and, as in some instances of this ancient mythical device, such as *sir-ree*, they actually mean nothing and could never have originated anything, it seems hard to find any other reason for their introduction than the desire to fill up space. Indeed, it is not easy to speak with proper moderation of the manner in which paragraph after paragraph of this dictionary is taken up with matter which it would be flattery to call twaddle. Of course Celtomania is prevalent. It is not, therefore, surprising to find quoted as an authority the one etymologist of our times who in his beliefs and methods belongs to the ninth century, but somehow got landed in the nineteenth. Under the phrase "hell and tommy," Dr. Mackay is cited as an authority for the origin of this grotesque expression. It probably means, he tells us, "to reduce a man to extreme destitution, or to bread and water, and, if so, an etymon may be found in the Keltic *ol*, drink, and *tomadh* (*toma*), a lump of bread." For the benefit of those, apparently, who may not take kindly to this view, the same phrase is entered under another letter of the alphabet, and a still different derivation suggested.

We are, however, under no necessity of going to any outside sources for similar illustrations. A new gift of tongues seems to have fallen upon the compilers of this work, and while reading it we are constantly reminded of the text which tells us of the Parthians and Medes and Elamites and the dwellers in Mesopotamia and in Judæa and Cappadocia and Pontus and Asia. All languages are laid under contribution from furthest regions in space to furthest ages in time. *Hant* or *haunt*, with the sense of "ghost," in American local usage, "is possibly the Malay word *hant*, an evil spirit." In *mill*, "to fight," we are sent to the Aryan root *mar*. Dutch plays a far from ignoble part in these linguistic excursions into the unknowable. Still it is to the speech of the gypsies and to the Yiddish—which seems to be German-Hebrew—that a very large proportion of these words and phrases have their origin attributed. *Mash* must have been derived from the Gypsy *mash* (*masher-ava*), "to allure, to entice." This is confirmed by Mr. Palmer, who knows the very family of actors and actresses of Romany stock with whom the term originated. But while the speech of the gypsies has its etymological charms, it is on the whole the fascinations of the Yiddish that are the most enduring and potent. That dialect is always peeping in, even where it does not venture to enter. Under *high faluting* we are informed that "it is very remarkable that there exists in Yiddish the word *hifelufelem*, meaning extravagant language or nonsense." *Callithumpian* "is possibly from the Yiddish *calle*, a bride." It consequently "means bride-thumping, or making a noise at a bridal." In the discussion of *make* in the phrase "on the make," it is found necessary to point out "its resemblance to the Yiddish *makir*, one who knows, who is intelligent in anything." There is nothing, indeed, that this dictionary shrinks from in the way of suggestion or supposition. It is so hopeless to give an adequate conception of the scale upon which these appear that we shall make no further attempt to illustrate its general characteristics than is involved in citing its remarks on the derivation of *shebang*, "a shanty." "No one," it is said, "has ever explained the origin of this term, but it may be noted that there are exactly seven board surfaces in a shanty, the four upright sides, the two sides of the roof, and the floor, and that the word *shebang*, in Hebrew, means seven."

It has been a matter of necessity to take up most of our space in speaking of the defects of this work. They are so obtrusive that they constantly force themselves upon the attention. They are so pervasive that they extend to the minutest details of definition or of derivation. Furthermore, much contained in it has no right to be included even under the wide-embracing title which it has received. There are, for instance, a large number of gypsy terms entered, it is hard to see for what reason. There would have been just as much propriety in introducing whatever is peculiar in the speech of the French of Lower Canada, or even words from the Hindustani itself. The work, indeed, can never be safely resorted to by him who is unacquainted with the matter with which it deals. He can never have the assurance that the information he derives from it is to be trusted. For all that, this dictionary will have its uses. While it is often inaccurate or misleading, it contains much that will be of service to him who knows how to distinguish the true from the false, the adequate from the inadequate.

RECENT FICTION.

In the Heart of the Storm. By Maxwell Grey. D. Appleton & Co.

At Fault. By Kate Chopin. St. Louis: Nixon-Jones Printing Co.

At an Old Château. By Katharine S. Macquoid. Harper & Brothers.

The Robber Count.—Fifty Years, Three Months, Two Days. By Julius Wolff. Translated by W. Henry and Elizabeth R. Winslow. Thomas Y. Crowell & Co.

Which Wins? By Mary H. Ford. Boston: Lee & Shepard.

Khaled. By F. Marion Crawford. Macmillan & Co.

In Low Relief. By Morley Roberts. D. Appleton & Co.

There Is No Devil. By Maurus Jokai. Translated from the Hungarian by F. Steinitz. Cassell Publishing Co.

Otto the Knight, and Other Trans-Mississippi Stories. By Octave Thanet. Houghton, Mifflin & Co.

The Uncle of an Angel, and Other Stories. By Thomas A. Janvier. Harper & Brothers.

The Philadelphian. By Louis John Jennings, M.P. Harper & Brothers. 1891.

A Question of Love: A story of Switzerland. Translated by Annie R. Ramsey from the French of T. Combe. Boston: Roberts Brothers. 1891.

Amaryllis. By Georgios Drosines. [The Unknown Library.] Cassell Publishing Co.

MAXWELL GREY'S third novel is in some respects the best of them all. The story has no less hold than the others upon the interest, and the thrilling pictures of India during the siege of Lucknow and the horrors of the mutiny are better than anything we have had before as background. The country folk, as of yore, are entirely delightful, and it has seemed to us that there is a slight abridgment in landscape—say, a mile omitted from every previous thousand. But on this point it may be that custom has dulled perception, and we speak under correction for exaggeration. What the author has had it at heart to show is the harm that a man can do a woman without drawing her into positive guilt. This has been done with no shrinking hand and in no hackneyed strain. On the contrary, the shrinking and hackneyed views of the world on this subject are held up for scorn in language which would be more powerful if less profuse, and in situations which are often despoiled of their strength by this writer's fatal fondness for fine writing. The final removal of the compromised but innocent Jessie is too like the fifth act of the French drama for a book aiming, as this one does, at renovation of social standards. However, her restoration to her love must be taken as a courageous innovation, and her rehabilitation in society may follow when the English-writing public shall have ceased to tremble before titled society.

It is not quite clear who is cast for the title-rôle in 'At Fault,' since all the characters have valid pretensions to the part. There is the lady who drinks and the gentleman who gets a divorce from her, the widow who loves and is beloved by him, but who persuades him to remarry his divorced partner and bring her to the Louisiana plantation, where she (the widow) may have a fostering care of the two and help them do their duty to each other. There is also the young lady of many engagements, the negro who commits arson, the young gentleman who shoots him, the Colonel who shoots the young gentleman, the St. Louis lady who goes to matinées and runs off with the matinée-going gentleman. It may not be amiss, in deciding who is "At Fault," to consider as well the claims of the author, the publisher, and the reader. The reverse side to all this is a graphic description of life on a cotton plantation, an aptitude for seizing dialects of whites and blacks alike, no little skill in perceiving and defining character, and a touch which shows that the array of disagreeables was born rather of literary crudity than of want of refinement.

'At an Old Château' is a mild and gentle little novel which reads singularly like a translation. The course of true love plays at not running smooth, chaperons and guardians scowl, faithful servitors save, noble rivals renounce, the written consent of the dead is brought to light, chaperons and guardians sing, dance, and show their delight, sugar-plums are served, and upon the scene descends the more than usual calm of Marjorie Fleming.

'The Robber Count' is a story of the Hartz country in the time of Pope John XXII., and is a really delightful account of the squabbles of a Bishop, a beautiful Abbess, and the Robber Count. From their neighboring strongholds they all cast their eyes on whatsoever booty pleaseth them, whether a castle, a town, or it may be a fair maid, and straightway behave like Louis Napoleon when he

> "Looked into some lexicons
> And found the word Mexicans;
> Here's at 'em, says Louis Napoleon."

The stories of the onslaughts are all most entertainingly set forth, as are the characters of the wily Bishop, the passionate Abbess, the bold, loving Count. The captive princess and the doughty knights who fight for her are no conventional lay figures, but full of life and charm, and it is hard to say whether the god of war or the god of love be the most adorable divinity in this refreshing story. The translation is excellent, with the exception of an occasional tendency to such grammatical malformation as "thou defendeth" and "thou indulgeth." Indeed, the patient wayfarer through German novel-land half suspects the present translators of contributing to the attractiveness of this work by abridgment, and is grateful.

'Fifty Years, Three Months, Two Days,' by the same author and translators, is also a sprightly story, and deals with the dwellers in castles in the Neckar Valley during the year 1397. The plot hinges upon an old law which declared that if any one having attained the age set forth in the title should die a bachelor, his property must be surrendered to the State. To save the noble Hans von Steinach's property from such absorption, his relatives and neighbors brew many a pretty plot, and weave so many tangles as nearly to encompass their own undoing. The romantic atmosphere of the 'Robber Count' is here replaced by one more farcical and less unique in tone. Yet it is a readable tale.

'Which Wins?' is an indifferent story, but that matters the less in that it is in reality a pamphlet upon Socialism. It is a book for the moralist and economist to consider, rather than the reviewer of fiction. There is much that is stirring in the setting forth of the miseries of "the other half," and of aspirations towards making this a better world. If brokers' offices in the West are the sinks of iniquity they are here represented to be, and if all mortgages on Western farms are simply organized plunder, it should certainly be published abroad. In the author's opinion, the establishment of a people's party is the only chance of redress for these evils, and the only hope of giving wives a partnership in their husbands' property, or control over their own, of raising the laboring classes to the refinements of table-cloth and napkins, of abolishing syndicates and monopolies, and promoting the brotherhood of man. The Associated Charities of New York come in for a thrust, and of course all capitalists. Whatever may be thought of the cure, what is not exaggerated in this book, and can never be old, is the relation of the sufferings of the poor, the echo of the world's eternal "Ach! wir Armen!"

Mr. Crawford's Arabian tale 'Khaled' is fantastic, romantic, and interesting. The art of telling is his in a high degree. The Oriental atmosphere is well maintained, yet shot through with modern tinges of thought, bringing the story close to modern sympathy. The central motive, of the incarnate genius whose soul is to be given to him only when he shall have won a woman's love, is as old as romance, but wears an individual aspect here from the individual setting. Mr. Crawford is the Cook's tourist of novelists, and we confidently look now for a love story whose scene shall be laid among the lake-dwellers. Provided it be as readable as 'Khaled,' it shall have a welcome.

Whosoever is unfortunate enough to read the so-called Bohemian transcript 'In Low Relief,' will perceive that the adjective belongs to the book, but that the noun is his own when the book is closed. It bears the same relation to a work of art that "Oats, peas, beans" does to poetry, and there is a straining after badness which chafes gratingly upon the nerves.

The badness of 'There Is No Devil,' on the other hand, is of the frankest kind, but, being removed to Hungary, wears an air of aloofness which makes it more tolerable; and since the Anglo-Saxon reader, reversing *Hamlet*, is apt to think they are all mad out of England (or America), a little more or less of insanity on Continental soil is only what is to be looked for. Jokai is a clever and vivacious writer, and in general skilful at construction, although we cannot wholly admire the contrivance by which the story gets itself told. Two gentlemen make a night of it, while one relates to the other the story of his life. That this vigil may not cause his guest to wish that he had slept at home, the host at the outset rings the bell and gives his orders for the night. "Tea with mandarin liqueur at once, at twelve o'clock punch and fruits, at two in the morning coffee à la Turque, and at five o'clock a cold woodcock and champagne." The publishers' prefatory note states a belief that the present volume is better suited to the taste of American readers than any previous stories by Jokai. If this be so, it was a commendable act to withhold the others.

There is but one Arkansas, and Octave Thanet is its Prophet. For those who are not sated with the "local literature" of the States, 'Otto the Knight' and the accompanying stories will be found very pleasant reading, and will take a high rank among the color sketches of our country. The writer succeeds in giving an especial note to this especial region, and has, besides, a literary gift which is shown to advantage in the invention and form as well as in the phrasing of the tales.

Mr. Janvier's new stories are of very unequal merit. The one which gives the book its title is cheap to a degree. "Our Pirate Hoard" is proof that if one must imitate Stockton, one had better not take him in one of his boneless moments. "A Temporary Deadlock," on the other hand, is bright and ingenious, and the Crimean sketch, "For the House of France," is both naïve and spirited. Of the two romances of Avenue B, the former is fairly amusing, while the latter reminds one of the fact that the saccharine matter discovered in petroleum is useless, being too sweet for granulation.

Novels, like children, are often christened without rhyme or reason, but when a name is given apparently intended to indicate the characteristics belonging to a particular locality, it is rather disappointing to find them lacking. There is nothing to distinguish 'The Philadelphian' from the shrewd but kindly business man of any American city, and the virtues attributed to the Virginia gentleman represented in the person of the ex-Confederate Colonel are by no means peculiar to that section of the country. Both characters and scene are quickly transferred to England and Wales, where the author is on more familiar ground, and the action proceeds in a lively manner. Many characters are introduced, most of them of a more or less villanous type, and the interest of the story hinges upon the skill with which the villains are run to ground by the Philadelphian and the ex-Confederate. This is worked up with considerable power, although there are occasional lapses. The story is too long for an ordinary railway journey and does not commend itself for home reading.

'A Question of Love' is settled in practical French fashion after some timid wandering in the fields of romance. The tyranny of foreign social custom makes itself felt when we see a

writer of such delicate discernment and subtle sympathies as the author of this little volume, compelled to bring about so thoroughly commonplace a conclusion of a promising idyl. To satisfy his sense of artistic fitness, he tries, towards the close of the story, to rehabilitate the successful lover; but here his art revenges itself upon him, for he only succeeds in making a little less uninteresting the character whose limitations he had previously made so clear. No other solution, however, would have been possible without doing violence to traditions which are a part of the very fabric of old-world social life. The whole atmosphere of the story is suffused with the tender light which the French know so well how to produce with brush or pen, and in the translation nothing is lost of the author's charm of style.

The scene of 'Amaryllis' is laid in Greece, but the occasional attempts at local color are about as fanciful as the assumed Greek name of the author. It is a graceful little tale, for the rest, and dwells throughout in a realm of sentiment which narrowly escapes silliness, once or twice, but which, on the whole, is genuine and pleasing. So comely a volume should have been spared the occasional blot of careless proof-reading.

BOOKS OF THE WEEK.

A Tonic

HORSFORD'S
ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Macmillan & Co.'s

NEW BOOKS.

Just published, with 300 illustrations, 8vo., $4.00.

Schliemann's Excavations.

An Archæological and Historical Study.

By Dr. C. SCHUCHHARDT,

director of the Kestner Museum, in Hanover. Translated from the German by Eugène Sellers. With an appendix on the recent discoveries at Hissarlik by Dr. Schliemann and Dr. Dörpfeld, and an introduction by Walter Leaf, Litt. D. With illustrations. 8vo, $4.00.

"Dr. Schuchhardt's pages, together with his appendix describing last season's work at Hissarlik, now give a full and final history."—*From the Introduction.*

"Dr. Schliemann with the utmost kindness allowed his report of the Hissarlik excavations during the year 1889–90 to be translated and printed as an appendix. With equal generosity Dörpfeld has given his portion of the report for the same purpose, together with his new plan of Hissarlik. As the recent excavations have almost doubled our knowledge of the Trojan Pergamos, the value of his plan can scarcely be overestimated."—*Translator's Note.*

Studies of the Gods in Greece

At Certain Sanctuaries Recently Excavated. Being Eight Lectures given in 1890 at the Lowell Institute. By LOUIS DYER, B.A., Oxon, late Assistant Professor in Harvard University. With maps and plans. 457 pages, crown 8vo, cloth, $2.50.

"Marked throughout by wonderful reason and moderation and openness to the evidence on all sides of matters in dispute. What gives the work its most admirable quality is the success of the author's effort to put himself at the Greek point of view. The gods are treated with the reverence that is due to them, and the fact is emphasized that there is much in Christianity which is of Greek rather than of Jewish quality."—*New York Tribune.*

Diphtheria,

ITS NATURAL HISTORY AND PREVENTION.

Being the Milroy Lectures delivered before the Royal College of Physicians of London, 1891.

By R. THORNE THORNE, M.B., F.R.C.P., F.R.S. 12mo, $2.00.

An Introduction to the Mathematical Theory of Electricity and Magnetism.

By W. T. A. EMTAGE, Examiner in the School of Natural Science, Oxford. 12mo, $1.90.

Fossil Botany.

Being an Introduction to Palæophytology from the Standpoint of the Botanist. By H. GRAF ZU SOLMS-LAUBACH, Professor in the University of Göttingen. The authorized English translation by Henry E. F. Garnsey, M.A., Fellow of Magdalen College, Oxford. Revised by Isaac Bayley Balfour, F.R.S., Professor of Botany in the University and Keeper of the Royal Botanical Garden, Edinburgh. With 49 Illustrations. 8vo, $4.50.

NEW NOVELS.

Uniformly bound in cloth, $1.00 each.

A Sydney Side Saxon.

By ROLF BOLDREWOOD,

Author of "A Colonial Reformer," "Robbery under Arms," &c. 12mo, $1.00.

Life's Handicap.

By RUDYARD KIPLING,

Author of "Plain Tales from the Hills," "The Light That Failed."

New Edition. 12mo, $1.00.

"No volume of his yet published gives a better illustration of his genious and weird charm which have given his stories such deserved popularity."—*Boston Daily Traveller.*

The Witch of Prague.

A Fantastic Tale.

By F. MARION CRAWFORD,

Author of "Saracinesca," "Khaled," &c.,

With numerous illustrations by W. J. Hennessy. 12mo, $1.00.

"'The Witch of Prague' is so remarkable a book as to be certain of as wide a popularity as any of its predecessors. The keenest interest for most readers will lie in its demonstration of the latest revelations of hypnotic science. . . . But 'The Witch of Prague' is not merely a striking exposition of the far-reaching possibilities of a new science; it is a romance of singular daring and power."—*London Academy.*

MACMILLAN & CO.,

112 Fourth Avenue, New York.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York,

WILL PUBLISH THIS WEEK:

Literary Gems. Third Series: Productions, complete in small compass, which have been accepted as classics of their kind, and which are entitled to the most attractive form that can be given to them. 32mo, with frontispiece, morocco, gilt top. Each, 75 cents.

No. 1. LYRICS. By Robert Browning. No. 2. LEGEND OF SLEEPY HOLLOW. By Washington Irving. No. 3. PRE-RAPHAELITISM. By John Ruskin. No. 4. RIME OF THE ANCIENT MARINER. By S. T. Coleridge. No. 5. SPEECHES ON AMERICA. By John Bright. No. 6. EDUCATION OF CHILDREN. By Montaigne.

A Treatise on Wisdom. By PIERRE CHARRON. Paraphrased by Myrtilla H. N. Daly. With an Introduction by Marcus Benjamin. 16mo, gilt top. With frontispiece, $1.25.

Prince Dusty: A Story of the Oil REGIONS. By KIRK MUNROE, author of Under Orders: The Story of a Young Reporter,' etc., etc. Vol. II. in the Rail and Water Series. 12mo, illustrated $1.25.

RECENTLY ISSUED:

Gospel-Criticism and Historical CHRISTIANITY. A Study of the Gospels and of the History of the Gospel Canon during the Second Century; together with a Consideration of the Results of Modern Criticism, By ORELLO CONE, D.D. 8vo, gilt top, $1.75.

"I have read the volume with the greatest zest. I admire its careful learning and thorough mastery of the subject in hand. Yet more I admire the singular mental poise which it exhibits. No other work of a critical character that I know compares at all well with it in its temperateness of conclusion, its measured judgment on points where scholarly partisanship seems so difficult to avoid. . . . Such a book marks an era in our American scholarship."—*Rev. R. Heber Newton.*

"I feel very great admiration for the scholarship and wisdom shown in the treatment of the whole subject. . . . The treatment of the fourth Gospel seems to me to be the best that I have ever seen. The conclusions are supported and rounded out with a wealth of scholarship and in a way which has made the reading of the chapter an epoch in the development of my own views on the great subject concerned. . . . The book is admirable, and cannot fail to do great good among thinking men."—*Andrew D. White.*

"The work is not excelled in attractiveness by any that has appeared on this subject, and may be warmly recommended to all who desire a sober and helpful introduction to the literary and religious study of the Gospels."—*Prof. C. H. Toy.*

TALES BY CLINTON ROSS.

The Pretender and the Peace of THE HILLS. (Ready in December.)

The Adventures of Three Wor- THIES. 16mo, cloth, 75 cents.

Being an adventure of a French gentleman in '70; one of a nobleman of old Touraine, turned Jesuit; one of a certain follower of the Stuarts, told by themselves.

"A delightful specimen of the style of the author, who is certain to grow rapidly in popular favor."—*Boston Traveller.*

"All the enticing accompaniments of the good old stories."—*Philadelphia Bulletin.*

"It may be that logic has a right to be spited in behalf of a style so full of subtle and poetical recommendations."—*New York Sun.*

The Speculator. A Portrait of a Contemporary American. 16mo, cloth, 75 cents.

"Too much cannot be said of the clearness of the author's conception, and his skill in the management of detail."—*The Epoch.*

"This is a bit of real life, put in the tersest, tensest form imaginable, and leaves the reader all unsatisfied."—*Literary World, London, Eng.*

"FRESH AND SPARKLING."

ELI PERKINS.

THIRTY YEARS OF WIT,

And Reminiscences of Witty, Wise, and Eloquent Men. By MELVILLE D. LANDON (Eli Perkins). 1 vol. 12mo, cloth, with portrait, $1.50.

In this book Eli Perkins, as Mr. Melville D. Landon calls himself professionally, recounts all the witty sayings of the famous people he has met in the course of his thirty years' experiences as a humorous writer and lecturer. Before his battery of good stories soldiers and statesmen gave way, and for the time being joined his ranks "swapping anecdotes," which appear here for the first time.

New Volumes in the "Unknown Library."

Little Princess Angel.

By STELLA AUSTIN. 12mo, cloth, $1.25.

"Miss Stella Austin's Princess Angel is a wonderful and fascinating little person, and the story of her reign is sure to be read again and again by children, young and old. It is a subject for regret that her highness should be stolen by circus folk, a device too common, alas! in Christmas books; but there is nothing new under the sun. If the plot is partly old, the treatment is wholly new, and cruel sorrow only brings out the more the princely virtues and heavenly charm of our princess."—*London Athenæum.*

Shreds and Patches.

By E. N. LEIGH FRY. 12mo, illustrated, cloth, $1.50.

"Written in a bright, graphic style, full of the stirring talk and incident so fascinating to young readers."—*N. Y. Observer.*

Sent by mail, postpaid, on receipt of prices.

E. P. DUTTON & CO.,
PUBLISHERS,

Conduct as a Fine Art

Including in one volume the LAWS OF DAILY CONDUCT, by N. P. GILMAN, author of 'Profit-Sharing,' and CHARACTER BUILDING, by E. P. JACKSON, author of 'A Demigod.' Crown 8vo, $1,50. (Each part bound separately, $1.)

A volume of interest and value to teachers and parents, as it is an attempt to place instruction in practical morals on a scientific basis.

*** For sale by all booksellers. Sent, postpaid, on receipt of price, by the Publishers.*

Houghton, Mifflin & Co., Boston.

FOR ADVANCED CLASSES ONLY, or for all desirous of keeping up their French, L'ECHO LITTÉRAIRE, a school and home French European Magazine. Romance, poetry, plays, sketches, exercises, etc. Twice a month. Nearly 800 pages, postpaid, at $1.25 per annum.

Charles Scribner's Sons'

NEW BOOKS.

An Introduction to the Literature of the Old Testament.

By Prof. S. R. DRIVER, D.D., of Oxford. Crown 8vo, net $2.50.

Dr. Driver's volume is the first of the *International Theological Library* and is admirably adapted to introduce the series. It gives a critical account of the contents and structure of the books of the Old Testament, considered as Hebrew literature, presupposing their inspiration, but seeking to determine the precise import and scope of the several writings.

University Extension Manuals.

Each volume 12mo, net $1.00.

THE USE AND ABUSE OF MONEY. By Dr. W. CUNNINGHAM.
THE FINE ARTS. By Prof. G. BALDWIN BROWN.

These two volumes introduce a most important series dealing with separate sections of Literature, Science, Philosophy, History, and Art. The series is the outgrowth of the University Extension movement, but the volumes are also intended to be contributions to the literature of the subjects they treat, and will be found to meet a general rather than a special want.

Select Dialogues of Plato.

The set, four volumes, specially bound in buckram, gilt stamp, etc., in a box. 12mo, $5 00.

This valuable little set, now issued in dainty and attractive binding, comprises the volumes entitled 'Socrates,' 'A Day in Athens with Socrates,' 'Talks with Socrates about Life,' and 'Talks with Athenian Youths.'

The Business of Life.

A Book for Every One. By the author of 'How to be Happy though Married,' 'The Five Talents of Woman,' 'Manners Makyth Man.' 12mo, $1.25.

"The author has a large store of apposite quotations and anecdotes, and he has the art of brightening his pages with a constant play of humor that makes what he says uniformly entertaining."—*Boston Advertiser.*

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. Second edition, revised and enlarged. With portrait. 12mo, $2.00.

This work, which was received most favorably in its first edition, is now reissued with two new chapters on the study of Tennyson and on his latest verse, a portrait, and a fuller bibliography.

"As a statement of the essence of Tennyson's poetical art, the book has no rival."—*Boston Beacon.*

Contemporary Socialism.

By JOHN RAE. New and revised edition. Printed from new plates. 8vo, $2.50.

This second edition has not only been carefully revised, but also greatly enlarged. New chapters have been supplied on such topics as "State Socialism." "The Progress and Present Position of Socialism," "Russian Nihilism," "Anarchism," etc.

NEW BOOKS FOR BOYS.

The Boy Settlers.

A Story of Early Times in Kansas. By NOAH BROOKS. Illustrated by W. L. ROGERS. 12mo, $1.25.

A vivid and spirited account of Kansas in the exciting days before the War. The dangers, sports, amusements, and trials of the Northern emigrants were never more graphically and truthfully painted.

The Boy Emigrants.

By NOAH BROOKS. New and cheaper edition. Illustrated. 12mo, $1.25.

"One of the best boy's stories we have ever read. His heroes are thorough boys."—*The Christian at Work.*

A New Mexico David,

And Other Stories and Sketches of the Southwest. By CHARLES F. LUMMIS. Illustrated. 12mo, $1.25.

Mr. Lummis has made excellent use of the novel and interesting materials which the wild life of this unknown region offers. There are sixteen sketches based upon his experiences among the Mexicans and Indians of the Southwest.

CHAPTERS FROM THE

Religious History of Spain.

Censorship of the Press. Mystics and Illuminati. Endemoniadas. El Santo Nino de la Guardia. Brianda de Bardaxi.

By HENRY CHARLES LEA, LL.D.

In one 12mo volume of 522 pages. Cloth, $2.50.

"The width, depth, and thoroughness of research which have earned Dr. Lea a high European place as the ablest historian the Inquisition has yet found are here applied to some side issues of that great subject. We have only to say of this volume that it worthily complements the author's earlier studies in ecclesiastical history. His extensive and minute learning, much of it from inedited manuscripts in Mexico, appears on every page."—*London Antiquary, Jan.*, 1891.

"It is a work of such painstaking scholarship, such mastery of detail, and shows such long and laborious research that we feel that we are doing it injustice to dismiss it with a brief review. It contains a mass of unpublished and inedited material, and is the most valuable contribution to the intricate period it treats of that has yet been given to English readers."—*The Church Review, Oct.*, 1890.

"All who have read Dr. Lea's earlier works will be prepared to welcome this book in the well-founded assurance that they will find it full of learning, and that its learning, so far from burdening its pages, will serve to give them life and interest. A delightful volume."—*London Saturday Review, Jan.* 31, 1891.

Are You Satisfied with Your Mental Habits?

The mistaken notion that education is completed with school or college course has done a deal of harm. Do you feel discouraged with your mental habits; do you bewail lost opportunities? Why not shake off your apathy and begin systematic reading? The Chautauqua Circle offers you wisely chosen books, a definite plan and many aids and suggestions. Begin the "American Year" this autumn and study the history, government, and literature of your own land. "The work has been an unbounded pleasure—in fact, my only resource," writes a Texas member. Write for details to *Office C. L. S. C.*, Buffalo, N. Y.

The Nation

VOL. LIII.—NO. 1371. THURSDAY, OCTOBER 8, 1891. PRICE 10 CENTS.

THE JEWS.

The Story of the Jews. By JAMES K. HOSMER, Professor in Washington University, St. Louis, author of 'A Short History of German Literature,' 'The Life of Samuel Adams,' etc. (No. III. in the Story of the Nations Series.) With two maps and thirty-five illustrations. 12mo, cloth, $1 50; half leather, $1.75.

CHIEF CONTENTS: The Ancient Pride—The Mediæval Humiliation—The Breaking of the Chain.

"Strong dramatic contrasts, vivid picture-making, picturesque generalizations. The book possesses much of the interest, the suggestiveness, and the charm of romance. It may be likened to a vast scenic panorama, which, though continually unrolled, is only fitfully illuminated by brilliant flashes, whose very intensity accentuates the dark intervals, though admirably conducive to the sharpness and vitality of the impression."—*Saturday Review (London).*

"An eloquent and vivid narrative."—*Scotsman (Edinburgh).*

"Professor Hosmer's account of Spinoza is really good, marked by grave and loyal admiration; his account of the Mendelssohns very charming; the Rothschild romance full of interest; that of Sir Moses Montefiore altogether attractive; but his chapter on Heine is quite masterly in its insight and pathos."—*Academy (London).*

"A work of which its author may well be proud. To sketch such a lengthy and eventful history requires qualities of a high order; in particular, sympathetic feeling and a fair sense of proportion, the power of condensation, and, before all, poetic imagination. In every respect Professor Hosmer is well qualified for the task he has undertaken."—*Echo (London).*

"It is a tale full of thrilling fascination and fruitful instruction."—*Rochester Advertiser.*

"No book for popular instruction that we have encountered gives so clear and comprehensive an account of the Jews in all ages."—*Philadelphia Bulletin.*

The Story of the Jews Under ROMAN RULE, by the Rev. W. DOUGLAS MORRISON. (No. XXIX. in the Story of the Nations Series.) 12mo, with maps and sixty illustrations, cloth, $1.50; half leather, $1.75.

"This is the only English book which deals with this special subject, and it is therefore peculiarly fortunate that the author should have shown himself so thoroughly qualified for his task."—*N. Y. Sun.*

"The rich stores of accumulated knowledge have been carefully digested, and the results embodied in the narrative shed a flood of light on the times. From either the historical or the doctrinal point of view it must be conceded that this volume is an indispensable aid to the history of the period, and it will prove a valuable adjunct to Biblical instruction."—*Phila. Ledger.*

"It is a comparatively rare thing to meet with a book of so much general interest and yet at the same time containing so great an amount of genuine scholarship. . . . A living, breathing narrative, thoroughly interesting as well in the directly historical portions as in the descriptions of Jewish traditions, laws, and beliefs. . . . A delightful combination of instruction and interest."—*Manchester Examiner.*

"It is what a boy would call 'a real boy's book.'"—*Charleston News and Courier.*

"The author makes the tale strongly and simply pathetic, and has given the world what will make it better."—*Hartford Courant.*

"Not since Dr. Edward Everett Hale's classic, 'The Man without a Country,' has there been published a more stirring lesson in patriotism."—*Boston Beacon.*

NEW EDITION.

EVOLUTION AND ITS RELATION TO RELIGIOUS THOUGHT.

By JOSEPH LE CONTE, Professor of Geology and Natural History in the University of California; author of 'Elements of Geology,' 'Religion and Science,' etc. New and revised edition. With numerous Illustrations. 12mo. Cloth, $1.50.

First issued about three years ago, this work has already had four editions previous to the present one, and has proved to be one of the most satisfactory of the many discussions tending to establish the consistency of fundamental religious beliefs with the known laws of development.

"Prof. Le Conte knows the ground on which he stands, and has conquered his right to be there. . . . He is a man in whom reverence and imagination have not become desiccated by a scientific atmosphere, but flourish, in due subordination and control, to embellish and vivify his writings. Those who know them have come to expect a peculiar alertness of mind and freshness of method in any new work by this author, whether his conclusions be such as they are ready to receive or not."—*The Nation.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1891.

The Week.

THE official announcement of Mr. Blaine's continued invalidism, which is made by President Harrison in his message to the Dominion authorities, postponing for that reason the reciprocity conference which had been arranged for October 12, calls attention to the remarkable conduct of the Secretary of State in holding on to an office the duties of which he is unable to discharge. It was on the 4th of May last that Mr. Blaine left the Department, and the fifth month since that day is now completed. Mr. Blaine still lingers in Maine, and there is so little prospect of an early resumption of work on his part that the President is forced to ask an indefinite postponement of an important conference with representatives of another country which had been arranged to take place on the 12th of October. The spectacle of a man retaining the name of a member of the Cabinet, while allowing half a year to pass without discharging its duties, is without a precedent in our history.

One thing may be considered as settled by the President's announcement, and that is that Mr. Blaine's nomination as the Republican candidate next year is entirely out of the question. The first requisite in a candidate for the Presidency is that he shall be well. No party would ever dare to offer the people as its nominee for that office a man who the year before had broken down in attempting to discharge the far less wearing duties of Secretary of State, and had been forced to abandon the national capital for a period of more than five months. Republican politicians who, for one reason or another, are disgusted with Harrison, may continue to free their minds by loud cheers for Blaine whenever they assemble, but nobody can longer suppose that there is anything serious in their talk about the party's nominating this confirmed invalid for the Presidency.

We print in another column a very serious charge against Admiral Brown, which we trust, for the honor of the American Navy, is capable of some explanation. It comes from an American resident in Santiago, and he fortifies it by sending us the Chilian newspaper to which he refers. If true, it adds another very unpleasant chapter to the history of our connection with this Chilian trouble, and makes it appear that every American official in Chili went headlong, under Egan's lead, into Balmaceda's conspiracy against the Chilian republic—the only "sister republic" in this hemisphere which has done any credit to popular government. It was, of course, of the utmost importance to the Congressionalists that the place and time of the landing of their troops should be concealed as long as possible from Balmaceda, and of the utmost importance to Balmaceda to get as early information about both as he could. The duty of a neutral under such circumstances was to refrain absolutely, no matter what he saw or heard, from giving any information to either side that could affect the operations. If Admiral Brown used the *San Francisco* to scout for Balmaceda, he ought to be inquired into. But one of the unfortunate results of the reckless, furibundal foreign policy of this Administration is, that, after it recovers from its fits of Jingoism and gets its head clear, it finds itself committed so completely to some piece of folly that it cannot for very shame back out or acknowledge its error. So we are afraid that even a complaint against the Admiral by Chili now would be met by horn-tooting, tom-tom beating, and other signs that "we are awake" and feeling very "American."

It must be borne in mind that Egan's giving shelter to political refugees in the American Legation at Santiago cannot of itself get him into trouble. This right of asylum for offenders against the State in the house of foreign ministers, though long abolished in other countries, has been maintained in Spain and in the Spanish-American republics, probably as a means of mitigating the horrors of their numerous revolutions. Members of all parties have occasion, in their turn, to be grateful for it. It gave Balmaceda his refuge in the Argentine Legation. Mr Fish tried to get the Powers to agree to abolish it in Central and South America in 1870, but did not succeed. It has undoubtedly rendered some service to humanity in Chili during the present crisis, as it did in Spain during the Carlist and Christinist war, and even later. But the more powers of this kind—necessarily delicate in their nature—are conferred on ministers in foreign parts, the more necessary it is that the ministers should be men of high character and absolute trustworthiness. To intrust great discretion or responsibility of this kind to wandering adventurers of shady antecedents is something which no Christian Power but the United States of America would now venture to do. So that the charge against Egan is not that he has improperly sheltered political refugees, but that he is Egan. When he admits that he is Egan, he virtually pleads guilty to all sorts of diplomatic offences, and asks by implication for his own recall.

The action of the Legislative Investigating Committee in Pennsylvania in so restricting their inquiry into the conduct of the State Treasury as to make it impossible to put Senator Quay on the witness-stand, calls forth a stern rebuke from Mr. Childs's paper, the *Public Ledger*, which thus gives further evidence of its determination to have the whole truth brought to light. The *Ledger* says that if anything further were needed to justify Gov. Pattison's course in calling an extra session of the Senate, this proceeding of the Committee would supply it; that the Committee "was bound by every consideration of good public policy, by the solemn official obligations of every one of its members, to exhaustively investigate" the charges of fraud, and to give the examination "whatever scope was necessary to the discovery of the whole truth, no matter what political organization or what person was helped or hurt by it"; and that, taking into consideration the remarkable conduct of the Committee and the adverse criticisms of partisan journals on the Governor's proclamation, "it may well be questioned if organs or leaders could be guilty of greater or more disastrous folly than they have been in connection with the official fraud and maladministration which have inflicted such enormous losses upon the State and city, and which have so greatly dishonored both."

Gov. Pattison's determination to demand from Canada the extradition of Livsey, the fugitive cashier of the Pennsylvania Treasury, is a wise one. He is one of the witnesses whom the Senate will most need if it is going to get at the truth about the connection between Bardsley and the State Treasury. It is also said to be the Governor's intention to have H. H. Yard, who is under indictment for complicity with Bardsley, brought forward and made to testify. Yard was brought before the Philadelphia Investigating Committee, but was not compelled to testify. He is the man who was concerned in real-estate speculations with Lucas, the dead President of the Keystone Bank, who robbed it of $997,000; and it has also been shown that John Wanamaker once lent him one of the bogus certificates of Keystone stock which he (Wanamaker) held as security for the money he had advanced to Lucas in their celebrated Reading "deal." Yard is, therefore, a connecting link between Wanamaker, and Lucas, and Bardsley, and the Keystone Bank, and, if he can be forced to tell all he knows, there will be some interesting developments.

The funeral of William H. Kemble, of "addition, division, and silence" fame, took place near Philadelphia on Sept. 30. The attendance was very large, and the exercises were conducted by three clergymen, two of whom delivered eulogistic addresses. The first speaker, the Rev. Dr. Charles Wadsworth, said:

"William H. Kemble was a large man and he filled a large place. Now that he is dead a large vacancy has been created. He will be greatly missed in the business community.

Our friend had a large heart, but he didn't carry it upon his sleeve. It was often felt by those who knew him. He will be missed especially by the poor. His left hand never knew what his right did. There will be many poor who will go hungry this winter who would not had he lived. Our friend did not give his name to the church, but he manifested his love for the religion of God by his many gifts to charities and the cause of religion."

The second speaker, the Rev. Dr. S. A. Mutchmore, said:

"One of the sublime elements of our character is that we do not know what we are fitted for. If, at twenty-two years of age, William H. Kemble had been told what places he would fill in life, he would have said, No, I am not fitted for them. A large tree in a forest when it falls causes a great commotion and makes the smaller trees feel it. Mr. Kemble was like the big tree. He had filled out the circle of his life, and had done his work."

Both of these reverend gentlemen knew when they were saying these things that the man of whom they were saying them had confessed, only a few years ago, that he was guilty of a crime which ought to have confined him to a cell in the penitentiary for several years, instead of allowing him to "fill a large place in life." They knew that he was charged with having bribed members of the Legislature to vote in favor of a bill taking $4,000,000 from the State Treasury, with the understanding that half the amount should go to Quay and Kemble and the other men who sought to bribe the bill through. They knew that he had in court pleaded guilty to the charge, but fled before sentence could be pronounced, and had been pardoned by a Board of Pardons of which Quay was a member, before entering upon his term of imprisonment. What wonder that the influence of the clergy is declining when two of its most prominent representatives in one of the foremost cities in the land stand up and say of such a man that he had "manifested his love for the religion of God" by his acts, if not by his profession, and that he was like a big tree among small trees? One of these reverend eulogizers, the Rev. Dr. Mutchmore, as editor of the *Presbyterian*, has been a severe critic of the Rev. Dr. Briggs, and has been profoundly concerned lest that clergyman's unorthodox views should do harm to the cause of religion.

The fall meeting of the Presbytery of New York may easily prove to be the most momentous in its history, and the peculiar composition of the ecclesiastical court before which Prof. Briggs is now being tried for heresy deserves a word of comment. Comprising but 55 churches, the Presbytery numbers 160 ministers. More than half of the latter, accordingly, have no pastoral charge, and are either superannuated or serving as secretaries, editors, professors, librarians, or in other capacities. Of them all, thirty-three are non-resident, though eligible to vote if their attendance can be secured. Such a state of things does not appear to have been contemplated in the original theory of Presbyterianism, which provides for the constitution of Presbyteries out of the churches of a given locality and their pastors and elders. Indeed, there are still some strict constructionists who maintain that only ministers actually in charge of a church have a right to vote in Presbytery; but they are in a hopeless minority, and the right of the secretaries and editors to an equal voice with pastors is conceded. The important thing to note, however, is that, while the make-up of the New York Presbytery leaves it a doubtful exponent of the real views of the churches, it also invites to extraordinary methods of electioneering in important cases. The side that can drum up the greatest number of absentees and rout out the most valetudinarians, and can "hold its men in line" through a protracted trial, is the side that wins the fight. The significance of the vote—64 to 62—by which it was decided to go on with the trial, which is now set for November 4, lay in the fact that the laymen outvoted the ministers, thus preventing the attempt to cover up a fire which cannot be smothered.

The "holy boycott" of Union Theological Seminary is evidently to be enforced in the most thorough manner. The Presbyteries are beginning to put the strongest kind of pressure upon students to induce or compel them to keep away from the instructions of Prof. Briggs, and are voting, one after another, that no pecuniary aid shall be given by the church to any one studying at Union Seminary. This issue was sure to come, and the benevolent boards of the church that have been standing aloof from the controversy cannot escape being drawn into it. It will not be long before the Board of Home Missions will be warned not to give employment to any Union student, and the Board of Foreign Missions not to send abroad any young minister with the dangerous Briggs infection. Thus the main features of the Andover dispute will be revived, and the argument of pike and gun—in the form of its modern equivalent, the argument of salary and position—will be resorted to. It might seem that there could be no surer way of driving theological students to Union Seminary in crowds than to threaten them in such an ignoble way. One would think that every fibre in a student of really open mind would resent the unblushing appeal to unworthy motives. But we fear that the Presbyteries know their men. Theological students as a class are financially dependent. They often enter the seminary compromised by assistance already accepted, and have the fear of the ecclesiastical authorities constantly before their eyes. It must have been one of this class who is reported to have said the other day, with that perfect unconsciousness of trying to serve both God and Mammon which marks so many utterances on the subject: "The students in Union Seminary greatly respect Prof. Briggs and sympathize with his views to a certain extent, but not to the extent of siding with him if by so doing they would lose their chance of getting good places in the church."

Bishop Potter, in a notable diocesan charge, dwells at some length upon the question of a minister's duty when he finds himself out of harmony with the creed of his church. As was to be expected, the Bishop shows little patience with the view that one can play fast and loose with the most solemn obligations, but he suggests a possible third course, between withdrawal and remaining, which seems to us highly impracticable. Let the troubled clergyman, says Bishop Potter, temporarily retire from active service in his church, until he has come to positive convictions on the questions in dispute. This is a perfectly proper and theoretically excellent piece of advice, but it is so out of keeping with the actual conception of the ministerial character that it must be regarded as barren. The minister is not considered as a learner; his views are fixed. In both the popular estimation and ecclesiastical usage, a clergyman who should express his doubt about certain doctrines or the creed in general, and request time for further study, would be taken to have practically admitted his heresy and to have mistaken his calling. The theory of the world is the same as that of the Church in this matter, viz., that all these things are to be settled before ordination. It is a teacher, not a student, who is wanted in the pulpit. It may be perfectly true, as ex-President Porter has remarked, that it is quite impossible for a theological student to arrive at satisfactory views on all the great questions pressing upon him for solution, and that he must "lay many of them upon the shelf" for future consideration. Still, in practice that is not accepted, and for that reason we cannot think Bishop Potter's suggestion practical.

Secretary Foster, in an interview sent out by the Associated Press on September 16, took a rosy view of the condition of the Treasury, which, he said, was one of "perfect ease," although he admitted that there was "less money in the Treasury now than there has been for many years." He also took occasion to deny the report that he was "delaying the payment of appropriations for any purpose," though again he made the dangerous admission that "he had felt it would be good policy to restrict disbursing officers to their actual needs." The truth of both these assertions can be tested by the Treasury statements of receipts and expenditures for the twelve months during which the McKinley tariff has been in force, and for the first quarter of the current fiscal year. For the year preceding the taking effect of the McKinley Bill, the Government's receipts from all sources were $418,259,585, and its expenditures were $330,839,533. During the year ending October 1, 1891, the figures were, respectively, $378,305,909, and $365,015,955. In the last sum no reckoning is made of the $18,225,550 paid out in redemption of the 4½ per cents, nor of the $7,279,150 still due on that account. With those items counted in, as they should be, a deficit of more than $12,000,000 would appear as the net result on the Treasury books

of one year's operation of the McKinley law. But, in fact, that does not begin to express the gloom of the outlook since the revenue from sugar has ceased. Take the first quarter of the fiscal year 1891–92, and we find that Secretary Foster has paid out $84,471,733. During the corresponding period a year ago $108,596,465 were paid out, which makes it look very much as if there had been "delaying payments" this year. There is another way of getting at it. The appropriations for the current fiscal year, even accepting the optimistic figures of Messrs. Allison and Cannon, are hard on to $500,000,000, or $125,000,000 a quarter. It is clear, then, that Secretary Foster has "held up" no less than $40,000,000 of the payments fairly chargeable to this quarter, and that he has restricted disbursing officers not only to, but considerably below, "their actual needs." In other words, the Treasury is going on at the rate of an annual deficit of $130,000,000, and yet its official head calls that a condition of "perfect ease."

With all the bickering, recrimination, and hard feeling over the passing of Missouri Pacific's quarterly dividend, one phase of the question seems scarcely to have received proper attention. Few of the angry critics have asked whether the directors of the company had any right to pay any dividend, either in this quarter, when they passed it, or in the two preceding quarters, when they paid it. The official statement published last week merely confirmed the belief of well-informed Wall Street men that the Company has not earned its full dividend in a single quarter thus far in the fiscal year. It has simply borrowed money on the Company's notes to pay "profits" to the Company's shareholders. No clearer illustration could be had of the distortion so often consequent upon looking at everything from a "Wall Street standpoint," than the protest of speculators, not against the manner of passing the dividend, nor against the deception of paying previous unearned dividends, but merely against passing the dividend at all. If this outcry is to be trusted, the unearned dividend ought to have been paid, and all would have been well. As a matter of fact, it is the demoralizing notion that railroad dividends must be paid in full, up to the moment of actual financial exhaustion, that is responsible for this perversity of view; and this notion in turn is due to the strong and baleful influence of the stock market over much of current railway financiering. To this influence, in fact, are due a large share of the financial collapses in our railway history, and a still larger share of the frauds perpetrated on a simple "outside public" in the stock market itself. For it is the payment of unearned dividends until the very last gasp of a staggering corporation which enables sharp "insiders" to unload upon a deluded public, at high prices, all their own holdings of stock, just before the discovery of the truth makes the stock almost valueless. The practice has been a curse to American railroad financiering. One of the very best signs of recent times has been the courage with which such corporations as the Rock Island Road and the Chicago, Burlington and Quincy have met a quarter of decreased earnings with a corresponding reduction in dividends.

Four pages of the report of Mr. W. Dudley Foulke and his associates to the Civil-Service Reform League on the Federal census relate to the census of New York city, and they present facts which call for something more than a passing notice. The high character of the Committee making the report will satisfy impartial persons that the Federal census as taken in this city was an exceedingly clumsy and inaccurate job, and that it came far short of the true population of the city. The Chairman of the Committee ascertained that in the two blocks bounded by Broadway and Nassau and by John and Liberty Streets the Federal census wholly omitted twelve houses, in which thirty-eight persons resided. The Chairman called upon the enumerator, John Kiernan, and put some questions to him. Mr. Kiernan informed him that one Reed had been appointed in the first instance as enumerator of the district, but that he gave up the job after he had taken a few names. His commission was then transferred to Kiernan by the simple process of erasing the name of Reed and inserting that of Kiernan. Reed never made any report to anybody. Kiernan took Reed's schedules and proceeded to verify them, but some of the persons called upon refused to give their names a second time. So Kiernan threw down these lists, and they were lost somewhere in his house, for when he tried to find them afterwards, he could not. Still more strange was a discrepancy that was found to exist between Kiernan's returns and the lists at Washington. "In a number of cases," says the report, "the names reported by Mr. Kiernan did not appear in the Federal lists. Whether the schedules containing these names were lost or destroyed, or in what manner the discrepancy occurred, is not known." From this disclosure the inference might be drawn that the census of New York was tampered with in order to lessen her representation in Congress. The Committee express no opinion on that point, but say that such inferences will be natural and inevitable whenever political considerations invade the Census Bureau.

French wines appear to be hit the hardest by the retaliatory legislation provoked by the new French protectionism, and the grape-growers are in a state of mind about it. Russia follows up her effusive demonstrations at Cronstadt by promulgating her new tariff with doubled duties on wines, and the vineyard-owners are asking if that is the way the Czar swears eternal friendship. Belgian exports to France were savagely struck at by M. Méline's bill, and Belgium retaliates by raising the customs rates on wines to about twice their former amount. Even Sweden and Norway follow suit, in revenge for the new French duties on building material, formerly imported free from the Scandinavian peninsula. On the other hand, the Bordeaux exporters of wine are at their wits' end to know what to do in face of the practically prohibitory duties on Spanish wines. They have long used these in vast quantities to mix with their own, and say they cannot get along without them. In these circumstances the Spaniards are meditating a shrewd stroke. A proposal has been agreed to by leading men of all political parties, and will undoubtedly pass in the coming session of the Cortes, for absolutely removing all Spanish duties on wines, and at the same time granting excessively low rates on the railways to importations of French wines. Their scheme is to have the great industry of wine-mixing and wine-exporting transferred to their own country, and it looks very much as if the blind policy of France, combined with their own astuteness, might bring that about in some measure. In that case, as a witty French writer says, the famous Château-Lafitte and Château-Margaux would become veritable "Châteaux en Espagne."

The war scare in Europe seems to have again subsided, but will probably be revived at short intervals. People have found out that there is very little in the Dardanelles trouble, that Turkey has accorded nothing to Russia which she denies to any other Power, and that England sees nothing in it to be worried about. The source of probable disturbance has now been transferred to Afghanistan, but the story of late Russian aggression in that quarter is too slight to last very long. Then there is no doubt of the renewal of the Triple Alliance, and of the great internal difficulties with which Russia is contending, and the Emperor of Germany has appeased France somewhat by relaxing the passport regulations in Alsace-Lorraine. In truth, there are numerous signs that the effect of the enormous armaments of the Continental States in fostering a bellicose disposition among the people and their rulers is not what has been commonly supposed. It does not appear to produce readiness for war. The machinery of war has become so tremendous in size and power that everybody is a little afraid of setting it to work. War now produces such industrial disturbance as was never seen, and the masses of troops to be moved are so great that all the generals have a secret shrinking from the task. As regards recent wars, for instance, there is hardly a doubt that if Alexander II. could have foreseen Plevna and the Shipka Pass, he would have been very slow in helping Servia, and we may be sure the German staff does not look to a conflict with France with nearly as much light-heartedness as it would have done ten years ago. The size of the armies and the improvement of the weapons and the great cost are in fact sobering all the warriors. The vaporing is mostly done in the newspapers.

THE FIELD FOR INVESTIGATION.

A VERY large amount of imperative investigation work will fall upon the new Congress when it assembles in December. It is of the highest public interest that several branches of the Federal service be subjected to a thorough inquiry in order that the exact truth about the scandals connected with them may be made known. Without professing to cover the entire field, we will suggest four branches of the domestic service, and three of the foreign or diplomatic service, which ought to command early and searching attention. We give in each instance the office, together with the name of the officials and others to be examined, and the chief subjects for inquiry.

(1.) *Pension Bureau: Green B. Raum.* The charges against Gen. Raum may be concisely summed up in a general charge of dishonest and corrupt management. He is believed to be in league with the pension agents, in fact, the partner of the most unscrupulous of them, and to be managing the Pension Bureau in their interest. He is known to have been interested financially in a doubtful refrigerator enterprise, and to have practically forced employees in the Bureau to take stock in it by giving them to understand that they would thereby improve their chances of promotion. He has violated the civil service rules repeatedly in regard to changes among his employees. His own son was detected in taking money of the Bureau intrusted to his care, and in selling appointments which were obtained by bogus or surreptitious examinations, and was allowed to resign by the President. Raum's most recent offence is in seeking to have discharged from the Bureau three employees who exposed his son's rascalities. The most serious of the charges against him have been made and sustained in the Washington correspondence of the *Tribune*, the leading organ of the Harrison Administration.

(2.) *Census Bureau: Robert P. Porter.* The general charge against him is, that, by employing incompetent enumerators, in many instances in open violation of law, he has compiled a new census which is so partisan and inaccurate in many proved instances as to be practically worthless, making it the most costly as well as the poorest ever compiled in this country. His conduct in regard to the selection of enumerators, the quality and thoroughness of their work, the use which he has made of it, and his general administration of the Census Bureau, are all subjects which should be most carefully examined.

(3.) *Sub-Treasury at New York: Ellis H. Roberts.* Inquiry should be made in this case whether Mr. Roberts has been using the power of his position over the banks of the city to induce them to grant him such discount and other personal favors as he desires to receive. This, we have reason to believe, will be a most fruitful field for investigation.

(4.) *Comptrollership of the Currency: Edward S. Lacey, William P. Drew, John Wanamaker.* The Keystone National Bank of Philadelphia should be the objective point of this inquiry. Investigation by Congress is made necessary by the course of the Harrison Administration in refusing to allow Mr. Lacey, the Comptroller, to take the witness-stand in the investigation which the City Councils of Philadelphia were conducting into the affairs of the bank. Mr. Drew, the National Bank Examiner, appeared before that Committee and gave evidence which reflected upon the course of the Comptroller in failing to close the bank at an earlier date than that chosen by him for the purpose. Mr. Lacey wished to take the stand in answer, but the Harrison Administration refused him permission, and would not allow his written statement in answer to Drew to be published till it had been passed upon at a Cabinet meeting. Subsequently Drew was removed by Lacey on a charge of having made a blunder in one of his reports on the bank's condition. Drew showed that this blunder had been corrected immediately, and showed also that Lacey, by his own admissions, knew the bank to be rotten two months before he ordered it to be closed. When it was closed, there was a delay of two months more in the appointment of a receiver, and two telegrams from John Wanamaker to Lacey have been disclosed, in which the former advised delay. John Wanamaker was also a heavy depositor in the bank for several years, as well as the personal friend of its two rascally presidents, and enjoyed great favors at their hands. John Wanamaker also succeeded in getting all his money out of the bank before it collapsed. This is a very inviting field for inquiry.

(5.) *Hayti: James G. Blaine, Benjamin F. Tracy, Frederick Douglass, Admiral Gherardi, William P. Clyde & Co.* The charge in this case is, that, for and in consideration of aid secretly furnished to Hyppolite, now President of Hayti, during the late civil war in that country, we demanded, first, a subsidy of $500,000 to the Clyde Line of steamers for making regular trips between Hayti and New York for a period of ten years; and, second, a lease of the Môle St.-Nicolas in perpetuity, together with an exclusion of all other foreign governments from Haytian territory.

(6.) *Chili: Secretary Blaine, Patrick Egan, Admiral Brown.* The subject of inquiry here is the relations sustained by Egan, as United States Minister, and by Brown, as Admiral of a United States ship of war, with Balmaceda, the late President of Chili. Were these relations such as would do credit to us as a nation? Were they in accordance with approved diplomatic and naval usage? Inquiry might also be made into the relations between Balmaceda and Patrick Egan's son in the matter of Government contracts.

(7.) *Brazil: James G. Blaine.* Was the new reciprocity treaty with Brazil secured by a trick? It is charged in Brazil that Mr. Blaine privately assured the Brazilian Minister to this country, Mr. Mendonça, that if such a treaty were agreed to by Brazil, the United States would not make one like it with Spain in relation to Cuba, thus opening a vast market for Brazilian sugar in the United States; that in view of this promise Brazil consented to the treaty, and that the subsequent negotiation by Mr. Blaine of a similar treaty with Spain was a direct breach of faith. Our Government ought not to rest quietly under an unanswered charge of this kind.

MR. LODGE AND HIS DODGE.

FOR the first time in the annals of political debate in this country, so far as we recall, has a debater declined to discuss "the issues of the campaign," and then accused the opposite party, who wanted to discuss those issues, of dodging and refusing to meet him. This phenomenon was presented at Boston, when Mr. Cabot Lodge replied to the letter of the Democratic State Committee. In previous correspondence the Committee had invited Mr. Lodge to meet Mr. John E. Russell in joint debate during the present campaign. Mr. Lodge had replied that he would meet Mr. Russell in joint debate on three occasions, and he claimed the right, as the challenged party, to name the subjects of each debate. He accordingly named as the subject of the first debate "The Administration of Gov. Russell"; of the second, "The Attitude of the National Democratic Party on the Silver Question"; and of the third, "The Prices of the Necessaries of Life as affected by the McKinley Tariff Act."

The conception of a political joint debate as something analogous to a duel, in which the challenged party has the right to choose the weapons, would never have occurred to a Massachusetts statesman unless he were trying to dodge. The weapons of debate are the tongues of the debaters. If Mr. Lodge had followed his analogy strictly, he might have said: "As the challenged party I claim the right to choose the weapons. I insist that neither one shall use his hands or arms in any way, or speak in an unusually loud tone of voice." Requirements of that kind would pass muster among professors of the code—even *Sir Lucius O'Trigger* would be forced to give his assent to them; but Mr. Lodge went much beyond the choice of weapons. He stipulated that no subjects should be discussed except the three named by him. This was like stipulating that the opposing party in a duel should not raise his arm higher than his knee, or should stand with the dust blowing in his face.

Let us glance for a moment at Mr. Lodge's subjects. The first one, the administration of Gov. Russell, is unobjectionable, for that is assuredly one of the issues of the campaign. It was promptly accepted by the Democratic Committee. The next one, viz., "The Attitude of the National Democratic Party on the Silver Question," excludes the discussion of the attitude of the Republican party on the same question. This is not a conjecture at all, for the Democratic Committee proposed to modify it so as to include the attitude of *both* parties. To this gentle proposal Mr. Lodge returned the following answer:

"In my last letter I said that I would not modify my terms in any particular. You now insist on a modification, which is equivalent to a refusal. You challenged me; I accepted the

challenge at once, naming the subjects, as I had a right to do. Instead of closing with my acceptance, you enter upon an argument upon technicalities, and dispute as to the terms of the debate. This seems to me entirely useless."

It is not necessary to point out to honest men that a debate on the attitude of one party only, on a political issue, would be not merely unfair to one of the debaters, but misleading to the audience. The Republican party has taken its stand on a bill which provides for the purchase of 4,500,000 ounces of silver bullion per month and the issue of legal-tender notes thereon. This is two and a half times as much as the Government ever purchased before, and it adds the new feature of legal tender to the paper issued upon it. The Democratic party in Massachusetts has condemned this measure and *all other* silver bills which provide for the coining of dollars not equal in *intrinsic* value to the best dollars in existence. But Mr. Lodge is not willing to have the present law debated at all. In fact, the terms of his proposal would exclude the platform of the Democrats of Massachusetts also, for he stipulates that the debate shall be on the attitude of the *national* Democratic party. How is anybody to learn what that is in advance of the National Democratic Convention?

Mr. Lodge's anxiety to restrict the debate on the McKinley tariff to its effect upon the necessaries of life is probably as keen as his desire to avoid the debate altogether. It is easy to see that the whole debate would turn on the definition of necessaries. That was undoubtedly what Mr. Lodge had in his mind. Of course nothing is necessary which a man can do without. There are a thousand things in the McKinley tariff that poor people use which have been enhanced in price, but which are not strictly necessary. They represent the first upward steps towards a decenter life, such as gloves and ribbons for women, cotton velvet for households, worsted suitings for men, etc. None of these things can be considered absolutely necessary. Consequently it would be easy for Mr. Lodge to rule out every article that tells against his own position and his own party.

Finally, the Democratic Committee proposed to Mr. Lodge that he should discuss with Mr. Russell broadly "the issues of the campaign." From this suggestion he fled as hastily as from the others, and in his humorous way put upon the other side the blame of dodging the debate. Fancy Lincoln, or Douglas, or any of the debaters who have left a mark on our political life, refusing to debate "the issues of the campaign" when challenged thereto by his opponents. Then imagine him, if possible, accusing his challenger of running away.

HOURS OF LABOR IN ENGLAND.

In February last the House of Commons appointed a committee "to inquire whether, and if so in what way, the hours worked by railway servants should be restricted by legislation." On July 16 this committee reported the evidence already taken, and recommended that a committee be appointed on the same subject in the next session of Parliament. The evidence given before the committee has just been printed in a large volume, and forms an important contribution to the subject of the hours of labor and the advisability of legislation thereupon. The general question of a shorter day was discussed by the railway employees, and also by managers who have to do with large interests.

The testimony was clear upon the point that there was upon English railways a large number of instances of long hours of labor, although there had been of late a gradual improvement. Thus, in a return prepared by the Board of Trade (a semi-official body), it was shown that the percentage of day's work exceeding twelve hours among the engine-drivers on the London and Northwestern was in March, 1888, 27 per cent., and in March, 1890, 20 per cent., though other roads showed no improvement. Upon this point Mr. Findlay, the General Manager of that company, said that his directors and officers had had tables of all excessive working-hours submitted to them, and had, by changes and by the employment of extra men, done everything possible to reduce all work to within ten or twelve hours per day. The exigencies of railway working must always make a hard-and-fast rule impossible, but Mr. Findlay was emphatic in saying that the habitual employment of men for an hour beyond their best strength was an expensive policy for the company. Overtime was a thing to be avoided whenever possible, as no employee was worth to the railway as much when working extra hours as when on his regular duty.

As to the question of danger to public safety, which was the ground of the inquiry on the part of Parliament, the testimony was not conclusive. The Government Inspector of Railways, Maj.-Gen. Hutchinson (of the Royal Engineers), could name but one accident directly attributable to overwork; yet he was convinced that long hours for engine-drivers, signalmen, or train conductors had indirectly helped to the fatal result in a number of cases. In one accident he reported: "It is not difficult to account for the conduct of these men, who, I am convinced, must have been asleep or nearly so upon the engine, for they had at that time been on duty for nearly sixteen and a half hours. It hardly needed this accident to show the enormous risk which attaches to the employment of drivers for these inordinately long hours." The railway managers did not deny the risk, but claimed the instances to have been exceptional. Still, the Board of Trade return, showing on a considerable number of roads that one-third of the engine-drivers were on duty more than twelve hours a day (though not necessarily upon the engine-plate the whole time), seems to leave a large field for reform.

In the United States we have no statistics upon this question of unusually long hours for engine-runners and signalmen; it may be presumed that our roads are mindful of the danger arising from overfatigue and drowsiness on the part of those upon whom rests the safety of trains. Yet, in view of the accidents now daily occurring, it would be well for our railway managers to examine anew into the actual (as distinct from the scheduled) number of hours worked by trainmen on duty, to see whether overwork is not one of the minor causes of our too frequent railway collisions.

The question of a possible remedy through legislation brought on a long and interesting discussion. The leaders of the railway trade-unions (with whom the English managers would not treat as representing the employees unless actually themselves employed on the road) asked for a law limiting the daily work to ten hours. The men were not agreed upon this. Some block-signal men on crowded lines, in view of their responsible position, thought for their work that the strain of eight hours was long enough. Other engine-drivers would rather work fifteen hours and get home to their families than stop at twelve hours though the company furnished lodging. A few were willing to work any number of hours provided they could get pay for the overtime. The sentiment of many seemed to be in favor of legislation which should fix a maximum day's work of less hours than at present, though at the same pay per day. A prominent manager thought the whole agitation was a trick of the unions to get increased wages; but his fellow-managers did not take that view of it, Mr. Findlay denying it emphatically, and seeming to think that the claim for a fair number of hours per day for responsible train work was founded in reason.

When it came to the question how such a reform was to be brought about, Mr. Findlay, perhaps the foremost railway manager in Great Britain, had very decided views. "I know of no class of service in the kingdom, or practically in the world," he asserted, "where the terms of the contract, the hours of labor, and the payment for that labor, are to be" (*i. e.*, can be) "settled between masters and men according to arbitration. It must be that the hours of labor must be regulated according to supply and demand, and if a man does not like the service, surely he is at liberty to leave it." In partial explanation of Mr. Findlay's position, it should be remembered that in England railway service is very popular, so that there are two or three applicants for every vacancy. "Demand and supply" on the English roads means, therefore, an easier victory of the corporations over the employees than is the case in the United States or in Australia. No arguments of the House of Commons committee could make this witness modify his view. He maintained that discipline on a railway was absolutely essential not only to profit, but to safety. If the servants got the idea that there was a higher authority than the railway officers, there was an end of discipline; this discipline on the railways, he asserted, was now more perfect than that of the English Army—an assertion which ought to provoke comment. Then Mr. Findlay frankly spoke of the good done by the Parliamentary agi-

tation. "I have not the slightest hesitation in admitting that the investigation this committee are now pursuing will result in a considerable improvement in the arrangement and organization for the working of traffic upon railways."

When asked why the railways had not taken up the subject on receipt of servants' complaints in previous years and before the action of Parliament, and why other companies had not introduced reforms like the London and Northwestern, and finally what was to be done if these companies refused to follow up the reform at all, Mr. Findlay did not give satisfactory answers. He admitted the jurisdiction of Parliament over mechanical apparatus like block-signalling, and over public safety such as was involved in legislation about hours of labor, but he thought that the published opinion of the Board of Trade censuring a particular company for its negligence in any one of those matters would arouse enough public sentiment on the subject to accomplish the reform, leaving the details, as now, to the officers of the company, who are responsible to the shareholders and to the Government. The whole subject was then left to the succeeding Parliament, without expression of opinion on the part of the Committee.

THE SUCCESS OF THE FRENCH REPUBLIC.

THE suicide of Boulanger is a very characteristic close to a singular career. The fittest way for a French charlatan to quit the scene of his labors is undoubtedly to kill himself on his mistress's grave. But it is not unreasonable to suppose that his suicide was hastened in some degree by the recent extraordinary success of the Republic. It is not simply that it has passed this summer the fateful term of twenty-one years, which no Government in France has reached since the overthrow of the old monarchy. The First Empire, the Restoration, the Monarchy of July, and Second Empire all tried for it, but every one of them perished within twenty years; so that it had become one of the superstitions of French politics that no government could be considered permanently established under which young men of twenty-one could not say they had been born. The present Republic has, however, broken the spell. It has lived long enough for a new generation to grow up under it. The youths who are now entering on the work of life, and above all filling the ranks of the army, have never known any other form of government. They have never seen a revolution, and their fathers, who remember the days of the one-man power, have grown old and conservative and hostile to any change whatever. So that it seems as if, after one hundred years of wandering in the wilderness, and that purgation by "blood and fire" which Burke predicted for her, France had at last entered on a new era of prosperity and comfort if not of glory. Bonapartism seems dead; Cæsarism has reached a ridiculous and ignoble end on Madame de Bonnemain's tomb; and the Legitimist cause would be fatally discredited by the complicity of the Comte de Paris in the Boulangist conspiracy, even if any tradition or memory of the old monarchy still survived among the mass of the people.

These things, however, may be all put down as pieces of good luck for which the Republicans are not entitled to any special credit. But there is one success they have achieved this summer, before which all Europe takes off its hat, which there is no gainsaying or depreciating, which no Government could achieve without possessing the highest order of administrative capacity, which has, one might almost say, suddenly changed the place of France among the great Powers, and which has closed the mouths of the largest and most influential portion of the remaining Royalists, and very likely gave Boulanger his death blow—we mean the production of an army of the first order. This fact has been revealed by the field manœuvres which have just come to an end, and it is no exaggeration to say that it has produced a profound sensation.

The French have been laboring at their army now for twenty years, and trying every sort of experiment on it, the fall of the Empire having left it in a condition of complete disorganization. Everything had to be changed or renewed. Its numbers had to be increased; its discipline restored; its self-confidence revived; its armament changed; its cavalry and artillery, commissariat and transportation, reorganized and enormously increased. There have been field manœuvres on a considerable scale every year for a good while, but they all revealed the fact that the force was far from ready to meet the exigencies of a campaign against that great thunderbolt of modern warfare, the German Army. Things which seemed very perfect in the garrisons and in the Champ de Mars in Paris, broke down completely when an attempt was made to engage in great strategic movements in the open country.

The manœuvres this year have shown that unwearied diligence and lavish expenditure have at last had their reward. Two hundred thousand men have been engaged for some weeks in mimic warfare in the Southeast, which tested, as far as is possible without actual bloodshed, the three things of greatest importance in military organization—the capacity of the generals to move great masses of men in the field, the capacity of the men to be moved rapidly and punctually, and the capacity of the commissariat and transportation to keep them supplied. The result has been a great success. The swarm of foreign officers who witnessed the manœuvres were all profoundly impressed, and acknowledge that France is once more a great military Power, worthy of her ancient fame. The Royalists, too, acknowledge with a sigh that the one thing which they predicted the Republic could never do—restore France to her old place among the nations of the earth — has been done. The effect of this on the army itself, and on the country through the army, may be readily imagined. No domestic disturbance or failure has, during the last twenty years, weighed so heavily on the French soul as the feeling that foreigners had ceased to think much of the French Army. It was the fear that the Republic could never seal this fountain of bitterness which made its future seem uncertain. It was this which gave a charlatan like Boulanger the few gleams of hope which brightened the earlier part of his political career and ruined him as a soldier. The new knowledge that "la gloire" is still possible for armed France has spread sunshine over the land; but the news that in this great rehabilitation of his old profession he could have no share, and that he must for ever be an outcast wherever the French flag waved and French guns were heard, probably filled the poor adventurer's cup of bitterness to overflowing.

A PRIME MINISTER OF THE FUTURE.

LONDON, September, 1891.

No one has of late years advanced himself so rapidly to a leading place in English politics as Mr. Arthur Balfour, the present Chief Secretary for Ireland. Seven years ago he was not known outside the House of Commons, and known there only as Lord Salisbury's clever, but, to all appearance, languid and unpractical nephew. Now he is recognized as the successor (and that probably at no very distant date) to Lord Salisbury in the leadership of the Tory party, and therefore in the Premiership when that party has a majority. The Tory party has not of late been fertile, any more than the Liberal party, in promising men. It has no one in the House of Lords of the least importance, except, of course, Lord Salisbury himself, while as regards the House of Commons Lord Randolph Churchill's blunders have thrown him out in the race; and Mr. Goschen, although at present he takes precedence of Mr. Balfour, is not popular with the Tories, and would not be accepted (having been lately a Liberal) as their leader. It is long also since any politician on the Tory side has been so much to the taste of the party and regarded with so much admiration as Mr. Balfour now is. For a parallel to the language one hears the Conservatives apply to him one must almost go back to the days of the younger Pitt. They never felt at home with Canning, whose brilliance frightened them; they were never enthusiastic for the Duke of Wellington, as a statesman. Even Sir Robert Peel, who led them for a long time with so much skill, was debarred by his cold manners from personal popularity, and lay under the reproach, serious in those days, of having sprung from the middle classes. Their admiration for Disraeli was somewhat factitious, and did not come till near the end of his career. They suffered Sir Stafford Northcote to be thrust aside by Lord Randolph Churchill, and, although the last-named politician won a considerable success for a short time, it was the rowdy and vulgar element in the party—now, no doubt, a strong element—that applauded him, while the better sort viewed him with well-merited distrust.

Mr. Balfour unites qualifications not combined before. He is the nephew of a great noble, now the head of the party, a familiar and favorite figure in society. He is a man of

undoubted talent, conspicuous courage, great facility of speech. His Irish policy, however unwise some may think it, was the policy which the English upper class desired and have enjoyed; and as Ireland was for several years the chief theme of political debate in and out of Parliament, Mr. Balfour was always in the front of the battle. It is not easy to convey an impression of the admiration—one might perhaps say adulation—with which "Society" now follows him. How far is this admiration deserved? Does he possess the gifts that make a great statesman who leaves his mark on his time, as Pitt and Peel did? Let us try to answer this question, so far as the limits of a letter permit. To begin with, Mr. Balfour has a mind. Of course, no man becomes prominent in English politics without showing considerable talent, but the talent is usually of a commonplace kind, which offers little to interest the observer. But Mr. Balfour's intellect has a character of its own, an individuality which makes its play worth studying. He always thinks, and he always thinks for himself. If he repeats vulgar catchwords or resorts to current fallacies, one can perceive that he sees through them. When he was hardly known in the House of Commons, there were some of his opponents who habitually listened to him because they knew that he had an active and penetrating intelligence. His intellect, however, is analytic rather than synthetic. It is a keen, critical, sceptical, destructive intellect. It produces few positive ideas, few constructive views. It ought not, perhaps, to be called an original intellect, because one gathers little that is new and profitable from it, but it is a formidable engine for sifting, scrutinizing, and detecting the weaknesses of an opponent's position. Nearly all his speeches consist in dissections and refutations of his adversaries, and the dialectic skill he displays has in it a scholastic ingenuity and fineness which gives it a thoroughly individual character. When he has to expound a complicated measure or to set forth and advocate a large scheme of policy, he is comparatively lifeless, sometimes confused, seldom telling or persuasive. The range of his interests and knowledge does not seem to be wide; his speeches, at any rate, do not convey the impression of a richly stored mind or of one which is fertile in suggestion. Its bent is to metaphysical dialectics, a field in which he has produced a clever book entitled 'Defense of Philosophic Doubt,' which was commonly taken to be an argument in favor of theological scepticism, but which he has himself declared to be the very opposite, and to be designed to strengthen revealed religion. Some may consider that the want of constructive gifts is not a serious drawback to his success as a statesman. A drawback it certainly is, but not so serious as might be thought, for, though the Tory party have lately been producing some constructive measures, their main function has been and is likely to be to criticise and resist proposals of change proceeding from the Liberal side. A great deal of our political discussion is mere dialectic attacks on the conduct and measures of opponents, and refutation of their attacks. In all this he shines.

As Mr. Balfour's quickness of perception and reasoning is mated to a great readiness and command of language, he has become an excellent Parliamentary debater and an effective, if not brilliant, platform speaker. He is not an orator—that is to say, he has no natural flow of eloquence, and has not so far shown any power of touching the imagination or of rousing the emotions. Yet his speeches are generally interesting, because he argues ingeniously and has a notable gift of sarcasm. This sarcasm is rarely or never humorous, but it is often genuinely witty. Lord Salisbury possesses the same gift in a high degree, but uses it more crudely and sometimes in gross breach of good taste. The cynical flavor is less marked in the nephew than in the uncle; and there is more in Mr. Balfour of an air of culture and of refinement, a quality conspicuously wanting in Lord Salisbury. Until he took office, the weak point of Mr. Balfour's speaking was a certain scholasticism, a want of touch with the facts of the case, a tendency to treat arguments formally sound as materially conclusive—a tendency, in short, to play the abstract dialectician in politics. But since he took office and found himself obliged day by day to grapple with his active and able Irish opponents, knowing far more of Ireland than he did, this defect has almost disappeared. He now takes hold of the substance of a case in a practical and vigorous way; and if he often fails to be convincing, this may be because he often gives the impression that he does not himself believe in his own case, but merely deems it a case good enough for the audience he has to deal with. This touch of cynicism, or of what may be called intellectual superciliousness, is seldom absent from his speeches. His supporters, however, like the peculiar flavor, and it is, after all, more important for a man to please his supporters than to evade the criticism of opponents.

His administrative ability is very differently judged by those who approve or blame the policy of repression he has followed in Ireland, the only field where he has been tested. This, however, may be said with confidence, that he has learned by experience, and has made far fewer blunders lately since he has taken the trouble to travel through Ireland and study her condition. His treatment of the political prisoners will probably come to be regarded as a gross and wanton error, which he would not now repeat, just as he has now abandoned the insolent tone and contemptuous manner which he used to display towards the Irish members. It is fair to say that the hostility to him of the Nationalists seems to have been rather official than personal; they have seldom or never shown the same kind of hatred to him, in spite of his severities, which they undoubtedly felt for Mr. W. E. Forster. It was probably by the excess of one of his best qualities that Mr. Balfour was led into the mistakes of his first two years of Irish office. He thought that a policy of repression ought to be above all things courageous, and therefore unsparing and unshrinking. He has now learned, having sufficiently proved his firmness, that softer methods may be more efficacious, and that courage and severity are not necessarily conjoined. It is largely to his courage that he owes his prominence, for no quality is so essential to a public man. He shows it not only in his willingness to take administrative responsibility, but in the boldness with which he meets all his antagonists in Parliament, from Mr. Gladstone downwards, and in the air of cool unconcern with which he receives damaging criticisms. He gives the impression of having, under a somewhat languid exterior, a fund of self-reliance and composure equal to any emergency. Courage in debate soon commands the respect of opponents; in Mr. Balfour's case it has largely contributed to the respect felt for him.

It may be asked whether with these gifts Mr. Balfour gives what may be called the general but indefinable impression of greatness, whether in fact he seems to belong to a different category from that of ordinary statesmen. People understand the term greatness so differently, sometimes including in it the element of moral elevation and sometimes restricting it to the possession of exceptional force of intellect and will, that it is not easy to answer such a question. There are those who would not call Bismarck great, because of his meannesses, nor Kossuth, because he was unsuccessful. Still, in whichever sense the term be taken, Mr. Balfour has not as yet shown himself to belong to the class. Good observers who have come into close contact with him describe him as very acute, very agreeable, very bright and ready, and, in a word, very able. More than this they do not seem to say. There was much that was theatrical and even vulgar about Disraeli's greatness, as there is much that is shabby and brutal about Bismarck's. Both, however, made a personal impression of brilliance and force and fertility which no one could escape. There is only one man living in England now who makes that sort of impression, and he belongs to a generation which has almost wholly passed away. None of our younger statesmen seems at present likely so to grow and develop as to rise to the like height. But of those who are now conspicuous in public life, there is probably no one before whom there opens the prospect of a future so distinguished as may be predicted for Mr. Arthur Balfour.

O. D.

MEMOIRS OF MME. DE GONTAUT.

PARIS, September 16, 1891.

I CONFESS being somewhat tired of the memoirs which describe the first Revolution, the horrors of 1793, the adventures of the Empire. There is a certain sameness in the sentiments of the authors of these memoirs and a certain narrowness; much as we may sympathize with their sufferings, we cannot help feeling that they hardly understood the events in which they were unconscious actors. I felt some hesitation before reading the 'Memoirs' of the Duchess of Gontaut, governess of the "enfants de France" during the Restoration.

The Gontaut family began to be illustrious with the famous Biron, who conspired against Henri IV. and was beheaded for his treachery. If I had the animus of Paul Louis Courier, I would say that a great crime does as much for a family as great services rendered to the state. Two or three centuries spread an extraordinary halo over criminals of state, and the reason of it is obvious: what we really regard and respect is the work of time, and a real descendant of Cain would be as much thought of as a real descendant of Abel. Madame de Gontaut was born in Paris in 1773. She was married to M. de Saint-Blaucard, who took, from the day of his marriage, the name of Vicomte de Gontaut-Biron, leaving the name of Saint-Blaucard to the elder son of the younger branch. The marriage took place in England, at Epsom. The young bride had been educated in France; she had lived, as a girl, in the intimacy of the Orleans family; a nephew of her father, M. de Valence, was married to the daughter of Mme. de Genlis; she was an inmate of the Palais Royal. She felt the same enthusiasm for Mme. de Genlis as did the children of the Duc d'Orléans. "I should have been ashamed," says she, "of being behind them in this romantic passion which everybody tried to manifest towards her. I have seen the Princes (the Duc de Chartres, who became Louis Philippe, the Dukes of Montpensir and Beaujolais), and Mademoiselle (who was named afterwards

Mme. Adelaide), kiss her footprints, and I must confess to my great shame that, wishing to distinguish myself, I threw myself on a chair which she had just left, and kissed it with warmth. I filled my mouth with dust, which calmed my ardor." Mme. de Genlis was at the time writing the 'Veillées du Château,' and she read it to those children. She certainly must have had a great charm. Louis Philippe on his throne continued to pay visits to her till the time of her death.

Mme. de Gontaut has not much to say on the first events of the Revolution. She was a mere child, and took refuge at first at the Château de Lys, near Nérac, which belonged to her father, Comte de Montaut-Navailles. The Revolution was already in full force, but see the influence of old tradition: "Our arrival at the Lys was a scene of the middle ages. We found peasants formed in line, the eight sons of the lord, my cousin, hat in hand, and eight soldiers who had followed my father in the Seven Years' War." Mme. de Gontaut, after her marriage in England, spent her time in the best English society, but there is not much to pick up in her Memoirs about the people she mixed with. The Duc de Biron was guillotined on December 31, 1793, and Mme. de Gontaut writes about him: "We had to deplore the services which he thought it his duty to render to his country." The Duc de Biron owed a large sum of money to the Marquis de Gontaut. As the Viscount could not go to France, since he was on the list of the *émigrés*, Mme. de Gontaut made the journey. She obtained a passport under the name of a Mme. François, who was in business. She was arrested at Calais, and kept in prison for three weeks. Fulton, the inventor of the steamboat, happened to be there. He came to see her, and, through the *judas* of her prison, said to her:

"'Mme. François, hear me.' 'I hear you.' 'You are in a bad way, and I come to save you.' 'Thank you, but explain yourself.' 'You are going to be sent to Paris. You will be shut up there, and, once there, you are lost. Hear me! there is nothing easier than to save you from this danger; nothing more simple. Marry me!' 'I thank you, I am married.' 'What a pity! I would make you rich; I have invented steam; I can also blow up fleets with submarine boats—nothing easier; it is just as easy to deliver you. Say but a word, say yes, and I claim you and marry you, and that is all.'"

Mme. de Gontaut thanked him for his kind intentions and Fulton left her with a sigh.

The arrival of some English delegates whom she knew, gave her an opportunity of escaping from prison. She succeeded in going to Paris and seeing her relations there. She learned from them many details about her friends, the royal family, the death of the King, the Queen, and Mme. Elisabeth. Her grandmother told her of the barbarous acts of the Terrorists, the courage of the young girls, of the women; how all France had become a prison; the shutting up of all the churches. A new era, however, had begun since the death of Robespierre, and the name of young Bonaparte was already pronounced as that of a saviour. One day, in one of her walks with her brother-in-law, she met Fulton on the boulevards. He rushed to her: "Dear me, dear me, Mme. François! How glad I am to see you." Her brother-in-law found him a little familiar, and said to him: "The person you are talking to is Mlle. de Montaut [she had in Paris assumed her maiden name]" "No, no," said Fulton, "she is Mme. François; she is married; she told me so in Calais." He immediately added: "Sir, I have come to Paris for a sublime thing. I want to blow up ships, I want to make boats go by steam." Her brother-in-law took Fulton for a madman.

She returned to London and found her mother and husband; she announced to them that they were ruined, but the times were such that ruin seemed a trifling misfortune. They occupied a residence at Dover, near Deal, which Pitt had lent to the Villiers.

"At first, the scrutinizing eyes of Mr. Pitt frightened me, but I became accustomed to them. He often asked me in the evening to read to him some pages of 'Télémaque'; the Conversation of Mentor provoked his enthusiasm. I had never heard him speak a word of French, and, to my great surprise, one day when he took me home in his phaeton, he repeated to me whole speeches of his dear Mentor in French."

It is difficult for us to imagine anybody, especially an English statesman, warmed by extracts from 'Télémaque'; we look upon it as a very dull *pastiche* of antiquity. Mme. de Gontaut may have given a peculiar charm to the long speeches of "dear Mentor."

M. de Gontaut was called to attend on Monsieur, to whom the Prince Regent had granted Holyrood; he made the journey with his wife in a small phaeton, which he drove himself. There was a small French colony at Holyrood. Monsieur had but one carriage, which he lent to everybody in succession; he reserved it for himself only on Sundays.

The Memoirs of Madame de Gontaut are entirely devoid of literary merit; she jots down notes indiscriminately, and all one can do is to pick up here and there some anecdote. At Cheltenham she made the acquaintance of Arthur Wellesley, just arriving from India, and patronized the future Duke of Wellington in her small set. She was made only for a small coterie, and could find it wherever she went. She was thoroughly imbued with that narrow spirit which was one of the curses of the little world of *émigrés*. Her account of Madame de Polastron, the friend of the Comte d'Artois, is very characteristic in this respect. Madame de Polastron was married very young to a young colonel, whom she had seen only once; her marriage was a small affair, her presentation a great one. The famous dancer Vestris gave her lessons and taught her how to make her bows, how to make believe kiss the hem of the Queen's gown. "Considering, madame, the place you are to occupy, her Majesty will approach you and kiss you; you must appear full of gratitude, and try to find her hand, which she will draw back. Remember that all this must be done with grace, with a round arm. All eyes will be upon you, and remember that Vestris is your teacher." Madame de Polastron became the idol of the Comte d'Artois, who, hitherto, had been very inconstant. She inspired him with a great passion, as great as he could conceive of. She returned it with usury, devoted herself entirely to the cause of the Prince, and finally died of consumption.

Once more did Madame de Gontaut see Fulton; she was in a box at the opera in London, with Lady Mary Bentinck, Lord Clarendon, and some others. She saw Fulton in the pit, and bowed to him. He came to her box and shook hands with her. "What a pleasure, Miss Montaut, to find you here! I could hardly believe my own eyes." M. de La Tour du Pin said to him, politely: "You are probably mistaken; madame is the Viscountess of Gontaut." "Oh, dear me! this is too much; does she always change her name?" Then Madame de Gontaut told him the whole story of her journey to Calais, and of her false name. "Well," said Fulton, "let me make my compliments to your husband for having a wife who for a moment threatened to make me lose my head or give myself to the devil."

Mme. de Gontaut remained in England as long as the Empire endured. She returned to France with Louis XVIII. Her Memoirs have all the elements of interest to be found in the memories of a person who saw the first and second Restoration, the Revolution of 1830, who was intimate with the chief political actors of her time; but it must be confessed that she did not know how to use these elements. There is a perpetual tone of commonplace in the volume which has been published. A systematic admiration of the Princes, of their surroundings, of her own family, becomes in the end very fatiguing. Molière places in the mouth of his "Avare," *Harpagon*, this speech to his cook: "The great thing is to make a good dinner with little money." What shall we think of the cook who makes a bad dinner with a great deal of money? Mme. de Gontaut may be compared to such a cook in a literary sense. One leaves her Memoirs with an impression of dulness and fatigue.

Correspondence.

OUR NEUTRALITY IN CHILI.

TO THE EDITOR OF THE NATION:

SIR: Ever since the revolution in Chili began, the attitude assumed by the United States Minister, Consuls, and Admirals, has been such as to meet with severest censure from all Americans here resident; and I am sure that were the American public acquainted with the facts, it would, with only increased energy, condemn their conduct and that of the Government at Washington which allows it.

Many things have been passed over in silence, each one excusing or accepting, as best he could, the just taunts cast against our representatives. Now, however, the limit of toleration is passed, and I raise my humble protest, seeking the courtesy of your columns to make it known, and soliciting the aid of your pen to denounce this last act of dishonor, disloyalty, and cowardly meanness toward a weaker nation.

Yesterday morning the *Esmeralda* a second time appeared off the bay, and the stir among the Dictator's forces made it apparent that the Congressional arms were effecting a landing. It was rumored that troops were disembarking in Quinteros, an inlet twenty miles directly north of Valparaiso. Distrust of the news was likewise apparent from the uncertainty attending the movement of the shore forces, though troops were despatched to the point of threatened attack.

There were in the bay one German and two British war ships, and the United States cruiser *San Francisco*. At about noon the *San Francisco* was seen to be steaming out. Observers of all nationalities, natives included, asserted that she was going out to spy for Balmaceda. This was hooted at by the Americans, who anticipated that she was going out to meet the *Esmeralda;* but she soon passed that vessel, and was lost to sight round the distant point of Quinteros Bay. She returned at five P. M., and was almost immediately boarded by the United States Consul, who went out in one of the Captain of the Port's boats. When they came back, though it is asserted that the port authorities were not allowed on board, yet I know positively that on landing they knew the number of transports, war vessels, and es-

timated number of men disembarked. The same evening, too, it was public news that the *San Francisco* had seen twelve transports, including three tugs and six men-of-war, in Quinteros Bay, and that the opposition had landed between 8,000 and 9,000 men. Though discrediting the story, one could not but feel that Admiral Brown had been most indiscreet in going out to Quinteros at such a critical moment, to a place where certainly no protection of American interests, but pure curiosity, called him; especially since by going he laid himself open to such imputations of disloyalty to neutrality and honor.

Not long after the return of the *San Francisco*, unwonted activity and decision marked the movement of the Government troops, which were hurried out by the railroad line early in the evening. This did not look well, yet our dismay can be imagined when newspaper boys this morning were calling out: "News of the fleet, brought by the *San Francisco*," and the Government paper, which accompanies this (the only one published this morning), began its account with the following: (Translation) "*From trustworthy news brought by the U. S. war ship San Francisco*, which arrived yesterday, we know for a fact that the revolutionists have, from their twelve transports and six war vessels, disembarked about 8,000 men in the vicinity of Concon and Quinteros," etc.

I know that the German Admiral and British Captain were each invited to send an officer. The former accepted, while the latter declined, because he felt such a proceeding unwarranted and despicable.

Comment is scarcely necessary. The bare statement of facts is sufficient to place Admiral Brown in no enviable light. An enemy (which the vast majority of the intelligent people and masses of the country regard as the representative of the Constitutional Government of Chili) was landing in an out-of-the-way, almost uninhabited bay, where no menace to any American interests could possibly be; and yet, when the Dictator's forces were in a quandary as to what was actually occurring there, a United States vessel goes out. On her return the real state of affairs becomes publicly known, and on that information forces are immediately thrown out along the line. That "our country" should have ever had representatives whose curiosity should lead them to such a breach of honorable dealing in behalf of tyranny and the worst form of military despotism, is disgraceful; yet the time may come when the revelation of a much more outrageous instance of the United States Navy having given a helping hand to Balmaceda and his accursed cause, may be made when further proof is obtained.

Heavy fighting has to-day been going on to the north of this, and the advance in the direction from which the sound of firing came, showed that the Congressional forces have gained ground. Late this afternoon transports were seen going south, decked with bunting. They have scored a victory and gained a footing. It will be rapid work now. Balmaceda will not hold out for the completion of his term of office, which constitutionally expires September 18. The Dictatorship is near its end. Congress and the people are bound to win. Would that the United States officials here had sympathized with the right! The influence of its representatives has unfortunately been on the side of oppression, cruelty, and tyranny. Their conduct, I regret to have to say it, has been unmanly and unjustifiable.

JOHN TRUMBULL.

VALPARAISO, CHILI, August 21.

P. S., AUGUST 24.—The *Gaceta Comercial*, from which I quoted above, was closed the following day. What raised the ire of the authorities was not, I believe, the *San Francisco* item, but the statement that Balmaceda had come on from Santiago to lead his troops in person. He is reported as having been seen in this vicinity. Certainly, his stanchest supporters are all here, and with him will probably, when the inevitable defeat comes, go on board the *San Francisco* to escape the punishment they justly merit.

If Admiral Brown, remarked an American resident to me, had only at this juncture observed neutrality as well as he did during the Peruvian war, when it led him to withhold assistance from drowning men at the blowing up of the Chilian transport *Loa* in Callao Bay, all would have been well—and this letter would never have been written.

J. T.

REV. LAWRENCE WASHINGTON OF PURLEIGH.

TO THE EDITOR OF THE NATION:

SIR: Following up the suggestion made in the *Nation* for July 16, 1891, that the MS. authorities for Walker's 'Account of the Sufferings of the Clergy' were in the Bodleian Library, Mr. H. F. Waters has recently examined the volumes with gratifying results. He writes under date of September 1, 1891: "This afternoon I came upon the chief letter upon which he [Walker] evidently depended for his information about the sequestered rector of Purleigh." This letter, he adds,

"was in worse order than anything I had been looking at. It, and two or three accompanying papers, had evidently suffered from dampness, and had been eaten, I think, by flies, perhaps mice. The letter was probably written in 1706 (judging from the dates of those near it), but where from or whom by there was nothing on the face of it to disclose at first sight. It was devoted to the cases of Mr. Cherry, Mr. Washington, and Mr. Wright of Witham. He spoke of Mr. Cherry as having 'dwelt 20 miles from me.' A little farther on he writes: 'The first visitation our diocesan made here at Easterford Kelvedon Mr. Cherry preached,' etc. Then comes this reference:

"'I doe not remember that ever I knew or heard of Mr. Washington after he had been sequestered, but there was then one Mr. Roberts a neighbor of mine who was owner and patron of a parish so small that nobody would accept of his church (but with difficulty) and Mr. Roberts entertained Mr. Washington, where he was suffered quietly to preach. I have heard him and tooke him to be a very worthy pious man. I have been in his company there, and he appeared a very modest sober person, and I heard him recommended as such by several gentlemen who knew him before I did. He was a loyal person, and had one of the best benefices in these parts, and this was the onely cause of his expulsion as I verily believe.'"

Mr. Waters adds that against both paragraphs, viz, relating to Mr. Cherry and Mr. Washington, Walker had written, "See last paragraph in this ——. J. W." Turning to the last paragraph, where dampness and flies had done the most mischief, Mr. Waters could make out only the word "Braxted." A reference to Morant's 'Essex' showed that Braxted Parva was just such a poor, mean living, and that the patron was Thomas Roberts. The Visitation of Essex shows the Roberts to have been there for four generations in 1634. A comparison of handwritings showed that the writer of this letter was the Henry Ayloffe who wrote another letter in the same collection, under date of March 26, 1706, annotated by Walker as "Esquire and Justice of the Peace." As Morant says that the Ayloffes had their chief seat at Braxted Magna, this letter seems to be of the highest authority. There was a Henry Ayloffe, third son, born about 1630, according to the Visitation of Essex, in 1634, who seems to be the writer. The early register of Little Braxted seems to be lost, but probably further search will give more particulars about Lawrence Washington there.

Immediately following this discovery, another bit of evidence appears. A few days later, Miss Emma M. Walford (of 46 Great Coram Street, Russell Square, London), a well-known expert genealogist, discovered and sent forward an entry in the register of the parish of All Saints, Maldon, Essex, as follows:

"Mr. Laurence Washington buried January 21, 1652."

Maldon is but three miles north from Purleigh, and is an old and comparatively large town, the natural abiding-place of any one interested in Purleigh. The inference is irresistible that we have at last discovered the death of George Washington's last English progenitor. I may here add that Little Braxted is about six miles north from Maldon, lying just to the east of Witham. From Purleigh to Braxted is less than nine miles in an air line.

In this connection another clue may be suggested. When the library of the late S. G. Drake was sold at Boston, May, 1876, lot No. 8130 was entitled "*Ohel* or *Beth shemesh*, a Tabernacle for the Sun; or *Irenicum Evangelicum*. An Idea Church of Church Discipline in the Theorick and Practick Parts," London, 1653, 4to. The author was John Rogers, rector of Purleigh, the successor of Lawrence Washington, and the one who paid a portion of the tithes to Mrs. Washington, as shown by Mr. M. D. Conway in *Harper's Magazine* for May, 1891. Mr. John Ward Dean remembers the book as containing some autobiographical items. If the purchaser of Drake's copy, or the happy owner of any other copy, will now examine it, possibly some item may be found in regard to Purleigh. I should like very much to see the book.—Yours very truly,

W. H. WHITMORE.

BOSTON, September 30, 1891.

P. S.—In order to give all possible clues, I would say that in *Notes and Queries*, 7th s. xii. p. 23, July 11, 1891, a writer signing himself "Vernon" made a coarse and apparently venomous attack on Mr. Waters's book. "Vernon" speaks of some deeds which he had lately copied, one of which shows that Sir John, and not Sir William, was the oldest son of the Lawrence Washington of Sulgrave who died in 1616.

"This Sir John of Thrapston in 1627 became bound for a debt of John Lord Mordaunt, afterwards Earl of Peterborough, and after the Earl's death he was sued and outlawed for the debt, which may account for the mystery which seems to shroud him also. Another of these deeds, in which yet another Laurence occurs, fourth in direct descent from the grantee of Sulgrave, gives just a possibility of a different link. If any one unconnected with the New England Society is interested enough and has time, which I have not, to work out this possibility, I shall be glad to give my references and any notes likely to be of use."

I hope some one of your readers not belonging to the New England Historic-Genealogical Society, to which this "Vernon" has so pronounced a dislike, will follow up this challenge and see if he has any information worth notice.

WHAT THE RUSSIANS READ.

To the Editor of The Nation:

Sir: The London correspondent of the New York *Times*, not long ago having finished with William II. of Germany and written *quod erat demonstrandum*, has now taken up a corollary, being prepared to finish Alexander III. of Russia. In the *Times* of Monday, September 14, he does the Russian people so great injustice that I beg of you a little space for some incontestable facts in protest. The injustice is contained especially in the italicized part of the following paragraph:

"Another indication [that "the great empire" is "marching back to barbarism"], perhaps even more significant, is found in the immense proportional increase of books printed in the Russian language. Booksellers who formerly kept a few Russian works, and devoted most of their shelf space to French, German, and even English literature, now see the conditions quite reversed. *The new Russian generation is far less inclined to reading of any sort than that which flourished under the Liberator Czar, and is also far less well educated. The demand for serious works has fallen almost to nothing. The principal display in every window and on every counter of foreign books is of Zola's novels. The Russian books, all in pamphlet form, are for the most part translations of Zola and other French novelists*, and these are annually read in increasing numbers, because younger Russians are not learning languages as their fathers did."

Our facts in refutation of this slander are taken from the St. Petersburg *Knizhny Viestnik*, the "Organ of the Russian Association of Booksellers and Publishers." In the January number of this year are given the "statistics of the book-publishing business in Russia for 1890," which show a total of 4,358 works. An analysis of the monthly numbers of 1890 shows that a single (combined) copy of all the works consisted of 680,133 pages (averaging 156 to each work), and that the number of copies all told was 11,755,503 (averaging 2,697). (It must be remarked, parenthetically, that in this journal the notice of each new work gives, almost without exception, the number of pages and the size of the edition—number of copies.) The analysis also shows that translations from foreign languages occupied but about 10 per cent. of the pages and 5½ per cent. of the copies.

The class *belles-lettres* in the table below will be seen to contain 18 per cent. of all the pages and 10 per cent. of all the copies. Of this the translations form about one-fifth by pages and one-sixth by copies. Of these translations, again, not quite one-third by pages and a little more than one-third by copies are from the French. And of these just one is a translation of Zola, of 442 pages and 2,800 copies. Against this Zola let us put some other Frenchmen, naming first number of pages and then number of copies: Gaboriau, 1,103, 8,000; Daudet, 1,137, 7,740; Hugo, 745, 6,500; Verne, 799, 5,500; Molière, 160, 5,110; Flaubert, 352, 5,000; Dumas, 282, 4,800. Others of this class are: Madame (Guizot) de Witt, Coppée, Ohnet, Cullerre, Girardin, Gérard de Nerval, etc. We cannot tell, of course, how many Russian translations of Zola get across the Tsar's borders from France and Germany; but if there were any truth in the statements about Zola's works contained in the paragraph quoted, there could not possibly be any such showing in the *Knizhny Viestnik*.

We are told that "the demand for serious works has fallen almost to nothing." The table below completely refutes that assertion; but two more examples from the class *belles-lettres* must be given, for comparison with the French: 'Paradise Lost' appears in 351 pages and 6,000 copies; and "Hamlet" in 136 pages and 10,000 copies. Where is Zola now? and where the lack of "demand for serious works"?

Class.	No. of works	Per cent. of the whole		Rus. translations: Per cent. of the class

The *Times* correspondent seems so determined to go wrong in regard to Russia that, when obliged to recognize a fact, he would compel it to bear false witness. "The immense proportional increase of books printed in the Russian language," instead of being, as he asserts, a significant indication of a "grand national retrograde movement," is most significant of national advancement, and must delight the heart of the Russian patriot—who is not a myth, notwithstanding what a German would call the "outlandish" newspapers.

J. Sumner Smith.

New Haven, October 3, 1891.

SERVETUS AND THE CIRCULATION OF THE BLOOD.

To the Editor of The Nation:

Sir: Will you allow the correction of a possible incorrect inference from your note in the last *Nation* regarding the German translation of 'Christianismi Restitutio'? Servetus did not describe the complete circulation of the blood—*i. e.*, from the left ventricle of the heart through the vessels of the body to the right ventricle (systemic circulation), and from the right ventricle through the vessels of the lungs to the left ventricle (pulmonary circulation). It was the pulmonary circulation only that he was aware of and described (1553), in opposition to the common belief of his time that a direct communication existed between the right and left ventricles through the ventricular septum. Cæsalpinus (1593) still held to this idea of Galen regarding the porosity of the septum, but accepted in part the pulmonary circulation also. From some passages in his writings it has been inferred that he recognized the systemic circulation, but this is doubtful.

Certainly the complete circulation, in the sense of a passage of the blood through two systems of vessels and both sides of the heart and a return to its starting point, was not known until it was established by Harvey's brilliant experiments and careful observations (1628).

Frederic S. Lee.

Columbia College, October 3, 1891.

Notes.

Harper & Bros. will publish during the present month the 'Collected Writings and Memoirs of the late Field Marshal von Moltke'; 'Literary Landmarks of Edinburgh,' by Laurence Hutton; 'The Warwickshire Avon,' by T. Quiller-Couch, with illustrations by Alfred Parsons; 'Studies in the Wagnerian Drama,' by Henry E. Krehbiel; 'Arts and Criticism,' and 'The Spanish-American Republics,' by Theodore Child; 'American Football,' by Walter Camp; an *édition de luxe* of 'Ben Hur,' in two volumes, with 20 full-page photogravures and more than a thousand marginal drawings from designs by William Martin Johnson; 'Life and Letters of Gen. Thomas J. ("Stonewall") Jackson,' by his widow, edited by the Rev. Dr. Henry M. Field; and 'Sharp Eyes,' insect, bird, and flower studies by W. Hamilton Gibson.

Charles Scribner's Sons have in preparation 'The Divorce of Catherine of Aragon,' by J. A. Froude; 'Japonica,' Sir Edwin Arnold's observations on Japan, with illustrations by Robert Blum; 'Travels amongst the Great Andes of the Equator,' by Edward Whymper; 'Lyra Heroica,' by W. E. Henley; 'Across Russia,' by Dr. Charles A. Stoddard; 'Ocean Steamships,' the series of papers that have been running in *Scribner's Magazine*; 'Nature and Man in America,' by Prof. N. S. Shaler; 'On the Border with Crook,' by Capt. John G. Bourke, with illustrations; 'Elsket, and Other Stories,' by Thomas Nelson Page; and the "American History Series" in epochs—Prof. Geo. P. Fisher of Yale treating of discovery and colonization; Prof. W. M. Sloane of Princeton, of the French Wars and the Revolution; President F. A. Walker of the Boston Institute of Technology, of the Constitution and national consolidation; and Prof. J. W. Burgess of Columbia, of the period from the peace of 1815 to the end of Reconstruction—this last occupying two volumes.

G. P. Putnam's Sons have in hand 'The Odes and Epodes of Horace,' translated into English verse by the Rev. John B. Hague, with notes and a parallel eclectic Latin text and references to previous translations; 'The Art Teaching of John Ruskin,' by W. G. Collingwood; 'A Guide to Greek Tragedy,' by Prof. L. Campbell; and 'English Literature during the Past Fifty Years,' by Mrs. Oliphant. They have nearly ready a revised and enlarged edition of Mr. Chas. Burr Todd's 'History of the Burr Family,' with a chapter, by Justice Bradley of the United States Supreme Court, on the Wheeler family, with which the Burrs were closely allied.

Macmillan & Co. promise an *édition de luxe* of Mrs. Oliphant's 'Makers of Florence,' with 200 additional plates; Mrs. Gaskell's 'Cranford,' with illustrations by Hugh Thomson; a 'Browning Cyclopædia,' with commentary and explanations, by Dr. Edward Berdoe; and 'Man and Beast in India,' by L. J. Kipling, father of the novelist.

'A Frenchman in America,' by Max O'Rell, with numerous illustrations by Kemble, is in the press of Cassell & Co.

Kemble will also lend his pencil to a holiday edition of 'Uncle Tom's Cabin,' which Houghton, Mifflin & Co. have undertaken; and Edward H. Garrett will illustrate their new issue of Whittier's 'Snow-Bound.'

Prof. Alpheus S. Packard's 'The Labrador Coast: a Journal of Two Summer Cruises to that Region,' which has been delayed in publication, is set down for the present month by N. D. C. Hodges, 47 Lafayette Place.

E. P. Dutton & Co. will share in the English enterprise of issuing a group of volumes of sermons or addresses selected or expressly written by distinguished representative men in the Church of England and in the chief branches of British Nonconformity. Each will contain a portrait of the author, a biographical sketch, and a bibliography. The Archbishop of Canterbury leads off with 'Living Theology.'

Little, Brown & Co. will bring out a collection of 'Elizabethan Songs,' with an introduction by Andrew Lang and illustrations by E. H. Garrett.

The 'Calendar of Sonnets by H. H.,' announced by Roberts Brothers, will have twelve illustrations by Émile Bayard and vignettes by Garrett.

J. C. Nimmo, London, begins his list of new books for the present month with a limited reprint of 'The Humorist,' containing forty illustrations by George Cruikshank, colored by hand; together with 'The Cruikshankian Momus,' pictorial broadsides and humorous song-headings by the three Cruikshanks, being fifty-two designs, also colored by hand. Other titles are: 'Last Words on the History of the Title-page,' with notes on some colophons and twenty-seven facsimiles of title-pages (including the first page of the Mazarin Bible), by Alfred W. Pollard; new editions of 'Notitia Venatica,' a treatise on fox-hunting, by Robert T. Vyner, and of Joseph Grego's 'Reminiscences and Recollections of Captain Gronow,' with hand-colored illustrations in each case; the 'Dramatic Works of George Farquhar,' edited by Alex. Charles Ewald, in two volumes, limited to 520 copies; and 'The Soft Porcelain of Sèvres,' fifty plates, royal folio, with an historical introduction by Édouard Garnier.

Mr. J. Scott of the British civil service in Corea, who issued a few years ago his Corean Phrase-book, is now seeing through the press a 'Dictionary of the Corean Language.' The work is based on seven years' research among the native records and official documents and oral sources of the language, Mr. Scott being among the first to master the vernacular on the ground and among the people. The book will be ready before the end of the year.

The definitive edition of Dr. Holmes's writings which is now being published, under the author's supervision, by Houghton, Mifflin & Co., is beyond the need of comment for its contents. It will fill thirteen duodecimo volumes, exactly matching the final Lowell in size and in type, but the printed page is broader and slightly more condensed, and the margins are narrower. The binding is in a red cloth, with a leather stamp, and does not indicate the series by volume numbers, so that purchasers can take the set or any part. The prose leads off, and the 'Autocrat of the Breakfast Table' constitutes vol. i., and bears the likeness of Dr. Holmes at the age of forty. In the fourth volume, 'Over the Teacups,' there is an etched portrait, later, but without date. Characteristic new prefaces are prefixed to each volume. The "Autocrat" returns an unaffected "encyclical of thanks" to his multitude of admirers and correspondents, and seizes the opportunity to recant an intimation, in his preface of 1882, that mechanical invention had exhausted itself with the telescope and electric illumination. The electric motor has rebuked him, and we hope the flying-machine will do so in its turn. The "Professor" congratulates himself on the liberal tendencies within the evangelical sects, and the evidence that "there is no such thing as an air-tight reservoir of doctrinal finalities." The "Poet" deplores afresh the evil consequences of "the process of scientific specialization"; it is the only pessimistic note in these prefaces. The indexes, indispensable accompaniments of Dr. Holmes's discursiveness, are seductive to any mind not wholly devoid of intellectual curiosity.

The meritorious translations from the Dialogues of Plato, by an anonymous admirer, which the Scribners have been publishing at intervals during the past dozen years, now amount to four volumes, 'Socrates,' 'A Day in Athens with Socrates,' 'Talks with Socrates about Life,' and 'Talks with Athenian Youths.' Made each for the hand, as a group they seem appropriately to belong together in a box, and so they come to us, in a reissue which deserves to be borne in mind as the gift season approaches.

Since we are speaking of new editions, it will be in place to mention here Loftie's 'Westminster Abbey,' with Herbert Railton's and other illustrations, a comely octavo (Macmillan); Capt. Metcalfe's 'Course of Instruction in Ordnance and Gunnery' (John Wiley & Sons); Van Dyke's 'Poetry of Tennyson,' revised and enlarged (Scribners); and John Rae's 'Contemporary Socialism' (Scribners). Mr. Van Dyke has added a chapter taking account of Tennyson's latest production, and another for a guide to the study of Tennyson by a classification of his poems. He has also revised the valuable chronology of Tennyson's Life and Works, with the aid of the poet himself. The most extensive revisions of Mr. Rae's work are found in the chapters on "The Progress and Present Position of Socialism" and on "Russian Nihilism," while two new chapters have been added—"Anarchism" and "State Socialism"—the latter being nearly 100 pages long. We can but repeat the praise of the author's thorough research and philosophic temper which we expressed on the appearance of the first edition, in 1884.

Prof. Buchheim, the indefatigable editor and interpreter of German poetry and prose, has given us another fruit of his labor in an attractive little volume of 'Balladen und Romanzen' (Golden Treasury Series, Macmillan & Co., 1891), which is in every way a worthy companion to his 'Deutsche Lyrik,' published some ten years ago. The same praiseworthy accuracy in the rendering of the text, the same careful adherence to the chronological order, the same cautious, somewhat pedantic judgment of artistic merit which characterized the earlier volume, are to be found here again, and help to make up a collection of narrative German poetry which it is not too much to say is truly representative. Some minor objections to Prof. Buchheim's criticism and method of selection might, of course, easily be raised. It is hard to see what is gained by such a dubious statement as his definition of *Ballade* as a dramatic-lyrical, of *Romanze* as an epic-lyrical poem. It is to be regretted that he should not have found space for at least a few specimens of the popular ballad. No possible excuse, it seems, could be found for the insertion of such a trashy production as H. Pröhle's "Kaiserwoort in Goslar," based on an absurd piece of *Volksetymologie*, and destitute of any idea or sentiment, except an almost insipid Byzantinism. But it would be unfair to dwell on the defects of a work which, taken as a whole, must be ranked with the best of its kind, and which is a most welcome addition to the unfortunately small number of trustworthy and well-edited German text-books.

The folio 'Popular Hand-Atlas of the World' which bears the imprint of T. Nelson & Sons, proceeds from the house of J. Bartholomew in Edinburgh, and is an abridgment of the 'Library Reference Atlas' made by the same cartographer for Macmillan & Co. last year. Many of the maps are identical, some are reduced in size, and there are sixty-seven in all as against eighty-four in the fuller collection. With an eye to the American market, the maps of North and South America precede those of Europe and the rest of the Eastern Hemisphere. The United States are delineated on a fairly large scale, as in the 'Library Reference Atlas,' but the map of Virginia and the Carolinas has been for some reason omitted from the series, and Maine has been docked from procrustean necessity, as Florida has been. The execution of the Bartholomew maps is familiar to all who have at all compared atlases. They succeed in being clear, and err on that side rather than on the side of fulness. This collection will be found handy, and it is provided with a "descriptive index," which is really a one-line gazetteer, and does not locate the names on the maps by ordinates and coördinates. A 'Globe Hand-Atlas,' from the same maker and publishers, is large octavo in form, and gives fifty-four maps, with an index by latitude and longitude. Three of the number exhibit classical geography, and some show the physical geography of the chief continents.

Dietrich Reimer, Berlin, sends us two more examples of his school wall-maps, namely, fourth editions of South America (political) and Africa (physical), by Heinrich Kiepert, revised by Richard Kiepert. They are on the same scale, 1:8,000,000, and are in four and six sheets respectively, strongly colored to catch the eye. It is to be remarked that the physical map of Africa is not devoid of names of places, bays, rivers, mountains, etc. The authority of the Kieperts, father and son, needs no endorsement from us.

Mr. Hamerton pursues his theme of "The Present State of the Fine Arts in France," in the *Portfolio* for August and September (Macmillan). He treats first (it is really eighthly) of the caricaturists—a race almost extinct in England, as he says, referring to "the genuine old caricature," whereas French caricature has survived and "made progress during the last twenty years." He regards "'Caran d'Ache' (pronounced 'd'Ash')" as the most original and inventive of living caricaturists, carrying the narrative style to perfection. In his ninth paper, Mr. Hamerton deals with portrait and landscape, and has some judicious observations on the practice, so common in Salons, of withholding the names of private persons whose portraits are exhibited. This may be delicacy or a *conditio sine qua non*, in most cases, but Mr. Hamerton suggests a descriptive title, *e. g.*, "The Lady with One Glove," as an aid to memory in place of "Madame D." He thinks there is a strong present tendency to be truthful in portraiture. In discoursing of landscape he says that though France vies with the best in Switzerland or Spain, "very few Frenchmen have attacked mountainous scenery with success."

A landscape by Binet, "La Grand' Mare à Saint-Aubin, près Quillebœuf," cited by Mr. Hamerton as an example of this painter's capacity for laying before us an extensive tract of country, is reproduced by process in *L'Art* for July 15 (Macmillan), and substantiates the justice of this critic's praise. In the same

number a worthy companion of Caran d'Ache, "Crafty," is represented in delightful narrative caricature. And again, in the issue for August 15, we meet with Émile Friant's "Ombres Portées," which Mr. Hamerton mentions for its portrait quality, though he describes it accurately as "a very middle-class man, far from handsome, . . . expressing silent love and adoration [he is squeezing her hand] for a very middle-class woman, far from pretty, and who does not seem encouraging."

In *Sun and Shade* for October (New York: Photo-Gravure Co.) the first plate in position and in importance is the portrait of James Russell Lowell from the Gutekunst negative, which is one of the landmarks of the poet's latter age. Lowell is also remembered abundantly in the current number of the *New England Magazine*, where reminiscences by Edward Everett Hale and verses by Mrs. Sarah K. Bolton are followed by a very serviceable account of the *Pioneer* by E. D. Mead. Mr. Mead gives several examples of Mr. Lowell's contributions to this short-lived venture, and they warrant the remark that "there is no word which Lowell wrote for the *Pioneer* which is not interesting as read to-day." The interest of the article is greatly heightened by facsimiles of the title-page of No. 1 of the *Pioneer* and of some of its illustrations, including one by a Cruikshankian Boston caricaturist, D. C. Johnston, who did not deserve the oblivion into which he has fallen. Before leaving this number of the *New England Magazine*, which is replete with profitable reading, we should mention the opening pages of Gen. B. F. Butler's autobiography.

It is pleasant to record the fact that at the recent Berlin Exhibition the Grand Prize of Honor was awarded to the Society of American Wood-Engravers.

"E. J. S." writes from Washington: "Apropos of the controversy between philosopher and rain-maker, may we not infer from the presence of meteorological instruments that production of rain must be preceded by careful barometric observations? Of course you know the laconic advice given by the bishop to the curate, when asked for his sanction of prayers for rain: 'First consult the barometer'?"

"S. I. S." writes from New Haven: "Lowell's lines, quoted by Mr. Whitney in the last *Nation*, are from 'To the Muse,' in the volume entitled 'Under the Willows,' published in 1869, and also in the 'Household Edition' of the Poetical Works, published in 1876."

"In the *Nation* of September 24," writes "J. W.," "'X.' thinks *gotten* is not one of those 'numerous survivals' of Elizabethan English current here and obsolete in England; but Hakluyt ('Westerne Planting,' p. 102), writing in 1584, was certainly Elizabethan when he said, 'They have *gotten* the starte of us.'"

—It is perhaps not too much to call M. Jules Huret's 'Enquête sur l'Evolution littéraire' (Paris: Charpentier; New York: F. W. Christern) one of the most extraordinary books in the history of authorship. M. Huret is a reporter on the staff of an enterprising French daily newspaper called *L'Écho de Paris*, and during March, April, May, and June of this year he went about Paris asking the leading literary men of the French capital their opinions as to the literary outlook, as to whether or not the naturalism of M. Zola was dead or dying, as to whether the psychologists would inherit the vogue of the departed Naturalists, and as to the value of the new school of Symbolists. Sixty-four interviews in all appeared in the newspaper, and are now reprinted in the present volume, accompanied by various letters, corrections, and supplementary opinions. Nowhere but in France could such a book have been possible; nowhere else is there such a keen interest in the principles and manifestations of literary art; nowhere else are there so many young authors ardently in search of new formulas. In the main, the discussion is curious rather than fruitful, but it supplies abundant material for satiric opinion of the literary temperament. The younger men especially are unsparing iconoclasts, and respect none of their elders; nor do they dwell together in amity among themselves. The new school of poets, the Decadents and the Symbolists, are especially intolerant towards each other. Even a man as old as M. Leconte de Lisle allows himself to cast reflections on M. Anatole France, with the result that pistols and coffee seemed probable; but once again "your If is your only peacemaker." The only American author of whom any of the disputants seem ever to have heard is Poe, although one of the sixty-four cites Emerson casually. Two of the Symbolists are Americans, Mr. Stuart Merrill and Mr. Viele-Griffin; one is a Greek, M. Moreas; and another coming light, M. Maurice Maeterlinck, is a Belgian. Altogether, M. Huret's book is a most amusing exhibition of *fin de siècle* Parisianism.

—In the discussion of the authorship of the Aristotle papyrus, now in full swing, the doubters appear to be mainly British scholars, while the Germans—with two or three conspicuous exceptions—accept the treatise as Aristotle's, as even more Aristotelian than Aristotle himself. In Ad. Bauer ('Literarische und Historische Forschungen,' etc. Munich: Beck), we have a thoroughgoing vindicator of the Aristotelian authorship, as also of the enormous value of the work, in which, he claims, we have at last the key to many vexed problems of Athenian history. He provides a useful chronological table for the period between B. C. 595 and 446. We miss a satisfactory discussion of Aristotle's sources, and think Bauer wrong in some of his corrections of the text; but his little book is distinctly the most important contribution yet made to the literature of the papyrus. Schvarcz, whose brilliant and original work on Democracy is known to all students of institutions, wishes to assign the treatise to Demetrius of Phaleron, the "Phalereus" of Milton, friend of Theophrastus and Governor of Athens B. C. 317-307 (*Ungarische Revue*, April). Rühl of Königsberg rejects it as unworthy of Aristotle, but makes no suggestion as to its author (*Rheinisches Museum*, vol. xlvi, No. 3). Fr. Cauer's contention, in his 'Hat Aristoteles die Schrift vom Staat der Athener geschrieben?' (Stuttgart: Göschen), that the work was independently composed by a pupil of Aristotle, will commend itself only to those who concur with Cauer in finding defects in it inexplicable on the hypothesis of Aristotelian authorship, and are ready to reject all positive testimony on the point. We are disposed to admit that Aristotle had help in collecting material, and that small portions of the treatise may have been compiled by another hand; but it is clear that these parts were revised and touched up by Aristotle—though not rewritten—and the whole work carries the weight of his name. It is pushing scepticism too far to deny to Aristotle a work accepted as his by his younger contemporaries, unchallenged in antiquity, with many internal evidences of genuineness, merely because it is not quite what we should have looked for. We must not forget that our ideal has been formed upon works written for a different purpose, themselves not wholly free from suspicion. This popular and sketchy "primer of Athenian constitutional history and citizen's handbook," as it has been happily characterized by an English scholar, is not to be judged as if it aimed to be a body of political doctrine, systematically arranged, for the use of the well-informed members of the Peripatetic school.

—In the Prince Consort Prize Dissertation for 1890, by J. W. Headlam of King's College, 'Election by Lot at Athens' (Cambridge: University Press; New York: Macmillan), we have an ingenious discussion of an interesting question, brought to date by the use of the new 'Constitution of Athens.' The writer aims to show that election by lot, though religious in origin, had, as practised, no religious significance whatever; that it flourished because it was a thoroughly democratic institution. It secured perfect equality among the citizens, rotation in office, and the authority of the Assembly. In the sense that democracy is inverted monarchy (Sir H. Maine), the Assembly ruled absolutely, becoming at times the "Tyrant Demos"; it had its favorite advisers, but there were no such things at Athens as party organizations and party management in our sense. Mr. Headlam's essay is original in its sharp criticism of the current view that party feeling at Athens found expression in the elections of generals and of other officers. He argues that elections had no political meaning whatever, since the officials elected had small powers, and were under the constant control of the Assembly. Party feeling found its vent, if anywhere, at the law-courts: the "sycophant" was the bane of ancient politics, where lot prevailed; whereas modern states, where elections are the rule, are cursed by the wire-puller. To choice by lot are due two good features in the Athenian system, which is a more genuine form of democracy than has since come into existence, viz., unexampled regularity and purity in the administration of the State, and absence of intense and long-continued party passion. The author's contention that elections had no party or political significance, seems hardly borne out by all the facts; but he does well to bring extravagant opinions on the subject back to the right mean. There are a few slips—*e. g.*, Aeschines was Ambassador in Peloponnese in B. C. 348, not in 346 (p. 73); Demosthenes was Commissioner for Fortifications in B. C. 337, not 338 (p. 107); the plans criticised by the Boulé were probably designs for the embroidery on the peplus of Athena, not plans of temples (p. 189); misprints on pp. 94, 168, 183, 187, etc.—but the little book is an important and suggestive one. The writer's originality, combined with sobriety, and his lucidity of statement, lead us to look for further valuable work from him.

—A rare monument of literary industry and indomitable perseverance under seemingly insuperable difficulties is Constant von Wurzbach's 'Biographisches Lexikon des Kaiserthums Oesterreich,' the sixtieth and final volume of which has just appeared. The author, who was born at Laibach in the Austrian province of Illyria, and is now in the seventy-fourth year of his age, began life as a soldier, entering the army at eighteen before he had finished his studies at the university. After four years of rather severe military service, he was promoted in 1841 to the rank of lieutenant. At that time his regiment was stationed in Lemberg in Galicia, where he had an opportunity of resuming his academical pursuits, and, in 1843, after passing an *examne*

rigorosum, he received the degree of doctor of philosophy from the university of that city. In 1844 he threw up his commission and was appointed to a place in the library of the Lemberg University; four years later he was transferred to a similar position in the Imperial Library at Vienna and made keeper of the archives of the Ministry of the Interior. The first sheets of the 'Biographical Lexicon,' which it was originally intended to complete in a dozen volumes, were printed in 1855. Not only the labor, but also the entire cost, of the undertaking rested at first upon the shoulders of Wurzbach, whose finances were hardly able to sustain the heavy burden. Fortunately, with the issue of the sixth volume, the very favorable criticisms of the work, especially by the German press, induced the Austrian Government to intervene and bear a portion of the expense of publication; the Imperial Academy of Sciences also voted a small sum to be paid on the completion of each successive volume. Ultimately, he was granted a permanent leave of absence in order that he might devote all his time and energy to his important task, while retaining his official position and enjoying the emoluments of it. Very soon, too, it became evident that the mass of material which had been already collected, and was constantly increasing, could not be advantageously compressed within the narrow limits originally proposed. The author resolved, therefore, to enlarge his plan, to give himself ample space and scope, and to do full justice to the subjects treated, regardless of the size which his work might finally attain. For his purpose the political boundaries of the Austrian Empire are the same to-day as they were in 1855; he ignores the battles of Magenta, Solferino, and Königgrätz, and the treaties of peace concluded at Villafranca and Prague, and regards Lombardy and Venice as still under the sceptre of Franz Joseph. He also retains administrative divisions of the empire that have long ceased to exist, and are now well-nigh forgotten, such as the territory formerly known as "Serbische Wojwodschaft und Temeser Banat," which was made a "crown-land" in 1849, but, on the reconstitution of Hungary in 1860, was, by an imperial decree, reunited with the kingdom of the Magyars. These otherwise harmless anachronisms are sometimes confusing to readers not perfectly familiar with the many political metamorphoses which the domain of the Hapsburgs has undergone.

—The unique value and epochal significance of Wurzbach's 'Lexicon' lie in the fact that it contains information concerning sovereigns, statesmen, scholars, musicians, poets, artists, authors, and other distinguished persons, not elsewhere easily accessible, and gives interesting glimpses into the intellectual characteristics and peculiar culture of the manifold and rather motley races of eastern Europe, of which the rest of the civilized world knows very little and has only scanty means of knowing anything more. Not the least of the preliminary difficulties which our author had to overcome, was the mastery of seventeen languages, without which it would have been impossible for him to carry on his investigations. These were the tools in the use of which he must become skilled before he could begin to quarry the material necessary to the construction of the edifice he had designed. That a work of this kind should be more or less strongly colored by the single mind which conceived and executed it is inevitable. One may not always be ready to endorse the personal views or political opinions expressed by Wurzbach, but no one, we think, will ever consult these volumes without finding what he seeks, nor lay them down without a warm feeling of gratitude to the man who had the boldness to enter upon such a gigantic task and the energy and erudition requisite for its successful completion. We may add that the 'Biographical Lexicon' is only one of many works on which Wurzbach's literary and scholarly reputation rests. Among his earlier publications we find a 'Bibliographical-Statistical Survey of the Literature of the Austrian Empire' (3 vols., 1854–56), in the form of official reports as librarian to the Minister of the Interior, Baron Alexander von Bach, and full of valuable information. Besides his 'Polish and Ruthenian Folk-Songs,' his 'Polish Proverbs,' his monograph on 'The Churches of Cracow' (an interesting contribution to the political and ecclesiastical history of Poland, as well as to the architecture and antiquities of the former capital of the Polish Republic), his well-known 'Schillerbuch,' his 'Historical Words, Proverbs, and Phrases,' and other works of a like character, he is the author of several volumes of verse published under the semi-pseudonym of W. Constant. The best of these productions are unquestionably the epics and ballads in his 'Gemmen' (Hamburg, 1855) and 'Cameen' (Düsseldorf, 1856), and his translations from various Slavic tongues, although as a lyrical poet he is by no means inferior to the multitude of ready rhymists who are essaying to climb the German Parnassus. In further proof of his versatility it may be stated that he printed at Lemberg in 1843 a book on the 'Elements of Geometry,' which was favorably received, and gave evidence of his ability to attain eminence as a mathematician had he not been diverted from this course by the superior charms of the Muses.

RECENT CELTIC LITERATURE.

Studies in the Arthurian Legend. By John Rhys. Oxford: Clarendon Press; New York: Macmillan & Co. 1891. Pp. viii., 411.

The Fians, etc. By J. G. Campbell. Introduction by Alfred Nutt. London: David Nutt. 1891. Pp. xxxviii., 292.

LIGHT is slowly but surely creeping over the dark places of our earth. And what could be darker and more labyrinthian, even to the professed student, than the Arthurian cycle? Yet for both reader and poet the nebulous world of Arthur and his knights and dames has always had a strange charm. Not to go beyond the bounds of English literature, we need only cite the names of Malory in the fifteenth century, Spenser in the sixteenth, Milton in the seventeenth, Tennyson, Swinburne, and Matthew Arnold in our own. Despite the cavils and strictures of critics of the logical school, we may admit, once for all, that the Arthurian atmosphere is congenial to poetry of a certain kind. Whether that kind be the highest and best, is another question. Enough to see and feel that it *is* poetry.

But the Arthurian world is, we have said, dark and labyrinthian. More than that, it is uncanny. Even in the Tennysonian adaptation *in usum Delphini*, there are touches of gloom that make one shrink. And the further back in the centuries one reads, the greater one's perplexity. How did it all come about, this mixture of religious fervor and blatant sensuality typifying the middle ages? What was the origin, or at least what is the final analysis, of such conglomerates as Arthur and Guinevere, Modred, Merlin, Lancelot, Gawain, Galahad, Tristan, and Isolde? To such questions Prof. Rhys's book supplies an answer which, if not final, is at least sufficient for the year and the century, and which does honor to the Oxford chair.

First, but not least, let us congratulate the author upon his perfect urbanity. This is no empty compliment. For ten years now the province of Celtic philology has been overhung by skies of blood and Apocalyptic vials of wrath. Zimmer, single-handed, on the one side, and Windisch, Stokes, Arbois de Jubainville, and their auxiliaries on the other, have waged bitter war. Charges and countercharges, incriminations and recriminations, have been hurled with deadly aim. Perhaps the cause of scholarship may ultimately gain through the shock of contention. But to live in this surcharged atmosphere is assuredly not pleasant. All the more welcome, therefore, must be a book which not only is replete with scholarship, but which breathes the blessed spirit of peace to all men of good will.

In general it seems to us that our author postulates too much in the ordinary reader. By this we mean not so much his assumption that the reader is, or ought to be, familiar with his Hibbert 'Lectures on Celtic Heathendom,' published in 1888 (the book is not difficult to procure), as his assumption that the reader possesses an off-hand familiarity with the salient features of Arthurian story, ancient and modern, and with the characteristics of Celtic literary form. This is a very rare acquisition. Those who have it can be counted off on the fingers of one's hand. Our readers may test the matter for themselves. Let them try to "place" an Arthurian name, trait, or incident in Gildas, Nennius, Geoffrey of Monmouth, Chrétien of Troyes, the 'Mabinogion,' the Welsh Triads, or in Malory. We are far from seeking a quarrel with so amiable and conscientious a searcher after truth. We admit freely the force of his statement, in the preface, that it has been his "chief object . . . to make Welsh literature help to shed light on the Arthurian legend," and therefore not to formulate the legend itself. Nevertheless, from the purely practical point of view, we believe that Prof. Rhys would have helped his "general reader" more had he given a ré umé, a skeleton, as it were, of the Arthurian legend. This assumes, of course, his ability to discover a skeleton in the amorphous mass. But perhaps there is none, perhaps the legend belongs to the order of invertebrates. Be that as it may, the reader will have to know familiarly the Arthurian legend in its successive stadia before he can justly estimate the author's elucidations.

Within our narrow limits we shall attempt to give only a few of Prof. Rhys's positions. Arthur is a blending of history and myth, of a *Comes Britanniæ* who defended his country against the invading Saxons, and of a Celtic divinity, either a sun-god or a culture-hero. It is interesting to learn the etymology of the name. Prof. Rhys equates it with an assumed Latin *artor*, parallel with the actual *arātor* "ploughman," ploughing of course symbolizing cultivation and culture in general. In this connection we should like to know what to do with Art the son of Conn in Irish legend. Still more interesting is the examination of Guinevere (Gwen hwyvar, or "white spectre"), p. 38, and the parallel between her and Etáin, or Be Find in Irish. But we can scarcely accept the explanation, p. 33, that Be Find is *more correctly* Be Bind. In Irish, *bind* and *find* are distinct words, the former meaning "sweet, melodious," the latter "fair, white." Fair woman is expressed in Irish by Be Find. The "triad" of Guineveres is equated

with the triad of Etáins and the triad of Isoldes (in the Tristan story). The capture or recapture of Guinevere by Arthur, or by Lancelot, is likened by Gaston Paris and by our author to the story of Orpheus and Eurydice. This brings us at once to the nether-world, which plays, we may say, the leading rôle in Celtic mythology. Most of the fantastic exploits which the later middle ages anthropomorphized so ingeniously are reducible to the perennial struggle between the powers of Light and the powers of Darkness. Even the Holy Grail itself, once supposed to be a purely Christian symbol, is regarded by Prof. Rhys (herein following Nutt in his 'Legend of the Holy Grail') as originally a cauldron of Hades. Whether the Nutt-Rhys theory will gain unqualified assent is a question that we cannot enter upon here. Our knowledge of *early* mediæval Christian legend is still too meagre. Lipsius's investigation of the apocryphal acts of the Apostles should teach us caution in setting too narrow limits to Oriental-Christian mysticism. How much that Grimm looked upon as Teutonic is now demonstrated by Lipsius to be Gnostic! At any rate, we fail to catch the point of our author's utterance, p. 326, "Outside the Celtic domain one may point to the Dwarf's Cup as one of the old Norse terms symbolic of thought, wisdom, and especially the inspiration of poetry," and we would ask our author how he happened to overlook the infinitely more celebrated 'Kettle' that furnishes the theme to no less than two entire poems in the Edda, namely, the "Hymiskvidha" and the "Lokasenna" (Oegisdrekka).

The identification of Peredur-Percival with Lancelot is highly suggestive. Equally so the parallel between the Empress in the Peredur story and the Irish Mórrígu, or Great Queen, and the suggestion of a contamination of the Celtic name Etain with the Greek name Helen (Elen) of the celebrated mother of Constantine the Great, p. 110. It need not disturb our enjoyment of Tennysonian poetry to learn that the Lily Maid of Astolat and the Lady of Shalott are but different phases of the same myth. Prof. Rhys's remark upon the weird fascination exercised by the Lady of Shalott in Tennysonian verse should meet with hearty approval. And so also should his passing condemnation of the Laureate's conception of Arthur himself, "falsetto preachments of the modern muse," p. 20. But we are less confident that it will. The Anglo-American Philistine has, we fear, accepted the falsetto preachments as Arthurian gospel.

In connection with the *green* color mentioned, pp. 53, 59, we miss an adequate discussion of the curious English romance of Sir Gawayne and the Green Knight. It is barely mentioned, p. 174. Occasionally the author introduces illustrative parallels from Teutonic mythology, *e. g.*, Siegfried's wooing in behalf of Gunther, pp. 226, 233. Such parallels, we think, might have been easily multiplied. Peredur's forgetting and neglect of Yngharad, pp. 85, 87, 112, 218, has its counterpart in Siegfried's forgetting of Brünhild. Less obvious, but not to be rejected, is the kinship between Cúchulainn's mare, p. 221, and Odhinn's horse Sleipnir. The heroes of Welsh stories, we read, never drive in chariots, but ride on horseback. In Irish myth, riding on horseback is commonly taken to be an indication of later composition. Can this test be applied to Welsh? At page 168 reference is made to the "fons Galabes," said by Geoffrey of Monmouth to be "in natione Gewisseorum." We should like to have an etymological interpretation of this name *Gewis*, which figures not only in Bede, but in the Anglo-Saxon chronicle. Sweet, in his 'Oldest English Texts,' treats the word as of Teutonic origin. But this is by no means certain. Perhaps Apollodorus, p. 197, may have had good reasons of his own for interpreting the Amazon's girdle captured by Hercules as the σύμβολον τοῦ πρωτεύειν ἁπασῶν, but the Siegfried-Brünhild story has taught us to regard such a girdle rather as the σύμβολον τῆς παρθενείας. And speaking of παρθενεία leads us to remark that Prof. Rhys's euphemistic allusion to chastity in Irish story-telling, p. 177, may be contrasted with Prof. Zimmer's terrific indictment, *Zeitschrift für deutsches Altertum* xxxii., 281-285. We regret that the Oxford professor should be unacquainted with his Greifswald colleague's memorable discussion of the Voyages of Maildun and Brendan, *Zeitschrift*, etc., xxxiii., 129-220, 257-338. His conception of the Celtic Hell and Paradise, and the Islands of the Dead, would have gained greatly in breadth and depth. But let us hasten to add that there is no fundamental difference of view between the two scholars.

Highly ingenious are our author's attempts to trace the evolution of original Welsh names; see pp. 284, 296, 299, and elsewhere. To appreciate the difficulties involved, one should first read chapter xvi, which treats of the various ways in which Welsh tradition came into the Anglo-French world. A name introduced orally was subjected to the usual corruptions of foreign ear and tongue. But these were slight in comparison with the clerical corruption of names occurring in ill-written Welsh manuscripts. Thus Rianon becomes Niniane and even Viviane, "the worst and most popular in print." The author's Irish references, however accurate as references, are not always as serviceable as they might be. The story of Conla the Red, p. 128, is referred to Windisch's Irish Grammar. A much more satisfactory reference would have been to Crowe's paper in the *Kilkenny Journal*, No. 17, giving text, translation, and introduction. We have detected one curious error of frequent occurrence in the notes. The famous Irish codex is cited as the 'Book of the Dun.' For this read 'Book of the Dun Cow.' And for an explanation of the curious title see O'Curry, 'Lectures on the MS. Materials,' etc., p. 30. The zealous Anglicist will hardly accept Prof. Rhys's estimate (p. 389) of pre-Norman English literature; but the present is no place for rectification.

We have ventured upon a few criticisms to show our interest in the subject. Of these Arthurian studies as a whole we can speak nothing but good. The book is throughout readable. Even in the most difficult passages the style is clear, simple, and elegant. The author's scholarship does not befog his utterance. We earnestly commend the book to all who would gain an insight into Arthurian legend.

Of an altogether different kind is the Rev. Mr. Campbell's book on the Fians. It is a collection of tales of Finn and his warriors, taken down by Mr. Campbell in the course of thirty years, from the lips of the Gaelic-speaking Scotch. Its chief value lies in its showing how deep-seated and widespread is the popular knowledge of Fionn mac Cumhall (pronounced Finn Mac Cool). The reader who approaches the collection from the side of Middle Irish literature will find little that is new; and that little is usually of a non-Celtic character, betraying contamination with one or another of the more common forms of European story-telling. Thus the trick of walking backwards into a cave (p. 166) resembles the story of the Greek robber, Cacus, as is pointed out in the Introduction (p. x.). But the editor might have added that the fastening of Garry's hair to the logs (p. 165) suggests at least the story of Samson. The editor is not at his best in comparative philology. But we must be charitable to utterances like this (p. x.): "In the ancient geographical names of Greece and Rome many place-names are to be found that admit of much explanation from the Gaelic, *e. g.*, Marathon by the sea is very like Maranan, Seas or Waves." The major proposition is doubtless true; but the minor? We have one general fault to find with the make-up of the book. One's powers of divination are in constant demand to perceive where the editorial labor of introduction and comment ends and the story proper begins. This is wholly unnecessary. The only scientific plan of editing a story is to give the text as heard on one page, translation on the opposite page, verbal explanations in foot-notes, general explanations either before or after the text, or in both places. In any case the eye should be able to see at a glance what is editor and what is story-teller.

In that part of the introduction which is by Mr. Alfred Nutt, that accomplished scholar, whose name we have mentioned above in connection with the Grail legend, touches upon a subject now hotly debated, namely, the origin of the Finn story. Until quite recently it was universally assumed that Finn, son of Cumall, and his band, were as distinctively Irish as Cúchulainn and Queen Medb. But in 1890 Prof. Zimmer published in the *Zeitschrift für deutsches Altertum*, xxxv.—Nutt's reference to vol. liii. is an obvious slip of the pen—an article of 170 pp., in which he denied the Irish origin of the Finn story, and maintained that the Fenians were at bottom only Norwegian vikings of the ninth century marauding in Ireland. Finn himself was perhaps Caitill Find (the Irish rendering of Ketill Hvi), a Norwegian leader who fell in 857. Mr. Nutt gives a fair résumé of Zimmer's position and arguments, to which we refer our readers. That the new theory should provoke angry protest from the Irish camp was inevitable. The Fenians of legend had given their name to Young Ireland as defenders of their country. To be informed that the original Fenians were but enemies (literally so, the word being, according to Zimmer, a corruption of Scandinavian *fjándr*, "enemy"), was too much for patriotic scholarship. In a brief appendix, Zimmer, going still further, contends that Oisin, the son of Finn (Macpherson's Ossian) was etymologically Ôswine, Oiserg was Ôsric, Osbran was Ôsbrand, Osult was Ôswald; Ôs- in these compounds being the well-known English equivalent of Âs- in Scandinavian. We will not take sides in the controversy. The points in dispute are at once difficult and obscure; time and patience alone can permanently settle them. Meanwhile we ought to be able to say this much at least without offending Irish susceptibilities: Irish myth and legend, in the shape in which they have come down to us (the MSS. cannot be dated earlier than 1100) are confused and incoherent. They need reconstruction as much as, let us say, the Siegfried myth in Norse-German, or the Beowulf myth in Anglo-Saxon. It is a truism of Irish history that for over two centuries prior to 1100, the island was at the mercy of invaders from Scandinavia. Is it at all improbable that these Danes, Swedes, or Norwegians should have brought with them their own mythology and imposed some of its traits upon their Celtic neighbors? It should be borne in mind that Zimmer two years be-

fore, in the *Zeitschrift*, xxxiii., showed that even the earlier and undoubtedly Irish Cúchulainn cycle betrayed evidences of Teutonic contamination. His latest paper is but a continuation of the former. And his method in both is the same. In the Finn story, Finn burns his finger in cooking the salmon, and, sticking it hastily in his mouth, acquires thereby a knowledge of things unknown. From the Irish point of view this episode is unintelligible, but it becomes perfectly clear if we treat it as a garbled reminiscence of Siegfried roasting the heart of Fafnir. Not a few words and phrases in Irish legend are inexplicable by the laws of Celtic philology, but they are intelligible as corruptions of Norse words on the Irish tongue. We merely indicate the drift of Zimmer's argument. Whether all his etymologies and contentions will obtain final acceptance we leave to the future, contenting ourselves for the present with the belief that he has given a new and powerful impulse to mythological study. It is interesting to note that the burnt-finger episode occurs in Mr. Campbell's collection, p. 20.

Familiar Quotations: A Collection of Passages, Phrases, and Proverbs traced to their Sources in Ancient and Modern Literature. By John Bartlett. 9th ed. Boston: Little, Brown & Co. 1891.

With lengthening span, this indispensable handbook has steadily broadened its scope, till it pauses at the point indicated by its new sub-title. It is still preponderantly a poetical anthology, but the prose element is now significantly large, and in one block have been added 121 pages of translations extending from Bidpai to Uhland, some of them expressly made for this work, with generous draughts from Plutarch, Epictetus, Marcus Aurelius, Diogenes Laertius, Cervantes, etc. A good deal of the old appendix has been incorporated in the body of the 'Quotations,' but the new appendix still fills eleven pages. If the type is slightly larger than in the eighth edition (1882), so also is the page, and there are now 1,158 pages against the former 904—an increase of much more than a third, as Mr. Bartlett reckons; and we gladly take his word that the stupendous index contains 10,000 additional lines.

These are the bare statistics of the compiler's final achievement, but it is impossible to indicate the amount of overhauling which the work has received in every part. At most we can touch upon a few representative names by way of suggestion. It cannot be denied that in a collection of this character the personal equation counts for very much; but if one should ask what poet in the past nine years had most absorbed public attention, the answer would be, unanimously, Browning. Browning clubs in England and America, Browning's death and Browning's Life, are notorious facts, and Browning quotations have consequently been the order of the day. Mr. Bartlett's recognition of this is almost startling in extent. In the eighth edition of the 'Quotations' there were just three extracts from Browning, and two of these were from "Faracelsus." The present edition leaps to nine *pages* of extracts, and the citations from "Paracelsus" have been quadrupled. Yet we remark with surprise that "The Lost Leader" only now is deemed "familiar." There is no other example of expansion comparable to this. Browning, by a disagreeable association, reminds us of Edward Fitzgerald, and so of Omar Khayyám, whose one extract has become six, in accordance with an enlarged reading and popularity of the "Rubáiyát." From Browning to Tennyson, too, is a natural transition; the latter's nine pages have been extended to twelve.

So much for contemporary English poets. Among their predecessors, Shakspere has become still more a household word, chiefly, it would appear, in the direction of the Sonnets; a rather tardy admission being accorded (among other well-known lines) to "Full many a glorious morning have I seen," and to "Not marble, nor the gilded monuments." Wordsworth fills no more pages than in the previous edition, but has made gains, not easy to discover on account of transpositions. Coleridge does better proportionately, but by an extension of his prose; extracts from his 'Table Talk' are given for the first time. These two poets admirably illustrate the fortuitous and arbitrary character of "familiar quotations," which are so far from being a criterion of the poetic worth and beauty of the pieces they are taken from. Let any one compare the single excerpt from the Peele Castle stanzas, or the two from the ode "Dejection," with what remains behind. But then, let any one love the poetry of Clough, and turn in vain to this dictionary to find a trace of popular favor—not even "Say not the struggle naught availeth," nor "It fortifies my soul to know"; neither "Peschiera" nor "Qua cursum ventus." His name is altogether wanting. Carlyle, the poet, suffers a like eclipse, though his translation of Goethe's "Symbolum" is known by heart to many. His prose, on the other hand, has been notably extended, from 'Sartor Resartus,' 'Heroes,' and 'Frederick the Great.'

Emerson, to come to America, has received a great expansion, and in his case, too, surprises are not few, in that "So nigh is grandeur to our dust," and "When half-gods go, The gods arrive," have just been discovered, and that his "Terminus"—perhaps the noblest swan-song of any poet—is still *terra incognita*. His prose sayings have been multiplied, and "Hitch your wagon to a star" at last finds its proper place in this handbook. So, oddly enough, does the stanza, "Life is real! life is earnest!" which had been heretofore passed over in Longfellow's "Psalm of Life"; and a shorter omission is likewise repaired. Had the fates ordained a tenth edition, perhaps we should have had this poem at last printed entire. Holmes's "Chambered Nautilus," again, has been recalled from a strange exile; and his prose has grown from one item to a page. The section devoted to Lowell was, as we see, in the press before the date of his death could be filled out. His three pages in the eighth edition have become eight, with two of prose—an innovation. First now to appear under Whittier we remark extracts from his "Ichabod" and "The Eternal Goodness"; but even so a page is hardly made out for a poet far more widely read than Lowell, yet also, we apprehend, less quoted, and certainly less quotable. And to these three preëminent poets of the elder generation, which of the later-born are to succeed, this dictionary being witness? Cranch, older than Lowell, and Channing, but a few months younger, and both still surviving, are little known to the great public of the present day. They have contributed something to Mr. Bartlett's store. Of all the rest, with possibly one or two obscure exceptions, Mrs. Elizabeth Akers Allen, for her "Rock me to Sleep, Mother," and Bret Harte, for his "Heathen Chinee," alone pass current from mouth to mouth. That implies neglect of Aldrich, Chadwick, Gilder, Higginson, Howells, Joaquin Miller, Parsons, J. J. Piatt, Stedman, Stoddard, and Story among the men well known for their verse at the date of Mr. Bartlett's eighth edition; Miss Thomas, Miss Woolsey, Mrs. Piatt, Mrs. Moulton, Mrs. Dorr, Mrs. Thaxter, among the women—to mention no others, of both sexes. We may observe, too, that the recent dead, Bayard Taylor excepted, have fared no better, and that not a line serves for a headstone to Paul Hayne, Helen Hunt Jackson, Sidney Lanier, or John Boyle O'Reilly. Numbers, it is clear, do not suffice. The public, indifferent to if not annoyed by the swarm of latter-day bards, seems ready to exclaim with Goethe:

> "Wisse dass mir sehr misfällt
> Wenn so viele singen und reden!
> Wer treibt die Dichtkunst aus der Welt?
> Die Poeten!"

We might continue our evidences of the perfecting of his compilation on the part of Mr. Bartlett, but it is time that we too should say finis. No more useful example of persistent renovation and improvement of a standard work has been offered in this country, and seldom anywhere outside of Germany. While the 'Familiar Quotations' has been imitated and pirated in England, it has never been approached, and is to-day the convenience of all English-speaking peoples. Its rare textual accuracy, precise citation, original research, and instructive comparisons of nearly identical thoughts and expressions, would constitute a sufficient life-service for any author. But Mr. Bartlett does not cease from labor because he will put no further touches to the 'Familiar Quotations.' Praise and gratitude for this closed account; but a new page of the ledger will presently open when his Shakspere Concordance sees the light.

English Composition: Eight Lectures given at the Lowell Institute [Boston]. By Barrett Wendell. Charles Scribner's Sons. 1891.

Prof. Wendell has for a decade had a responsible charge at Harvard College in connection with the English department, and has acquitted himself well. All that he here tells us incidentally of his acquired experience as instructor in a most difficult branch, will profit his fellow-instructors everywhere. These, however, he does not address (for he has not aimed at making a text-book), but the public at large. As he undertook to interest a mixed audience by lecturing, so he thinks the general reader will find his remarks more appetizing than the ordinary manuals. Consequently, he has but slightly retouched his discourses. This seems to us a misjudgment, on several grounds.

In the first place, a lecturer on rhetoric must, almost of necessity, greatly curtail his illustrations and subordinate them to his general principles—must begin by developing the latter. This is the bane of text-books for beginners even in formal and exact science, and is what has made grammar so odious a study. The mind refuses to be interested in abstract definitions and systematic presentation; and the first business of a text-book is to interest. The lecturer who employs this method in a series is further at the disadvantage, as compared with a writer, of having to refresh the memory of the regular attendants, as well as to furnish a clue to listeners who come in at the middle of the course. In fact, Mr. Wendell resorts to a great deal of iteration—to a great deal more, we are sure, than he would have ventured upon or thought needful had he composed for readers alone. Then he has, as he freely confesses, been handicapped by the conditions of his lectureship, viz., so many talks of just an hour each, with

the result of destroying the proportion he usually observes with his college classes; hence unavoidable compression and relatively undue stress.

Despite the compression, there is in some of these chapters an air of diffuseness and almost of padding. Much valuable space is wasted, as it seems to us, on a fanciful distinction between the written and the spoken word, which, for example, finds a concrete expression in the remarkable assertion that, "alone of the elements of style, paragraphs belong to written composition, and not to spoken." There is a whole chapter on paragraphs, which Mr. Wendell calls "parts of [written] composition," as if they were not parts of thought, whatever mode be taken to give them utterance. To the mind they represent single efforts, to the voice they are breathing-spells, to the eye they are merely punctuation-marks. Mr. Wendell's scheme has not, so far as we can see, any provision for the case of a thinker who dictates—say a review—to an amanuensis without indicating paragraphs. In the revision, if the thought has been orderly and logical, the paragraphing is merely a mechanical affair; and the nature of the composition will determine whether the cleavage be between topics or between categories. In the former case the paragraphic break may be likened to the period; in the latter to the semicolon.

Mr. Wendell admits that for him punctuation is a mystery; and in truth it cannot be taught in lectures without a great deal of apparatus. The few words he bestows upon the theme are of no worth for practical guidance. The same may be said of his observations on the correct use of shall and will, in which his loose idea is shown by the sentence, "I *will* come, means, clearly enough, that I should like to come very much." Was this in Regulus's mind when he pledged himself to return to the Carthaginians? "I will come" means "I intend, I am resolved, to come." It will not do here, as Mr. Wendell proposes, to refer to good manners or good sense for a criterion. In other parts of his doctrine he shifts his burden in like manner, and even calls in "the average man" as his *deus ex machina*. The appeal to good usage, which, of course, he constantly urges, is the only definite and practical rule.

The unconscious side of literary expression or style is hardly at all regarded by Mr. Wendell. Writers of eminence differ extremely among themselves in artistic intent, in rough-drafting, correction, polish; but substantially they write prose, as M. Jourdain spoke it, without knowing it. The gift is inborn, but so is the power of thought, without which mere fluency would never gain distinction for any one. "'I can't write, anyhow,' say students to me year after year; they mean," says Mr. Wendell, "that they won't think." This no more follows than it would from a person's declining to speak in public. A whole library of books on English composition could not teach a man to express himself on a subject beyond the range of his interest, his knowledge, or his natural capacity. Hence the discipline surest of success is to be sought in narration and description, in making abstracts from good models, and in translations. The thinking may be left to take care of itself, as may style in the higher sense. The cultivation of clearness, directness, and terseness is the thing to be aimed at for the ordinary student, who can never hope to shine as thinker or stylist. It would tend to spare Mr. Wendell his "most frequent experience," "the striking out of the first page or so of a student's compositions," written, as our author pleasantly says, in obedience to "a very strong impulse to preface something in particular by at least a paragraph of nothing in particular, bearing to the real matter in hand a relation not more inherently intimate than that of the tuning of violins to a symphony." It might also save his pupils from such defects as this (p. 181): "If rigid adherence to formal rules be fatally frigid, none the less fatal to any certainty of effect is *that* relaxation of grasp *that* must result from disregard of the principles of Unity, of Mass, and of Coherence, *that* underlie all formal rules"—where *the*, *that*, and *which* would have been more elegant and less monotonous, and at the same time more perspicuous; or this (p. 222): "I might go on almost as long as I chose. In brief, *these* seem to mean that we may assume the average man to know what good use is"—where the antecedent of *these* is ten lines off, with five plural nouns between.

We are tempted to close with a nugget of good sense respecting composition, which may be found in the correspondence of Rousseau, and as it would be a pity to translate it, we may be pardoned for giving it in the original. The passage is the more important because Rousseau notoriously elaborated what he wrote and was a conscious artist:

"Qu'une expression soit ou ne soit pas ce qu'on appelle française ou du bel usage, ce n'est pas de cela qu'il s'agit: on ne parle et l'on n'écrit que pour se faire entendre; pourvu qu'on soit intelligible, on va à son but; quand on est clair, on y va encore mieux: parlez donc clairement pour quiconque entend le français. Voilà la règle, et soyez sûr que, fissiez-vous au surplus cinq cents barbarismes, vous n'en aurez pas moins bien écrit. Je vais plus loin, et je soutiens qu'il faut quelquefois faire des fautes de grammaire pour être plus lumineux. C'est en cela, et non dans toutes les pédanteries du purisme, que consiste le véritable art d'écrire."

We are bound to say that this doctrine is by no means foreign to Mr. Wendell, as any reader of his pages will see.

Dante's Treatise 'De Vulgari Eloquentiâ.' Translated into English, with explanatory notes, by A. G. Ferrers Howell. London: Kegan Paul, Trench, Trübner & Co. 1890.

It is to be regretted that we have not a complete and uniform English translation of all Dante's works, for to the student of history and letters all that Dante wrote possesses the exceptional value of an authoritative document. In many and varied subjects, in questions of science, government, literature, and philology, he throws light on an interesting period of history. In his minor works especially, he was almost the only writer of the day who bore witness to the changes through which Italy was passing in language and literature no less than in politics and religion. Such "documents" must, of course, be made accessible to the general reader and student as well as to the specialist. In Germany, thanks to that passion for translating into the vernacular masterpieces of all languages which was one of the best traits of the romantic movement, Kannegiesser and Förster had published by 1845 satisfactory renderings of all Dante's minor works. But the English tongue has not been so fortunate. The 'Lyrics,' indeed, were translated as early as 1835, and the 'New Life' in 1846, but it was not until 1879 that the treatise 'On Monarchy' appeared, and not until 1889 that the 'Banquet' was satisfactorily rendered into English. There still remained four minor pieces of various value: (1) Dante's Letters—important remnants of his public and private correspondence; (2) the treatise 'On the Relations of Land and Water'—a marked example of Dante's eager interest in scientific inquiry; (3) certain Eclogues—communications, in what seems to us the most artificial of forms, addressed to Giovanni del Virgilio, one of the most interesting of the early humanists; and (4) a treatise 'On the Vulgar Tongue.' For a creditable translation of this last from the vigorous but crabbed Latin in which it is written, we owe our thanks to Mr. Howell.

The treatise 'On the Vulgar Tongue' is of interest both to the pure philologian and to the general student of literature. To the philologian it recommends itself as the earliest Italian work whose author recognized the common basis of the Romance languages and had an inkling of their historical relation to Latin; even though it frequently disappoints him by a too frequent use of the purely subjective and deductive methods, which Dante owed to his scholastic studies, at just the points where facts objectively considered for purposes of induction would be most interesting and valuable. Whatever the worth, however, of its information on linguistic matters, the treatise leaves on the reader an impression of great nobility. Dante himself shows in it. At a time when the early humanism was beginning to be dominant, and a senile Latin to tyrannize over the new-born Italian, the master could see in the vernacular the high worth of that which is the instrument of our daily needs, however intimate or common they may be.

"The Vulgar Tongue," he says, "is that which we acquire without any rule, by imitating our nurses. We afterwards have another secondary speech, which the Romans called Grammar. Few, however, acquire the use of this secondary speech, because we can only be guided and instructed in it by the expenditure of much time and by assiduous study. Of these two kinds of speech, also, the Vulgar Tongue is the nobler, as well because it was the first employed by the human race as because the whole world makes use of it, though it has been divided into different forms of utterance and words. It is also the nobler as being natural to us, whereas the other is rather of an artificial kind; and it is of this nobler form of speech that we intend to treat."

To the attentive reader, moreover, this fragmentary treatise marks something like an epoch in Dante's life. Internal evidence assigns it to the earlier years of his exile, and most scholars agree that it was written about 1305, just before the 'Banquet,' the sceptical Scartazzini alone placing it later. But what is most significant about it is that in it Dante is midway between the love-sonneteer of the 'New Life' and the great thinker and poet of the 'Divine Comedy.' Shorter pieces, sonnets, ballades, and the like, no longer attract him, nor has he yet risen to the ambitions of his later all-embracing 'Comedy.' The *Canzone*, a much longer form of composition than the sonnet, answering roughly to the elaborate ode of the eighteenth century, seems to him most worthy of an author's ambition. "Now, that the whole of the art of poetic song is embraced in *Canzoni* appears from the fact that whatever is found in the art is found in them. . . . For all the utterances of the highest mental powers of illustrious poets* are found in *Canzoni* alone. Wherefore, in reference to the subject now before us, it is clear that the matters which are worthy of the highest vulgar tongue ought to be handled in *Canzoni*." To the theory of the *Canzone*, then, with all its problems for subtlety and deftness, the poet is devoting

*Dante's own extraordinary phrase is, "Quicquid de cacuminibus illustrium capitum profluxit ad labia."

himself already. His earnestness warns the reader that this trained hand will find work more worthy of it. Already Dante feels that something separates him from his fellows. The theme of one is always love, he says; that of others arms. His, and his alone, is the theme of "righteousness."

Mr. Howell's rendering, though not preëminent for smoothness and fluency, has in general triumphed over the peculiar difficulties which he had to meet. His notes are, so far as they go, accurate; but they are designed for the most cursory reader. The main facts concerning Cino da Pistoia's life (p. 98), for instance, are already at hand in several books of reference with which any one who is likely to use the translation must be familiar. What is much more important than dates and titles is a full statement of Cino's part in that school of poetry which Dante did so much to found and to perpetuate—the *dolce stil nuovo*. Indeed, the treatise 'On the Vulgar Tongue,' though not written for that purpose, can best serve us as a guide to the literature of the thirteenth century. It is in their dealing with the structure and sequence of the various schools of that literature that Mr. Howell's notes are weakest.

Essays, Scientific, Political, and Speculative. By Herbert Spencer. Library Edition, containing seven essays not before republished, and various other additions. 3 vols., 8vo, pp. 478, 466, 516. With an alphabetical index. D. Appleton & Co. 1891.

THE theory of ethics which has latterly been taking shape under the hands of Stephen, Spencer, and others, is, from a practical point of view, one of the most important boons that philosophy has ever imparted to the world, since it supplies a worthy motive to conservative morals at a time when all is confused and endangered by the storm of new thought, the disintegration of creeds, and the failure of all evidences of an exalted future life.

The little of new which is contributed to the ethical theory in the present edition of Mr. Spencer's essays is contained in the essays on the "Ethics of Kant" and on "Absolute Political Ethics." It was hardly to be expected that the additions would go to enhance Mr. Spencer's well-built-up reputation. The popularity of his doctrine has probably passed its meridian. In one of the new essays, he quotes with admiration Huxley's fine saying, "Science commits suicide when it adopts a creed." That is just the principle of death lurking in Spencer's philosophy. It is a creed in that it is erected upon axioms founded only on the inconceivability of their contradictory opposites, and regarded as absolutely indubitable. One of the seven essays mentioned on the title-page refers to the discussion concerning the a-priori origin of axioms. Few psychologists, if any, would now dispute the instinctive origin of the ideas from which the three laws of motion have become evolved under the influence of experience and reflection. But it is a widely different thing to say that these laws are without doubt exactly true. For such a belief there cannot be the slightest warrant. In the same way, it may be true that all scientific reasoning postulates something which men seek to formulate as the general uniformity of nature; but it by no means follows that reasoning cannot discover that this postulate is not exactly true. That would be like insisting that because astronomy rests on observations, therefore the astronomer cannot deduce from these observations their probable error. Science or philosophy cannot itself commit suicide; but a method of inquiry which provides no means for the rectification of its first principles, has mixed and swallowed its own poison and has to expect an inevitable doom. What explains the success of modern science is that it has pursued a method which corrects its own premises and conclusions. It reminds us of certain methods of arithmetical computation where mistakes of ciphering have no effect but what disappears as the process goes on. In like manner philosophical inquiry, which necessarily begins in ignorance, must not pursue a method by which the error of its first assumptions is allowed to retain its full effect to the end, or else it will come to naught.

The most interesting of the new essays is that "On the Factors of Organic Evolution," in which the author urges almost irresistibly the indirect evidence of the transmission of acquired characters. As in the question of spontaneous generation, the direct evidence is feeble, if not quite wanting. But the force of general facts and indirect considerations would appear, at least to onlookers of the controversy, as sufficient to remove all doubt. Spencer well says that many of the modern evolutionists are more Darwinian than Darwin ever was; yet in part the reverse is true. The intellectual motive which has prompted evolutionary speculation in biology is the desire to discover the laws which determine the succession of generations. This involves in some sense a "postulate" that the phenomena are subject to law; but to jump to the assumption made by neo-Darwinians that the form of each individual is a mathematical resultant of the forms of its ancestors, is not to be more Darwinian than Darwin, but, on the contrary, it is seriously to maim his theory.

Spencer cites the old dogma that Nature abhors a vacuum as an example of a merely verbal explanation. A reader of Boyle's attack upon the maxim, made while it was a living belief, would hardly so judge it, since Nature was conceived as a sort of living being mediating between the Creator and the universe. Yet, as Nature's abhorrence of a vacuum remained somewhat unreasonable, Spencer is right in saying that the theory gave little help towards understanding the facts. But what, then, shall we say of a theory which proposes to explain all growth and its inexhaustible manifold of results by the law of the conservation of energy—that is, by a mere uniformity in the motion or matter, a mere general description of certain phenomena? To suppose an intelligence, provided only we can see its acts intelligently, is to suppose that which is intelligible *par excellence*. But to suppose that blind matter is subject to a primordial law, with nothing but an Unknowable beyond, would seem to leave everything as incomprehensible as well could be, and so fail completely to fulfil the function of a hypothesis.

Besides, the law of *vis viva* is plainly violated in the phenomena of growth, since this is not a reversible process. To explain such actions—of which viscosity and friction are examples—physicists resort to the consideration of the chance encounters between trillions of molecules, and it is an admirable scientific feature of the Darwinian hypothesis that, in order to account for a similar irreversible operation, that of growth, it equally resorts to the doctrine of chances in its fortuitous variations. The attempt of some of Darwin's followers to drop this feature of the theory is unscientific. It is also destructive of the theory, for if any laws of heredity are followed with mathematical exactitude, it becomes at once evident that the species of animals and plants cannot have arisen in anything like the manner in which Darwin supposed them to arise.

Another interesting part of this essay is where the author draws attention to the strong evidence of an enormous direct effect upon animal and vegetable forms due to the circumambient element. Such considerations strengthen Mr. Clarence King's suggestion that transmutations of species have chiefly been caused by geological changes of almost cataclysmic magnitude and suddenness, affecting the chemical constitution of the atmosphere and ocean.

In the essay, or prepared "interview," on "The Americans," Spencer holds, it will be remembered, that we carry the gospel of work too far.

Usambara und seine Nachbargebiete. Von Dr. Oscar Baumann. Berlin: Dietrich Reimer. 8vo, pp. 375.

THIS stout book is an elaborate description of the northernmost of the East African countries recently acquired by Germany. It is based on the personal observations of the author during two explorations made in 1888 and 1890. The territory described comprises a strip of the continent extending from the coast opposite the island of Pemba, just to the north of Zanzibar, in a northwest direction as far as the mountain Kilimanjaro. Its extent is estimated at 45,900 square kilometres, with some 156,000 inhabitants of various races and tribes. The author divides it into coast-land, *Vorland*, steppe, and the hill-region, and each is treated separately and in detail—its physical features, its fauna and flora, its people and their manners and customs. He begins with the coast, describing the various ports with extreme minuteness, even to the mention of the beer-saloon of Tanga, a town which is the home of twenty Germans as well as the seat of a garrison.

The most interesting part of the book is that relating to the life of the natives, who, in the various regions, differ very much in their customs. Some of the tribes, for instance, practise circumcision. One is distinguished by the worship of its ancestry. Another offers sacrifices to its dead to ward off the misfortunes which their spirits are supposed to bring to their families. In another a murderer is sold as a slave, unless his property suffices to satisfy the claims of the relatives of his victim, while in others he is executed. One tribe was visited which did not live in villages, but in scattered huts or on farms, as it were. Particularly interesting are Dr. Baumann's accounts of the children, the girls who play with dolls, and the ceremonies attending their coming of age and marriage, as well as the dances and music of the several tribes. The English missions are referred to in a kindly spirit, but an unfavorable report is made of their work and influence. Islam, on the other hand, is spreading rapidly among some of the coast tribes.

The closing chapter deals with the climate as affecting Europeans—the coast being fairly healthy and the *Vorland* unhealthy—and the value of the country for commercial and colonial purposes. In its present condition this value is small, as the population is scanty, and a large part of the country is exposed to the periodical ravages of the Masai, who absolutely prohibit cattle-raising by driving off all the herds. There are no indications of coal or minerals, except that iron is found in the mountain streams of Pare. It is taken out and washed like gold, chiefly by the women, who also do much of the smelting and smith's work in making spears and swords. The au-

thor advocates strongly the construction of a railway from the port of Tanga to a point ninety kilometres distant in the interior, where two important caravan routes meet, the one going to the Victoria Nyanza, the other through Ugogo to Lake Tanganyika. From the latest advices this has been determined upon, and an engineer has been sent out to survey the route.

An appendix contains reports on the author's collection of edible plants, of butterflies, and of skulls. There are also lists of words in divers native languages, and several of the African songs and dances are set to music. The large map of the country is an admirable piece of work, and reflects great credit upon Dr. Baumann, who regards it as his most important task and considers the book to be subsidiary to it. In addition to the general map are others, showing the distribution of the races, the density of the population, the distribution of the food plants, and the geology of the country. The author's style is clear, and his descriptions are vivid, while the general appearance of the book is very attractive.

BOOKS OF THE WEEK.

A Bibliographical Catalogue of Macmillan & Co.'s Publications from 1843 to 1889. Macmillan & Co. $3.
Ball, Thomas. My Threescore Years and Ten. Boston: Roberts Bros.
Bartlett, John. Familiar Quotations. 9th ed. Boston: Little, Brown & Co.
Barrie, J. M. Auld Licht Idylls. Cassell Publishing Co. $1.50.
Bate, W. S. Wayside Voices. New York; The Author.
Behnke, Emil. Stammering, its Nature and Treatment. London: T. Fisher Unwin.
Boldrewood, Rolf. A Sydney-Side Saxon. Macmillan & Co. $1.
Bristol, E. L. M. Before He Was Born. New York: The Author. 50 cents.
Brooks, Noah. The Boy Settlers. Charles Scribner's Sons. $1.25.
Brown, Alex. J. Popular Recitations. New York: Excelsior Publishing House. 25 cents.
Brown, Prof. G. B. The Fine Arts. [University Extension Manuals.] Charles Scribner's Sons. $1.

Caine, Hall. The Scapegoat. John W. Lovell Co. 50 cents.
Cone, Helen G. The Ride to the Lady, and Other Poems. Boston: Houghton, Mifflin & Co. $1.
Dictionary of National Biography. Vol. 28. How—Ing. Macmillan & Co. $3.75.
Driver, Prof. S. R. An Introduction to the Literature of the Old Testament. [International Theological Library.] Charles Scribner's Sons. $2.50.
Earle, Alice M. The Sabbath in Puritan New England. Charles Scribner's Sons. $1.25.
Edwards, Rev. Tryon. A Dictionary of Thoughts. Cassell Publishing Co. $5.
Ewing, Juliana H. Last Words. Boston: Roberts Bros. $1.25.
Gilman, N. P., and Jackson, E. P. Conduct as a Fine Art. Boston: Houghton, Mifflin & Co. $1.50.
Goldsmith, Milton. Rabbi and Priest. Philadelphia: Jewish Publication Society of America.
Gore, Prof. J. H. Geodesy. Boston: Houghton, Mifflin & Co. $1.25.
Harris, A. L. The Fatal Request. Cassell Publishing Co. 50 cents.
Heimburg, W. A Maiden's Choice. Worthington Co.
Holmes, O. W. The Poet at the Breakfast Table. Riverside Edition. Vol. III. Boston: Houghton, Mifflin & Co. $1.50.
Holmes, O. W. Over the Tea Cups. Riverside Edition. Vol. IV. Boston: Houghton, Mifflin & Co. $1.50.
Howe, Maud. Phillida. John W. Lovell Co. $1.
Kerolenko. In Two Moods. John W. Lovell Co. 50 cents.
Kirkland, Joseph. The Captain of Company K. Chicago: Donohue, Henneberry & Co. 50 cents.
Kipling, Beatrice. The Heart of a Maid. John W. Lovell Co. 50 cents.
Landon, M. D. ("Eli Perkins"). Thirty Years of Wit. Cassell Publishing Co. $1.50.
Lillie, Lucy C. The Squire's Daughter. Philadelphia: Porter & Coates.
Lippmann, Julie M. Jock o' Dreams. Boston: Roberts Bros. $1.25.
Loftie, W. J. Westminster Abbey. New ed. London: Seeley & Co.; New York: Macmillan. $2.25.

Recalled to Life.

By GRANT ALLEN. Cloth, $1.00; paper, 40 cents.

"A tale with elements of novelty as a psychological study and great ingenuity and felicity."—*Chicago Times.*

HENRY HOLT & CO., N. Y.

LINCOLN.

G. KRUELL'S portrait on wood from photograph and life mask. Size of block, 8.5x10.5 inches. Proof impressions on Japanese paper, signed by the artist.

"This extraordinary print of Lincoln is, we do not hesitate to say, destined to be the historic likeness of the first President of our free Republic."—*The Nation*, March 26, 1891.

WEBSTER.

G. KRUELL's portrait on wood from daguerreotype. Size of block, 12x10.5. Proof impressions on Japanese paper, signed by the artist.

"In point of technique . . . perhaps even more to be admired [than the Lincoln]. . . . Not less calculated to cast all previous prints in the shade."—*The Nation*, Sept. 24, 1891.

TWENTY DOLLARS each, carriage free. Address G. KRUELL, East Orange, New Jersey. (Mr. Kruell will also send *on approval* on receipt of price.)

Mr. Kruell also has for sale his DARWIN (two portraits), GARRISON, PHILLIPS, ASA GRAY, and E. L. GODKIN, in the same style of engraving and impression, at Fifteen Dollars each: edition limited.

EQUITABLE
MORTGAGE COMPANY

Condensed Statement, June 30, 1891.

Capital authorized	$4,000,000 00
Paid (in cash)	2,049,550 00
Surplus and undivided profits	830,396 67
Assets	14,074,813 56

This company solicits correspondence about all first-class investment securities.

Buys and negotiates Municipal, Railroad, Water, Industrial, and Irrigation Bonds.

Issues its debentures and negotiates mortgage loans.

Studies in Church History.

The Rise of the Temporal Power. Benefit of Clergy. Excommunication.

By HENRY CHARLES LEA, LL.D.

New Edition. In one very handsome royal octavo of 605 pages. Cloth, $2.50.

"They deal at great length, and apparently with much care, and as the result of long and well-directed research, with many of the most interesting controversies of the ancient and mediæval church; and they contain much information that will be new at any rate to all but ecclesiastical scholars. The papers on primitive discipline and on the abuse of excommunication in later times contain a mass of curious and interesting particulars which will fix the attention of the reader who dips into them however hastily, and will give to many a clearer idea than they ever before entertained of the abuses of power which led to the great revolt of the Reformation, and to many of those revolts, less famous because unsuccessful, which preceded it."—*London Saturday Review.*

"Mr. Lea is *facile princeps* among American scholars in the history of the Middle Ages, and, indeed, we know of no European writer who has shown such research, accuracy, and grasp in investigating important and out-of-the-way topics connected with the history of Europe in the Middle Ages."—*N. Y. Times.*

"It is some years since we read the first edition of this work by Mr. Lea, and the impression made by it on us at the time is confirmed by reperusal of it in this enlarged and improved form; namely, that it is a book of great research and accuracy, full of varied information on very interesting phases of church life and history. It discusses each subject with a rare fulness of dates and instances, and a curious conscientiousness of verification and citation of authorities."—*Edinburgh Scotsman.*

TWILIGHT PARK, IN THE CATSKILLS.

I write these advertisements with the frankness of a private letter, seeking to entice every reader to visit this Happy Valley so full of witching beauty and now in full autumnal glory. Here you may find rest and refreshment for mind and body, drawing inspiration from the grandeur of the mountains and hearing "the still small voice" that speaks to the soul in the forest recesses.

The *Nation's* editorial on "Changes in Summer Migration" emphasizes the growing taste for sequestered homes amid rural quiet, and the wholesome preference for "summer rest" rather than "summer whirl," and for prolonging the vacation season from June to October. Our people are learning to relish rural life as the English do and to shrink from the exactions of "society" and fashion. We shall see Twilight Parks everywhere, and the cottage system has come to stay.

Our simple log cabins are most popular. If you could peek into the window where I am writing before breakfast, with my dogs by my side this superb morning, you would think it inviting. Rough comfort is the chief aim. A corner fire-place, some Shaker rockers, cheap matting, and a few rugs on the floor; a lot of Art Interchange sketches in rustic frames on the walls, an ancient desk and spinning-wheel, with Japanese lanterns galore, a flag or two, some jars and mugs, a Burlap portière—and that is all. The beds are of the best. There is abundant light, and air, and comfort; and we relish it all—even Prince and Rover, waiting for their romp.

Just now the misty mildness makes a piazaz hammock an excellent point of observation, but when evening approaches and the mountains wrap their sable cloaks around them and commune with the stars, we gather about the crackling fire, and while a Russian friend dispenses tea from a Samavoir the hours pass cheerily with music, song, chat, or other amusement. There are beds for seven and room to entertain a score, yet $1,000 paid for everything.

Though the crowd has gone we find plenty of occupation. One day we drove to Overlook and lunched on the rocky verge above miles of sweeping landscape. Thursday a party of thirty supped at Sunset Rock, and waited till the moon rose from the Hudson Valley, returning by her pale gleam through winding footpaths. Building is going on; four cottages under way, a dozen in prospect out beyond Ledge End, among the trees yet on sunny sites with a commanding view.

When you come to Twilight you will be "personally conducted" about the place, and shown the houses and the views, but you will not be urged to buy. We are not mercenary, but are so proud of our baby settlement that we want every one to know when it is getting a new tooth.

Perhaps you may fall in love with the Park, but it won't be our fault; we only press the button and Nature does the rest. But you must be "a clubbable fellow," and not a votary of fashion or Mrs. Grundy, to relish such life, or to be admitted to our charmed circle.

CHAS. F. WINGATE,

Haines Falls, Greene Co., or 119 Pearl St., N. Y.

A NEW AND VALUABLE WORK OF REFERENCE.

A DICTIONARY OF THOUGHTS.

Being a Cyclopedia of Laconic Quotations from the best authors, both ancient and modern. By TRYON EDWARDS, D.D. Alphabetically arranged by subjects. 1 vol., 8vo, pp. XII-644, extra cloth, $5 00.

It is believed that no work has hitherto appeared which equals the present volume, in scope and value, as a treasury of the best thoughts of the world's greatest authors.

A New Volume in Cassell's Blue Library.

Edleen Vaughan.

Or, Paths of Peril. By CARMEN SYLVA (Queen of Roumania), author of 'The Witch's Citadel,' 'Astra,' etc. 1 vol., 12mo, cloth, $1.00.

There is a tenderness and charm in "Carmen Sylva's" writings that commend them to mothers, as well as to their daughters. 'Edleen Vaughan' has both of these qualities, and at the same time it has more, and will do much to enhance the author's reputation.

New Volumes in Cassell's Sunshine Series.

The Fatal Request.

A Novel. By A. L. HARRIS, author of 'Mine Own Familiar Friend.' 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

By Right, Not Law.

A Novel. By R. H. SHERARD. 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

A Russian Priest.

By HOTAIIEHKO. 1 vol., 12mo, paper, 50 cts.; cloth, 75 cts.

The Cruel City.

After the Russian of Dimitry Grigorovitch. With an introduction by Ernest de Lancey Pierson. 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

Within Sound of the Weir.

By THOMAS ST. E. HAKE, author of 'In Letters of Gold,' etc. 1 vol., 12mo, paper, 50 cents, cloth, 75 cents.

New Volumes in the "Unknown Library."

Some Emotions and a Moral.

By JOHN OLIVER HOBBES.

Amaryllis.

By GEORGIOS DROSINES.

Each in 1 vol., unique cloth binding, 50 cents.

A Girl in the Karpathians.

By MÉNIE MURIEL DOWIE. 1 vol., 12mo, extra cloth, illustrated, $1.50.

"Fresh, utterly unconventional, and wholly charming. . . . It must be read."—*The Nation, New York.*

"FRESH AND SPARKLING."

ELI PERKINS.

THIRTY YEARS OF WIT,

And Reminiscences of Witty, Wise, and Eloquent Men. By MELVILLE D. LANDON (Eli Perkins). 1 vol. 12mo, cloth, with portrait, $1.50.

In this book Eli Perkins, as Mr. Melville D. Landon calls himself professionally, recounts all the witty sayings of the famous people he has met in the course of his thirty years' experiences as a humorous writer and lecturer. Before his battery of good stories soldiers and statesmen gave way, and for the time being joined his ranks "swapping anecdotes," which appear here for the first time.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company

104 and 106 Fourth Avenue, New York

Charles Scribner's Sons'

NEW BOOKS.

Across Russia.

From the Baltic to the Danube. By Dr. CHARLES A. STODDARD, Editor of the New York *Observer*. Illustrated. 12mo, $1.50.

An experienced traveller and careful observer, the author has pictured most graphically the people, customs, art and institutions, and the many phases of life in Russia.

Elsket,

And Other Stories. By THOMAS NELSON PAGE. 12mo, $1.00.

Mr. Page's new volume contains the stories written since his popular "In Ole Virginia" appeared, and will add to his already high reputation as a delineator, not only of Southern life and character, but of transatlantic types.

The Hightop Sweeting,

And Other Poems. By ELIZABETH AKERS. 12mo, $1.25.

Containing fifty poems, chiefly lyrical. They present a notable union of simplicity and skill, and will appeal to readers of every degree of literary culture.

University Extension Manuals.

Each volume 12mo, *net* $1.00.

ENGLISH COLONIZATION AND EMPIRE. By ALFRED CALDECOTT.
THE PHILOSOPHY OF THE BEAUTIFUL. By Prof. WILLIAM KNIGHT.
THE USE AND ABUSE OF MONEY. By Dr. W. CUNNINGHAM.
THE FINE ARTS. By Prof. G. BALDWIN BROWN.

☞ The purpose of the series, of which the foregoing are the first volumes, is to bring within the reach of the mass of the people the results of the latest investigations in literature, science, philosophy, history, and art, thus supplying a system of popular education quite independent of University Extension. They are written by acknowledged authorities.

The Sabbath in Puritan New England.

By Mrs. ALICE MORSE EARLE. 12mo, $1.25.

An entertaining and piquant contribution to Puritan sociology. The hardships and austerity, the rigor and narrowness, the devotion and piety of the Puritans, are graphically portrayed.

The Business of Life.

A Book for Every One. By the author of 'How to Be Happy though Married,' 'The Five Talents of Woman,' 'Manners Makyth Man.' 12mo, $1.25.

"The author has a large store of apposite quotations and anecdotes, and he has the art of brightening his pages with a constant play of humor that makes what he says uniformly entertaining."—*Boston Advertiser.*

Marie Antoinette at the Tuileries.

A New Volume in the FAMOUS WOMEN OF THE FRENCH COURT. Translated from the French of IMBERT DE SAINT-AMAND. Each vol. 12mo, with Portrait, $1.25.

The vicissitudes of the Royal Family, and incidentally the political history of the time, from the forcible removal from Versailles in 1789 to the end of 1791, including the unfortunate attempt at flight and the arrest at Varennes, are the subject of this book.

PREVIOUS VOLUMES:

MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
CITIZENESS BONAPARTE.
THE WIFE OF THE FIRST CONSUL.
THE COURT OF THE EMPRESS JOSEPHINE.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.
MARIE LOUISE AND THE INVASION OF 1814.
MARIE LOUISE, THE RETURN FROM ELBA, AND THE HUNDRED DAYS.

"Attractive in their arrangement, never dull, with much variety of scene and incident and admirably translated."—*The Nation.*

AN EXCEPTIONAL OFFER.—The *Book Buyer* for October, November, and the double Christmas number will be sent to any address for ONLY 20 CENTS. The *Book Buyer* contains portraits and sketches of popular authors, reviews, selected illustrations, and reading from the newest books, special articles by well-known writers, literary news, and numerous other interesting features. As a guide to current literature it is invaluable. Send 20 cents and try it for three months.

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

Houghton, Mifflin & Co.'s Saturday Books.

Dante's Divine Comedy.

Translated by CHARLES ELIOT NORTON, Professor in Harvard University. With Notes. In three volumes. I. HELL. 12mo, gilt top, $1.25.

Professor Norton is recognized in America and in Europe as not only one of the best Dante scholars, but as one of the few masters of English prose. His translation of the Divine Comedy is as literal as is consistent with good English.

Dante's Eleven Letters.

Translated into English by CHARLES S. LATHAM, with Introduction and Notes. Edited by G. R. CARPENTER, Professor in the Massachusetts Institute of Technology, and Secretary of the Dante Society. With an Introductory Chapter by Prof. Charles Eliot Norton. Crown 8vo, $1.50.

This translation of Dante's Letters, which is the first ever made in English, won a prize from the Dante Society for its excellence.

What is Reality?

By FRANCIS H. JOHNSON. Crown 8vo, $2.00.

This is a book of remarkable grasp and power, and is a contribution of great value towards the solution of some of the deepest problems that can engage the mind of man.

The Lost Ring, and other Poems.

By CAROLINE A. MASON. $1.25.

The tone of Mrs. Mason's poems is in many respects like that of Mr. Whittier's, and this tasteful volume must be welcome to many.

Dr. Holmes's Works.

New Riverside Edition.

Elsie Venner.

The Guardian Angel. Crown 8vo, gilt top, $1.50 a volume.

The One-Hoss Shay,

With its Companion Poems, How THE OLD HORSE WON THE BET, and THE BROOMSTICK TRAIN. By OLIVER WENDELL HOLMES. A Holiday Book, with sixty illustrations by HOWARD PYLE. 8vo, full leather binding, $1.50.

These three famous companion poems have been illustrated with admirable spirit and humor by Mr. Pyle, and form a tasteful and popular book.

The Undiscovered Country.

A Novel by WILLIAM D. HOWELLS. Riverside Paper Series. 50 cents.

One of the strongest novels Mr. Howells has ever written.

*** *For sale by all booksellers. Sent, postpaid, on receipt of price, by the Publishers.*

VOL. LIII.—NO. 1372. THURSDAY, OCTOBER 15, 1891. PRICE 10 CENTS.

Charles Scribner's Sons' New Books.

MARIE ANTOINETTE AT THE TUILERIES.

A New Volume on the FAMOUS WOMEN OF THE FRENCH COURT. Translated from the French of M. IMBERT DE SAINT-AMAND. With Portrait, 12mo, $1.25.

The vicissitudes of the Royal Family, and the political history of the time, from the forcible removal from Versailles in 1789 to the end of 1791, including the unfortunate attempt at flight and the arrest at Varennes, are the subject of this book.

Already Issued: Mary Antoinette and the end of the old Régime—Citizeness Bonaparte—The Wife of the First Consul—The Court of the Empress Josephine—The Happy Days of the Empress Marie Louise—Marie Louise and the Decadence of the Empire—Marie Louise and the Invasion of 1814—Marie Louise, the Return from Elba, and the Hundred Days. Each 12mo, with Portrait, $1.25.

"Attractive in their arrangement, never dull, with much variety of scene and incident and admirably translated."—*The Nation.*

THE BUSINESS OF LIFE. A Book for Every One. By the author of 'How to Be Happy though Married,' 'The Five Talents of Woman,' 'Manners Makyth Man.' 12mo, $1.25

"The author has a large store of apposite quotations and anecdotes, and he has the art of brightening his pages with a constant play of humor that makes what he says uniformly entertaining."—*Boston Advertiser.*

THE LIFE OF AUSTIN PHELPS. A Memoir. By ELIZABETH STUART PHELPS (Mrs. Ward). Illustrated, Crown 8vo, $2.00.

"We are drawn irresistibly to this memoir. The writer has painted a true portrait of her father—true to the ideal, and yet not omitting to make it true to life. You are brought near the man and made to feel the secret of his power."—*Boston Herald.*

THE SABBATH IN PURITAN NEW ENGLAND.

By Mrs. ALICE MORSE EARLE. 12mo $1.25.

"A more entertaining and instructive essay in our earlier colonial history has not heretofore got into print. A faithful study of old chronicles, town and church records, and journals has provided the author with an abundance of material, and she has put it into very agreeable shape."—*Boston Beacon.*

THE FINE ARTS. By Prof. G. BALDWIN BROWN. Illustrated. 12mo, *net*, $1.00.

The whole field of painting, sculpture, and architecture is covered in this compact but exhaustive manual. It is one of the first of the *University Extension Manuals*, and well illustrates the nature and scope of the series.

ACROSS RUSSIA. From the Baltic to the Danube. By Dr. CHARLES A. STODDARD, Editor of the New York *Observer*. Illustrated. 12mo, $1.50.

An experienced traveller and careful observer, the author has pictured most graphically the people, customs, art and institutions, and the many phases of life in Russia.

AN INTRODUCTION TO THE LITERATURE OF THE OLD TESTAMENT.

By Prof. S. F. DRIVER. Crown 8vo, $2.50 *net.*

Dr. Driver's volume is the first of the *International Theological Library* and is admirably adapted to introduce the series. It gives a critical account of the contents and structure of the books of the Old Testament, considered as Hebrew literature, presupposing their inspiration, but seeking to determine the precise import and scope of the several writings.

"By so ably giving the results of his labors, Dr. Driver has conferred a great boon on theological students as well as those interested in theological inquiry."—*The Scotsman.*

ELSKET, and Other Stories. By THOMAS NELSON PAGE. 12mo, $1.00.

Mr. Page's new volume contains the stories written since his popular "In Ole Virginia" appeared, and will add to his already high reputation as a delineator, not only of Southern life and character, but of transatlantic types.

THE HIGHTOP SWEETING, and Other Poems. By ELIZABETH AKERS. 12mo, $1.25.

A volume of fifty Poems, principally lyrical, simple and musical in form, and tender in feeling. Every cultivated taste will find something attractive in the book.

D. Appleton & Co.'s
NEW BOOKS.

FREELAND:

A SOCIAL ANTICIPATION. By Dr. THEODOR HERTZKA. 12mo. Cloth, $1.00.

A most interesting attempt to work out the social problems which confront the world to-day. It is a description of an ideal community founded upon new and yet not impossible conditions. In Germany this book has met with a success equal to that of *Looking Backward* in this country, and, like the latter book, it has led to the foundation of clubs and societies, and to efforts to put the plans of the author into actual practice.

ONE REASON WHY.

By BEATRICE WHITBY, author of 'The Awakening of Mary Fenwick,' 'Part of the Property,' etc. No. 81, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"It is not often that the first novel of an author is such a pronounced success as is 'The Awakening of Mary Fenwick.'" — *Christian Union.*

"'Part of the Property' is a thoroughly good book. . . . It is refreshing to read a novel in which there is not a trace of slipshod work."—*London Spectator.*

LABORATORY PRACTICE

A Series of Experiments on the Fundamental Principles of Chemistry. A companion to 'The New Chemistry.' By [illegible] and Director of the Chemical Laboratory, Harvard University. 12mo. Cloth, $1.00.

"It is thought by the writer that a course on the fundamental principles of chemistry, like the one here outlined, is far more suitable for the pupils of secondary schools than the meagre description of the scheme of the chemical elements which is presented in epitome by most of the elementary text-books on this science; and in order to bring the experimental method within the means of all schools of that class, the writer has sought to adapt to the purposes of instruction common household utensils, such as may be made by a tinsmith, or found at any house-furnishing store. . . . The student ought to be left to make his own observations, and then to interpret the results with such aid as may be necessary from the instructor."—*From the Preface.*

LITTLE, BROWN & Co.'s

NEW LAW BOOKS.

"THE REVISED REPORTS."

A Republication of the Reports of Cases in the English Courts of Common Law and Equity from the Year 1785 to the Current Law Reports, 1865, omitting such Cases and Parts of Cases as are considered to be no longer of Practical Value. Under the general editorship of Sir FREDERICK POLLOCK, editor of *The Law Quarterly Review*, and author of treatises on the subjects of Contracts, Torts, and Partnership.

The whole to comprise about fifty volumes, royal 8vo, bound in law sheep or half law calf, price $6.00 *net* per volume in either style; a large reduction from the English price. The volumes will be sent postpaid. *Vol. I. just ready.* The volumes will appear at intervals of three months, and possibly at even shorter intervals.

Every practitioner possessing a set of "The Revised Reports" may feel confident that he has in his library *the whole of the living case law of England for the period.* Among the special advantages which will commend "The Revised Reports" are: 1. *New head notes, and also references to later decisions.* 2. *The great saving in price.* The rarity of many of the original Reports and the extreme prices which prevail have placed them practically out of reach, and the cost of the nine hundred volumes which will be used in preparing "The Revised Reports" would be four thousand dollars. 3. *The convenience of this issue.* The present publication will give all the important and useful cases in about fifty volumes, being of as much practical service in the library as the original reports, and occupying a much smaller space on the shelves. 4. *The importance of the period covered.* The eighty years to which "The Revised Reports" will be devoted may be said to be the most eventful in the annals of jurisprudence, in regard to the eminence of the judges, the great growth of the law, and the multiplicity of important points and new questions which arose.

DRAKE ON ATTACHMENTS. New Edition.

A Treatise on the Law of Suits by Attachment in the United States. By CHARLES D. DRAKE, LL.D., lately Chief-Justice of the United States Court of Claims. With an Appendix containing the leading Statutory Provisions of the several States and Territories of the United States in relation to Suits by Attachment. Seventh Edition, revised, corrected, and enlarged. One volume, 8vo, law sheep, $6.00.

The labor on the new edition of this standard work, which has since its first issue successfully met a need of the legal profession, has exceeded that on any previous edition. From over 700 new cases, additional matter, equivalent to about 50 pages, has been woven into the text, and special work has been done in the enlargement and improvement of the index.

"One of the most valuable books that a lawyer can have in his library."—*Albany Law Journal.*

BIGELOW'S ELEMENTS OF THE LAW OF TORTS. New Edition.

Elements of the Law of Torts for the Use of Students. By MELVILLE M. BIGELOW. Fourth Edition. 12mo, leatherette, $2.50 *net*; law sheep, $3.00 *net*.

STORY ON THE CONSTITUTION. New Edition.

Commentaries on the Constitution of the United States, with a Preliminary Review of the Constitutional History of the Colonies and States, before the Adoption of the Constitution. Fifth Edition, revised by MELVILLE M. BIGELOW. 2 vols., 8vo, law sheep, $12.00.

COOLEY'S CONSTITUTIONAL LAW. New Edition.

The General Principles of Constitutional Law in the United States of America. By Hon. THOMAS M. COOLEY, author of 'A Treatise on Constitutional Limitations.' Second Edition, revised and enlarged. 12mo, leatherette, $2 50 *net;* law sheep, $3.00 *net*.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

The Nation.

NEW YORK, THURSDAY, OCTOBER 15, 1891.

The Week.

THE experts who have been examining the affairs of the Keystone Bank for the City Councils Investigating Committee in Philadelphia have made their report, and it establishes with great thoroughness and conclusiveness the fact that there was a conspiracy between Bardsley and the officials of the bank to rob both the City Treasury and the bank. The experts say that, at the time Bardsley entered upon the duties of his office as City Treasurer, "the Keystone National Bank was insolvent," there being an actual deficit of $1,031,499.78, and that, "in addition to the entire exhaustion of the capital stock of $500,000, its assets, even at the valuations fixed by the bank of such as had bona-fide existence, were $531,499.78 less than the liabilities." The experts say in conclusion that an accurate accounting at this late day would be impracticable, owing to the extraordinary condition of the bank's records. "Not one of the books," they declare, "was complete; nearly 400 pages were cut out of the ledgers for one year, and fraudulent manipulations were of almost daily occurrence; many loans were obtained upon the fictitious affidavit of the authority of the Board of Directors, and these and nearly all the other loans to the bank were omitted in the books, and for years after insolvency it was concealed by falsifications and manipulations that an exhaustive examination would certainly have discovered before it was too late for remedy." This is a statement which makes it more imperative than ever that there should be a searching investigation by Congress in order to ascertain why it was that the Comptroller of the Currency did not discover the condition of the bank long before he did, and why he delayed for two months to close it after he had discovered that it was thoroughly rotten.

In view of this report of the experts, the address which was put forth on Friday in Philadelphia, signed by over one hundred Republicans, all men of the highest character, asking voters to support the Democratic nominee for City Treasurer, Mr. Wright, is most timely. Mr. Wright was appointed to the position by Gov. Pattison when Bardsley confessed and resigned, and has shown great fitness for the duties of the position. The address declares in favor of Mr. Wright's candidacy in the most convincing terms. Among the better-known signers are Wayne MacVeagh, Henry Charles Lea, Dr. Henry Hartshorne, the Rev. Dr. G. E. Hare, the Rev. Dr. Joseph May, the Rev. Dr. S. D. McConnell, the Rev. L. K. Berridge, Owen J. Wister, Morton P. Henry, Dr. Charles W. Dulles, and Dr. D. Hayes Agnew. The address was published in full by Mr. Childs in the *Public Ledger*, but not a line of it appeared in the *Press*, though the editorial moralist of that journal sneered at the signers of it, and said that any one professing to be a Republican who rejects the Republican nominee for Mr. Wright, "must do so because he prefers the success of the Democratic party, with all that it implies, rather than the success of the Republican party."

The developments at Monday's session of the Pennsylvania Legislative Investigating Committee were as illuminative of the remarkable condition to which Quayism has reduced that Commonwealth as anything that has preceded them. An ex-City Treasurer took the stand, and testified that though while he had been Treasurer he had never taken any commission on city advertising, he had acted as Bardsley's agent in collecting 40 per cent. commission from the newspapers which were favored with it, that he had in each instance collected this in bank bills, the grand total being about $17,000, and had handed the entire amount over to Bardsley, who said he needed it to save him from threatened bankruptcy. The business managers or editors of the papers involved testified that they paid this commission, though they had never paid anything like it in amount for any other kind of advertising, and that they were in the habit of having the matter put in type in one office and then stereotyped for use in the others, thus increasing their individual profits. None of them seemed to be aware that they were in a disreputable or doubtful business, and that what they were doing was sharing with Bardsley in a raid on the city treasury. The payment of the commission in bank bills recalls "Jake" Sharp's methods with the Broadway Railway franchise, and shows a desire to avoid leaving any tell-tale trace of the transaction which is of itself a confession of guilty knowledge.

Following this exposure, there came one of the most childish exhibitions of depravity that have yet been made. The stenographer who had taken for the Committee the testimony of the Auditor-General and State Treasurer, who are about to be investigated by the Senate in special session, disappeared from the State a day or two ago, taking his notes with him, and it was said that he had gone to Michigan with the intention of keeping out of the State with the testimony long enough to delay the work of the Senate till after election. This was indignantly denied; but color was given to it on Monday, when the stenographer failed to appear, and no sign of the testimony was given till just as the Committee was ready to adjourn. Then a package was handed to the Chairman, which proved to be the testimony written out. The Chairman announced that it came from the stenographer at Ann Arbor; but when the postmark on the wrapper was examined, it revealed the fact that the package had been mailed that morning on the railway, at some point between Pittsburgh and Philadelphia. This is trickery of a kindergarten order, which would be possible only in a thoroughly demoralized gang of hard-pressed plunderers.

Gov. Campbell of Ohio made a speech the other day, in which he proposed to divide the vote of Ohio with Mr. McKinley on the basis of McKinley having the votes of all persons whose wages have been increased since the passage of the McKinley tariff, and Campbell having the votes of all whose wages have not been increased since that time. On that basis the Governor said that he should be reëlected by 750,000 majority at least, that being the total vote of the State. He had repeatedly asked anybody in his audiences whose wages had been raised since the passage of that bill to stand up, or to give his name and tell what branch of industry he was engaged in. Nobody had yet responded to that invitation. It is just possible that Mr. Andrew Carnegie is taking steps to astonish the Governor by raising the wages of his men, the following notice having been served on them within a few days.

NOTICE.

TO OUR EMPLOYEES: As provided in the above agreement, we hereby notify you that we desire to end it December 31, 1891, and that we will be ready to make a new sliding-scale agreement with you at any time after October 10, 1891, to take effect January 1, 1892. The contemplated changes are rendered necessary principally by the introduction of many mechanical improvements and advanced methods of manufacture, by which the output has been very much increased since the above agreement went into effect.

CARNEGIE BROTHERS, Limited.
H. C. FRICK, Chairman.

It will be observed that the reason for giving this notice to the men is, that there have been many mechanical improvements and new methods of manufacture introduced lately. Such improvements invariably lead to dispensing with human labor: there are fewer hands employed for a given output. Now it is possible that Carnegie Brothers find themselves embarrassed by this condition of things, and want time to consider how they shall distribute the increased profit among their men in the form of higher wages. We advise Gov. Campbell to keep an eye on the Carnegie works and workmen, for, although they are not in his State, they are hard by, and the example set by the Carnegies might have an overpowering influence on wages in Ohio. We see that some of the local papers, in a censorious spirit, construe the notice as an intention to reduce wages. Whether the intention is to reduce or to increase the scale, it is certain that fewer men will be employed to produce a ton of rails, or of structural iron, or what not. Then the question will naturally arise, What becomes of the farmers' home market that the tariff is always building up? How

many barrels of flour does a new machine consume? How many dozens of eggs would be required to keep a puddling-furnace going after the puddler himself had been discharged?

An interesting debate has been going on in the columns of the Richmond *Times* between Senator Daniel of Virginia and Mr. James Dooley of that city on the free-coinage question. In the *Times* of October 4, Mr. Dooley runs his antagonist into a corner from which he will not easily escape. Senator Daniel had contended that free coinage would be a relief to the overburdened debtors of the country. Mr. Dooley finds that a large and increasing part of the indebtedness of the country is upon contracts payable specifically in gold, and the testimony that he introduces upon this point is unimpeachable. Now, in order to relieve some debtors, he argues, you are going to increase arbitrarily the burdens of others? You require them to receive, in payment for what is due to them, a worse currency than they have to pay. Do you intend, he asks, to make silver legal tender on gold contracts? To this "fetching question" Senator Daniel answers that "it is a delicate power as against existing contracts, and ought not to be used unless indispensable to our financial system"—a truly Delphic utterance. But it is indispensable, as Mr. Dooley shows, unless you are going to grind one class of debtors for the benefit of another class. The correspondence shows that Mr. Dooley is more than a match for the Senator in economical discussion, whatever may be their respective powers in other fields.

As the canvass goes on, things in this city become more and more "mixed." The appearance of Gov. Hill and Mr. Cleveland on the same platform on Friday night was a curious phenomenon. Mr. Cleveland is, wherever he appears, an imposing personage, and always says weighty things. His speech was by no means enthusiastic, but it was cool and dexterous. He had a good word for all classes of his supporters. He had little to say—though what he said was high praise—about the Democratic candidate for the Governorship; but he dwelt on the importance of this election with regard to national issues, and threw this into the form of warning to the Independents who are afraid of Tammany. But on this point the Independents are not likely to be much influenced by his arguments, because they were used in 1887 to induce us to make Fellows District Attorney, and in 1888 to induce us to reëlect Grant to the Mayoralty. They are a kind of advice which the titular head of a great party is obliged to give, *ex officio*, as it were, but they are to be received as the faithful receive a "pious opinion" in the Catholic Church—that is, as obligatory by those who like it, but as non-obligatory by those who do not. The appearance of Hill at the meeting, with his "malign influence" in good working order, must produce great hilarity among readers of the *Times*, which has to treat him now with respect. It pulled through its trouble bravely, however, by castigating him soundly about silver and warmly commending him about the World's Fair. In fact, its enthusiasm was so roused while patting him on the back about the Fair that it boldly announced:

> "On this World's Fair issue alone Platt and Fassett ought to be overwhelmed in defeat by the people of this State."

If this "alone" were the issue, it would be the funniest adult election the world ever saw.

Mr. George S. Hale clearly stated the line of action upon which independent voters proceed, in a recent address at Boston. "We desire to accomplish great objects," he said, "and it is indifferent to us by whose means we accomplish them. We ask who is able to maintain the banner of the cause which we deem the most important." This rule makes the independent voter support the present Democratic Governor for re-election in Massachusetts, even though he incline to the Republican side in national politics, on the ground that the pending election is for State officers, and that Russell has proved himself far better qualified for the place than his Republican opponent. In like manner, such a voter in New York, even though he believe thoroughly in the Democratic policy regarding the tariff, may feel constrained to support the Republican ticket for State officers, on the ground that Fassett is a better man for Governor than Flower, and that there is far more hope of getting ballot reform from the Republicans than from the Democrats. In Pennsylvania, on the other hand, men who are earnest Republicans on national issues are zealously supporting the Democratic candidates for State officers, on the ground that in that way only can the frauds committed by Republicans be exposed and punished. In each of these three States the question for the voter is, which party will do most for the cause he has most at heart in the pending election.

The discharge by the Cincinnati *Commercial Gazette* of Gen. H. V. Boynton, the well-known and highly respected writer who has been for twenty-five years the Washington correspondent, first of the old *Gazette* and later of the combined paper, is only another sign of the progressive downfall of what was once one of the ablest, most independent, and most influential journals in the country. The Cincinnati *Commercial* of 1870 to 1877 was a credit to journalism, but for some years past the newspaper has been steadily going down hill until now it has touched bottom on the plane of the Cincinnati *Enquirer*. Whether McLean of the *Enquirer* has actually secured financial control of it may be a question, but that the McLean ideals of journalism have been adopted is obvious to every reader. The suggestion that Gen. Boynton's discharge is due to the fact that he has all along been a strong opponent of Mr. Blaine, while the paper intends to devote itself to the nomination of Mr. Blaine for the Presidency next year, may be dismissed as absurd. Nobody outside of a lunatic asylum longer talks seriously of Mr. Blaine's being a candidate for any other office than that of the valetudinarian. The reason Gen. Boynton had to go was because the present management of the *Commercial Gazette* "has no use" for that type of a man, and it would have been a reproach to him if he had long retained his connection with that sort of journalism.

By a curious oversight, no mention has been made in this part of the country of the fact that the Legislature of Colorado, at its last session, passed both a corrupt-practices act and a ballot-reform act, each an excellent measure. The former prohibits bribery, corruption, intimidation, and all other forms of improper influence in elections, and requires sworn publication after election by both candidates and campaign committees of all expenditures made. The ballot act is a close adaptation of the Australian system, providing for an exclusively official blanket ballot, with the names of candidates arranged in party groups with the party name and emblem at the top of each. The voter can indicate his choice either by checking the names of individual candidates, or by placing a single mark opposite the party emblem at the top of a group. Colorado makes the number of States having new ballot laws thirty, which Kentucky and Texas will increase to thirty-two when the laws called for by their new constitutional enactments shall have been framed.

A newspaper commentator on Parnell's career makes the assertion that he made "no [constructive] use of his leadership," and that "mere defiance" was all he furnished to the solution of the Irish question. This simply shows that the writer has not read even Mr. James Bryce's narrative entitled "How We [the Liberals] Became Home-Rulers." This narrative covers the period between 1880 and 1886. Any one who wants to know what Parnell accomplished as a legislator and agitator should peruse this carefully. He will there find that Parnell managed to crowd into these five years the most extraordinary changes in English policy and opinion in British Parliamentary annals. That is to say, he raised the Irish question from a condition of absolute contempt and made it the chief question of British politics; converted the great Liberal party from a state of complete ignorance and indifference about it to a belief in its transcendent importance; convinced the great bulk of that party that a change in the framework of the British Government greater than has taken place since 1688 was a proper concession to Irish feeling and opinion, and induced the Ministry to bring in a bill for the purpose and to stand or fall by it. Moreover, Parnell did this with a despised and discredited following of eighty-five members. It is also true that there was no bit of legisla-

tion with regard to Ireland during his Parliamentary career to which he did not contribute valuable suggestions and criticism. One of his bills, which was regarded with scorn by the present Ministry when he introduced it, was adopted and passed the following year by the Tories, who had to eat their own denunciations of it in the most disgraceful and humiliating way. It would have been folly for him, a private member, to have spent much time in drafting bills in an assembly in which the majority was fiercely hostile to him, and in which the right of initiating legislation is reserved to the Ministry. But no apparently forlorn and hopeless cause was ever more effectively served than was the Irish cause in Parliament by him. His faults of all sorts were serious, and his fall at the end was tremendous, but he was none the less a man of extraordinary capacity and great achievement.

It is not in the least likely that the Parnellites will be able to carry out their threat of keeping up a distinctive organization, hostile not only to the rest of the Irish party, but to Gladstone and the English Liberals. The melancholy failure of Parnell's attempt to do this very thing, in spite of his prestige and his great ability, shows the fate that is in store for the little Rump of blatherskites and firebrands which he has left behind. There is no man of any weight or eminence among them. They all shine with a reflected light, which, of course, will now rapidly disappear. When the preparations for a general election begin, and they ask the Irish voters to refuse the help of the English Liberals in getting the very thing they have been struggling for for ninety years, the absurdity of the programme will be apparent even to the most illogical. Moreover, they have no journal of any influence to represent them, now that the *Freeman's Journal* has abandoned their cause; and an Irish party without a newspaper is like a locomotive without fuel.

The strain of idealism in the Jewish mind is well shown in the decision of the Russo-Jewish Committee of London to send the novelist, Mr. Hall Caine, on a tour through Russia. This action was resolved upon in the thought that "the powerful pen of an imaginative writer, who has lately shown his strong sympathy with the Jewish people in another land of oppression [Morocco], might perhaps move the public so deeply that even the Russian Government could not be indifferent to the outburst of indignation which would be evoked." Ever since 'Uncle Tom's Cabin,' reformers and philanthropists have been looking for the novel that would furnish a short cut to their goal. One reason why they have not found it is the fact that the peculiar conditions which led to the anti-slavery story cannot be reproduced, among them being the circumstance that Mrs. Stowe did her work with no foresight whatever of its tremendous effect. When notice is deliberately served on the public that it is to be profoundly moved, and the novelist is seen squaring his elbows for the work, the tears do not follow to order. Besides, Russia is pretty well hardened by this time to "outbursts of indignation" in other countries, and will have to be stayed in her course, if at all by outside influence, by something more tangible than the horrified cries of the readers of an "imaginative writer."

It is not easy to say at this distance whether the new Russian loan, for which subscriptions were opened in Paris a few days ago, has been a success or a failure. Only a part of the loan was subscribed for within the prescribed period, and hence an extension has been rendered necessary. Its prospects for futher subscription, moreover, are impaired by the fact that the financial markets are already quoting the loan at a discount. Under ordinary circumstances all this would practically assure the failure of the loan. But Russia is so very hard pressed and needy a borrower, and has tried its experiment under conditions so thoroughly adverse—the whole Jewish banking community being enlisted against it—that a very moderate measure of success in this undertaking would be equivalent to a financial triumph elsewhere. That such unfavorable incidents were anticipated, moreover, is apparent from the liberal commission of three-quarters of one per cent. offered to brokers, which gives ample margin for shrinkage in market quotations. Nobody need suppose, therefore, that M. Vishnegradsky will abandon his efforts because the first experiment resulted unfortunately. It is not in a single day that $100,000,000 can be raised on its own bonds by a nation practically bankrupt, with its securities tabooed in the two principal financial markets of Europe, its monetary projects handicapped by opposition from the most powerful Continental financiers, and its outlook for surplus revenue rendered almost desperate through the ruin of its harvest. Granting all the force of "Russophile" enthusiasm among French investors, the successful floating of so large a loan under such circumstances would be an episode almost without parallel in financial history. Certainly it would not be possible anywhere else than in France. But the French investors, great and small, entertain a very positive belief that political convictions may be backed unhesitatingly with money. Believing as they do in the political harmony of Russia and France, it is quite possible that investment in a Russian loan appeals to them much as if it were an investment in the Franco-Russian Alliance.

The meagre and unintelligible accounts of rioting in Rio de Janeiro probably indicate no serious political trouble; yet they may very well be an index of grave public discontent with the way things are going. The dissatisfaction relates partly to the conduct of President Fonseca, who persists in going on pretty much as he did when Dictator, as if the Constitution and Congress were toys for the people to amuse themselves with, while he was doing the real governing of the country according to his superior lights. Then, there is also great complaint of the general financial management; huge banking scandals are in the background; the accounts of the Provisional Government and the budget for the coming year are kept back from Congress in an extraordinary manner; and the unexampled decline in foreign exchange has raised the cost of living to an unprecedented height. A good deal of all this has been reflected in the independent comments of the *Rio News*, a journal that is often extreme in its utterances, we must remark, but one that has a happy faculty of telling disagreeable truths— as in its issue of August 25:

> "There can be no disputing the fact that the situation in Brazil has become most critical, and that it cannot be supported much longer. Although the country is now marketing a large coffee crop, and although the out-turn of other products is equal to, if not above, the average, the rate of exchange is steadily falling, and the costs and difficulties of living and transacting business are continually increasing. There has been no war, nor great calamity; the country is in a state of profound peace, and not one single obstacle exists to the development of industry and trade. And yet, in spite of all this, he credit of the country abroad has largely decreased, and is being now maintained with difficulty, while at home the currency of the country is depreciated nearly 50 per cent., trade is becoming demoralized, and public confidence has been seriously shaken. There has been a peaceful change of government, which has created but little more disturbance than an ordinary change of ministry; but it has left everything in so topsy-turvy and unsettled a condition that the new men seem to be utterly lost in the confusion. In every branch of the public service, incapacity and indifference reign supreme. We have a bank problem which no one is able to solve, a currency problem which no one can understand, a joint-stock-company problem whose destructive results no one foresees, a transportation and shipping problem whose defects no one appreciates, a custom-house problem whose oppressiveness and fatal consequences no one cares to think about, and political problems without number, whose solution is being sought in makeshifts and delays, to the incalculable loss of trade and industry in every part of the country."

The election returns from Norway show strong gains for the Radicals at the expense of the moderate Left, the Conservatives remaining about as before. This change of front indicates an endorsement by his party of Steen's policy of a separate Foreign Office for Norway, and if the Radical increase continues in the remaining districts, the present Minister's position will be assured for the following year. Unless, however, the Conservatives suffer some serious loss of votes, which at present does not seem at all likely, the question cannot be brought to a vote, as without a combination of the two branches of the Left the necessary two-thirds majority cannot be reached. It begins to look now as if Norway were slowly drifting towards the unfortunate political situation of her sister kingdom, Denmark, where everything else is subordinated to the consideration of a single apparently unattainable object. As in Denmark, the Radicals of Norway are bitterly opposed to any form of compromise, regarding with disgust their more amenable brethren.

STATE AND NATIONAL POLITICS.

ONE of the fears of the framers of the Constitution was that the Federal Government would prove so insignificant in the popular eye, compared with the State Government, that State and not Federal offices would be the chief objects of ambition to first-rate men. For a while this was true. There was a period, in the larger States at least, when a lover of public honors would rather be Governor than Senator. But this state of things has long passed away. It is the Federal offices which are now the great political prizes and which most fire the popular imagination. The Presidential election has made all others by comparison unimportant.

If this tendency had been accompanied by an extension of the sphere of Federal authority, there would be little to be said against it except by the enemies of centralization. But it has not. Federal jurisdiction covers almost the same ground that it did one hundred years ago. Nine-tenths of all the rights and interests for the protection of which government exists among civilized men are still within the sphere of State legislation. If it were not for the tariff, which raises prices, the great bulk of the population of New York would never, from one year's end to another, except through the Post-office, come in contact with Federal authority. Property, marriage, education, wills and succession, civil and criminal justice, land tenures, charities, are all matters exclusively of State jurisdiction, over which neither President nor Congress has any control whatever. So that our increasing absorption in the Presidential election and increasing indifference to the State elections may fairly be called an anomaly which will greatly puzzle future historians.

It is made all the more extraordinary by the fictitious powers attributed to the President during the canvass. Every Presidential canvass furnishes illustrations of this, but the most striking illustration of it was furnished in 1884, when the Republican press, headed by the *Tribune*, continued day after day, with wearisome iteration, to assure its readers that, if Cleveland were elected, the rebel debt would be paid, the old slave-owners would be compensated for the loss of their property, and, more extraordinary still, that the tariff would be so modified that most of the mills would be closed, and tens of thousands of American workmen would be thrown out of employment. Moreover, this was believed, in whole or in part, by thousands of very intelligent people. We remember being assured in that year by the head of a great corporation, a Republican, that, in twelve months after Cleveland's accession to power, starving workmen would be knocking people down and robbing them in broad daylight in the streets of New York. No knowledge of the Constitution, no amount of experience of the failure of Presidents to exert any influence whatever on legislation, even with a majority of their own party in Congress, seems sufficient to protect people against this extraordinary hallucination. President Cleveland prevented a great deal of mischievous legislation by his vetoes, but all he was able to accomplish against the tariff he effected by an appeal to the people, in a message which was not destined to bear fruit until two years after he had gone out of office.

Every American knows well that great legislative changes are effected only by the slow working of public opinion through Congressional elections, but this does not prevent his once in four years picturing the President to himself as a benevolent or malevolent despot, as the case may be, who can change the framework of society by a ukase. The election of Harrison in 1888 did not prevent a crushing reversal of the popular verdict in 1890, and Harrison had no more power to prevent it than to prevent an equinoctial gale. The office is a great one, but its powers, and even its influence on public opinion, are very limited. The origin of the purely fictitious importance attributed to it would be found, we have little doubt, by the philosophic historian, in the effect on the imagination of political managers of its immense patronage, exercised under the spoils system. The man who can, if he will, make "a clean sweep," rises, in their affrighted vision, like the Arabian genie, in monstrous proportions, out of the electoral bottle.

That this growing subordination of State to Federal politics has in any way improved the latter, nobody will affirm. Of the deteriorating effect on State politics of using State elections as "straws" to indicate how Federal elections are likely to go, or to influence their result, there is, unhappily, little question. This effect was first most markedly visible in what were known as the "October States," viz., Pennsylvania, Ohio, Indiana, and Iowa. In these States the State election in Presidential years very soon ceased to have any reference to or influence on State affairs. It became at first disguisedly, and then avowedly, a means of persuading one side or the other that it would win the Presidential election in the following month. As soon as this practice was established, the whole force of each party all over the country in fraud and corruption was directed to achieving victory in these "preliminary skirmishes," until the October States became sinks of corruption, and the date of the election had to be changed to prevent the virtual destruction of the local government.

But a State did not need to be an "October State" to fall a victim to the poison, and did not escape it by ceasing to be an October State. The managers now seek to obtain their "straws" a year earlier. They have begun to demand the use of State elections for Federal purposes, in every year of the Presidential term. There is now, in the larger and more important States, no election in which either Democrats or Republicans, if the managers have their way, are allowed to vote on the issues which most nearly concern their property and reputation. No voter in New York, or Pennsylvania, or Ohio, or Indiana, is allowed, if the politicians can help it, to express in his vote an honest opinion about the way his local government is administered. He has to vote not every four years, but every year, on the tariff and the negro, and on nothing else.

For an illustration of the effect of this on State politics, we need not go further than Pennsylvania and New York. In Pennsylvania, every local interest has been subordinated for twenty years to the support of tariff legislation in Congress and the election of high-tariff Presidents, and the result is "Quayism," or, in other words, the conversion of the State Government into a slough of corruption, the recent revelations about which are astonishing the whole country and discrediting popular government all over the world. In New York, there has grown up during the same period one of the most corrupt and powerful organizations ever seen in politics, with the sole object of quartering as many adventurers as possible on the public treasury, and with most disastrous effect on the political morality and public spirit of both the great parties. And now, so necessary has this organization become to the winning of Federal victories, that the time never comes when party managers will admit that its destruction at the polls may safely be attempted, or when, indeed, any opposition can be safely offered to it by the party to which it nominally belongs. At every election it cunningly claims what may be called its "benefit of clergy." Every time it is asked to take its hand out of the public's pocket, it asks whether you want to ruin the Democratic party?

That this effect on State and city would be produced by this practice, might have been predicted, à priori. The honesty and efficiency of the State Government is as necessary to the genuine success of the American Commonwealth as the honesty and efficiency of the Federal Government; indeed, an intelligent man might, without heresy, say, more so. But no government can be honestly or efficiently administered under which responsibility is divorced from power. That is to say, no government can be really successful in which officers are elected for other purposes than the faithful administration of the office. It is not in human nature for a man who knows that he has been elected Governor of a State not because he is the fittest man for the place, but because, no matter what kind of man he is, his election will furnish a useful "straw" about the result of some other election, to care greatly how he discharges his duty. In fact, he must inevitably doubt whether he has any duty in the premises after he has duly furnished the "straw." Nor can caucuses and conventions greatly care what kind of candidates they present to the voters, as long as they are able to tell them that at this election it makes no difference who is elected, as long as the party wins.

The Republic that could stand this indefinitely would have to be more clearly under the protection of Divine Providence than any Republic has yet been.

PARNELL.

THE most obvious reflection suggested by Parnell's death is, of course, how fortunate it would have been for his fame if it had overtaken him two years ago—say, at the close of the Pigott trial. But if he had died then, his character, puzzling and inscrutable as it was, would not have been as puzzling and inscrutable as it is now. It has been from the beginning a bundle of mysteries on which not even his most intimate friends and followers have been able to throw much light. His determination, when he first entered on political life, to break with the circle in which he was born—that of the Anglo-Irish Protestant gentry—and ally himself with the tenants and Nationalists in a crusade which sought to visit on his own class the consequences of English misgovernment, would have been easily explained by the possession of a warm and enthusiastic temperament, such as is usually described by the epithet "Celtic." But he was, to all outward appearance, a man of unusually cold temperament. No Englishman could surpass him in frigidity of manner. In fact, he had in perfection the "you-be-damned air" which is said to characterize that most typically phlegmatic of Englishmen, Lord Hartington. He was, to all outward appearance, the last man in the world to be moved by a sentimental grievance or fired by a great idea. He had, when he entered Parliament, no sign of the orator about him. Impassive, and unsympathetic in face and movements, he was probably the most unpromising material for an Irish agitator, or ventilator of Irish wrongs, that the troubled fortunes of the island have ever brought to the surface of her politics.

Nevertheless, from the moment of his election to the House of Commons in 1875, he forsook resolutely and unchangeably his own class and all its traditions, and threw in his lot with the then small band of despised and much-abused Irish agitators, who had reached the conclusion that calm discussion of Irish questions was wasted on the English majority, and that, in order to make any real impression on it, sterner measures must be resorted to. He promptly threw off the authority of the then Home-Rule leader, the gentlemanly and moderate Butt, and raised boldly the banner of obstruction by night and day, and fought under it with a bitterness which astonished the English public, completely won over the Irish, and made him in four years their acknowledged leader.

The change in his oratory, too, was no less remarkable than the change in his rôle. It was in the beginning the halting and uncertain utterance of a man who, having no faculty for public talk, rather despised it as an instrument of persuasion. It became, by the time he joined the land movement in 1879, an instrument of extraordinary power, in which every word went home like a pistol shot. The effect of it was heightened by the seeming nonchalance of manner with which he poured it forth. His sarcasm in particular was a weapon from which even the boldest shrank. On one memorable occasion, when he turned on Mr. Chamberlain, after one of his feats of tergiversation, the action of Parnell's oratory on the victim was likened by an eye-witness to the slow dropping of vitriol on an exposed countenance. But it was probably never so characteristically used as in the contemptuous address which he delivered to the Tory majority, who were unwilling to make a formal acknowledgment of his innocence after Pigott's suicide. The scorn which he managed to infuse into the simple closing phrase, "I am sorry for you," is said to have been a wonderful triumph of mere manner and intonation.

His retention of the undisputed leadership of the Irish party sent to the House by the extension of the suffrage, considering the gulf of caste, and manners, and temperament which separated him from them, has always been considered another mystery of his career, second only to its beginning. But this has never seemed to us a great puzzle. The mass of his followers were little fitted by training or education to engage in encounters in the House with the English masters of debate. They were many of them illiterate and uncouth men, who, even if they had the gift of speech, would have been listened to with impatience. Their orators, too, like Dillon, O'Brien, and Sexton, had not yet begun to feel their own power, and in those early days were too mellifluously and fluently Irish to be able to make much impression on an audience to whom the idea that Irish oratory could have anything decidedly unpleasant and serious behind it was still unfamiliar. In those days Parnell was a tower of strength. He proved himself from the beginning a Parliamentarian of consummate force, who was never caught napping, who feared no man, and who never rose without saying the exact thing he meant.

The melancholy tale of his fall from this high and strange position is now familiar to everybody. There were signs of it for two years at least before the end came. Prolonged absence from his post in the House, leaving his followers in absolute ignorance of his whereabouts or of the date of his return, grew more and more frequent, and spread ill-concealed uneasiness through the Liberal ranks. When the dénouement came, it proved to be the old, old story of Samson and Delilah. But no one expected it would really be the close of an extraordinary career. A brief retirement from public life would probably have, for all practical purposes, effaced the memory of it. But then there came that astounding transformation which made recovery impossible. The shrewd, cold, and apparently calculating parliamentarian and man of the world, who had never been known to make a business mistake or give a point to an enemy, was suddenly converted into a shrill, passionate, and reckless claimant of honors and trusts which nobody was willing to award him, making open proclamation of his readiness to ruin his party and his cause in order to retain a position which he had sacrificed with open eyes. But this last act in the tragedy furnishes really rather a study in morbid pyschology than in politics. We presume that all who ever followed Parnell or admired him will cling to the belief that the frantic follies of his last years were the result of disease, and not a revelation of long hidden moral unsoundness. No more striking figure has ever appeared in English politics, and if he could have passed from the scene at an earlier period, his name would probably have been put without difficulty, when the passions of the Irish question had subsided, on the roll of illustrious British public men.

BALLOT REFORM IN PENNSYLVANIA.

LAST spring neither party in Pennsylvania was disposed to disregard the popular demand for a ballot which should be both secret and impartially furnished to every voter. Yet the uncertainties of the political situation were such that the Republican Legislature passed, and the Democratic Governor approved, a ballot bill whose operation was deferred until after March 1, 1892—that is, until after the next State and local elections, which would have furnished valuable experience, and would undoubtedly have secured a true ballot reform at the next Presidential election. Moreover, the "practical politicians" inserted in the bill a provision that any voter might declare that, by reason of disability, he desired the assistance of a qualified voter in the voting compartment where he was to prepare his ballot. The bill also allows watchers, with their poll-list and challenge-marks, so that it guarantees little more secrecy than at present. As the Legislature does not meet in regular session again until after the next Presidential election, the Ballot Law will stand unless the Constitution of the State is changed in the meantime. This contingency was foreseen by the labor leaders; and, by their agitation, a bill was passed by the same Legislature of 1891, calling upon the people to vote for or against a Constitutional Convention, and at the same election to choose delegates to sit in the Convention, if called.

The Convention of 1873 introduced into the Constitution of Pennsylvania two provisions which are now objected to as opposed to the secrecy of the ballot, and consequently to ballot reform. These were the numbering of the ballots as received by the election officers, and the provision that no voter should be deprived of his right to vote by reason of his not being registered in advance of the election. The dangers then most prominent being the stuffing of ballot-boxes and the personation of voters—no member of that Convention seems to have thought of any more efficient remedy than positive identification of the voter and his ballot by the above means—and by making the election districts small, so that the voters might know each other. As a result of these provisions, ballot-box-stuffing and personation have been changed into intimidation and bribery. To prevent the old evils and suppress the new now seems possible only by requiring previous registration and a secret ballot. Without a popular awakening, however, there can be no ballot reform in Pennsylvania for the next two or

three years. By that time the now dominant party will have such a small majority as to be upon its good behavior. For this contingency, the astute managers of the Republican party have provided by a plank in the present party platform, promising that if the people do not call a convention, the Legislature will submit an amendment to accomplish the desired reform. The Democratic platform-maker, with less shrewdness, has suggested that, if a convention be called, the delegates ought to feel themselves pledged to consider merely the one question of ballot reform. But no such pledge is a part of the platform.

The necessity for calling a convention to amend the State Constitution does not arise from the absence of the usual clause authorizing the Legislature to submit amendments to the people. There was such an omission in the Constitution of 1790, as a kind of recoil from the provisions of the Constitution of 1776; but in 1838 the present provision was added, which prevents the Legislature from proposing amendments to the State Constitution "oftener than once in five years." This restraint is now operative, as the prohibition amendment was submitted by the Legislature in 1889, and, being left to its fate, was of course defeated by the active efforts of the liquor interest.

There is, nevertheless, no restraint upon the calling of a convention as often as the Legislature may choose, the people having merely the choice of delegates. This was the Democratic plan in the last Legislature, and had the merit of securing a convention. But the Legislature passed the Republican bill, which submits at one election the two questions, whether there shall be a convention, and, if so, who shall compose it. On the Democratic side of both houses it was objected that the double election on one day would compel candidates to work for election to an office which might never exist, whereas the effect ought to have been to make the candidates active promoters of the Convention. As a matter of fact, they have expressed no views whatever upon the method of amending the Constitution; nor have the newspapers considered it worth their while to discuss what form the amendment of the Constitution to secure ballot reform shall take. The silence of the press is the less excusable, as the question of amendment must come up, if not now, then in the near future.

The Constitution may be amended by simply striking out the compromises of 1873, thus returning to the requirements of 1790 and 1838 (without going further back), that "all elections shall be by ballot." This would leave the Legislature free to introduce the Australian system. Such seems to have been the thought of the Republicans in their ballot bill, which finally became a law, for, in the section where secrecy was sought after by sealing up the number required to be placed upon the ballot by the Constitution of the State, there is a proviso that no number shall be placed on the ballot after the Constitution ceases to require such numbering. Still another course is practicable: An article might be inserted in the Constitution fixing even the details of an election, if the restriction upon the submission of amendments by the Legislature were taken off. This would obviate the necessity of calling a convention, and would escape the peril of throwing open the whole Constitution to the tinkering of a convention called expressly for one purpose.

"SOCIALS."

In these days of sociological study, when the habits of all forms of civilized and uncivilized society are made the subject of special investigation, it is surprising that so little scientific attention has been given to those manifestations of the gregarious instinct of Americans which are called "socials," or "sociables." Most observers of life and readers of the country press have been vaguely aware of these phenomena, and some have doubtless been struck by their rapid spread in new forms throughout the land, so that "Pink Teas" and "Apron Socials" now figure frequently in the reports of the doings of the gay world. But what was needed was some skilled and patient investigator who should study the facts at close range, and bring order into this confused province of human knowledge. Such a person has been found, we are glad to say, and the manual on the subject which she has published in Chicago, under the title 'Socials,' comes nearer filling "a long-felt want" than many of the more pretentious works of sociologists. It is true that she writes as the ardent advocate and propagator of "socials," rather than as their dispassionate critic; but she gives a full classification and explanation of them, including some varieties invented by herself, and so throws a great deal of light upon a very dark subject.

Her most general definition of a "social" is that it is "one of the commonest means by which different societies seek to raise money." She also notes the fact that people are "less charitably inclined, less public-spirited than they used to be; every season they become more exacting as to the amount of amusement furnished for the money. . . . Consequently, from all over the country, arises the cry: 'What can we get up that shall be new and entertaining?'" Having thus clearly pointed out the demand for the inventive purveyor of "socials," she proceeds to lay down certain general principles by which that important functionary must be guided. The first is, that "the character of those who are to form the audience must be taken into consideration." As she justly observes, a "Shaksperian carnival" is "delightful," but would be voted "stupid by one who had never read Shakspere." In like manner "An Evening with Browning" would scarcely be enjoyed by those who, having "read and studied all day, want to be amused, and will be more likely to spend their money where they can have a good time without much mental effort." Hence arises the necessity for such mentally non-fatiguing substitutes as the "C Social," the "Crazy Social," and the "Phantom Social," all of which, with a great many others, are elaborately explained by the author.

Take the "Palette Social" as a specimen: "Each gentleman paid twenty-five cents, and received a palette cut from white cardboard, to which a small lead-pencil was tied with narrow ribbon. On the palette were the words, 'Supper for two' in fancy letters, and along one side of it were figures from 1 to 20. The gentlemen were then taken to another room, where attendants wrapped them in sheets, and tied masks over their faces, completely disguising them; then a tiny card, just large enough to hold one or two figures, was fastened to the drapery of each. The ladies were required to pay ten cents each, which entitled them to a card similar to those fastened to the gentlemen. They were then told that they would find a package in the next room marked by a card bearing a number corresponding to that which they held. . . . The lady was obliged to remove the mask from the face of her 'package' as soon as she found it, and he then acted as her escort for the rest of the evening." Now, before the unthinking reader pronounces a hasty judgment upon the foregoing, let him pause to reflect how many important principles of the art of social converse it illustrates. "One of the most necessary elements," says our author, "is surprise." There can be no question about that result—at least upon a mind not made *blasé* by a long experience of "socials." Moreover, this "surprise" at once "rendered impossible the restraint so often noticeable at such gatherings." The "Palette Social" also meets in the finest way another requirement of the art, which is, our expounder tells us: "Do not be afraid to be silly." A doubt occurs to us, however, very likely due to our ignorance, whether there is not here a violation of that other canon implied in the author's assertion, "A person with any regard for comfort will not go a second time to a place where he has once been made nearly wild."

Only secondary to the main object of raising money, a great aim of "socials" is, we are told, to do away with "awful pauses" and "stiffness." An effective way of getting rid of those undesirable features is furnished by the "Conundrum Social," in which the gentlemen draw conundrums from one box and the ladies the answers from another, and then "the gentleman must find the lady who holds the answer to his conundrum, and pay for her supper." There is a hint here also for those who deplore the decay of conversation as a fine art, since "the delightful part of this arrangement is that in his search he is obliged to enter into conversation with many different ladies," and thus "the scene at once becomes animated." If "stiffness" cannot be avoided in this way, the experimenter is advised to try a "Brown Tea," at the conclusion of which the ladies are placed "behind a curtain, with their feet only in view," and auctioned off to "charitably inclined young men who will buy a supper for them." If all else fails, resort should be had to the "Apron Social," in which the gentlemen hem aprons, the most successful

seamster being voted a prize by the ladies. "The more comical the prize is, the better. A pumpkin pie, baked in the largest dripping-pan in the neighborhood, is usually hailed with delight, and so is a popcorn ball as large as a water-pail."

In spite of her aversion to the literary "socials," as being too intellectually exhausting, our mentor provides for one "Authors' Social." She admits that this "requires considerable preparation," but thinks it necessary to pander occasionally to "those who prefer to have a little instruction with their amusement." Those exceptional people are to be gratified by the impersonation of a "few well-known authors." She suggests as a "good company"—"good," we suppose, for the desired combination of "instruction" and "amusement"—"Dickens, Tennyson, Longfellow, Mark Twain, Bill Nye, Josiah Allen's wife, Amelia Rives, and Elizabeth Stuart Phelps." After the "actors" have made themselves up "to look as nearly as possible like the authors whom they personate," they are to go on with a "dialogue" which "should be prepared and committed to memory. This," it is conceded, "may seem a difficult task to many, but it is not, if begun aright." The way to begin aright is, it seems, "if there is a funny incident in the life of one author, another tells it as a good joke on him." Thus we suppose it would be the thing for Josiah Allen's wife to twit Tennyson with becoming a lord, in spite of having expressed his preference for a kind heart over a coronet. Readings of "something which they have written, and a song or two may be introduced," and the only stipulation in regard to the "conversations" is that they should be "natural and lively." Even after all precautions are taken, the warning is given that the "audience . . . may not enjoy a whole evening devoted to authors. . . . Do not think because the literary entertainment is good and ought to be liked, that it must and shall be." Consequently, you are to experiment upon your audience with a minute dose of "authors," and, if they do not seem to like it, then "have simple refreshments, followed by general conversation or games."

We are unable to go into the delights of the "Cap Social," the "Basket Social," the "Mother Goose Social," the "Mum Social," the "Quaker Social," and the many other fascinating varieties described in the manual. What we have written will at least serve to show that the future of American society is secure. When such forms of social intercourse as those explained here are in common and growing use in large sections of our country, it can no longer be truthfully said that the American Philistine leads a life of "hideousness and immense ennui," as Matthew Arnold asserted to be the case with the British Philistine, the heir of the Puritans and their theory of life. That writer is dead, unfortunately, and so it must be left to some other pen than his to write a description of the brilliance of the American "social," which will rival his famous account of society in the salons of France.

SWISS AND AMERICAN CONSTITUTIONALISM.

LONDON, September 23, 1891.

NOTHING is more noteworthy than the attention which of recent years publicists in both England and America have directed to the Swiss Constitution. Twenty (or even ten) years back no English writer, except Mr. Freeman, knew anything about Swiss politics, and not the least among the many services the author of the 'History of Federal Government' has rendered to the English people on both sides of the Atlantic is his having at last taught the world that Switzerland possessed many things of interest besides her mountains. The 'Swiss Confederation' of Sir Francis Adams, the lectures of Prof. Moses, Mr. Vincent's lucid essay on 'State and Federal Government in Switzerland,' are all signs that Prof. Freeman's teaching has at last borne fruit, and that thoughtful men, especially in America, are now resolved to study the history and the institutions of a State which, according to the way you look at the matter, may be called either the oldest or the newest of Federal governments.

It is natural and desirable that the jurists of America should explore with special care the intricate Federal system of Switzerland. They have some advantages as students which cannot be possessed either by English or by French observers. The resemblances between the Federalism of America and the Federalism of Switzerland are striking and obvious; they cannot possibly escape the notice of any one who knows the history or takes part in the public life of the United States. The analogies between the history of the two Federations are full of curiosity and instruction. The struggle between the Catholic and the Protestant Cantons has a real affinity to the struggle between the South and the North. In both countries a body of States representing what must be called retrograde political ideas held their own for a length of time with marvellous success against States of far greater power, which were the representatives of modern progress and enlightenment. The disputes about the common territories oddly recall certain phases of the conflict between the free States and the slave States. The Sonderbund anticipated secession. Dufour's strategy was in its way quite as remarkable as Grant's; the week's campaign which, contrary to the expectation of the best-informed European statesmen, finally crushed the Sonderbund, was as decisive in its way as the years of civil war which ended in the destruction of the Confederacy.

The institutions of Switzerland, again, may be called a reduced copy of the American Commonwealth. The Cantons are only States called by another name. The doctrine of State rights is at least as well understood in the Confederacy as in the United States. In Switzerland, even more than in America, the whole working of the Government and the political life of the nation depend upon the constant effort to maintain an elaborate and very artificial balance between the supremacy of the nation and the semi-sovereignty—if jurists will pardon the term—of States, such as Lucerne, Geneva, or Zurich. The Swiss Federal Assembly is in some points of view an intended imitation of Congress: we may safely assert that the Swiss would never have tried a bicameral system but for the influence of American example, that the Council of States owes its existence to admiration for the American Senate, and that the creation of the Federal Court was, if not caused, yet greatly aided, by the high reputation of the Supreme Court of the United States. When we add to all this that in Switzerland, as in America, democratic institutions and habits of an extreme type are combined with Federal institutions, we need not wonder that American jurists should devote special attention to a country where an American may find himself at home.

Yet, to speak the truth, I am inclined to think that the real, and, still more, the superficial, similarities between the Swiss and the American commonwealths are likely to prove a snare in the path of Americans bent on understanding not only the form, which is a comparatively easy thing, but, what is a far more difficult matter, the spirit of Swiss political life. For the points of difference between the two democratic federations are, though not as salient as their points of resemblance, at least as remarkable, and are more fundamental. It were greatly to be wished, then, that American jurists, whose labors will, if well directed, bear rich fruit, should, in their study of Switzerland, bear in mind the features in which the Swiss Confederacy and the United States throw light on each other by way of contrast rather than of difference.

The constitutions of both countries are Federal democracies, but while American democracy is founded on traditions and ideas common to the whole English people, Swiss democracy is founded on historical conditions and on conceptions of government and law common to the whole of Continental Europe. Master the idea that the Swiss Confederacy is the one completely developed and completely successful democracy of the Continental type, while the United States is the one completely developed and preëminently successful democracy of the English type, and you have the clue to mysteries in Swiss institutions which are often overlooked, but which, if noted, always perplex the English or the American observer. In making this remark, let me add at once that I have not the presumption either to assert or to believe that wherever Swiss customs or laws deviate from the Anglo-Saxon type they are defective. The institutions of the English people are no more perfect than the institutions of other nations. Swiss statesmen may learn, as indeed they have learned, much that is valuable from the experience of England and of the United States. Englishmen and Americans may learn, though perhaps they have not yet learned, from the experience and institutions of the Swiss Confederacy. But neither Englishmen nor Americans will gain a knowledge which it is of importance they should acquire, unless they recognize the fact that, in spite of superficial appearances to the contrary, the Swiss commonwealth is no copy of the American commonwealth.

To see that this is so, it is enough to note the idea which underlies all the political institutions of the English people on both sides the Atlantic. This idea is nothing else than the supremacy of fixed law. In England, no less than in the United States, every official is—in reality, however much the fact may be disguised in England by fictions—bound by law, and, one may say, by very rigid law. What is of even more consequence than this, all the rights of individuals, both as regards each other and towards the State, are regulated by law, and are ultimately definable in any given case by the courts. The question, for instance, which is at this moment exercising the minds and exciting the passions of thousands of Englishmen—whether the Salvation Army may march with bands of music through East-

bourne on a Sunday—is from an English, as it would be, did the same difficulty arise at New York, from the American, point of view, a mere question of law. Its decision depends, unless Parliament should intervene and change the law, upon the correct interpretation of one or two sections in a local act of Parliament. There is, strictly speaking, no room for compromise. What may be the discretion of the Eastbourne magistrates—itself a question of law—or how this discretion, should it exist, may in the present condition of Eastbourne be most wisely exercised, are questions on which I have no means of forming an opinion. One thing is certain: neither the Queen, nor the Prime Minister, nor the Home Secretary, nor any official whatever, has a right to suspend the execution or override the terms of the law which at the present moment governs the right of meeting on Sundays at Eastbourne. The rights or the wrongs of the Salvationists, as of their opponents, are determinable by litigation; they are not determinable by diplomacy or negotiation.

Far otherwise is it in Switzerland. The Salvation Army thought well some years ago to "invade" Swiss territory. Their "campaign" excited some disturbance, and in certain Cantons much indignation; many of the cantonal governments passed laws (which, from a Salvationist point of view, might savor of persecution) for the suppression of the Army's open-air meetings. The Salvationists, like true Anglo-Saxons, stood upon their rights; they maintained that these laws were "unconstitutional" (in the American, not in the English, sense of that word); they applied to the Federal Court. The jurisdiction of the Federal Court in the matter was contestable. The body to which the decision as to the rights of the Salvationists and as to the constitutionality of the cantonal laws, in fact, under the Swiss Constitution, belonged, was in reality the Federal Council, or, as we should say in England, the Cabinet. The Executive, therefore, issued a report addressed, I conceive, to the Federal Assembly, which, in fact, decided the whole question. The judgment, if we may call it so, is very unlike the judgment of any English or American court. It is based partly on law, but partly—and this is hardly concealed—on general considerations of policy. It determines, in effect, that the right of public meeting must in principle be maintained in favor of the Salvationists, but that this right must in practice be exercised with moderation, and that the cantonal laws which restrain the right of public meeting are, if looked at as pieces of permanent legislation, unconstitutional, but if regarded as temporary regulations for the maintenance of order, are unobjectionable. The Salvationists, in short, are told that they must exercise their rights moderately, with out pushing them to extremes. The cantonal governments are told that, while they may slightly invade the strict rights of the Salvationists, they must not permanently subvert the privileges secured to all men by the Constitution.

This way of dealing with a legal and political difficulty has a good deal to recommend it, but no court in England or America could deal with a question of legal right in the manner in which the Swiss Cabinet have met the demands of the Salvationists and of their opponents. Certainly, neither in England nor in America would the Executive ever be called upon, as the Swiss Cabinet constantly is called upon, to exercise the functions of a court, and of a court governed partly by legal, partly by what I may term diplomatic, considerations. I have dwelt on this "case of the Salvationists" because it affords a typical instance of the working of Swiss institutions. The history of the recent movement in Ticino would, had I the space to follow it out, be equally illustrative of Swiss habits of political action. There again we should find that the Swiss Ministry or Cabinet—the terms are not correct, but they convey to my readers better than does any other language the nature of the Federal Council—dealt with a question of constitutional law which threatened a dangerous political crisis, partly as a court, partly as an executive body. Legal rights were sacrificed, but order was preserved and a national danger was averted. The members of the Ministry may not be perfectly just judges, but they are sagacious administrators and astute diplomatists.

If an Englishman is astonished at the freedom with which the Swiss Executive moderates the operation of strict law, an American would, I conceive, though I speak with diffidence, be surprised at the liberties which the Swiss Executive will, if occasion requires, take with cantonal rights. Now at the bottom of the authority which Swiss democrats concede, both in theory and in practice, to the Cabinet lie apparently two ideas. The first is, that in a democracy the Executive government as truly represents the people as the Federal Assembly or the courts, and that there is, therefore, no special ground for jealously watching the action of the Government. The second is, that the rules of the Constitution, and indeed the law of the land, is not the only expression of the will of the people; that therefore, when occasion requires, the Executive, which exists to carry into effect the will of the nation, may to a certain extent interfere with the operation of the law. Let me not be misunderstood. I do not assert that these ideas are either sound or unsound. It is clear enough that the democracy which entertains them may be exposed to dangers from which Englishmen or Americans are protected by the belief in law. My only contention is that these ideas, or notions like them, influence the Swiss, and give to the institutions of Switzerland a character essentially different from institutions created by the English people.

If we leave for a moment the spirit and come to some of the details of Swiss constitutionalism, we shall find that the arrangements of the Confederacy are weak or defective just where the institutions of the United States are strong, and that the institutions of Switzerland are strong just where the institutions of the United States are or seem to be weak.

The Swiss Council of States, for example, was made in avowed imitation of the American Senate. The statesmen of '48 expected that the Council would be the most influential part of the whole Federal Government. Experience has entirely belied their expectations. The Council of States has never, since its creation, been able to occupy anything like the position of the American Senate. For this failure many causes may be given; one is of itself sufficient to explain. The Council does not exercise any special functions; one might almost say that there is no reason for its existence, except, of course, the general reasons, some of them strong enough, which may always be urged in favor of the bicameral system.

The Federal Court, again, suffers a good deal by the comparison which its name provokes with the Supreme Court of the United States. It is, indeed, a most respectable tribunal, and, what is a matter of great consequence, the course of events since '48 has increased, and probably may yet increase, its authority. Mr. Vincent, whose judgment on such a matter ought to be treated with great respect, apparently expects that the Federal Court will by degrees come to occupy something more like the position of the American judiciary. Whether this expectation is well founded seems, to an observer uninfluenced by American traditions, very doubtful. That new functions will as time goes on be discharged by the Federal Court is probable or even certain; that it will ever exert an authority like that wielded by the Supreme Court is improbable, and this for more than one reason. The Federal Court has no independent means of enforcing its own judgments. For this purpose it must rely, in the last resort, on the aid of the Federal Cabinet. Its judges are elected by the Federal Assembly, and elected for short terms; it cannot pronounce any enactment of the Federal Assembly unconstitutional; it is in its own sphere overshadowed by the Cabinet. At the bottom of all these causes of weakness lies the fact, which is betrayed by every page of Swiss history, that the Swiss people have never discriminated with anything like distinctness the functions of the Executive, of the Legislature, and of the Judiciary. If this discrimination be, as most thinkers consider it is, a mark of progress, the Swiss in this matter fall behind not only England and the United States, but other Continental countries, such, for example, as France or Italy. It is fair to add that this blending of judicial with executive functions has in Switzerland some recommendations; but, until the "division of powers" is recognized, the authority of the Federal Court is not likely to be greatly increased.

Meanwhile, the Cabinet, or, to use the Swiss term, Federal Council, gains what the Court loses. No candid observer will assert that the American Presidency has been the most successful of the institutions created by the founders of the United States. But every one who has studied Swiss history and politics will be inclined to assert that the Council, or Cabinet, is the most successful, as it is certainly the most original, among the institutions of Switzerland. The Cabinet, placed in office, as it is, by a vote of the Assembly, but not exposed to be dismissed from office by the body which has placed it in power, combines to a very great extent the advantages of a parliamentary Executive such as exists in England, and a non-parliamentary Executive such as exists in America. Switzerland is thus saved from the changes of administration and the fluctuations of policy incident to cabinet government, and it is also saved from the conflicts, the excitement, and the intrigue which seem to be some of the evils that necessarily attend Presidential government. No democratic executive has ever displayed anything like the permanence and the quiet business capacity of the Swiss Council. Political theorists urge, and possibly may urge with success, the substitution for it of a body elected by direct popular vote. No argument is put forward in favor of this change except that the innovation is in accordance with so-called democratic principles. This fact is of itself sufficient evidence of the sterling merits possessed by the Swiss Ministry.

AN OBSERVER.

Correspondence.

THE SPEAKERSHIP.

TO THE EDITOR OF THE NATION:

SIR: It has been suggested in some quarters that it will be expedient to select the

next Speaker from the North or West, in order to avoid the charge of sectionalism which would be levelled against the promised tariff bill if a Southern man should be chosen Speaker. It is alleged in support of this that the Mills Bill suffered from that cause.

It is exceedingly unfortunate that so important a question as the election of the Speaker should be complicated by geographical considerations, and for my part I cannot think that they are entitled to much weight. A few years ago, it was asserted that the Executive Department could not safely be intrusted to the hands of a Democrat. As long as the experiment was untried, the argument was perhaps not without effect; but actual experience completely exploded it. Whatever else may be said of the Administration of Mr. Cleveland, no one will again contend that the Government will be unpatriotically conducted either by him or by his party. The important practical consequences of this have been repeatedly pointed out in the *Nation*.

The Speakership is an honor that justly falls to a party's leader, regardless of the situation of the district from which he "hails." The very position of leader of a party, whose members in greater or less number represent every point of the compass, shows the quality of statesman as against that of local politician. For a party, then, in a time of perfect peace, security, and national unity to renounce its leader because he comes from a district which, a quarter of a century ago, fought for an idea which it has since been glad to abandon, were surely pusillanimous in the extreme. The brave course is here, as elsewhere, the right course: the Speaker must be chosen on his merits. If he chance to be a Southern man, the effective way to silence insinuation is to prove by legislation that it is baseless. A tariff measure framed in the large spirit in which alone it should be conceived will for ever quiet apprehension on that score; whereas, if the natural party leader is put aside for another recommended solely or chiefly by the accident of locality, the scare will remain available for future use.

As far as my observation enables me to say, it seems to me that the Southern Democrats are disposed to pursue a wise and moderate course. To say the least, the conduct of the Northern Republicans in the last Congress was not so high-minded as to make it necessary to exclude the Southern Democrats from another trial. I dare say the Mills Bill was framed in as liberal and unselfish a spirit as the McKinley Bill. At all events, the charge of probable sectionalism comes with bad grace from those whose pet measure, so far from embodying the needs of even a section of the country, was dictated by a few grasping merchants and manufacturers. A. F.

LOUISVILLE, October 3, 1891.

HYGIENE IN FRANCE.

TO THE EDITOR OF THE NATION:

SIR: The discussions in the Paris Academy of Medicine upon the causes and remedies for the stationary or diminishing character of the French population, as well as upon the leading questions of public sanitation, disease-prevention, and the loss of life due to the peculiar methods of infant farming, recently ended in the adoption of the appended resolutions. This body rarely makes recommendations to the law-making power unsuccessfully, and it may be confidently expected that these measures will shortly take effect.

(1.) That in each department there be established an asylum or refuge for the reception and care of women in the later months of pregnancy and in their accouchement. That, if so desired, absolute secrecy be observed. That there be an office to give succor and aid to persons unable to procure proper care for themselves and infants.

(2.) That the law of December 23, 1874, for the protection of infants, be revised in some of its provisions, and notably that relating to "l'élevage mercenaire," in order that infants may not henceforth be left without the supervision and care of the parents.

(3.) That vaccination and revaccination be made obligatory.

(4.) As this law is of national importance (it has been recently adopted), the Academy recommends that vaccination and revaccination be encouraged and facilitated by all possible means at all times, and notably so when departments are advised of the appearance of indications of variola by the State Council of Hygiene, because, contrary to popular prejudice, vaccination and revaccination are the surest means of arresting the spread of smallpox and stamping it out of existence.

(5.) That all school-children be vaccinated and revaccinated, as all soldiers and sailors are.

(6.) That a vaccination service be organized throughout the country, without charge to the people, a day being fixed upon for the operation, which is to be performed as seems necessary.

(7.) That smallpox cases be isolated in all instances, in hospitals and elsewhere.

(8.) That municipalities, prefects, and the powers that exist in communes be given sufficient authority by law to correct at once all insanitary conditions, and particularly to procure the supply of pure water without the admixture of sewage and surface contaminations.

The Academy has three times in the last ten years voted in favor of obligatory vaccination and revaccination. Many other public-health questions were under discussion, particularly measures looking to the prevention of typhoid and the commonly prevalent infectious diseases, the number of lives that could thus be saved annually, aggregating, it is estimated, upwards of 150,000; but the above measures were the principal ones formulated and urgently pressed upon the attention of the French Parliament.

C. A. SIEGFRIED.

NEWPORT, October 3, 1891.

THE WASHINGTON CONNECTION.

TO THE EDITOR OF THE NATION:

SIR: Among the Washington papers in the possession of the Government I found the following letter, which may lead to some further discoveries in the English records on the Washington family. The emigrant Lawrence had married in England Mary Jones, and had by her one daughter, Mary. It was to this daughter that the letter was written. By a second wife Lawrence had a son John, the writer of the letter, and Ann. Mary married Edward Gibson of Hawnes, and Mr. Henry F. Waters gives me the following information: "He was vicar of that parish, as his father (of same name) had been before him. She probably died before her husband, if I draw the right inference from his will, which does not mention a wife. This will is of Edward Gibson of Hawnes, minister, 6th January, 1723; proved 17th June, 1732. . . . The Aunt Howard mentioned in the letter may have been Martha Washington, youngest sister of the two emigrants to Virginia, who herself was assisted by her eldest brother, Col. John Washington, to remove to Virginia." This last incident is to be found in Col. John's will, printed in my compilation of Washington wills. I would add that the letter is not an original, but a copy, sent to Washington when he was President by a descendant of this Mary Gibson. Perhaps some of your readers may be able to add to the information it conveys.

WORTHINGTON C. FORD.

BROOKLYN, October 6, 1891.

VIRGINIA, June y^{e} 22d, 1699.

Dear & Loving Sister,

I had the happiness to see a Letter which you sent to my Aunt Howard, who died about a year and a half ago; I had heard of you by her before, but could not tell whether you were alive or not. It was truly great joy to hear that I had such a relation alive as yourself; not having any such a one by my Father's side as yourself. My Father had one Daughter by my Mother, who died when she was very young, before my remembrance. My Mother had three daughters when my Father married her, one died last winter, and left four or five children, the other two are alive & married and have had several children. My Mother married another man after my Father, who spent all, so that I had not the value of twenty shillings of my Father's estate, I being the youngest & therefore the weakest, which generally comes off short. But I thank God my Fortune has been pretty good since, as I have got a kind and loving wife, by whom I have had three sons and a daughter, of which I have buried my daughter and one son. I am afraid I shall never have the happiness of seeing you, since it has pleased God to set us at such a distance, but hoping to hear from you by all opportunities, which you shall assuredly do from him that is

Your ever loving Brother
till death
JNO. WASHINGTON.

If you write to me direct yours to me in Stafford county, on Potomack River in Virginia. Vale.

To Mrs. Mary Gibson, living at Hawne's in Bedf's. These sent with care.

A CAST-COLLECTION CATALOGUE.

TO THE EDITOR OF THE NATION:

SIR: I have been favored with a copy of the 'Tentative Lists of Objects Desirable for a Collection of Casts,' privately printed by the Committee of the Metropolitan Museum in New York. These "tentative lists" enumerate a mass of reproductions which, when brought together, would compose the richest museum of casts in the whole world. The announcement of such a noble enterprise can only be greeted with warm recognition. It is now too late for the United States to institute galleries rivalling the British Museum, the Uffizi, or the Louvre; and the money which could be spent on the purchase of second-rate originals cannot be better employed than in forming large collections of casts. The New York collection, if completed, would stand unrivalled, and it is not very difficult to make it so. The museums of Europe will certainly give every assistance in their power towards the fulfilment of that scheme. I am certain that it will benefit archæologists of all countries by the facility it will give them of obtaining in their turn casts and photographs. Allow me to express the wish that, at the same time, a very detailed catalogue be put in type, stating once for all the whole literature of every monument, and accompanying each of them with a pen-and-ink drawing taken from photographs, in the style of the excellent illustrations now appearing in the *Archæologischer Anzeiger*. A catalogue of that sort

would be simply invaluable, and would open a new era in the study of plastic art.

Truly yours, SALOMON REINACH,
Keeper of the Museum at St. Germain.

PARIS, September 22, 1891.

Notes.

DODD, MEAD & Co. extend their "Makers of America Series" this fall with biographies of Robert Fulton, by Prof. R. H. Thurston of Cornell; Sam Houston, by Henry Bruce; Sir William Johnson, by the Rev. W. E. Griffis; De Bienville, by Grace King; Cotton Mather, by Prof. Barrett Wendell; Thomas Hooker, by the Rev. Geo. L. Walker; and John Winthrop, by the Rev. Joseph H. Twichell. The same firm initiate a "Portia Series," for girls and women, and announce the following titles: 'Chats with Girls on Self-Culture,' by Eliza Chester; 'The Art of Entertaining,' by Mrs. M. E. W. Sherwood; and 'Physical Development and Exercise for Women,' by Dr. Mary Taylor Bissell. They have nearly ready the fifth and concluding volume of Mr. James Schouler's 'History of the United States,' ending with the civil war, and will publish a revised edition of Fergusson's 'History of the Modern Styles of Architecture,' and the same author's 'Indian and Eastern Architecture'; 'Prison Life during the Revolution,' by the Duchesse de Duras; and 'Short Studies in Literature,' by Hamilton W. Mabie. In preparation are a new edition of the 'School for Scandal,' illustrated by Mr. Frank M. Gregory, and also a selection of 'Charles Lamb's Dramatic Essays' in the Giunta Series.

Longmans, Green & Co. are just about to issue 'Epoch Maps Illustrating American History,' by Prof. Albert Bushnell Hart of Harvard; and 'Seas and Lands,' Sir Edwin Arnold's account of his recent travels.

'Laboratory Practice,' by Prof. J. P. Cooke of Harvard, is in the press of D. Appleton & Co.

James Pott & Co. announce 'Beautiful Thoughts from Henry Drummond,' selected and arranged by Elizabeth Cureton; and 'Moral Theology,' based on the 'Summa Theologiæ' of St. Thomas Aquinas, by the Rev. J. J. Elmendorf of Racine College.

Macmillan & Co. have been appointed special agents in this country of the London firm of George Bell & Sons, whose publications include the well-known "Bohn's Libraries."

From Houghton, Mifflin & Co. we are to have 'Three Episodes in Massachusetts History,' by Charles Francis Adams; 'Betty Alden,' a new tale of Plymouth Colony, by Mrs. Jane G. Austin; 'Colonial Furniture of New England,' by Dr. Irving Whitall Lyon; and 'The Land of the Lingering Snow,' an outdoor book by Frank Bolles, Secretary of Harvard University. They have just issued at a reduced price the annotated edition of 'Sheridan's Comedies: The Rivals and The School for Scandal,' published eight years ago by J. R. Osgood & Co.

Roberts Bros. will publish 'The Lovers' Year-Book of Poetry,' compiled by Horace P. Chandler.

D. Lothrop Co. have in hand 'Birddom,' by Leander S. Keyser.

Ginn & Co. will issue during the present month 'Straight Road to Cæsar: A Latin Lesson-Book for Beginners,' by George W. Waite and George H. White; and a 'Reference History of the United States,' by Hannah A. Davidson.

In December, W. B. Clarke & Co., Boston, expect to bring out a 'Memoir of Rufus Ellis,' including selections from his journals and letters.

We understand that Mr. Goldwin Smith has enlarged, and recast in the form of a biographical essay, his two reviews of the Life of William Lloyd Garrison in *Macmillan's Magazine* on the successive appearance of the two halves of the work in question. The book, which will still be of moderate compass, will appear shortly.

A Life of Benjamin Harris Brewster, by Eugene Coleman Savidge, may soon be expected from J. B. Lippincott Co.

Chapman & Hall, London, announce a new work on Dickens, 'A Week's Tramp in Dickens-Land, together with Personal Reminiscences of the "Inimitable Boz" therein collected,' by William R. Hughes. More than 100 illustrations are to lend attraction to the volume, from the designs of Maclise, H. K. Browne, Langton, and others.

A new firm of publishers in London, Lawrence & Bullen, announce a new series of the poets, to be called "The Muses' Library," and to begin with a two-volume edition of Herrick, prepared by Mr. A. W. Pollard, with a preface by Mr. Swinburne.

The same firm also announce two books likely to interest all dramatic collectors. The first is the famous theatrical poem, 'The Rosciad' of Charles Churchill, edited and annotated by Mr. Robert W. Lowe, to whom we already owe admirable editions of Cibber's 'Apology' and Doran's 'Annals of the English Stage.' It will be adorned by eight full-page portraits. The second book is a volume of collected criticisms of the contemporary theatre in London by Mr. Joseph Knight, the dramatic critic of the *Athenæum*. It is called 'Theatrical Notes: A Contribution towards a History of the Modern English Stage.' Mr. Knight has also under way the biography of Garrick for Mr. Archer's series of "English Actors."

The Dunlap Society has in press and nearly ready to issue to its members an account of 'The Private Life of William E. Burton,' by Mr. William L. Keese, author of the authorized biography of the comedian-manager. This will be followed towards the end of the year by a reprint from the pages of the *Gentleman's Magazine* (the American *Gentleman's*, which Burton edited in Philadelphia) of Burton's memoirs of the elder Wallack. The secretary of the Dunlap Society is now Mr. William Carey, No. 33 East Seventeenth Street, New York; and, for an annual subscription of $5, members receive three publications every year.

Among the other books about the stage likely to be published this fall is Mr. Davenport Adams's 'Dictionary of the Drama,' announced nearly ten years ago.

With the return of the holiday season, the Messrs. Putnam put forth a fresh issue of their pocket "Literary Gems"—Irving's 'Legend of Sleepy Hollow,' the 'Ancient Mariner,' some of Browning's Lyrics, Ruskin on Pre-Raphaelitism, Montaigne on the Education of Children, and three speeches on America delivered by John Bright during our civil war. This is undeniably a good assortment, and we only wish that the compass of these little books would have allowed admission of a fourth American speech of Bright's, in 1867, the most elevated of all in tone and the most finished in diction. His portrait, Montaigne's, and Ruskin's embellish their respective volumes. The rest have fancy frontispieces.

Mrs. Oliphant's 'The Makers of Florence' (Macmillan) has encountered a rare degree of popularity, having now attained its third edition in fifteen years, with five reissues, or reprints, as the memorandum on the reverse of the title-page calls them. The last shape is a medium octavo, and the volume is dubbed "extra-illustrated" in view of twenty full-page engraved reproductions of pictures by Florentine artists to be found in the churches or galleries of their city. These furnish a rather cold and pallid decoration, but are not out of keeping with the wood engravings in the text, which are not of a high order. The next stage of reproduction might fitly witness the abandonment of all the present illustrations, in favor either of pure photography or of such wood engraving as Mr. Cole could furnish. The present volume is elaborately bound, with a back of white canvas stamped with gilt and lettered in red.

By the side of the new edition of Dr. Holmes's works, his publishers (Houghton, Mifflin & Co.) have brought out, in one dainty volume, 'The One-Hoss Shay, with its Companion Poems, How the Old Horse Won the Bet, and the Broomstick Train,' Mr. Howard Pyle furnishing the pen-and-ink illustrations. An interval of more than thirty years separates the first and the last of these pieces—the one a purely intellectual, the other a purely poetic conceit: logic versus metaphor. Mr. Pyle's drawings possess his usual cleverness, but occasionally seem to have less than justice done them in the "process" or the printing. The vignette on p. 29 is in the spirit of Bewick, for all that the execution is in black line and not in white.

The Historical Printing Club of Brooklyn, N. Y., has just reprinted its second Revolutionary orderly book, viz., that of the Maryland Loyalist Regiment. This was kept by Capt. Caleb Jones from June 18, 1778, to October 12, 1778, and comprehends the evacuation of Philadelphia, the march across the Jerseys, and the cantonment on Long Island, where the book was ultimately found. Its value lies in its supposed uniqueness so far as Loyalist regiments are concerned, and in its preserving Gen. Howe's orders after July 5. Mr. Paul Leicester Ford has edited and annotated this record. The most eminent name in the list of officers is that of Philip Barton Key, uncle of the author of "The Star-Spangled Banner."

Another and more important memorial of the Loyalists is the Rev. Arthur Wentworth Eaton's 'The Church of England in Nova Scotia and the Tory Clergy of the Revolution' (Thomas Whittaker). The Diocese of Nova Scotia, Mr. Eaton points out, "owes its existence to the Tories of the Revolution" who migrated thither, and is now the oldest colonial diocese of the Church of England. The author is noticeably liberal, fair-minded, and candid, as witness his admission regarding the anti-Revolutionary attitude of the Episcopal clergy, his comments on the sectarianism of King's College, and his chapter on "Other Religious Bodies," in which he says: "It is probably true that in late years the leading Dissenting bodies in Nova Scotia have often had ministers of greater ability, and sometimes of more thorough education, than the Church of England." Mr. Eaton writes in an interesting way, condensing the fruit of much research, and his work is in every respect meritorious. It is rich in biographical sketches of the exiled clergy, the later bishops, distinguished laymen, and royal governors. We need hardly say that New Englanders in particular, along with New Yorkers and Pennsylvanians, will find here a part of their own history, enacted beyond their territory and under altered conditions.

A good deal of conscientious research has gone into the making of 'The Sabbath in Puritan New England,' by Alice Morse Earle

(Scribners). Most unusual is the author's delving in the records of scattered local churches, and more than one pearl does she find in those dust-heaps. Puritan Psalmody gets special attention, but the whole range of Sabbath observance, at home and "in the great congregation," is covered, and the grim, the curious, the cruel, and the saintly stud the pages. Mrs. Earle once more shows that Peters's "Blue Laws" were, after all, only a sort of malicious codification of actual law and practice.

The second edition of Prof. Joseph Le Conte's 'Evolution: Its Nature, its Evidences, and its Relation to Religious Thought' (D. Appleton & Co.) serves to mark, in its added chapter on the factors of evolution, the point most in debate since the first appearance of his work. Further new matter is found in the chapters on the Divine Immanency and on the Relation of Evolution to the Doctrine of the Christ.

The will of John Washington, the emigrant, lately edited by Dr. J. M. Toner, has been acquired by the Historical Society of Pennsylvania for their collection.

The current Bulletin of the Boston Public Library (No. 86) devotes a section to Genealogy, beginning with a list of bibliographies, dictionaries, etc., and adding a list of serials, and lists of local and of family histories. These will be found valuable to any searcher.

In *Lincolnshire Notes and Queries* for October (Horncastle, Eng.), mention is made of an important work privately printed this year by Dr. George W. Marshall of the Heralds' College, called 'Parish Registers: A List of those printed, or of which MS. copies exist in Public Collections, together with references to extracts therefrom, printed and in manuscript.' The *Notes and Queries* prints the list of all entries relating to Lincolnshire, with references to volume and page of the late Col. Chester's transcript from the note-books of the late Lord Monson and Arthur Staunton Larken.

Mr. Stewart Culin, who has a genius for the investigation of what lies hidden under our noses, contributes to the July-September number of *American Folk-Lore* a striking enumeration and description of "Street Games of Boys in Brooklyn," whom we cannot suppose to be exceptionally favored in this particular.

"Tariffs and International Commerce" is the subject of a paper contributed by Prof. Shield Nicholson to the series on Britannic Confederation now being published in the *Scottish Geographical Magazine*. It is distinctly favorable to the idea that a commercial union between Great Britain and her colonies is practicable. The only reason which he gives for this conclusion is the fact that fifty years ago the tariffs of the United Kingdom were in a worse confusion than those of the colonies at the present day, and that now they are reduced to the simplest form. Then there were a thousand articles on which duties were collected; now there are practically only four or five. The colonial tariffs number forty-two, and their variety can be illustrated by the following instances: "Coals are free in 23 tariffs; in 11 they are charged specific duties, and in 8 *ad-valorem*. Salt is free in 13, it is charged specific duties in 21, and *ad-valorem* duties in 8." The only article which is almost universally free is manures. The principal reform which Prof. Nicholson presses upon the colonial statesmen is to abolish "their general taxes on unenumerated articles, and—where enumeration means taxation—in the curtailment of the list." By this means they would approximate the simplicity of the British tariff. He is careful to add that his idea of a commercial union does not mean protection against the rest of the world. The paper is somewhat rambling, but it is suggestive and not without weight. There are several striking quotations from Adam Smith, in one of which he propounds, according to Prof. Nicholson, "the most definite and most practicable scheme ever yet published of Imperial Federation."

Bulletin No. 7 of the Bureau of American Republics (Washington) is devoted entirely to Brazil, and comprises, with the reprint of much familiar matter, an historical sketch of the country, an account of the emancipation movement, various statistical chapters, and a translation of the Brazilian tariff now in force.

Hodder & Stoughton, London, send us the first number of *The Bookman*, "a monthly journal for bookreaders, bookbuyers, and booksellers." Its motto, "I am a Bookman," is taken from James Russell Lowell. Peculiar features of this periodical are (in addition to news notes and reviews) literary articles of a fresh kind, such as "The Carlyles and a Segment of their Circle," "Burton at Damascus," "Thomas Hardy's Wessex," "The Work of Rudyard Kipling," "Paternoster Row Forty Years Ago," "The Provincial Dailies—their Present Position," etc., and a "Young Authors' Page." In this page, MSS. submitted for judgment will be classified under headings with an occasional note. Finally, it seems as if it were the publishers' intention to throw in regularly a steel portrait for the sixpence. Lawrence's Tennyson adorns No. 1, which is typographically very attractive.

—The *Argosy* newspaper of British Guiana has recently published two documents relating to the fight, on the 24th of February, 1813, off the coast of Demerara, between the United States ship-of-war *Hornet*, commanded by Capt. James Lawrence, and the British brig *Peacock*. One of the documents is a report by Senior Lieutenant Frederick A. Wright, who took command of the *Peacock* when the commander of that vessel, Capt. Peake, was killed; the other is a statement, taken down at Barbados for the information of the British Admiral, and made by four of the sailors of the *Peacock*, who, when that vessel was sinking, got into a shattered boat and made their escape. Lieut. Wright's report is to be found among "Admiral's Despatches, North America," 1813, No. 24, and the sailors' narrative with "Admiral's Despatches, Leeward Islands," 1813, No. 30, in the Public Record Office, London. The Lieutenant's report was probably published at the time, but the sailors' narrative is now published for the first time. The two statements give fuller details than are to be found in either Cooper's or James's naval histories. It was in reference to this short and sharp engagement (an affair of between ten and fifteen minutes only) that Lawrence, afterwards, in addressing the men of the *Chesapeake*, when about to fight the *Shannon*, said: "Peacock her, my lads, Peacock her!" In connection with the foregoing we may mention that Mr. C. Montague Jones of Georgetown, British Guiana, proposes to exhibit in the British Guiana Court of the coming World's Fair one of his pictures of the fight between the *Hornet* and the *Peacock*.

—The identity of the pygmies of the ancients with the dwarfs of Equatorial Africa is the subject of an elaborate paper by M. Paul Monceau in the last number of the *Revue Historique*. The earliest-known representation of the latter is to be found in the monuments describing the conquests of the Egyptian kings of the eleventh and twelfth dynasties in the countries to the south of Egypt. To a later sculpture of the same people the word Akka is added—the same name by which one of the dwarf tribes of the Congo Basin, discovered by Schweinfurth and since seen by Stanley, is known at the present day. A few centuries after, the negro dwarf was received into the Egyptian mythology, and represented their Vulcan, though more as a searcher for the precious metals in the earth than as the artisan. This is possibly the origin of the universal tradition, especially in the Middle Ages, connecting dwarfs with underground habitations full of treasures of gold and silver. The Phœnicians borrowed him from the Egyptians and gave him the name Poumai—meaning a foot high or tall. They carried him to Cyprus, where he was worshipped as Poumaion, and from thence he passed into Greek mythology as the pygmy. The Greeks, according to our author, naturally, though mistakenly, connected the word Poumaion with their word πυγμή, a measure of length almost the same as that designated by the Phœnician word. At the recent Congress of Orientalists, Mr. R. G. Haliburton read a paper affirming the existence of a race of dwarfs in the Atlas Mountains of Morocco. He believes that their existence has hitherto been kept secret because of their sacred character, they being addressed as "Blessed Lord" by the people, and having the deepest veneration shown them when they leave their mountain haunts. Their special occupation seems to be, in accordance with the universal superstition, digging mines. While it is impossible to say whether Mr. Haliburton's evidence is sufficient to prove his statement, it is well to note that there is no passage in any ancient poet, geographer, or historian mentioned by M. Monceau, placing any dwarfs among the Atlas Mountains. All ancient tradition and testimony, with some unimportant exceptions, point to but two places as the home of the dwarf, India and Equatorial Africa.

—An enthusiastic linguist and collector writes to us as follows from Switzerland respecting his pursuit of the literature of the Romansch or Retoromanic language: "We visited the hamlets through the whole length of the Lower Engadine from Martinsbrück to the Austrian border upwards, and got together a large number of the works printed in the dialect there spoken. We did the same thing for the Upper Engadine on our way to St. Moritz, and afterwards, while sojourning at that pleasant resort. While descending the mountains to Chur, we stopped in the Oberhalbsteinerthal, where a distinct dialect is spoken, the literature of which is limited to a few religious manuals and elementary school-books. At Chur, the book-shops furnished a few additions to our treasures, and some excursions to the Rhenish Oberland—the Romanic speech of which possesses an extensive literature, both Protestant and Catholic—brought in many more. Meanwhile, through the antiquarian booksellers of the Tyrol and Northern Italy, we were able to acquire some of the publications in the Grōden, Enneberg, and other Romanic dialects of Austria, and in the allied Friulan (*lingua furlana*) and Istrian. The Retoromanic language survives in isolated dialects spoken between the headwaters of the Rhine and the mountains of Istria. The present centres of publication for the literature are Chur, the capital of the Grisons; Disentis (Catholic) in the Oberland, Samaden (Protestant) in the Engadine, Innsbruck and Trient (for the Tyrolese Romanic), and Udine and Gorizza (for the Friulan). In Switzerland there are just now only three regularly appearing Romanic weekly journals, the *Foegl d'Engiadina* (founded 1857) of Samaden, the

Gasetta Romonscha (also dating from 1857) of Disentis, and *Il Sursilvan* (now in its eighth year), published at Chur, while at Udine the *Florean dal Palazz* has been issued in Friulan weekly since 1883."
